I hope the Members of the House will pass this resolution to dispatch a committee of the Congress without delay to Europe to bring back the facts to the American people. General Eisenhower, at the close of the war, did the Nation a great service when he called for a committee to be sent to Europe to view the horrors of the concentration camps which committee brought back the true picture to the American people. Certainly, it is time for us to view the picture again and to determine without question or error what is the situation in Germany today. When the American people have the facts then they will be able to deal with the question. It is to be hoped that before this happens the President in some way will arrange to lift the ban on the sending of packages and of food and medicine to help preserve the lives at least of the infants and little children of Germany who are starving to death daily by the thousands according to every authentic report coming out of Germany at the present.

Truman Bidding United States To Accept Marxian Ideas

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Samuel Crowther from the New York Journal-American:

TRUMAN BIDDING UNITED STATES TO ACCEPT MARXIAN IDEAS

(By Samuel Crowther)

President Truman's message to the Congress in which he combined a message on the State of the Union with a message on the Budget is a long and dreary document taken as a document. So is the Communist manifesto.

President Truman dealing with the State of the Union has brought together, using a few more words, what he said on domestic affairs in his radio address of January 3 and what he said on foreign affairs in his address on Navy Day. The part of the message dealing with the Budget is merely arithmetic of a sort.

REPLACES ORIGINAL PRINCIPLES

Nevertheless this message, in spite of its dreariness, in spite of its masses of words that convey no ideas and in spite of the good intentions that wander through the text like homeless orphans in a crowd, must be set as a historic one.

It marks the first time that a President of the United States has asked the Congress to abandon the principles on which our American state was founded and to adopt a new set of principles directly repugnant to them.

And all this is the more remarkable because the man who is asking for socialism does not believe in socialism and does not know he is asking for it.

These are the words in which President Truman definitely denounces the American ideal:

"There is no question in my mind that the Government acting on behalf of all the people must assume the ultimate responsibility for the economic health of the Nation.

"There is no other agency that can. No other organization has the scope or the authority nor is any other agency accountable to all the people."

APPLIES MARXIAN CREED TO UNITED STATES

This is a direct proposal that the Marxian creed—not in theory but as it has worked out in practice—shall be applied to the citizens of the United States.

This means that they must be submerged as individuals and become serfs in an all-powerful state, living or dying at the will of the politicians who are in control.

That was the kind of state Mussolini was driven into making after seizing power to rescue his country from chaos; that was the sort of state that Hitler was driven into making after seizing power to bring his country out of chaos.

There is no point short of the absolute at which a government can stop once it assumes responsibility for the economic health of its people.

That is well known to every modern revolutionist. That is well known to those inner circles in Washington who control the puppets holding our principal offices, and that is why these inner circles, as has just been pointed out in the series The Tragedy of Truman, are so well satisfied with the way events in this country are shaping up.

ADVOCATES CIO PROGRAM

The titular officers of the administration are being pressed to ask for more control, on the ground that more control now will mean less control later. Exactly the opposite is the case.

The notion that a price control can be held until the article comes into full supply is naive, but the promotion of the thought is sinister, for any article on which there is a price control can never come into large supply, because price control is production control.

The President, having been persuaded that there is a way by which a man who has mortgaged his property to the hilt and spent all his money can keep right on spending by some magic creation of purchasing power, has naturally accepted the program of Sidney Hillman's PAC-CIO crowd who hang this sort of feed bag in front of their followers.

Therefore, it is not surprising that in his message he demanded, as in his radio address, the adoption of the full PAC-CIO program. He added to that program universal training, fact finding, succession to the Presidency, unification of the armed services, and a couple of items having to do with ship sales and stock piles.

FACT FINDING DEFERS ARBITRATION

He had no answer whatsoever to the near-revolution in which this country now finds itself—a long-range, socialistic program and the reiteration of his strange belief that the facts are lacking in the present labor disputes.

The fact-finding bodies thus far appointed have not proved to be impartial committees and through their seeming dominance by labor unions are doing the country a real disservice by postponing the day when arbitration on a plane of high integrity can be brought into being.

The President, in his discussion of foreign policy, chooses to ignore that through the UNO we have all but shifted our State Department to Moscow and, although we may weep over our fate of small nations, we can do nothing about them.

In the Budget message, as in his treatment of the domestic issues, the President ignores the fundamentals and elaborates the trivial-

ities. He proposes to balance the budget, not by limiting the expenditures, but by drawing on funds already in hand.

HIGH TAXES CRUSH INCENTIVE

He says nothing about really funding the debt but points with pride to an interest rate so low that individuals will not buy Government bonds as investments. The bonds will thus remain in the banks supporting a stupendous money supply for inflation.

And he gives no hope that taxes may be reduced to a point where it will pay a man to venture and to earn.

It is a strange message, in that it takes nowhere into account the state of liberty in our Union.

The President speaks not at all of the plight of the ordinary citizen who, if he is a union member, has been deprived of most of his citizenship by his union leaders; or, if he is in business for himself, is being crushed by union wages, rules, taxes, and price controls; or, if he is a white-collar man, is being pushed about by everyone.

The message might well be entitled: "A manual of what not to do if the United States is to resume its status as a great and free nation." As such it is a challenge to the Congress.

Do Congressmen Drink?

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. COFFEE. Mr. Speaker, there has been much discussion in the public print as to whether Congressmen are heavy drinkers. My friend, Jack Pollack, discusses the matter in the January 1946 issue of This Month magazine. There are arguments pro and con. Here are Jack Pollack's own observations:

DO CONGRESSMEN DRINK?

(By Jack H. Pollack)

An alcoholic bomb dropped on Capitol Hill recently when a physician—who happened to be a Federal employee—was quoted as saying that Congress was overbrimming with liquor-loving legislators. Some lawmakers, he audaciously if somewhat imprudently charged, were unmistakable alcoholics. Others, borderline cases. Result: demon rum made the people's representatives rude, vulgar, aggressive, forgetful, and a prey to lobbyists.

This view of Congress was put forward by a capable psychiatrist on the staff of St. Elizabeths Hospital, a Washington institution supported by congressional funds. The mild-mannered, 35-year-old Dr. Michael M. Miller, told the United Press that liquor is a "major factor in Congress, and exercises a most damaging effect on legislation." In the bard's intoxicating idiom, lawmakers 'put an enemy in their mouths to steal away their brains."

Behold these Scottish symptoms, Dr. Miller contends. Don't Congressman tend to repeat their words and ideas again and again? Aren't they crude and belligerent in their shameless filibusters and home-brewed debates?

Not one to discriminate against our legislative public servants, Dr. Miller simultaneously denounced the august State Department and United States Diplomatic Corps for being "stuffy with drunks."

As was to be expected, the State Department haughtily ignored the innuendo—even though it was rumored not long ago it had requested an additional three-quarters of a million dollars appropriation to stock its embassies' cellars abroad. At the same time, our more sensitive solons, rubbing their bleary eyes, spoke up—and booted their critic out of a job.

Denying that there were dipsomaniacs under the dome, our sober statesmen scoffed at the slur. Even the upper Chamber's leading dry, Senator Arthur Capper, rushed to his colleagues' defense. Conceding that some of his thirstier conferees raised the elbow unduly—and of that he roundly disapproved—the octogenarian Kansan concluded, "I doubt that it interferes with their services."

Notwithstanding, naysayers contend that some lawmakers get so drunk at some parties thrown by a famous Washington hostess or at their own poker games that they are absent at roll call votes the following day. Press gallery cynics tell of one tipsy statesman who must be periodically dragged out of the Chamber to the recuperative cloakroom couch. Drew Pearson recently made public the dipsomania of an ex-Senator—a fact long known to Capitol insiders.

Similarly, suspicious souls point out that the House of Representatives' breakfast menu—under "pick-ups"—recommends Bromo Seltzer, aspirin, and bicarbonate; and that Dr. George W. Calver, congressional physician, in his ten commandments of health issued to his legislative patients, urges them to "drink plentifully," but adds in his own handwriting as an afterthought "of water."

Obviously, there is more than one Member of the House and the Senate who drinks too much. Since the Republic was founded, that has been so. Alcoholic abuses led to the removal of the last saloon bar in the Capitol in 1903—just as it was the excesses of Tammany politicians that led to the closing of the New York City saloons on election day.

Nevertheless, many legislators are genuine teetotalers, while others will just take an occasional sip in company. Earl Wilson, the New York Post's irrepressible saloon editor, gleefully reports that several years ago a Washington electrician finished some wiring in a Senator's office late one afternoon. A man he mistook for a clerk asked, "How would you like to sample some of the Senator's private stock?" The electrician happily obliged and on the way out murmured to a secretary, "That was a helluva nice fella who gave me that drink. Good thing the Senator did not catch us."

"That was the Senator," was the reply, "Senator Truman."

Still, as a group, Congressmen are a pretty temperate bunch. Businessmen, militarists, and newspapermen are as great if not greater drunkards. Some tycoons and junior executives, especially in urban areas, would be lost without that 5 o'clock cocktail. Army and Navy officers, even in peacetime, are heavy drinkers. And journalists, chiefly those frustrated by difficult editors and publishers, assert themselves on the rosy cup.

Unquestionably, a handful of lawmakers—even as several million fellow Americans—drink more than is good for them. One Congressman with high blood pressure drinks because his doctor tells him to. Another elder statesman, when in Bacchus' arms, will make less sense than when sober. And I remember crying in my beer with one of our ablest lawmakers shortly after a bill that he had thrown his heart and soul into, was callously voted down. Pouring himself a drink, he bitterly toasted, "To my colleagues. May they some day learn the meaning of democracy."

However, Dr. Miller is mistaken if he believes alcohol changes votes. Whether for good or evil, the legislative is too slow-moving a process to be seriously affected by liquor. Rarely is there a surprise vote. Because most legislators vote according to party lines, economic pressures, or sectional prejudices, Capitolists can and do predict votes long before they are cast. Important votes are counted weeks before the regular floor vote.

Questioned about this, Dr. Miller explained that although the United Press story had misquoted him, he strongly believed that those who blocked constructive social legislation, especially the irresponsible filibusters, were the real drunks in the Congress.

Yet the prospect of a bingeless legislative body is unfortunately not hopeful, if history is any guide. Not only General Grant but even the founding fathers were not averse to a bit of carousing. After all, they lived in an era when corn liquor was plentiful, gin the washerwoman's drink, and an outraged citizenry rose up to harass President George Washington, protesting the liquor tax during the Whisky Rebellion.

Society's attitude toward inebriety has varied from age to age. Medieval moralists held that no mortal was really drunk as long as he could differentiate a man from a haystack. In our own day, far more is required. The responsibilities of our lawmakers are too great to take a chance on tippling. Dr. Miller's outburst may have come in the nick of time to make us aware of the extent of these responsibilities.

Meanwhile, wiser, jobless Dr. Miller continues his alcoholic crusade. He lost his job in Cleveland because his successful clinic fought the penal treatment of alcoholics in the house of correction there. Rather than send daily drinkers to prison or the insane asylum, Dr. Miller urges special clinics with a medical psychotherapy and social rehabilitation program.

At present he is trying to open a private clinic to aid alcoholics. Congressmen, State Department employees, and all others, welcome.

UNO: Welcome to Westchester

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the CONGRESSIONAL RECORD an editorial which appeared in the Standard-Star published at New Rochelle, N. Y., on Wednesday, January 9, 1946, entitled "UNO: Welcome to Westchester":

UNO: WELCOME TO WESTCHESTER

To the members of the United Nations Organization Headquarters Site Selection Committee who flew over Westchester this morning and who return tomorrow for a more intimate inspection of potential sites, Westchester extends hearty and sincere greetings of welcome.

We are not sure that Westchester has available any site which will measure up fully to the yardstick of qualifications set up by the UNO Interim Committee on Headquarters of the Preparatory Commission, particularly if permanent installations, as mentioned, require from 40 to 50 square miles. That represents roughly about one-tenth of the entire county. But if the UNO can scale down the geographical dimensions of its permanent site, we believe the county meets effectively other standards.

Regardless of whether the choice of headquarters, either temporary or permanent, be in Westchester, we wish the visiting Commission members to know that our real interest lies in the success of United Nations. That comes first.

With regard to other essential criteria as established by the Interim Committee, we can assure the UNO that here in Westchester they will find the desired accessibility to the world at large through proximity to New York City's air and steamship lines, through our own fine system of parkways, and our own new airport. Too, they will find excellent climatic conditions, favorable cultural surroundings, high public service standards, and adequate educational, health, and recreational facilities. These are all desirable criteria as set down by the committee on site selection.

Also, in conformity with the committee's yardstick of qualifications, the UNO will find in Westchester local sentiment, through public opinion and an independent press, which is strongly in support of the goals of that organization. We have no isolationist group of any consequence, we are absolutely free from any social or economic or political movements which might seek to influence the UNO, and we permit no legal disabilities or general social discriminations on the ground of race or religion.

Should the two specific sites suggested, Ophir Hall in Harrison or Rockwood Hall in Mount Pleasant, be too small, as appears most certain under presently mentioned requirements as to size, we suggest the UNO committee might well consider an area including both Westchester and adjoining Fairfield County in Connecticut, including the southeastern portions of the towns of North Castle and Bouridge and the northern portion of Fairfield County, near the Round Hill section of Greenwich.

In that area there are many square miles thinly populated, with consequent less hardship through displacement of any large number of homes; there is immediate proximity to the county airport at Rye Lake, adjacent are the Merritt and Hutchinson River Parkways, and less than an hour away is New York City. There UNO would have all the advantages of remote privacy, beautiful countryside, and yet be within reach of the recreational, educational, and cultural offerings of Westchester, Connecticut, and the metropolis.

Should Westchester be unable to offer any site for permanent headquarters, we suggest to the committee the desirability of temporary quarters here while the permanent home is being constructed. There would be available for such temporary purposes the Westchester County Center at White Plains, the county airport a few minutes away, golf and country clubs for lodging or recreation, and rapid transportation to New York City.

In any event, regardless of where or why the permanent or temporary headquarters may be located, we wish to emphasize Westchester's solid support of the program which UNO offers a war-wearied world. We are proud that this area has remained within the narrowed-down zone selectivity through possession of many of the high standards the selection committee has established. And we pledge without stint or reservation our continued support here in Westchester of public opinion and press as UNO marches forward bravely toward the goals of permanent peace for which civilization yearns.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD an address made by Dr. Alexander Guerry, president of the University of the South, on the subject of Universal Military Training, a subject which is at this time of vital importance to the American people. This address was made before the Rotary Club at Chattanooga, Tenn., on December 27, 1945.

Dr. Guerry, who was at one time president of the University of Chattanooga, located in that city, has been at the head of the University of the South at Sewanee which is on top of Cumberland Mountain at Sewanee, Tenn., for several years and, under his guidance and leadership, this university has grown and has become more and more prominent among the outstanding schools of the country.

Dr. Guerry had two sons in the last World War, both of whom distinguished themselves on more than one occasion.

His words on the subject of Universal Military Training are worthy of most serious consideration and meditation. He is not only one of the outstanding educators of the Nation but is an alert and deep thinker. I hope that this address of his will be universally read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The choice is not between universal peacetime military training and unpreparedness. The choice is between compulsory universal peacetime training and some other manner by which our Nation can be prepared adequately to defend herself and to preserve the peace. And for these purposes our country should be prepared.

The choice is not between peacetime conscription and unpreparedness because preparedness can be accomplished by other means than a compulsory universal training law. This other means is volunteer enlistments and, if necessary, a selective service act to keep the Army, Navy, and Air Force at the strength deemed essential. Selective Service can operate to produce the personnel of an army of 500,000 or 10,000,000; the same for the Navy. It is much better to have an adequate army, air force, and navy from volunteers plus Selective Service, when and if Selective Service is necessary, than to initiate now universal peacetime training. It is better because we have now a fine Army, Navy, Air Force, and Marine Corps, and Selective Service. To maintain our armed forces at whatever strength is considered advisable and as long as desirable is a natural and essential procedure.

It seems unnecessary and unwise for this country to break now with its traditions and its conviction over the years regarding peacetime conscription and to embark at once upon a program of universal military training with its inevitable, far-reaching consequences, before we see the pattern of peace, before we observe the effectiveness of the United Nations Organization in its efforts to keep the peace and to prevent aggression, before we play our part in attempting to make the UNO an effective agency for the purposes for which it was created, and before we know more about the use of atomic energy and the relation of atomic energy to a program of national preparedness and to war itself.

The Army can have enough soldiers for effective preparedness including occupation duty overseas, through the process of volunteer enlistments, in my judgment, if the Army as a career and as a temporary occupation is made more attractive. This could be brought about by better pay and more particularly by an improved program of general and vocational education, recreation, and athletic sports at every Army post, and by the providing of homes for the families of enlisted men at or near each Army base.

On the other hand, if such a program fails to secure the required number of soldiers, a selective-service law could produce the additional men. The additional number needed might be very small. Certainly it would be better to call these into the service through impartial selection than to put the whole Nation under a universal-training law.

The same procedure would be in effect for the Navy. It is my opinion, however, that the Navy feels it can secure sufficient personnel through the volunteer method, and that the Navy is not particularly interested in compulsory universal military training.

Surely the only justifiable reason for peacetime conscription is that it is a military necessity, and peacetime conscription is not a military necessity. If I believed it were, I would support it.

Furthermore, it is not an adequate means of national defense. As high military spokesmen have recently and repeatedly pointed out, the next enemy who might attack us would strike without warning and with his full might in an effort to win the war right at the start. As the proponents of universal military training have proclaimed time and again, in the event of another war America may not have the time to prepare herself for battle as she had for World War I and World War II. This is quite true.

And it all goes to show that what is necessary as long as there may be the danger of war is an army, a navy, and an air force of the minimum but sufficient strength, composed for the most part of men who are making a career of the military or making the military their occupation for a period of three or more years, an army, a navy, and an air force composed of men skilled and trained in the modern instruments and weapons of war and possessing the most modern instruments and weapons of war.

In the 1930's and in particular in his book, The Army of the Future, General De Gaulle emphasized the necessity of armed forces carefully trained, equipped with modern weapons and ready to fight at the drop of the hat and minimized the value of France's program of universal military training. It is my belief that, if we enact a military training law, we will have both peacetime conscription and an army, navy, and air force of approximately the same strength as with or without universal training.

Millions of 18-year-olds in training or millions of reserves, men trained in 1 year of a compulsory universal military program, probably will not play an important part, possibly not any part, in a war, if another war comes, that will be fought to a finish with a deadliness and a swiftness beyond imagination.

If, however, reserves are or may be important or necessary to the security of our Nation in war or peace, the present ROTC program should be continued and expanded and, in particular, the program of the summer civilian military training camps, under Army supervision, known as the CMTC, should be revived, improved and greatly expanded. These two voluntary programs would give the country hundreds of thousands of reserves with valuable military experience.

As civilian aide to the Secretary of War for Tennessee, I was actively associated with the CMTC for about 20 years, and I know the tremendous possibilities in summer military camps sponsored by the War Department. I believe that a very large number of boys and young men would attend camp for one, two or three summers during the high school and college days, especially if a small honorarium were paid to compete with summer jobs.

Just as necessary as an adequate army, navy, air force, and marine corps for national preparedness and infinitely more important than universal military training are these three factors: (1) Constant improvement of the weapons and instruments of war; (2) a plan for the instant mobilization of industry for war; and (3) the pursuit and encouragement of scientific research, not scientific research alone, as applied to war, but general scientific research.

My chief objection to peacetime conscription is that universal peacetime military training will change the character of the American people. To draft boys and men for war in time of war or under the threat of war is one thing. To compel all men in this country at a given age to spend a year in military training in peacetime is quite another thing. This will lead, beyond any doubt, to regimentation of our youth and will place Government in control of all the men of this country for 1 year in peacetime. This will be an enormous extension of the function and power of government. The ultimate result will not be good.

Four arguments often presented in behalf of universal military training should be critically appraised. The first is that universal military training will be a valuable and necessary experience in discipline. The second is that the physical fitness of our youth will be greatly improved by universal military training. The third is that universal military training would have restrained Germany and Japan from war. The fourth is that universal military training will strengthen America's foreign policy.

I hear on all sides that young men need discipline and the Army and Navy can give it to them. Certainly discipline is necessary. But discipline should come through the home, the school, the college, and the church, and not through the State. When we turn to the State for discipline for our youth, a free society has failed. If our youth need discipline, let the home, the school, and the church look to their responsibility. To ask the Government to accomplish what the home, the school, and the church have failed to accomplish is to undermine the foundations of a self-reliant, independent people, the foundations of a free society. The same about universal military training and responsibility.

As a matter of fact, the discipline that is needed in a democracy is self-discipline. Army discipline operates as a control of the soldier in the Army, not as a general rule after he leaves the Army. A year of universal military training will not be conducive in the long run to discipline or self-discipline in a democracy.

As for compulsory military training and physical fitness, it should be clear to every person that it is during all the years of a boy's life, from his earliest childhood, that he becomes physically fit. Proper medical care, proper dental attention, nourishing food, sunshine, exercise, sports, and proper living conditions, these make a young man physically fit. But it's a process over the years. The age of 18 is too late. Our young men should be physically fit. We can make them physically fit if we start at the beginning, and if the home, the school, and other agencies, the county, the municipality, and State departments of public health join hands for the promotion and development of a real program of physical fitness.

The statement has been made often by the advocates of universal military training that Japan would not have attacked America or that Germany would not have gone to war if America had been carrying on a program of universal military training. This may be true. But it also may be true that Japan might not have attacked America or Germany might not have gone to war if the United States had maintained a reasonably adequate Army, Navy, and Air Force, properly equipped and supplied with modern guns, modern instruments of war, modern ships, modern planes, or if the League of Nations had been effective when Germany broke the Treaty of Versailles, or if America had joined the family of nations for the purpose of preventing aggression and preserving the peace of the world.

This word with regard to universal military training and our foreign policy. Before we inaugurate universal military training to back up our foreign policy, it is urgent and necessary that the United States have a definite foreign policy which it consistently and intelligently supports. Lack of a clear-cut foreign policy to which this country firmly adhered was in part a cause of the last war. As for the relation of universal military training to the effectiveness of our foreign policy, we should realize that it has certainly been demonstrated that our armed might, even at its very peak, has had insufficient relation to the effectiveness of our foreign policy or to the respect and regard of other nations for our views and our position in international affairs.

A further objection to universal military training is that the interruption of a boy's education is bad. Education is a continuing experience. The normal process is for a boy to go direct from elementary school to high school, from high school to college, from college to graduate or professional school. Theoretically, it can be argued that a year out of school or college makes a boy or young man more mature, more eager and more appreciative of the opportunity to get an education. Actually it does not turn out that way. The very small number of boys in high school or college who have been out of school a year and returned to school is and has been proof for many, many years that interruption of one's education is anything but conducive to his return to school. And their records do not indicate that their absence has bettered their scholastic achievement.

If I am charged with prejudice in this matter because I am a college president, I can only say that I am certain in my own mind that the interruption of the education of boys and young men for a year will have three unfortunate consequences: (1) That many boys and young men will not continue their education; (2) that of those who do continue their education, fewer will go to college and the professional schools, more to vocational and trade schools, the country losing some of its best material for a general college education and for the professions, including scientists, engineers, technicians, architects, artists, musicians, as well as physicians, lawyers, and ministers; (3) that the level of academic attainment will be lower.

What a country needs for war and peace is a large number of citizens of fine intellectual training, who possess power and versatility of the mind. That is the reason that the lowering of the level of intellectual attainment would be a great misfortune, just as it would be a misfortune to have fewer or less capable men in the sciences and in the professions.

One of the dangers of universal military training is that it has become a panacea in the minds of the people. Pass a law, they seem to say, for universal military training, and we will have discipline, physical fitness, and better education for our youth, preparedness, a firm foreign policy, security, and lasting peace. These objectives will not be realized, in my judgment, through peacetime conscription, but by other wiser and more difficult measures.

If it is the decision, however, of our Congress to enact a compulsory universal military training law, there should be no substitution of ROTC or of National Guard for the year or a portion of the year of prescribed military training, no substitution of any other kind of training for military training, and no substitution of any other agency for the War and Navy Departments.

Thus far we have discussed a program of adequate defense, a better alternative to universal military training, and some reasons against peacetime conscription. Now, let us face the truth of some other vital things, the deeper issues.

First, universal military training and preparedness have never prevented war. At times they have postponed war. At times they have hastened war. Sometimes, but by no means always, they have determined the victor But they have never prevented war, and they never will.

Second, the next war, a war to be fought in the atomic age with atomic energy, will be incredibly and horribly terrible. It will be so awful that another war will probably destroy civilization. If it does not destroy man, it may drive him back again to the dark ages.

Third, there is and it seems that in all probability there can be no real protection against atomic energy. Atom bombs can be delivered and used in a hundred different ways.

Fourth, nations will go to war regardless of the terror or the consequences of war unless their sovereignty is made subject to international law and to an agency to enforce the law, a world organization above the nation.

The United Nations Organization, international law, the application of the principle of law between nations, a world court to interpret the law and to settle disputes between nations, a world force to enforce international law, to prevent conflict and aggression and to keep the peace, these are the keys to security for the future and the only agencies that can surely prevent war. While we remain prepared in an uncertain world we must strive toward these goals for our own salvation and the salvation of the world.

If we say that we cannot surrender any portion of our sovereignty to international law, a world court and a world organization, we must accept this inevitable result: the surrender of freedom as we have known it, the surrender of freedom to a greater degree than would come through a surrender of a portion of our sovereignty, the loss of personal liberty as we have cherished it, increasing regulation and control of our lives in civilian as well as in military matters in order to be prepared and ready as far as possible in every way for the war that will hang over our heads like the sword of Damocles and, in the end, is certain to come.

Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. BRIGGS. Mr. President, the citizens of my State are very much interested in the development of the Missouri River Valley. Recently the Governor of the State appointed an official commission to investigate various plans offered for the improvement of the valley. One of the commissioners, Mr. F. V. Heinkel, who is president of one of our great farm organizations, has made an excellent and a comprehensive report on this matter. I ask unanimous consent to have the report of the commission and the appended report of Mr. Heinkel printed in the Appendix of the RECORD.

I may say, Mr. President, that the Government Printing Office advises me that to print in the RECORD the manuscript I have submitted will cost $225.40.

There being no objection, the report and its accompanying statement were ordered to be printed in the RECORD, as follows:

THE COMMISSION'S UNANIMOUS REPORT, NOVEMBER 16, 1945

We agree that the Tennessee Valley Authority is of vast benefit to the people and the area served by it, and enjoys high standing among the people of the Tennessee Valley.

We agree that the bills pending in the Congress of the United States for the creation of a Missouri Valley Authority are objectionable.

We recommend that construction of reservoir projects in Missouri proposed and included in the authorized Pick-Sloan plan be deferred until those features of the plan have been again reviewed.

We agree that there is a necessity for a basin-wide control, development, and utilization of the water resources of the Missouri Valley.

We agree that national action in development of water resources is justified only when there are interstate characteristics operating to prevent successful development by private industry under State laws or by the States or subdivisions thereof.

We recognize that basin-wide coordinated control and maximum practicable utilization of water resources, including conversion of potential water power into pooled electric energy available for public use at the cost of production, is sound public policy. We recognize that this cannot be successfully undertaken by individuals, local or State government, or by private industry. We believe that this utilization of any river basin is regional and not national in scope. However, we do believe that it could be properly assigned to be executed by a regional authority created for and restricted to the accomplishment of that specific purpose. Thus restricted, we agree that it would not constitute an invasion into the fields of endeavor heretofore reserved under our form of government for development of resources by individual private industry or by State or local government.

SUPPLEMENTAL STATEMENT

(By F. V. Heinkel)

I

"We agree that the Tennessee Valley Authority is of vast benefit to the people and the area served by it, and enjoys high standing among the people of the Tennessee Valley."

My investigation in the Tennessee River Valley amply substantiate the Commission's conclusion that "The Tennessee Valley Authority has been of vast benefit to the people and the area served by it, and enjoys high standing among the people of the Tennessee Valley."

I made inquiries of scores of people in literally all walks of life, and during the whole tour I heard not one single complaint against TVA from anyone living within the area. Farmers, mayors, governors, businessmen, clerks, taxi drivers, laborers, bankers, editors, manufacturers, Republicans and Democrats—all agreed that TVA has been a wonderful influence for good in their region, and many of them admitted that they had fought the TVA from its inception until its deeds had proved their opposition to be wrong.

M. B. Spraggins, a banker-farmer of Huntsville, Ala., typically stated the case. He admitted he fought TVA from start to finish on the grounds that he objected to Government being in business of any kind. But now he approves. "If there is anything wrong with it I can't find it," he said, and added, "I don't believe the job could have been done without an Authority."

County Agent Mitchell, of Madison County, Ala., said, "We consider TVA one of the highlights of this county." Editor Ryndon, of the Chattanooga Times, whose paper opposed TVA in the beginning, said the Authority has been "so modest and self-effacing that the average person doesn't realize it is around." He said further that the Army engineers had tinkered with the river for a hundred years, but only since TVA came have there been satisfactory results in the way of flood control at Chattanooga.

T. J. Cottingham, of Decatur, Ala., who is president of a chain of 14 banks in north Alabama, and who also bitterly opposed TVA in the beginning, declared: "The outstanding result of TVA has been the improved social and economic condition of the people in the valley."

John A. Caddell, a lawyer, is president of the Chamber of Commerce at Decatur, Ala., and he was asked if the people of the region generally approve of TVA because of the results obtained, or because it is a "Santa Claus" propcsition with them. His indignant reply was that it is not a "Santa Claus" proposition—"We are going to pay it (the money) all back, plus develop the valley." (NOTE.—TVA expects to amortize the debt in about 30 years' time.)

A dairy farmer in Catoosa County, Ga., said, "The progress we have made with TVA over the past 10 years has been astounding to me," while another one said, "The TVA people are the nicest people we have ever dealt with."

Every one of the governors of the seven States in the Tennessee Valley has unqualifiedly endorsed TVA. "The rights and interests of the several States," they told the St. Louis Post-Dispatch, "have been strengthened by operations of the Authority." We, the Missouri commission, found that the Authority cooperates with and works through existing governmental agencies by means of contracts mutually agreed upon.

Perhaps the most remarkable thing of all about TVA, particularly when considering its scope and the magnitude of its task, is that it has won such universal approval. Nothing short of the production of great benefits to the people, plus fair dealings to all, could have brought about such a result.

Electric power: What are some of the accomplishments? Perhaps foremost have been the savings in electric bills and the expansion of the use of electricity. Consumers served by the 130 municipal and cooperative distributors of TVA power are saving an estimated $11,000,000 per year on their electric bills as compared with the cost of electricity under rates previously in effect. For example: In the TVA area prior to TVA service, the cost of residential service averaged about 5.7 cents per kilowatt-hour; in the 12 months ending April 30, 1945, the average cost was 1.87 cents per kilowatt-hour.

In the area now served by TVA power production of electricity has grown from about 1,000,000 kilowatt-hours in 1933 to more than 10,000,000,000 kilowatt-hours annually at present. While about three-quarters of the total has been used during the emergency for war purposes, residential users have increased their consumption of electricity from about 600 kilowatt-hours each, on the average, in 1933, to an average of 1,713 kilowatt-hours per customer in the 12 months ended April 30, 1945. On 29 of the systems average use exceeded 2,000 kilowatt-hours in the calendar year 1944, ranging as high as 3,300 kilowatt-hours per customer. The number of residential consumers has also increased from 225,000 in 1933 to 493,000 at present. As soon as war demands end, the people are looking forward to a much greater expanded use of electricity, such as heating their homes and the use of all kinds of electric appliances, together with a more widespread use in industry.

Navigation: Low water rates have been attracting new private industry into the region, we were told. The TVA system provides a 9-foot channel upstream 650 miles to Knoxville, and freight traffic increased on the Tennessee from 33,000,000 ton-miles in 1933 to about 206,000,000 ton-miles in 1943. Among the several new industries which have moved into the valley—a trend which has been interrupted by the war but is now expected to resume—is a flour mill whose general office is in Omaha. Its manager said his company was attracted to Decatur, Ala., because of low water rates and cheap electricity.

Whereas in the area served by the new flour mill cotton was once king, and agriculture was on a decline owing to a decline in soil fertility, wheat and other crops are now being produced. The flour mill was able to buy only $10,000 worth of soft wheat in the vicinity during its first year of operation. Three years later it bought $250,000 worth of soft wheat, and the acreage is increasing. A growing population caused by the location of new industries in the valley, plus the use of better farming practices stimulated by TVA, is developing a new dairy industry. King Cotton is being relegated to fewer acres of the best land. Rail traffic has been increased by the new business locating in the valley—most of the river traffic seems to be new business.

Soil conservation: The region is being vastly benefited by soil-conservation work promoted by TVA through the several State extension departments. Briefly, TVA furnishes the money to the State extension departments for the work TVA wants done in the watershed. The extension departments simply employ additional county agents to specialize on soil conservation. Extension departments, using TVA funds, publish any literature needed.

At Muscle Shoals, TVA has been producing high analysis fertilizers from low-grade phosphate rock under a new electric furnace process developed by TVA scientists, and these fertilizers have been furnished to farmers over the area to carry on educational demonstrations, showing how soil conservation can be accomplished on the one hand, while farm profits can be increased on the other. The silt is thus being kept out of the reservoirs, while at the same time farming is made more efficient and the entire area more prosperous.

Wildlife and recreation: Soil conservation and better farming practices, with a greater diversification of crops, are promoting wildlife and recreation. The people told me that quail and wildfowl are increasing, and the lakes are teeming with fish. I was told by businessmen that the lake near Decatur, Ala., had more than a half-million dollars worth of pleasure craft on it last summer, and that several war industries in the region expect to convert themselves into boat manufacturers as soon as war work is finished. Located not too far from densely populated areas of the Nation, the people are expecting the region to become a vast playground, which will bring millions to the people in the area.

Flood control: The TVA's integrated system of 26 dams—5 of which are owned by the Aluminum Co. of America—provides space to store 13,000,000 acre-feet of flood waters at the height of the flood season. At the close of the flood season, around April 1, there is still storage space for 10,000,000 acre-feet. This is the way the system works to control floods and at the same time to generate electric power:

By the time the rainy season begins, the TVA tributary reservoirs have been drawn down to provide storage for floodwaters. Space is also reserved in the mainstream reservoirs for the same purpose. During the rainy season, when the streams are run-

ning full, the power plants on the mainstream, the Tennessee, carry most of the power load, while the powerhouses on the tributaries (Norris on the Clinch, Douglas on the French Broad, etc.) are closed down. As the end of the flood season approaches, the reservoir levels are allowed to rise gradually, and with the end of the major flood danger, all possible stream flow is stored. Then, during the low-flow periods of summer and fall when there is less rainfall, the stored water is released to maintain the navigation channel and produce power at both the tributary dams and the nine dams on the mainstream. These releases, drawing down the reservoirs, provide storage capacity for the next flood season.

Flood control is a major function of TVA, and during flood periods on the Ohio and Mississippi Rivers TVA flood control is correlated with that of the Army engineers. The TVA system is calculated to be able to reduce flood stages at Cairo by as much as 3½ feet.

Inundation of land: TVA has permanently inundated about 462,700 acres of land. Of this, about 298,000 acres were crop and pasture land, of which practically all was previously subject to destructive and periodic flooding. Investigations as a member of the Missouri Commission satisfied me that this loss of productive acres has been more than overcome. In the first place, thousands of acres of land, including land on which towns and cities are located which had been subject to frequent floods, have been permanently protected against further inundations.

But in addition, TVA, working through the several State extension departments, has stimulated the use of fertilizers and better farming practices on the uplands. This has been done by TVA mostly in order to retard the soil erosion which fills up reservoirs. Most people do not realize the importance of fertilizers in erosion control. For example: The Missouri Experiment Station found that "during the rainy period in 1944 at Columbia, the runoff was 60 percent for a grass plot that had not been fertilized. From an adjoining and corresponding plot, where the soil had been fertilized and a dense sod prevailed, the run-off was only 12 percent of the rainfall."

The better farming practices include, besides the use of high-analysis fertilizers, contour farming, strip cropping, terraces, reforestation on marginal areas, the growth or more legumes, the use of better seeds, more livestock, etc. Cotton, formerly the chief crop, is being restricted to fewer acres of the best land and the use of fertilizers has maintained as high a production on the fewer acres as formerly on the larger acreage. Altogether, the increased production on the uplands has more than offset the loss of production on the land that is now permanently flooded.

The tax situation: The tax situation has been taken care of in the Tennessee Valley. TVA took the average taxes paid to State and local governments over the 2-year period prior to the time they acquired the land, on all occupied land and property, and is returning that amount in lieu of taxes—one-twelfth of it each month. In the fiscal year 1944, TVA paid $2,168,798 to States and counties in lieu of taxes, and in fact, in 1944 the payments by TVA exceeded the former taxes on purchased power properties and on all reservoir lands by more than $790,000. Besides this, all of the net income of TVA belongs to the Federal Government and is available for Federal purposes in the same manner as taxes.

Land purchases: I found that whereas other branches of the Federal Government have been slow about paying farmers and other landowners for land taken for developments (some farmers in the Weldon Spring, Mo., area haven't been paid yet) the TVA paid for the lands before any developments were begun. Farmers told me they continued to use the land a year or more before TVA began operations. When farmers were bought out by TVA they were not simply paid off and moved out into the highways to become a health menace, as well as a prey to real-estate sharks. TVA specialists helped them to find new homes at the proper prices, helped them start life anew in new locations on the uplands.

Public health: TVA has concerned itself with the health problem. Malaria, once the worst human plague in the area, is being controlled by the Authority. It keeps down the malaria-bearing mosquitoes by raising and lowering the lake levels at frequent intervals—the mosquito larvae are stranded on the vegetation when the lakes are lowered and are destroyed by the sun; when the lakes are raised the new crop of larvae is set afloat for the fish to consume. Low areas on the lake fringes are sprayed with insecticides.

Phosphate developments: At Muscle Shoals which I, the only member of the Missouri commission, visited, I learned that TVA has conducted extensive experiments with fertilizers. It has developed a new process which enables it to economically produce high-analysis fertilizers from low-analysis phosphate rock. Samples for demonstrations have been sent out over the region, as well as to several other States including Missouri, so that farmers in cooperation with State extension departments could demonstrate to all the results from its use. These demonstrations have greatly stimulated the more extensive use of fertilizers sold by private manufacturers. As a result of these demonstrations in the Tennessee Valley soil erosion has been retarded through the growth of legumes and other plants which hold the soil and at the same time restore the humus which absorbs and holds water on the land.

The phosphate plant at Muscle Shoals has furnished nitrogen and phosphorus and other products for the Government in winning the war, just as TVA electricity helped produce the atom bomb further upstream. Its laboratories have also tested phosphate deposits elsewhere in the Nation for the people, including private industry.

Some conclusions: I found that TVA is not doing one thing that is not already being done one way or another by the Government elsewhere in the Nation. The only difference is the method. For example, the Reclamation Department is producing electric power, and distributing it. The Army engineers have been working on floods for 100 years. TVA has built towns, schools, and other business enterprises for its workers on the projects (most of which it has now disposed of), but so have the Army engineers (see Fort Peck in Montana). Soil conservation and reforestation, wildlife and recreation, have been promoted for years by various branches of the Government. TVA is engaging in no kind of business except electric power, and this only in a wholesale manner. All other activities are on either an experimental or demonstrational basis, calculated to help private industry and the people generally. The only difference has been in the method—TVA does it on a regional, or watershed basis, with all the activities coordinated, and with the Authority located where the people can see it, talk things over with it, understand it. This fact, to my mind, is why the people in the region so universally approve of the Authority * * * they see it, talk to it, understand it, and cooperate with it.

II

"We agree that there is a necessity for a basin-wide control, development and utilization of the water resources of the Missouri Valley.

"We agree that national action in development of water resources is justified only when there are interstate characteristics operating to prevent successful development of private industry under State laws or by the States or subdivisions thereof.

"We recognize as sound public policy that basin-wide coordinated control and maximum practicable utilization of water resources, including conversion of potential water power into pooled electric energy, should be made available for public use at the cost of production. We recognize that this cannot be successfully undertaken by individuals, local or State government, or by private industry. We believe that this utilization of any river basin is regional and not national in scope. However, we do believe that it could be properly assigned to be executed by a regional authority created for and restricted to the accomplishment of that specific purpose. Thus restricted, we agree that it would not constitute an invasion into the fields of endeavor heretofore reserved under our form of government for development of resources by individual private industry or by State or local government."

The conclusions of the commission above noted and unanimously agreed to, constitute in my opinion a strong and unqualified endorsement of the principles of a Missouri Valley Authority, as well as a condemnation of the presently authorized Pick-Sloan plan.

The commission's statement that "National action in development of water resources is justified only when there are interstate characteristics operating to prevent successful development by private industry under State laws or by the States or subdivisions themselves" is merely a recognition of our system of democratic government and our American free way of life to the effect that the Federal Government should perform only those functions which cannot successfully be undertaken by the people themselves or the States or local subdivisions themselves. However, it is noted that the commission agreed that, as to the water resources of the Missouri Valley, there are interstate characteristics operating to prevent their development by private industry or by the States or subdivisions themselves, and on this point the commission concluded "that this (basin-wide coordinated control and maximum practical utilization of water resources) cannot be successfully undertaken by individuals, local or State governments, or by private industry." The commission was unanimous in its opinion of the "necessity for a basin-wide control, development, and utilization of the water resources of the Missouri Valley."

The water resources of the Missouri Valley for over a century have been subject to control, development, and utilization by private industry or by the States or local subdivisions themselves, but during this period of time the waters have been uncontrolled and have failed to be developed and utilized for the benefit and welfare of the people. The runoff of the water on the uplands, washing away and eroding the soil, has continued at such an accelerated pace that much of the fertile soil of the Missouri Valley now rests in the Gulf of Mexico. Devastating floods continue to occur and to occur more frequently, causing untold loss of and damage to property, loss of life, and great suffering. Power and electricity at the lowest possible cost have not been made available to the people, so that many of the farms of Missouri continue and would continue to do without the commonplace wonders of electricity and electric power. Industrial development in the Missouri Valley has been retarded by the failure to harness the waters of the Missouri and make it work for the people rather than against the people. Today only 24 percent of the farms of Missouri have electricity, and much of this power is excessive in cost. Private industry and the States or subdivisions themselves have thus miserably failed to control, develop, or utilize the water resources of the Missouri Valley. And because the Missouri Valley covers a great portion of more

than 10 States, there do exist interstate characteristics for its control, development, and utilization which prevent successful development and utilization by private industry or the States themselves of the water resources of this great valley.

Therefore, the commission very correctly and reasonably unanimously agreed, after extensive and detailed study, that the control, development and utilization of the water resources of the Missouri Valley must of necessity be basin-wide in scope because such could not be successfully undertaken by individuals, local or State government, or by private industry.

The commission further unanimously recognized "as sound public policy that basin-wide coordinated control and maximum practical utilization of water resources, including conservation of potential water power into pooled electric energy, should be made available for public use for the cost of production," and agreed that such "would not constitute an invasion into the fields of endeavor heretofore reserved under our form of government for development of resources by individual private industry or by State or local government." The conclusions of the commission are answer to those who have charged and may continue to charge that a regional authority or basin-wide control of the water resources of the Missouri Valley is an invasion into the fields of private endeavor and as such is socialistic in nature. The Federal regional authority for the Missouri Valley would be performing those functions which the people themselves, which private industry itself and which the local or State governments themselves have not and could not perform. The best proof of that fact is that they have not yet been performed although the Missouri Valley has been open for development by private industry for over a century. If the water of the great Missouri River is to be controlled and if industry and farming in the Missouri Valley are to be properly developed, then full utilization of the water resources must be made. First of importance is the control of floods which not only cause great human suffering but cause ruinous loss of property and the washing away of the fertile soil of the Missouri Valley. Control of floods means soil conservation on the uplands, the development and utilization of the great phosphate deposits of the upper valley for fertilization of the soil and the building of many small reservoirs and lakes. The water should be then utilized in the dry regions of the upper Missouri Basin for irrigation and to bring into productivity lands not now arable. Lastly, conversion of the water on its onward rush to the sea into electrical energy to bring light and power and the benefits resulting therefrom to the people of the Missouri Valley is of the utmost importance. That can be accomplished only when the control of the water resources of the Missouri Valley is in a basin-wide authority created for the accomplishment of those purposes.

The commission further subscribed to the belief that "this utilization of any river basin is regional and not national in scope." In that conclusion the commission condemned the principles of the Pick-Sloan plan for the control and development of the water resources of the Missouri Valley. The Pick-Sloan plan is a part and parcel of a national scheme. It is administered by national agencies operating on a Nation-wide basis. Those agencies are the War Department, the Department of the Interior, the Federal Power Commission, and the Department of Agriculture. The chief administrative officer of each of those departments, charged with the execution of the Pick-Sloan plan, holds his position and is responsible for many functions national in scope and not specifically related to the problems of the Missouri River Basin. Those Departments are administered, not from offices in the region of the Missouri Basin, but from national offices located in Washington, D. C. Therefore, this conclusion of the commission definitely calls for a regional authority for the Missouri River Basin and not control and development by Nation-wide agencies of the Federal Government which are not restricted nor confined to dealing with the problems of and the control, development, and utilization of the water resources of the Missouri Valley. The Pick-Sloan plan not only is a plan injurious and detrimental to the welfare and interests of the people of Missouri, but it is a plan which is unsound in principle for the successful development and utilization of the water resources of the Missouri Valley.

In my opinion the above unanimous conclusion of the members of the commission constitutes a definite recommendation for the creation of a region-wide authority for the control, development, and utilization of the water resources of the Missouri Valley, and further constitutes a definite condemnation of the principles of the now authorized Pick-Sloan plan.

III

"We recommend that construction of reservoir projects in Missouri proposed and included in the authorized Pick-Sloan plan be deferred until those features of the plan have been again reviewed."

The conclusions of the committee that the execution of the Pick-Sloan plan should be held in abeyance until reviewed is an important one and one which in my opinion is deserving of some elaboration on the reasons therefor. It is my opinion that upon review of the Pick-Sloan plan by the people, the plan will be found to be highly objectionable and one which should be discarded and replaced by a single basin-wide authority established in conformity with the conclusions No. 2 of the commission, above set forth. The Pick-Sloan plan, upon careful review by the people and the Congress, will be found objectionable for the reasons herein noted.

The Pick-Sloan plan does not create or establish a basin-wide authority for the control, development, and utilization of the water resources of the Missouri Valley. It is merely a plan, approved by Congress, under which existing Federal agencies are to do parts of the work of developing the Missouri River Basin. It is only a plan based upon the voluntary cooperation between four independent Federal agencies as to the part each will take in the execution of the contemplated program. Part of the Pick-Sloan plan is to be administered by the Bureau of Reclamation of the Department of the Interior; part by the Corps of Engineers of the War Department; part by the Federal Power Commission; and part by the Department of Agriculture. Thus, the Pick-Sloan plan does not furnish an actual basin-wide authority, created for and restricted to the control, development, and utilization of the water resources of the Missouri Valley, found to be absolutely necessary by the unanimous vote of the commission, but on the other hand, represents a continuation of the hodge-podge program of dealing with the problems of the Missouri Valley.

The laws adopting the Pick-Sloan plan vest almost absolute and arbitrary control in the development and execution of the plan in two individuals—the Secretary of War and the Secretary of the Interior. It is noted that part of the plan was approved by Public Law 578, Seventy-fifth Congress, enacted June 28, 1938, and the language used therein vests power to modify the plan in the sole discretion of the Secretary of War and the Chief of Engineers, as follows:

"The general comprehensive plan for flood control and other purposes in the Missouri River Basin, as set forth in Flood Control Committee Document No. 1, Seventy-fifth Congress, first session, with such modifications thereof as in the discretion of the Secretary of War and the Chief of Engineers may be advisable, is approved * * *."

It is noted that this is the law which first approved the plans for the construction of the large reservoirs in Missouri, which will inundate thousands and thousands of acres of Missouri farmlands, with no corresponding benefits to the people. Furthermore, House Document No. 475, Seventy-eighth Congress, second session, which constitutes the Pick part of the Pick-Sloan plan, approved by Public Law 534, Seventy-eighth Congress, in December 1944, provides as follows:

"That the general comprehensive plan for flood control and other purposes in the Missouri River Basin, approved by the act of June 28, 1938, as modified by subsequent acts, be expanded to include the plans presented herein, and as expanded be approved for prosecution by the War Department under the Secretary of War and the supervision of the Chief of Engineers, with such modifications thereof and changes therein as in the discretion of the Secretary of War and the Chief of Engineers may become advisable."

Furthermore, the act of December 1944, approving and authorizing the Pick-Sloan plan authorized an appropriation of $200,000,000 "for the partial accomplishment of the works to be undertaken under said expanded plans by the Corps of Engineers," and authorized the appropriation of $200,000,000 "for the partial accomplishment of the works to be undertaken under said plans by the Secretary of the Interior."

Therefore, not only does the Pick-Sloan plan vest far greater control in fewer individuals in the execution of the plan for developing and utilizing the water resources of the Missouri Valley than does any proposed regional authority, but it also vests such control in individuals who are not restricted to dealing with the problems of the Missouri Valley. The Pick-Sloan plan constitutes the handling of the problems of the Missouri Valley on a national basis rather than on a regional or basin-wide basis. Those directing the activities of the national agencies taking part in the development and execution of the Pick-Sloan plan are not required to reside in or maintain offices in the Missouri Valley. Those individuals will continue to reside in and maintain offices in Washington, D. C., rather than in the Missouri Basin. Therefore, the real heads of those agencies, charged with the responsibility for the control, development, and utilization of the water resources of the Missouri Valley under the Pick-Sloan plan, will be far removed from the people and the actual interests of the Missouri Valley.

It will be found that the paramount interests and rights of the people of the State of Missouri were ignored in the development of the Pick-Sloan plan. In order to give a semblance of taking into consideration the rights and interests of the States and the people of the Missouri Valley, there has been voluntarily created a so-called "Interagency Committee," which has no statutory standing and is merely advisory in capacity and does not exercise and cannot exercise any real control or jurisdiction over the Federal agencies involved in the development and execution of the plan. Statutory standing for this committee has been proposed, but even then it would remain advisory in capacity, for any attempt to make the four existing Nation-wide Federal agencies subject to the control of State governors would clearly be illegal and in violation of the Federal Constitution. The most that the so-called Interagency Committee could do would be to advise and try to keep the four Federal agencies working in harmony on the plan, but in the event of serious disagreement the committee would be powerless to act. Therefore, the Interagency Committee is merely an effort to give lip service to the real interests of the people and the States in the Missouri Valley.

Not only is the Pick-Sloan plan erroneous in principle, administered by too many Federal agencies, too far removed from the people and the interests of the people ignored, but it is noted that the plan itself is detrimental to the interests and the welfare of the people of Missouri. The plan calls for the construction in the State of Missouri of numerous reservoirs which will inundate thousands of acres of Missouri's most fertile land. These reservoirs which are now held as a part of the plan for the control, development, and utilization of the water resources of the Missouri Valley were first proposed, not for the development of the Missouri Basin, but for flood control in the lower Mississippi and for an aid to river navigation. In House Document No. 238, Seventy-third Congress, second session, dated September 30, 1933, the Chief of Engineers of the War Department, in recommending the construction of these gigantic reservoirs, said:

"For the primary purpose of alleviating flood conditions on the lower Mississippi River a system of seven reservoirs with an aggregate gross capacity of 9,405,000 acre-feet is suggested by the district engineer, as follows."

Then are listed the reservoirs at Richland, Arlington, Osceola, South Grand, Pomme de Terre, Chillicothe, and Garfield. In that same report it is stated that due to the method of operation proposed for these reservoirs, the development of anything but secondary power at widely separated intervals would be impractical.

Therefore, there is no assurance that the impounded water will be utilized to produce electric power so vitally needed for the advancement and the betterment of the people of Missouri, but, on the other hand, it is practically conceded that the dams will be so operated for flood control on the lower Mississippi and for aid to river navigation that it will be impractical to convert the water power into electrical power. Such a scheme constitutes a tremendous waste of the water resources of the Missouri Valley to the detriment of the people of Missouri. Furthermore, as the construction of the reservoirs is planned also as an aid to river navigation, that will constitute a Federal subsidy to a special-interest group, involving the expenditure of hundreds of millions of dollars of the taxpayers' money with little return of benefits to the people.

The lands condemned for such reservoirs will be removed from local and State tax rolls and will seriously affect the operation of local schools and county governments in at least 17 Missouri counties. These unfortunate counties are Bates, Chariton, Cooper, Daviess, Grundy, Henry, Hickory, Livingston, Monroe, Macon, Pulaski, Ripley, Stone, Shannon, St. Clair, Taney, and Vernon.

Furthermore, the Pick-Sloan plan proposes the construction of huge levees along the Missouri River from Sioux City, Iowa, to the mouth. These levees will virtually destroy and remove from production thousands of acres of fertile bottom land which is some of the most productive in the State of Missouri. Such a scheme is not flood control, but an admission that the river cannot be controlled and a plan to destroy by levees the land which is now subject to flood, as well as to destroy by reservoirs thousands of acres of additional land.

Lastly, the Pick-Sloan plan fails to adequately deal with the great problem of soil erosion, which, over a period of years, costs the State and Nation four times as much as do floods. If floods are to be controlled, then soil erosion must be arrested, and this will mean slowing down the run-off of water in the up-lands and holding it there as long as possible and straining out the silt instead of permitting it to rush wastefully down to the creeks and rivers so as to bring about ruinous floods in the low-lands.

It is for these reasons that the Pick-Sloan plan should be reviewed by Congress and the people. The objections above noted cannot, in my opinion, be met by a revamping of the Pick-Sloan plan but can only be remedied by discarding entirely the future development of that plan and by creating a basin-wide regional authority to deal specifically with the problems of the control, development and utilization of the water resources in the Missouri Basin.

IV

"We agree that the bills pending in the Congress of the United States for the creation of a Missouri Valley Authority are objectionable."

It is noted that the commission unanimously concluded that the presently pending Murray bill for the creation and establishment of a Missouri Valley Authority is objectionable. Certainly, in view of the other conclusions arrived at by the members of the commission, no member of the commission could contend that the principles of a Missouri Valley Authority are unsound. In my opinion, the only objection to the presently pending bill is that the authority should consist of more than the three members proposed. It is my opinion that the authority should probably consist of at least 10 members, one appointed from each of the States in the Missouri River Basin by the President with the consent and approval of the Senate and that the appointee from each State be from a list of nominees submitted by the governor of each of the respective States in the Missouri Valley. This method of nomination and appointment of the directors of a Missouri Valley Authority would assure that the agency would remain responsible to the people of the Missouri River Basin and would assure the recognition and protection of the rights and interests of each State in the development and execution of an over-all plan for the development of the Missouri Basin. This objection could be met by amendments to the pending bills, but, even if not amended, the Missouri Valley Authority proposed in the pending bill is still superior to the Pick-Sloan plan and should, in my opinion, be adopted, rather than permitting the further waste of the taxpayers' money in developing the Pick-Sloan plan.

CONCLUSIONS

The Pick-Sloan Flood Control Act of December 22, 1944, is a compromise plan which is to be administered in Washington by four Federal agencies. This hodge-podge plan is not only inadequate to meet the needs of the Missouri Valley, but in my estimation it is detrimental to the best interests of the people in the State of Missouri, because:

1. The seven huge reservoirs planned for the basin in Missouri will inundate 450,500 acres of Missouri's best land. Only 388,000 acres of land will be protected, and 301,000 acres will not be protected at all. They are intended, according to a report of the Army engineers to the War Department (Sept. 30, 1933), for the primary purpose of alleviating flood conditions on the lower Mississippi, and any flood and electric power benefits to the Missouri River Basin will be incidental. The Army engineers themselves, who are to administer the Pick-Sloan Act in this State, admit, therefore, that the State of Missouri is to be damaged out of all proportion to any benefits derived from the compromise plan.

2. Enormous levees, providing a trough for the Missouri River 3,000 feet wide from Sioux City to Kansas City, and 5,000 feet wide from Kansas City to the river's mouth, are provided for under the Pick-Sloan plan. Set back approximately ½ mile from the river's banks on either side, these big levees will ruin practically one acre for every acre of land they will protect. The very plans for these big levees are an admission by the Army engineers that the big reservoirs will not protect the Missouri Valley in this State from floods. They are an admission that the Army intends to deal with floods here in Missouri after the waters have swept down into the lowlands. Levees represent an age-old, fossilized thinking such as prevailed when huge levees were constructed along the Yellow River in China generations ago. Because of siltation, which the Pick-Sloan plan does not adequately deal with here, the Yellow River now flows between two walls—the bottom of the river is now higher than the land behind the levees. One does not have to be an engineer to foresee that the same conditions will one day be found in the Missouri River bottoms.

3. While there has been much ado about the generation of power at the dams scheduled for Missouri under the Pick-Sloan plan, and penstocks will reputedly be installed, the Army engineers themselves, when the seven dams in the basin in Missouri were first proposed, declared that only "secondary power at widely separated intervals" could be produced, and that several power sites would be ruined by the dams. Therefore, the Pick-Sloan plan, so far as the State of Missouri is concerned, offers little promise of alleviating some of the drudgery around the farmstead and in the homes; and as the sole farmer member of the commission I deplore this fact, because 71.6 percent of the Missouri farms are still without this blessing which is so commonplace to city dwellers, while at the same time under the Pick-Sloan plan the power to produce it will be wasted. I submit that this is a disgrace to the State of Missouri. By the same token private industry in our State is to be denied the benefits of low-cost electric power, and thus under the Pick-Sloan plan industrial development and greater employment which spells prosperity, not alone to city and town dwellers but to Missouri agriculture which needs better nearby markets, will not be encouraged. This is of the utmost importance, because, for example, had Missouri enjoyed the same low electric rates as are charged by TVA, Missourians would have saved $39,000,000 on their $80,000,000 electric bill last year.

4. Designed primarily for flood control on the lower Mississippi, the several reservoirs will be filled up during rainy seasons and drawn down during dry seasons, whereupon huge mud flats with an accompanying stench and mosquito habitat will be created. This will create a public nuisance and public health hazard. For an example, I refer those interested to residents of Greenville, Mo., in Wayne County, where the Wappapello Dam was built on the St. Francis River. The Pick-Sloan plan proposes to create a mess for our State, and offers to do nothing about it.

5. Lands condemned for reservoirs over the entire State of Missouri by the Pick-Sloan plan will cause serious loss in taxes to school districts and county and municipal governments in at least 17 counties. For, unlike TVA and as is proposed under the MVA plan, the Pick-Sloan plan makes no provision for in-lieu-of-tax payments (except in cases where marginal land is rented to farmers, which will be negligible). The 17 counties that will be most affected are: Chariton, Grundy, Bates, Cooper, Daviess, Henry, Hickory, Livingston, Monroe, Macon, Pulaski Ripley, Stone, Shannon, St. Clair, Taney, and Vernon. In addition the counties located adjacent to the Missouri River where the big levees are to be constructed will be affected more or less. There is no way to reliably estimate the damage to our State in this respect * * * for towns will be adversely affected that are located at some distance from the mechanical structures and the inundations. Other property owners elsewhere in the State will no doubt be required to make up the difference in tax revenue.

6. Only backhanded and incidental recognition is given to soil conservation by the Pick-Sloan plan, notwithstanding soil erosion is costing the State and Nation four times more than floods over a period of years, and notwithstanding the Army engineers themselves admit that the huge reservoirs will be silted up within 50 years' time. The

law says some soil conservation work shall be done by the United States Department of Agriculture, but this Department itself does not know what is to be required of it. Every person conversant with the subject knows that floods begin on the uplands where the rain falls, and as a farmer I contend that the place to begin dealing with floods is on the uplands, and not after the uncontrolled waters have swept down into the lowlands.

7. The Pick-Sloan plan gives only lip service to wildlife and recreation. I maintain that wildlife and recreation in our State will be greatly damaged—the wide fluctuation in the water levels of the huge reservoirs will be detrimental to fish life, while several of Missouri's scenic streams and springs that are admired by the Nation wil be ruined forever.

8. Friends of the Pick-Sloan plan and opponents of the MVA talk a lot about the Interagency Committee. They put it forth as a substitute for a Missouri Valley Authority. Composed of four governors in the Valley and certain Federal departments, they urge that it be given statutory standing, and suggest that it act as a referee to settle disputes under the Pick-Sloan plan. In the first place, it is an admission of the need of a Missouri Valley Authority. But in the second place it is an absurdity. For, does anyone seriously believe that the several Federal agencies, such as the Army engineers and the Reclamation Bureau, represented on the committee will allow themselves to be outvoted? And since when has it become wise for men to sit on their own board of directors? Governors are busy men. They would have to have substitutes of lesser ability to deal with the problems for them by proxy. Moreover, the Federal Government cannot, without changing its Constitution, permit State governors to decide policies of the Federal Government. It would be a strange thing, indeed, if a time came when four State governors could tell the Army, for example, what to do and what not to do. And how could the Interagency Committee act as a referee without any power? Webster's dictionary defines referee as "one to whom anything is referred for decision." It would certainly be a radical departure from custom if Congress delegated powers to an agency composed of State governors and miscellaneous bureaus to decide things for the Army.

9. No recognition whatever is given by the Pick-Sloan plan, unlike that of the MVA plan, to research and experimental work necessary for the development of phosphate deposits in the Northwest where lie, undeveloped, 80 percent of the Nation's known phosphate deposits. Missouri farmers now use phosphates from Florida and Tennessee, and these deposits will be exhausted in about 30 years. Missouri farmers must have phosphate fertilizers in ever-increasing amounts if soil fertility is to be maintained and the health of our people who subsist upon Missouri's agricultural products is to be safeguarded. Every Missourian ought to investigate the experiments made at the Missouri College of Agriculture which show that runoff on a plot of sod was reduced from 60 percent to 12 percent by the mere application of fertilizer, and the experiments which show how essential this plant food is to the nutrition of the livestock of our State and hence to the people who consume the livestock.

The Army engineers have already spent $319,000,000 on the Missouri River for navigation and flood control. Neither objective has been attained, as witness the grandiose schemes to promote navigation and flood control contemplated by the Pick-Sloan plan. On the contrary, the flood sitution has been aggravated. (As proof, figures recently released by the Department of Resources and Development of the State of Missouri, based upon information obtained from the annual reports of the Chief of Engineers and the United States Geological Survey, indicate that the carrying capacity of the channel has been reduced by from 13 to 41 percent at various points from St. Joseph to Hermann.) The river has been choked off by an extensive system of dikes placed in the river, and the most that can be claimed for this enormous expenditure is that the river's banks have been stabilized, but even now the pilings are rotting off and more trouble lies ahead.

Notwithstanding this failure, however, the Army engineers, under the Pick-Sloan plan which they helped to promote, now want an additional $700,000,000 for navigation and flood control. What assurances do the people have that they will succeed in view of their past record?

As a member of the Missouri commission, with the profound responsibility of making recommendations on which plan would best serve the Missouri River Basin and the people thereof in the development of its resources, I most earnestly call the attention of all Missourians to the fact that under the Pick-Sloan plan the State of Missouri will be greatly damaged—damaged out of all proportion to any benefits derived therefrom.

I think most of our citizens agree that the river's devastating floods must be controlled as nearly as possible, and I submit that under the tried and proven TVA plan this can be done without so much damage to our State. On the contrary, a careful study of the Tennessee River Valley makes it crystal clear to me that under an integrated, unified, balanced plan patterned after the TVA the resources of the valley can be conserved, developed, and utilized, thereby stimulating the growth of private enterprise in the valley, which will spell better markets for farm products, jobs for thousands of workers, opportunities for private business, both large and small.

I most vigorously maintain that the Missouri River should be harnessed and put to work for the people under a plan similar to that of TVA, and not merely be put into a strait-jacket at the taxpayers' expense as is proposed by the Pick-Sloan plan.

Pending Legislation and Problems of Labor

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. SABATH. Mr. Speaker, under leave given me I insert in the RECORD a speech delivered by the Honorable William Green, president of the American Federation of Labor, on December 4, 1945. The occasion was a caucus in the Old House Office Building attended by more than 100 Members of the House desirous of learning the facts about antilabor legislation then under consideration. The subject of Mr. Green's address was Pending Legislation and Problems of Labor, and his remarks were particularly directed to the then pending bill, H. R. 3937, the so-called May-Arends-Smith bill. It is my opinion that what he said then applies with even greater force to that monstrosity now pending, H. R. 5262, which carries many more, and more objectionable, vicious and restrictive antilabor provisions; which was never read, heard, or considered by the Committee on Labor; and which the Rules Committee has made in order for consideration as a substitute for the Randolph fact-finding bill in defiance of all orderly procedure of this great House. The text of Mr. Green's speech follows:

Chairman SABATH. The meeting will come to order. Many Members have said that leaders and spokesmen for labor were not granted an opportunity to be heard before the Committee on the Judiciary on H. R. 3937 and H. R. 3938, two bills which obviously threaten all that labor has gained in two decades. Therefore, some of us decided to call together Members who desire to hear the real facts in regard to these bills.

I am indeed gratified there are so many of you here. Do not fear that I shall talk a long time. I shall not. We have here today several gentlemen whom you want to hear and whom you came to hear. They have served equally their country and the cause of labor all their lives and are recognized as spokesmen for organized labor. There is one outstanding gentleman here who desires an opportunity to place before Members of the House his position, and the position of the great organization he represents, on these pending bills which have been granted such broad and liberal rules that any amendment, no matter how vicious, would be in order.

Now it is a pleasure and a privilege to call on Mr. William Green, president of the American Federation of Labor, who will address you.

Mr. GREEN. Congressman SABATH, Members of Congress, and friends, first may I express to Congressman SABATH my deep appreciation of the steps he took to call this conference and to the Members of Congress and their friends who are present here. I interpret your presence and the action of the chairman of this meeting as evidence of your definite interest in this antilabor legislation, which is now pending in Congress, and of your desire to know the sincere and honest attitude of labor toward said legislation.

Our membership will deeply appreciate the report they receive from us of your attendance at this conference this afternoon.

First of all, I want to state with all the emphasis at my command and in a most vigorous way that the 7,000,000 members of the American Federation of Labor are united, thoroughly united in opposition to this antilabor legislation to which I will refer in just a few moments. It is policies of this kind that serve to cement labor, to unite it, to place it upon a common basis and there they stand; feeling as one, thinking as one, and acting as one.

I think I can also speak out of knowledge of the understanding about the state of mind of men and women of labor and other organizations. It is my opinion that all of them stand on the same basis. There is no division. They are aroused, and are united in their solid determination, immovably in opposition to this antilabor legislation.

It occurred to me that I should make those statements to you so there would be no misunderstanding by you of the attitude of labor toward this pending legislation.

First of all, may I refer to H. R. 3937, a measure offered to repeal the War Labor Disputes Act and to provide penalties for stoppages of work and breach of contract. This measure was proposed by those who were associated with the Military Committee as an amendment to the Smith-Connally Act, and by the way, may I point out that when the Smith-Connally Act was pending in Congress the American Federation of Labor appealed to the Members of Congress to defeat that measure because instead of a strike-prevention measure it would prove to be a strike-promotion measure. Do you recall those prophetic words, that prophetic appeal that was made when that act was pending? All that we prophesied has happened and more, too.

The Government of the United States and the taxpayers of the Nation have been called upon to spend thousands of dollars in holding elections designed for promotion of strikes. Even the authors of the measure now realize that it was a mistake. Now they are engaged in steps to make the same mistake—even a worse mistake—by proposing to enact these amendments to the Smith-Connally Act as provided for in H. R. 3937. In fact, what ought to happen is this: That the Members of the House of Representatives and of the Senate ought to rise up to new heights and repeal the Smith-Connally Act in its entirety.

Now, may I make an observation? In September 1945, Representative SMITH of Virginia introduced a bill to repeal the War Labor Disputes Act—the Smith-Connally Act—and thereby terminate strike ballots under the present act. You will recall that only a short time ago the appropriations committee of one of the Houses decided to strike a blow at the Smith-Connally Act and as a result they refused to appropriate any more money.

On October 13, 1945, the House Committee on Military Affairs reported the bill out with certain amendments, whereupon it was submitted to the whole House. It is now pending in the House of Representatives. This bill is H. R. 3937. It provides for two new proposals with serious penalties for work stoppages and breaches of contract in an agreement which contains a no-strike clause. It provides that activities and conditions of this nature be brought to an end and made unlawful.

We know that a measure sponsored in Congress by a Member of Congress who is known to possess broad liberal views will be a measure to promote the public interest, but when a measure is sponsored and supported by those whose constant record over years and years has been antilabor, we know that that bill is designed to strike at the heart of labor; and when a bill is sponsored by men whose record is such as has been made by Congressman SMITH of Virginia, Congressman Cox from down in the South, Congressman HOFFMAN, of Michigan, the kind of men who have been constantly antilabor, we know then that any bill sponsored by those men is antilabor And these men, I feel sure, who have always been regarded as enemies of labor are taking advantage of a disturbed public opinion, aroused for various causes, to secure the enactment of this antilabor legislation.

The provisions of H. R. 3938 with respect to strike penalties reads: "In the event of any strike or concerted failure to bargain on a contract which includes a no strike provision, the employer shall be relieved of any obligations under the contract and the labor organization shall lose its status as a bargaining agent for a period of a year. Any such organization which is a party to the contract may be sued and in its own name in any Federal court in which any of the officers reside and be found responsible in damages."

Labor understands that proposal, how it strikes at the heart of labor. If enacted into law it will serve to cripple, if not destroy labor organizations. I will go into that in a moment just a little more fully. It is apparent that many evils are in the foregoing provision. The use of the words "concerted collective bargaining" brings back to life the common law doctrine of conspiracy. That is, while it is lawful for one man to quit work, it is unlawful for two or more to do so.

Also, the section is written that a violation by a party to the agreement, no matter how insignificant the violation may be, relieves the employer of any obligation under the contract. It is shocking to think that the Members of Congress would entertain such a proposal for a single moment. Most significant is the unfair and unjust provision that a labor organization shall lose its status as a bargaining agent for a period of years when it is guilty of breach of contract, yet an employer does not lose its business or status when it violates the agreement.

It is depriving a union of its status of bargaining. It is no union if you destroy it. But no similar penalty or effect is visited upon an employer.

The last sentence of the above-quoted paragraph is significant. In providing that labor organizations may be sued for damage in breach of contracts, it proposes enactment of this bill into law. The malicious intent back of the proposed provision is to be found in the use of the word "any" in connection with the party injured as a result of the breach of an agreement.

Bakery workers in a small bakery found to be in breach of an agreement may not only subject the union to payment of damages to the employer of the bakery workers, but to an additional payment of damages to a hotel, a retail grocery, or other similar customer who suffers damages through the nondelivery of bread.

Prior to the passage of the Norris-LaGuardia Act in 1942, employers brought suits against unions, rendering them ineffective. Damages were also recoverable against individual, officers and members. You remember the Danbury Hatters case, when the wage earners' houses were taken and sold. The most classic example attempting to overcome that broad and unjust responsibility is the Norris-LaGuardia Act which includes the following provisions: "No officer or member of any association or organization, and no association or organization participating or interested in a labor dispute shall be held responsible or liable in any court of the United States for the unlawful acts of its officers or agents except on actual proof of, or actual authorization of such acts or of ratification of such acts after actual knowledge thereof." The proponents of this legislation want to take us back to those days, those bygone days, when labor was exploited and when the homes of honest, upright men were taken and sold over their heads.

I can't believe that the Members of Congress who believe in justice and fair play will subscribe to such legislation. The proposal in the House Military Affairs Committee implied it will repeal the Norris-LaGuardia Act and put a penalty upon any breach of agreement, whether authorized or unauthorized acts, or whether the acts were participated in or not participated in directly by the owner or whether they were ratified or not ratified by the union. I have reserved my discussion of the language in the proposed amendment, the no-strike amendment. A straight construction of that language would not make it effective in instances where an agreement did not contain a specific no-strike clause, but there are rules of law which permit courts to indulge in constructions of law and to read into provisions intents and implications. Judges can very well read into the proposed law a no-strike pledge. Courts can very well say, and many will say, the warning conditions constitute an implied agreement not to engage in stoppages of work, or to exercise other economic pressure during the life of the agreement. In other words, judges may hold that the agreement itself is a no-strike pledge. That is far-reaching—far-reaching. It's susceptible to that sort of interpretation.

Shall labor be reduced now to that status? Is that how they are to be rewarded for the faithful service they have given during the war emergency? The performance of labor from Pearl Harbor to VJ-day was a miracle. No other workers in the world ever measured up to such heights as did the workers of America. No workers in any country under the sun ever turned out ships and guns and airplanes and war material in such volume and in such perfect completion as did the workers of America, and now, immediately after it is over and they made their contribution to win this war, they are to be compensated by being reduced to a basis of servitude and slavery.

Not until the Supreme Court of the United States will have construed the law will we know whether the provision proposed by the House Military Affairs Committee is applicable to those provisions which contain the specific no-strike pledge.

From the foregoing it will be observed that the provision is dangerous to the labor movement, it may destroy the existence of trade unions.

The second proposal has to do with so-called political contributions of labor unions. The Smith-Connally Act itself broadened and enlarged on this point. Former Attorney General Biddle approved political contributions when he said it applied only to general elections. The provision amends the Federal Fair Employment Practice Act of 1925 as follows: "Section 313. It is unlawful for any national bank or any corporation organized by authority of any law of Congress to make a contribution in connection with any election to any office or any political office held to select candidates or any political organization. It is unlawful for any labor organization to make any contributions. expend any sum to aid in the solicitation of any funds, or levy any assessments on its stockholders, members, or subordinate affiliates in connection with any election, or in connection with any political convention held to select candidates for any such election, or for any candidate, political committee, or person to accept or receive any contribution prohibited by this section. The corporation or labor organization which makes any contribution in violation of this section shall be fined not more than $5,000, or the officers or directors of any organization or any officer of any organization, as the case may be, in violation of this section shall be fined not more than $1,000, or imprisoned for not more than 1 year, or both. For the purposes of this section labor organizations shall have the same meaning as under the National Labor Relations Act."

I imagine there are labor representatives here this afternoon who can scarcely believe that such a proposal has been made in the Congress of the United States, to rob men of this political and citizenship right, to prevent them from helping to elect men like many of you here this afternoon to the Congress of the United States. It is unthinkable. The foregoing language could be construed to prevent unions from spending money for radio time, for disseminating their views on candidates or political offices and on campaign issues. Although on the face of it the provision writes of freedom of speech, some parts may hold otherwise. Thus, it will not be known until the courts have passed on the proposed enactment, whether it is unconstitutional. And that will involve the expenditure of large sums of money by labor to test the validity and constitutionality of such an objectionable act in the courts of the land. It will bring them into the courts for a long period of time and in the meantime the rights of labor will be hanging in the balance of uncertainty, and we will be deprived of helping our friends to be elected to the Congress of the United States, and in defeating our enemies.

It is apparent that the purpose of the enactment is meant to make unlawfyul activities of certain organizations such as were engaged in the last national election. However, there is embraced within the provision many activities in which labor is obliged to engage in order to defeat an adverse legislative program. Now, my friends, I have gone over this bill known as the H. R. 3937 to repeal the War Labor Disputes Act and analyze some of the objectionable features.

These men who sponsor this measure are committeed to the preservation of our free-enterprise system. They extol the virtues of that system. They demand that it shall

be maintained at any cost. Labor supports a free-enterprise system because it fits in with our free-democratic procedure. But, my friends, how are we to maintain a free-enterprise system that denies labor the exercise of its inherent and fundamental rights? Where are they going to drive labor here in America? Can't they learn any lessons from what is taking place now in the different nations throughout the world? What is the political trend among the masses of the people in Great Britain even, and other nations throughout the world? Well, I want to warn you here right now that we are no different than those in Great Britain. When you drive them to distress, to desperation, they will turn to the left also, and if this kind of procedure is to be kept up the workers of America will be found veering to the left within a short period of time just the same as the workers in other countries throughout the world.

If you want to maintain your free-enterprise system in America then you must be just and fair. The rights of labor under a free-enterprise system must be recognized and protected, just the same as the rights of capital. It isn't one-sided. It isn't for the employers of labor alone. Under the free-enterprise system the owner of the labor is the one who uses it, and he has as much right to give labor or withhold it as an employer has to give his capital or to withhold it.

There are certain rights that go with a democracy and with a free-enterprise system, and if one group in our political and national life wants to maintain their rights under a free-enterprise system they must be big and broad enough to accord to other groups the recognition of a preservance of their rights.

They make much about local strikes that take place. Well, my friends, they don't have any strikes in Russia under the totalitarian form of government. Do we want this Nation to be like that? We don't defend illegal strikes and we don't defend strikes that should not occur, but please bear this in mind, that we, the representatives of labor organizations, are not clothed with the right to select the membership of the labor organization. We can't operate like a fraternal union—pick our men after we have examined them carefully. We must take them as we find them. We organize those whom the employers employ. They select them, and, perfect and imperfect as they are, we blend them into a union for the purpose of teaching them as best we can their responsibilities under a union agreement.

Well, have we reached a point here now where any man living in this day and age can expect perfection in an imperfect world? Please remember that we are still made up of imperfect men and women. We haven't yet reached the millenium and because of that fact I maintain that during the war period and subsequent thereto we have made a record that we ought to be commended for rather than to be condemned for. Perhaps, Mr. Chairman, when the millenium comes and the world is perfect then we can have a land where no strike takes place.

Now, Mr. Chairman, I have presented in this brief way our opposition to these measures. I sent to all Members of Congress a letter, a personal letter, urging them to defeat this highly objectionable legislation. I certainly hope there will be a favorable response on the part of a majority of Congress to our appeal. I repeat again that we are endeavoring to correct evils. We are endeavoring to prevent strikes. We are endeavoring to promote management-labor cooperation. We believe it can be done better through cooperation, through meetings, through conferences on the part of management and labor than it can be done through the enactment of compulsory legislation and I know that such a proposal meets with the hearty response of a part of the Members of Congress who are here this afternoon.

Thank you so much for this opportunity of being with you and I know I shall go from here carrying with me a full consciousness of the fact that you are going to stand with us in this fight.

Chairman SABATH. Mr. Green, I am satisfied and convinced that the Members that are here will appreciate—and do appreciate—the splendid explanation of the objectionable features of these bills, and I feel that if the same opportunity had been given to you before these legislative committees, there would have been enough Members there to have defeated the attempts of those few gentlemen who take advantage of unsettled conditions and report such legislation as you have correctly criticized and objected to.

Statement by Harry W. Bashore Before Nebraska Reclamation Association

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. BUTLER. Mr. President, Mr. Harry W. Bashore, former Commissioner of the Bureau of Reclamation, Washington, D. C., delivered a very interesting address before the Nebraska Reclamation Association at Lincoln, Nebr., a few days ago. Mr. Bashore, as well as his predecessor, Mr. John C. Page, are former citizens of Nebraska. Mr. Bashore is returning to make his home at Mitchell, Nebr. We welcome him back home. I ask unanimous consent that Mr. Bashore's address be printed in the Appendix of the RECORD.

I have received an estimate from the Public Printer that the address will cover two and two-thirds pages of the CONGRESSIONAL RECORD and that the cost will be $138.80.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It's good to get back to Nebraska. For a long time I have been looking forward to the day when I would have leisure time to meet old friends again and talk over some of our mutual interests.

It gives a man a great deal of satisfaction to look back over the years and realize that he has had a part in bringing some portion of prosperity to a great State. I think most of you know that I have my roots pretty well down in Nebraska soil. Thirty-nine years ago I came to work here on the North Platte project as an engineering aide for the Bureau of Reclamation. I am proud to say that the North Platte reclamation development is an outstanding example of what can be accomplished through irrigation.

Since the establishment of this project, Scotts Bluff County has grown in population at a rate three times as great as that of the State. Records of the drought decade (1930-40) show that this county increased 18.3 percent as compared with a net loss for the whole State of Nebraska of 4.7 percent.

Water was the loadstone which drew settlers to Scotts Bluff County. Water will continue to be the deciding factor in the increasing prosperity of this region. Fertile lands in the North Platte project, located in both Nebraska and Wyoming, produce great quantities of sugar beets, alfalfa, barley, potatoes, and beans. Farmers on this irrigated acreage contributed greatly to the more than 11,000,000 tons of food and forage raised on projects served by Bureau facilities last year. You will be interested to know that the total gross value from this 1944 crop was in excess of $411,000,000. That represents a lot of money as well as a great deal of food.

We have learned much since we built the North Platte project. No longer do we consider development of just one stream or river. We map the river basin as a whole, so that by careful planning and regulation of different streams, we can get the most use out of every drop of water in a river valley.

The Bureau of Reclamation is now launching the greatest construction program in its history—a $140,000,000 one for 1946, designed to meet the peacetime needs of the Nation. To finance this program Congress recently granted a supplemental appropriation of $81,462,300. This sum, plus regular appropriations and carry-over funds from the fiscal year, make up the $140,000,000 total available for expenditure this year. Approximately $14,000,000 of this will be used in starting construction on several authorized projects in the Missouri River Basin plan, and in completing engineering and investigations on other approved units. The Missouri River Basin plan is the first of 15 river-basin plans of the Bureau to be presented to the Congress. Nebraska—the whole State of Nebraska—is included in this comprehensive development.

As you know, the Bureau plan, correlated with that of the Corps of Engineers, was approved under the Flood Control Act of 1944, and 29 units were authorized for the initial stage of costruction.

The regular appropriation act for 1946 made $3,200,000 available to the Bureau of Reclamation and other interested agencies of the Interior Department for undertaking detailed surveys, preparation of plans and specifications and further investigation for the over-all Missouri River Basin plan. This money, however, was not sufficient to finance an orderly, well-balanced program of development. The funds would permit the work to be carried forward on only 11 of the 29 approved units.

Following the President's statement to the Congress on September 6, when he urged that funds be provided for the continuation of detailed planning for construction of most needed Federal works, we prepared, with other interested departmental agencies, a program designed to get things going on this and other war-deferred projects.

In the supplemental appropriation bill recently presented to Congress, the Budget estimate for the Missouri River Basin was $11,918,000. Congress appropriated $10,780,300. Included in this amount are funds with which the Bureau can continue its surveys and investigations on several projects in Nebraska.

It is estimated that of the $14,000,000 available for the Missouri River Basin $948,025 will be spent in Nebraska in 1946. Now let us break down this sum into units on which preconstruction work will be started and those on which general investigations will be continued.

Of the 29 authorized Missouri Basin units, there are 4 located in the State of Nebraska where it is anticipated that money will be spent during the fiscal year 1946. These four projects are in the Republican River Basin that includes parts of the States of Colorado, Kansas, and Nebraska. Here's a short summary of the anticipated program:

One hundred and forty-six thousand and twenty-five dollars is programed for preconstruction activities including designing and specifications on the Franklin and Red Cloud units of the Bostwick project. The

Nebraska portion of the Superior-Courtland unit will also use some of this money mainly on the diversion dam.

Five hundred and thirty-three thousand dollars is programed to be spent during fiscal year 1946 on preconstruction work and design for Enders Dam, Medicine Creek Dam, Cambridge unit, Oxford unit, Frenchman unit, and Meeker unit of the Frenchman-Cambridge project. The present schedule is to have all the designs and specifications ready for the above units by the 1st of July 1946.

Ten thousand dollars is programed to be spent on the North Republican (Wray) project during the fiscal year 1946. This will be used by preconstruction activities in relation to the two diversion dams and canals that will be constructed to irrigate 2,080 acres of dry farmland near Haigler, Nebr. The major work accomplished during this fiscal year will be at the storage dam at Wray, Colo., and this cost would not be included in the totals for the State of Nebraska.

Ten thousand dollars is programed on pumping projects in Nebraska for the fiscal year 1946. The work accomplished would include geological explorations, field surveys, and surface- and ground-water studies of the units in southwestern Nebraska. The complete unit is approximately one-half in Nebraska, and one-half in Kansas.

Thus a total of $698,025 is programed to be spent for preconstruction work in Nebraska during the fiscal year 1946. Both the Bostwick and Frenchman-Cambridge projects are well under way at this time, and it is anticipated that construction contracts will be awarded on both these projects early in fiscal year 1947. The North Republican (Wray) and Pumping projects are still in the preliminary stages.

In addition, approximately $250,000 of the Missouri River Basin appropriation will be used for general investigations in Nebraska this year. The money will probably be divided as follows: $200,000 in the lower Platte River Basin; $5,000, Republican River Basin; $10,000 for cooperation with the Corps of Engineers, and $35,000 for a general economic study of the Missouri River.

The following shows expenditures proposed for Nebraska in the regular budget for the fiscal year 1947 but not yet appropriated by Congress.

Investigations

	Total project	Nebraska only
Lower Platte (Grand Island, Kearney and Loup River)	$196,000	$196,000
Republican area (including part in Colorado and Kansas)	85,000	30,000
Niobrara	40,000	40,000
Total	321,000	266,000

Preconstruction and construction

North Republican (Wray Dam)	$100,000	$30,000
Bostwick below Harlan County Reservoir (diversion dams and canals)	1,000,000	700,000
Frenchman-Cambridge (Enders Dam, diversion dams, and canals)	1,500,000	1,500,000
Pumping (wells)	100,000	80,000
Transmission lines (Gering-Sidney)	600,000	600,000
Subtotal	3,300,000	2,710,000
Grand total	3,621,000	2,976,000

The Bureau now has under construction in northwestern Nebraska the Mirage Flats project on the Niobrara River. This project lies within the Missouri Basin area, but it is not covered in the supplemental appropriation. You see, we already had the money set aside for the project, which we were constructing as an essential war food development. Although manpower and material shortages have delayed work on Mirage Flats, the irrigation system should be ready to serve part of the lands by next spring. When it is complete, the project will irrigate about 12,000 acres.

Since about 1881, dry farming has been carried on in this area with good crops in occasional years and with poor crops or near failures in most years. After the dry years of 1893 and 1894, the farmers organized a mutual water company and constructed an irrigation system without storage regulation to serve a somewhat larger area than that included in the present Mirage Flats project. The system failed because of inadequate maintenance resulting from lack of use in wet years; the destruction of wood flumes by prairies fires, and because of water shortages in hot months.

Then came the drought decade, which I have already mentioned, and the realization that something must be done to help farmers in regions of uncertain rainfall. Investigations were undertaken and construction was begun on the Mirage Flats project, under the Water Conservation and Utilization Act of May 10, 1939, upon a finding of feasibility approved by the President April 26, 1940.

The Bureau is building Box Butte Reservoir of 30,000 acre-feet capacity about 20 miles above the lands to be served. Irrigation water will be diverted from the Niobrara River about one-half mile below Dunlap by a concrete ogee-type diversion dam. The main canal will be 25 miles long and there will be laterals of simple construction.

And as the Bureau completes work on the Miraga Flats project, it is scheduling construction in 1946 on the Bostwick, one of the Missouri River Basin units. Preliminary investigations have been completed by the Bureau and a final report is being prepared. Preconstruction surveys are now under way. The project includes lands located on both sides of the Republican River from Naponee, Nebr., east and south to Concordia, Kans. The Bureau proposes to irrigate 89,170 acres of new land and to provide a regulated water supply sufficient to supplement 230 acres of land now irrigated, all by gravity. Of the total acreage, about 27,000 acres are in Nebraska.

Drought and flood have been the twin handicaps in Harlan County—droughts causing such serious crop losses that in some years there is not enough feed for cattle and hogs, and floods which sometimes rise to devastating proportions. The plan is to regulate the flood flows and save these waters to stabilize both crop and livestock production in the region.

The Harlan County Reservoir, authorized for construction by the War Department, is scheduled for early building. The dam located just below the confluence of Prairie Dog Creek with the Republican River will provide 850,000 acre-feet of storage capacity allocated as follows: Silting, 200,000; irrigation, 150,000; and flood control, 500,000.

The silt-control feature of the plan is very important because it will improve the use of water below the dam for municipalities, industries, and domestic purposes. Cities now diverting water from the Kansas River, of which the Republican is a principal tributary, will be saved money in filtration costs and maintenance of city waterworks. Likewise, silt control will cut down on costs of operation and maintenance of canals and laterals, as well as aid in keeping the river confined to its channel.

The Bureau plans to develop the irrigable lands below Harlan County Dam in five separate units: Franklin, Red Cloud, Superior-Courtland, Republic, and Scandia. Five diversion dams and nine main canals with a combined length of 169 miles will be required. Lateral and drainage systems for the full acreage will be provided.

A 2,000-kilowatt power plant will be constructed at the Harlan County Dam, if necessary, to provide power for pumping irrigation water from wells along the Republican River above the dam. A 62-mile transmission line to Superior, Nebr., is also proposed for construction.

Exclusive of the Harlan County Reservoir, which is estimated to cost $21,935,000, the total cost of the Bostwick development is expected to be about $9,018,500, based on January 1940 unit prices.

I don't need to tell you what this project and others like it will mean to Nebraska. The Republican River is small, but when its waters are included in a large basin development plan, such as that of the Missouri, this little river assumes a new role in the reclamation of semiarid lands.

Another Republican River project scheduled by the Bureau for early construction is the Frenchman-Cambridge project in southern Nebraska. This is another one of the initial units of the great Missouri River Basin plan. The proposed works will extend from Enders, Nebr., eastward along Frenchman Creek and the main Republican River to Orleans, located only a few miles above the proposed Harlan County Reservoir. The project will include 53,140 acres of land under the following units: Frenchman, 14,200 acres; Meeker, 6,980; Red Willow, 13,870; Cambridge, 13,600; and Oxford, 4,400 acres. Of the total, 16,740 acres, mostly on the Frenchman and Meeker units, will be provided with supplemental irrigation water, and 36,400 acres will be new develoment.

Two storage reservoirs with earth-fill dams for flood control and irrigation use will be constructed. Enders Reservoir, to be built on Frenchman Creek at Enders, will have a gross storage capacity of 74,000 acre-feet to spillway level, of which 30,000 acre-feet will be used for flood control, 34,000 acre-feet for irrigation, and 10,000 acre-feet for silt and wildlife protection.

Medicine Creek Reservoir to be built on Medicine Creek 8 miles northwest of Cambridge will have a storage capacity at spillway level of 100,000 acre-feet, of which 65,000 acre-feet will be used for flood control, 25,000 acre-feet for irrigation, and 10,000 acre-feet for silt and wildlife protection.

One diversion dam will be constructed on Frenchman Creek near Beverly and three on the Republican River near Culbertson, Indianola, and Cambridge. Four main canals and extensions of two existing canals with an aggregate length of 103 miles will be constructed. Laterals and drains will be provided for the Red Willow, Cambridge, and Oxford units. The Meeker system will be improved where necessary to assure dependable service.

Using the 1940 price basis, the total cost of the project is estimated at $11,477,000 of which $6,326,000 represents the cost of the two storage reservoirs.

A Republican River project which will serve both Nebraska and Colorado is the North Republican project. The lands proposed for development lie along the North Fork of the river from Wray, Colo., east to Parks, Nebr. Within this area, 3,340 acres of land already irrigated under private canals will receive supplemental water, and canals will be built to irrigate 2,080 acres of land near Haigler, Nebr.

An earth dam for flood control and irrigation will be built on the North Fork about 4 miles above Wray. A small diversion dam will be constructed on the river near Sanborn to supply water to a 13-mile canal serving lands east and west of Haigler. A second small diversion weir 5 miles east of Haigler will supply a 5-mile canal to serve new lands further east, and laterals will be provided for all new lands. The total cost of the project is estimated at $935,000. These project plans, however, are to be reviewed prior to preconstruction activities.

Along the Republican River Basin in Nebraska and Kansas are many small areas of

good land which require irrigation by pumping from wells. Preliminary plans have been developed for this construction which is one of the initial projects of the Missouri River Basin development. On the basis of such plans, it is proposed ultimately to develop wells in five main units to provide water for the irrigation of 23,500 acres of land distributed as follows: (1) South Fork of Republican River from St. Francis, Kans., to Benkelman, Nebr., 2,500 acres, (2) Republican River from Benkelman to Trenton, Nebr., 7,500 acres, (3) Lower Frenchman Creek above Culbertson, Nebr., 2,500 acres, (4) from Culbertson to the proposed Harlan County Reservoir below Oxford, Nebr., 5,000 acres, and (5) below Harlan County Reservoir, 6,000 acres. Opertion of the pumping plants will require a total installed motor capacity of about 5,000 kilowatts. The total cost of the well units is estimated at $1,140,300.

The Cedar River is another small tributary which is of importance in river valley development for Nebraska. The Cedar Rapids project in east central Nebraska approved under the Flood Control Act of 1944, comprises about 20,000 acres of excellent irrigable land lying in a "shoe-string tract" about 25 miles long and one-half to 1 mile wide on each side of the Cedar River in Nance, Boone, and Greeley Counties.

These lands, as you know, produce fair to good crops in many years, but have serious crop losses in dry periods. The average precipitation is about 24 inches, but varies widely and is often too poorly distributed to permit satisfactory crop yields.

Principal project features would consist of a reservoir at the Ericson site on Cedar River below Ericson with a capacity of about 20,000 acre-feet and an irrigation, distribution, and drainage system.

A rough approximation indicates a construction cost of about $4,000,000. Increased gross crop value will average about $25 per acre, or $500,000 per year.

Loup River waters will be used to the greatest advantage by the construction of the Lower North Loup project and the Sargent project. Both projects are approved as initial units of the Missouri River plan.

The Lower North Loup project comprises about 15,000 acres of excellent irrigable land lying on both sides of the lower part of the North Loup Valley in Howard and Greely Counties in east central Nebraska.

A reservoir at the Davis Creek site would cover irrigation of 10,000 acres and a direct diversion from the North Loup River would serve the rest. A very rough approximation indicates the distribution system may cost about $1,500,000. The Davis Creek Reservoir is estimated to cost $12,500,000. The project would also serve other areas in the lower Platte and Loup Valleys. This development would furnish irrigation water to an area that experiences frequent crop failures, although it has an average annual precipitation of about 24 inches. Increased gross crop value, it is estimated, will amount to about $25 per acre, or $375,000 per year.

The Sargent project will be on the Middle Loup River, near the town of Sargent. There are about 25,000 acres of suitable land that can be irrigated in this area. Unused waters would be conserved and regulated at the Dismal Reservoir site on the Middle Loup River, about 50 miles west of Sargent. There are potential reservoir sites nearer the irrigable lands which might be used to regulate the run-off, not only for use on lands in the Loup Basin, but also for diversions into the Platte Basin near Kearney. Desirable storage capacity of the Dismal Reservoir has been placed at 30,000 acre-feet.

A small area is now irrigated just below the project area, but the generally sandy soils and somewhat rough topography on these lands make irrigation difficult. All lands in the Bureau's proposed Sargent project area have been classified and a reconnaissance survey has been made for canals and reservoirs.

The Loup River and the Platte River will be used to serve the Grand Island project. This development, approved in the over-all Missouri River Basin plan, contemplates the irrigation of several hundred thousand acres in Nebraska on the Platte River from Kearney to Fremont and along the main Loup River.

In this area the annual precipitation ranges from 21 inches at Kearney to 27 inches at Fremont, with fair to good crops as a rule. In almost every year, however, the crop yield could be materially increased by the timely application of water and with adequate and dependable moisture, more diversified and higher-priced crops would be grown.

There is no gravity irrigation on the Platte River below Kearney and it is limited in the Loup River drainage basin to areas along the Middle and North Loup Rivers. A goodly portion of the area in the Loup-Platte Valley is now irrigated by pumping, mostly from wells. Nearly all users of pump irrigation are enthusiastic as a result of the increased crop returns.

The cost of the project is roughly estimated at $40,000,000. Investigations are under way at the present time and several surveys and land classification parties are at work in the area. The possibility of producing power at the contemplated reservoirs and along the diversion canals will be investigated.

The Bureau is also considering for development in the Platte River Valley from North Platte to Kearney a project area containing approximately 200,000 acres of irrigable land of which about 65,000 acres are being irrigated by the Gothenberg, Cozad, Lexington (Dawson County), Elm Creek, and Kearney Canals north of the river, and the Thirty Mile, Six Mile, and Orchard and Alfalfa Canals south of the river.

The canals were originally constructed in the early nineties and, with possibly one exception, underwent a period of disuse early in the century. They were revived after 1910 when the North Platte project return flows and irrigation waste improved stream flows.

The Platte Valley public power and irrigation district in 1934 and 1935 constructed the Sutherland Reservoir at North Platte. Designed to hold 150,000 acre-feet of water, unforeseen circumstances prevented full use of that capacity. The district is under obligation to provide 100,000 acre-feet of storage annually to six of the canals at a charge of $1 per acre-foot. The district has contracted for temporary use of 150,000 acre-feet of capacity in Kingsley Reservoir to comply with irrigation storage contracts and to augment power output at its North Platte plant.

Full development of the project area would require the importation of Loup River waters to Platte Valley. It will be necessary to rehabilitate and extend present canals and construct a new high-line canal on the north side of the river to serve adequately the irrigable lands. Canal capacities are generally inadequate, none of the canals has permanent diversion dams, and some of the intakes are in a precarious condition. Widespread ground water pumping will be needed to provide supplemental water and to minimize a considerable mileage of deep, open drains. A widespread system of surface drains will be necessary to dispose of excessive rainfall in the heavier flat lands, and there should be improved channels and possibly some detention reservoirs for the control and disposition of floods debauched in the flat valley floor by streams draining the neighboring uplands.

Power development at high drops in the canals with power to be used for pumping and the surplus output to be sold is included in the Bureau's plans. The construction cost is estimated at $12,000,000. A conservancy district or similar organization is needed which can effectively operate the complicated system of canals, drains, pumping plants, power plants, and collect adequate funds for the operation and maintenance of the system.

I should also like to call to your attention that the people of this State will benefit from projects to be constructed under the Missouri River Basin plan in neighboring States. To name a few of these, there is the Angostura unit on the Cheyenne River just across the line in South Dakota, and the Glendo Reservoir on the North Platte River in Wyoming.

And included in the supplemental appropriation for the Colorado-Big Thompson project was an amount of $500,000 for building the Brush-Sterling-Holyoke transmission line. This extension will consist of 35 miles of 115-kilovolt transmission line from Brush to Sterling, Colo., and 50 miles of 66 kilovolt transmission line from Sterling to Holyoke, Colo. The proposed extension will serve immediately to alleviate the critical power shortage in the vicinity of Holyoke, Colo., and will ultimately serve cooperatives, municipalities, and private utilities in northeastern Colorado and western Nebraska.

The Bureau, in cooperation with the Corps of Engineers, is also planning further studies and surveys on the South Platte River in Colorado and Nebraska with especial reference to the Cherry Creek, Chatfield, and Narrows River sites, the Sappa Creek area in Kansas and Nebraska, and Elk Horn River in eastern Nebraska.

It was a great day for Nebraska when the Missouri River Basin plan was approved by the Congress. I have long looked forward to the time when it would be possible to offer a good development program to you people. The Missouri River Basin plan is the culmination of our hopes and dreams. By controlling this unruly river, it will be possible to bring under irrigation almost 1,000,000 new acres of land in Nebraska and to provide supplemental support for almost 20,000 acres now inadequately served.

New irrigated farms can be made ready for settlement of veterans and others in this State; supplemental water supplies can be provided to farmers now barely eking out an existence; and job opportunities can be opened on construction sites, and in cities, which will thrive near reclamation developments. Above all, we can minimize the dangers of drought and flood, and provide economic stability through the diversification of agriculture in this State. A more prosperous Nebraska will mean a more prosperous Nation, for we have found that when western farmers have money to buy what they need, other parts of the country feel the effect of their purchasing power.

The projects which I have discussed for this State are part of a great inventory of 415 developments which the Bureau has blueprinted for the 17 Western States. More than 100 of these, including the Missouri Basin units, have been authorized or are under construction or in operation.

If all these projects are built it is estimated that the purchasing power of the West will be increased by several billion dollars a year, that it will be possible to open up 200,000 new farms for settlement on 11,000,000 new acres of land, and to provide supplemental water for another 11,000,000 acres. Hydroelectric plants on reclamation projects, which contributed so greatly to war production, would be of increasing importance for pumping irrigation water, for serving rural electrification needs, and for the development of home-State industries, such as food-processing plants.

With greater use of electrical labor-saving devices, people will have more leisure time. Recreational opportunities, such as boating, fishing, and picnicking will be offered by the many reservoirs created by dams on the Missouri River and other great western streams.

My years of association with water users in this State have been happy, challenging ones. What the Bureau of Reclamation has accomplished here has been done through the cooperative, untiring efforts of great county, town, and State leaders. The Bureau of Reclamation needs your continued support. As a resident of Nebraska—for here is where I intend to settle now that I have retired from the job as Commissioner—I will be working with you and looking forward to sharing the good years ahead of us.

Secret Agreement at Yalta

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two editorials from the Washington Post of January 30, 1946, and February 1, 1946, entitled "Mr. Roosevelt's Lapse" and "Halter at Yalta":

[From the Washington Post, January 30, 1946]

MR. ROOSEVELT'S LAPSE

Secretary Byrnes has now confirmed the Russian contention that at the Yalta Conference in February 1945, a secret three-power agreement was made promising the Kurile Islands and southern Sakhalin to Russia after the defeat of Japan. The news comes as something of a shock. It shows that the late President Roosevelt was not entirely candid when, some time before his death, he said that, aside from the agreement to give representation to the Ukraine and White Russia at the United Nations Conference—that fact leaked out not very long after Yalta—no other secret agreements had been made at the Crimea Conference.

It is true that at the time Mr. Roosevelt made this statement Russia was still neutral in the Pacific war. It is also true that any revelation as to the future disposition of the Kuriles would have tipped off Japan regarding Russia's intentions. A valid argument could therefore be made for the secrecy of the agreement. But this does not explain Mr. Roosevelt's assurance. Nor does it explain why President Roosevelt kept the arrangement secret even from the State Department. Secretary Byrnes says that he did not hear about it until after Japan's defeat. It appears doubtful whether former Secretary Stettinius was informed. And there is no copy of the agreement in the State Department archives. No wonder that when asked about the Kuriles at a press conference on January 22 the then Acting Secretary of State, Dean Acheson, said that it was his understanding—now proved to have been mistaken—that Russia was only to occupy the Kuriles, not to keep them permanently.

The fact is that at Yalta President Roosevelt was a very sick man. This is a charitable explanation not only of his lack of candor but also of the arrangement itself. Had Mr. Roosevelt been in full vigor he would no doubt have hesitated to accept such an arrangement. It was not within Mr. Roosevelt's authority to "give" the Kurile Islands to Russia or anyone else. That can only be done by treaty, which means with the Senate's advice and consent. Accordingly, the Kurile arrangement must be regarded as tentative rather than final.

Evidently Russia was promised the Kuriles outright with no strings attached. No quid pro quo was asked or given. Nor was any question raised about putting those strategically important islands under international trusteeship. This we must now try to do. The American Government ought not to oppose the cession as such. For strategic reasons—they are just off Russia's coast—those islands are vital to Russia's security, and there can be no valid objection to Russian occupation of them. But we must press Russia to accept the same kind of trusteeship arrangement for these islands that is made in respect of other Pacific islands. The whole trusteeship arrangement is endangered by the new revelation.

[From the Washington Post of February 1, 1946]

HALTER AT YALTA

It is clear from the revelation of the secret Yalta agreement to give the whole of the Kuriles to the Russians that Mr. Roosevelt proceeded to the Crimea in January 1945 not only a sick man but also with an imperfect grasp of the situation in the Pacific. Perhaps the sickness and the lack of grasp went together. At any rate, Mr. Roosevelt seems to have labored under two misapprehensions. One was that the struggle with Japan would be protracted, and the other was that, either because of the prospect of a long conflict with Japan or because of uncertainty about Russia, it was necessary to buy Russia's entry. The misapprehensions combined to make the conference at Yalta a monumental blunder.

At Yalta the uncanny intuition and commanding faith which marked Mr. Roosevelt's conduct of the war went under a cloud. The contrast looks strange in retrospect. The President never minimized the Nazi menace, he appreciated the survival value of Britain and went to Britain's aid with lend-lease, he knew that the course of wisdom was to beat Hitler first, he gave moral sustenance to the British in their darkest hour. In these respects he has been brilliantly vindicated. May it not be that the intuition and the faith which made him the grand bulwark of the Allied cause against Hitler were built on information which he was able to size up correctly?

This seems to be the case in the light of what happened at Yalta. It looks as if the President was neither so well served in the Pacific nor so well equipped to evaluate or to understand the forces in operation. He had Joseph Grew as his chief adviser on Japan. Mr. Grew had a sense of values in dealing with Japan, but he seems to have overestimated Japan's staying power. It could be said for him that when the homefront morale was a vital element in warmaking the tactic of exaggerating the foe's prowess was forgivable. But it is another thing to base military and political strategy on a public-relations tactic. The blunder at Yalta shows that the President counted on the long and sanguinary struggle for which the American people were prepared.

But the chief weakness in the advice available to the President would appear to have lain in Moscow. Mr. Averell Harriman, who is now retiring from his post, was our Ambassador. He was one of the proteges of Harry L. Hopkins who got and stayed out of their depth when they were given high office. We felt this at the time, and the knowledge that Mr. Harriman was at Mr. Roosevelt's side when he made all the deals at Yalta which have turned out to be Dead Sea fruit confirms our feeling. Did Mr. Harriman try to restrain the President? Evidently not. The assumption must be made that Ambassador Harriman advised the President that on the theory of a bitter struggle with the Japanese, it was necessary to buy Russian participation.

Nothing could surely have been more obvious than that in her own interests Russia would have jumped into the war against Japan without a purchase price. The Russians would have had no title otherwise in the peace settlement in the Far East. As Badoglio once said, the price of a seat at the peace table is always a few thousand dead. Evidently, however, the conferees at Yalta sought to persuade the Russians to come in, the price being all the Kuriles and two extra seats for the Ukraine and White Russia respectively in the United Nations. In return the United States got a mess of pottage in the form of promises of a democratic eastern Europe and a frontier line in Poland which never materialized. The clumsiness and mistake of the Yalta proceedings yielded nothing but unnecessary headache over eastern Europe, a legacy of trouble at San Francisco, and the jeopardization of a sensible and cooperative trusteeship system in the Pacific. It was a tragedy for the United States that Mr. Roosevelt was sick at Yalta and his advisers asleep. Mr. Truman, we hope, will take the lesson to heart when the time comes to name a successor to Mr. Harriman. We need an Eisenhower in Moscow.

Bad Conditions in the Pacific

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. WEICHEL. Mr. Speaker, evidently there is something wrong with the treatment of our armed forces in the Pacific, for almost daily I have received complaints from the parents of these men who are now serving in the Pacific area. There seems not only to be low morale but utter disgust for the treatment they are receiving at the hands of the high officer personnel.

I am including a copy of a letter to the father of one of these men which will depict what is seemingly going on in the Pacific theater:

DECEMBER 12, 1945.

DEAR DAD: I don't want mom to see this letter if possible, because she would probably worry a lot and it isn't very nice to think about.

As you have probably been able to tell in my last few letters, our morale has been getting pretty low out here. First of all we have been over here 17 months; second, we have been stuck so far hauling Japs in the repatriation program. We don't mind the first part so much because most of the LST's doing this duty are old or older than us. We did think taking Japs to Japan was bad because we had to cramp 1,000 of them in the tank deck, which can hold them all, but with little room to spare. The Japs, however, have interpreters, doctors, and as a whole are pretty clean. Also few, if any, of the Japs are sick. Some of the Japs get seasick but on the whole they manage to throw up over the side. They are also easy to keep in line, having been strongly disciplined in the Jap Army. The main objection to them seems to be that their food and their bodies smell bad. But it can be worse, we found that out. Before I go into that though, our schedule is like this: We load in groups of three LST's at Taku, China, with 1,000 Japs apiece with six marines to guard them. Then we sail for Japan where we set for a couple of days and then return empty. On these LST's there is no doctor except Jap doctors for their men. Last trip we had two men come down with dysentery.

However, the worst is yet to come. The last time at Sasebo we loaded up with Chinese civilians to take to Taku. That was yesterday afternoon. These are our observations so far. Of the 1,000, anywhere

from 600 to 800 are definitely sick and probably all of them are diseased in some way. The diseases include dysentery, syphilis, gonorrhea, leprosy, and beri-beri. We had some rough weather last night and they didn't bother to go to the "heads" we had made for them. They just puked, ——, and urinated right where they were. The tank deck smells worse than any barn you ever thought of. The Japs at least were clean, the Chinese are filthy. I saw a few today from a distance who had big syphilis sores on their buttocks. Others have feet rotting off from beri-beri (lack of vitamins or nourishing food). The Chinese have no doctors or interpreters.

Our men refuse to go near the tank deck and I don't blame them. I won't go near them myself. So far no disease has broken out in the crew and I'm hoping and praying it won't. But this is the last straw. I think that this is something that needs looking into. It might be somewhat of a blow to MacArthur's unblemished (?) reputation if something like this were to come out at home.

Authorities out here rule with an iron hand and no sense can be drilled into their heads, but there ought to be someone in Washington who would be interested in this. So if you can think of anybody to write to that will help us out, please do so. We're not the only LST on this duty; there are about 50 more. Most of our crew are writing similar letters home. You know we can't write letters like this to a Congressman.

I can't exactly describe my emotions now. I guess the greatest is the fear of getting one of these diseases. Then there's contempt for the Army, Navy, and anything military. Discouragement, as far as getting to the States, that almost reached despair and anger at the whole lousy set-up.

Well, this has been a pretty strong letter, but it just gives you a faint idea about how things are being done out here. If something isn't done, one of these things will happen:

1. A major epidemic will break out in one of these convoys, with no doctor to help out.

2. Or one of these crews is going to mutiny.

Men are eligible for discharge and cannot be sent home because of no replacements. LST's are being held out here long after they are supposed to have gone to the States, even in wartime schedule.

The Japs offered to do this job with their own ships, but MacArthur said, "The United States Navy will take them back." About the only time that LST's have been considered a part of the Navy.

If I wasn't an officer, I'd write straight to a Congressman. Some of the men, I'm sure, have done that. They don't mind whatever they get because this stink will so overweigh whatever error they made that it won't make any difference. I'll bet a paper like the Chicago Tribune would go for a story like this.

Well, I must close now. Maybe a miracle will happen and they'll decide to stop all this stuff. I'll let you know how we come out.

P. S.—Please see what you can do. This is mighty important to us.

Foreign Policy Must Be Based on Principle

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sumner Welles, from the Washington Post of January 30, 1946:

FOREIGN POLICY MUST BE BASED ON PRINCIPLE

(By Sumner Welles)

In an article of January 19, Mr. Walter Lippmann vehemently assails my recent statement that the United States will impair its chance of leading humanity toward lasting peace unless all peoples can have faith that when this Government speaks officially it means what it says.

Mr. Lippmann's writing is usually distinguished by its clarity. His present argument seems to me a singular amalgam of contradictions and of confused reasoning.

Mr. Lippmann admits the fact that at Moscow this Government abandoned two basic principles to which it was solemnly pledged. He insists, however, that the picture which I draw of this fact is "absolutely and fundamentally false."

To justify this charge he pleads that the action of the United States in agreeing to relinquish its exclusive control over Japan justifies its abandonment of those essential principles to which it had committed itself at Yalta and at London. He claims that "our moral position is better after Moscow than it was after London."

He asserts that the partial rectification at Moscow of a grave lapse of which we had been guilty in our Far Eastern policy warrants the abandonment of our official pledge to secure the establishment of free and representative governments in the occupied countries of eastern Europe. In other words, atonement for one error justifies the commission of another. That would indeed be a new precept in international morality.

He is certain that my own position in this connection is not free of embarrassment. He reminds me that while I have urged that this country should not abandon the official commitment into which it entered at Yalta, to bring about the installation of democratic governments in the occupied countries, I have quite as strongly opposed intervention by the United States in the American Republics for the purpose of imposing some standardized form of political regime upon their people.

Mr. Lippmann is evidently ignorant of the fact that the United States is bound by inter-American agreements to refrain from any form of intervention, direct or indirect, in the Western Hemisphere.

I can see no cause for embarrassment in urging that this Government should always abide by its official commitments, whether those be to promote self-government in the countries formerly dominated by the Axis or to refrain from intervention in the internal concerns of its neighbors.

The difference between Mr. Lippmann and myself is, however, much more far-reaching.

Mr. Lippmann believes, and so maintains in much of his recent writings, that the peace of the world can best be preserved through the establishment of a few spheres of influence, each dominated by a major military nation. He has repeatedly urged that a new balance of power should be constructed upon such a basis.

I, on the other hand, believe that neither world peace nor human freedom can be advanced through a return to any kind of a military balance of power. I believe those ideals can only be attained through the development of a world under law, which has available the power to enforce its decisions.

I further believe that the United Nations Organization affords the American people the one chance they possess to promote those objectives.

I do not believe, however, that the United Nations Organization can succeed if it is utilized as a front behind which the rights of weaker peoples are to be flagrantly disregarded. Were that to take place the major powers would speedily surround themselves with subservient satellites and thus create the system of military spheres of influence which Mr. Lippmann upholds. The Charter was designed to bring about a world order in which the smaller neighbors of the major powers will become peaceful and friendly because they can have confidence that the United Nations Organization will be employed not as means for the extinction of their liberties, but rather as a means for the protection of every one of their legitimate rights as free peoples.

We will have no assurance of a better world order until the three major powers have had the opportunity to cooperate in the United Nations Organization, and by thus working together at length learn by experience that they can live and prosper in the same world without reason for fear or suspicion. Until such a foundation of mutual trust has been established, it would be difficult for the new international organization to make much progress.

But surely international confidence will not be built up unless the three major powers abide by their commitments.

The most extraordinary feature of Mr. Lippmann's reasoning seems to me to be his apparent failure to attribute any importance to the need for this Government to abide by its pledged word.

There is no country today which, because of its power, its demonstrated resources, its geographical position, and its lack of any imperialistic ambitions can assume the leadership which the United States can exercise.

If other peoples find that the basic principles of policy which the United States professes, and to which it is officially pledged, are disregarded in practice, the ability of the United States to exercise such leadership will necessarily be lost.

If the foreign policy of the United States is not generally recognized as being dependable, and if other countries have no assurance that the United States means what it says, this Government will lose its best chance to help in erecting a new world order.

Neither the United States nor any other major power can buy its safety by sanctioning the present spreading disregard of the rights of weaker peoples, by doing homage to force rather than to justice, or by abandoning for the sake of apparent expediency those proven principles in international relations which alone can make for a free and peaceful world.

Proper Consideration for a Great Valley

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT TO THE MEMBERS OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS BY JUSTIN R. QUERBES, PRESIDENT, QUERBES & BOURQUIN, SHREVEPORT, LA.

It is my pleasure to come before you today in a dual capacity. First, as president of the Shreveport Port Development Association, and, secondly, as a businessman in Shreveport whose interests extend into some of our major shipping industries.

In the capacity as president of our port development association, I should like to assure this honorable board that we in Shreveport will develop a public dock that can be used by shippers of every classification, irrespective of the quantity of merchandise they wish to ship. Several mem-

bers of our association are representatives of the leading firms within our community, and many are major shippers. The acceptance of a place on the directory of this association is indicative within itself that these men within their industries, and the industries with which they are affiliated, will supply substantial tonnage in support of this canal. There is no need of my elaborating upon this because we have, each of us, supplied our data to the department of public works, and it is therefore incorporated in their report.

I am here, in my second capacity, as a Shreveport businessman, to assure you that we in Shreveport will use this canal when you provide it. My affiliations in a business way give me a small insight into the over-all business picture of our community. One of the industries with which I am affiliated is a fabricator of steel products. Our best available estimates indicate that we would ship by this canal approximately 60,000 tons per annum. Now, we are only one of several industries in our community that does a similar business in the same general classification. It would be economically sound for us to use the canal, and I see no reason why it would not be just as sound for every other fabricator of steel or iron products in the community. I believe it would, and I believe they would use the canal.

Another of my business affiliations is a wholesale electrical appliance establishment. We have carefully analyzed our operations and believe that we would use the canal in this enterprise to the extent of some 3,000 tons per annum. We would do this because it is economically sound for us to do so. The use of the canal on any other basis would not long endure. There are several other establishments in our community of a similar or a related nature, and I can see no reason why it would not be equally as sound for them to use the canal.

I am submitting this information relative to my own business connections solely for the purpose of pointing out to you that we as businessmen in the firms with which I am associated have determined it to be sound business for us to use this service when it is made available. If it is sound for us, it will be equally as sound for many other institutions which have not as yet, perhaps, given it the same analytical study that we have given it. So I have no fears but what the canal will be used more than is necessary to establish its economic justification.

Sound United States Leadership in Asia

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. Gen. David P. Barrows, from the New York Times of January 20, 1946:

SOUND UNITED STATES LEADERSHIP IN ASIA

(By Maj. Gen. David P. Barrows, military authority and former president of the University of California)

The cease-fire agreement between the national government at Chungking and the Communist organization in the north is hailed as the emergence of China as a strong, united nation.

This result has not yet been fully achieved, but to give it any prospects of success it was essential that the Communist endeavor to create a northern state embracing the provinces of Inner Mongolia and the very rich area of Manchuria should be defeated.

This Communist object has failed.

Those Americans who would have defeated the unification of China, and there are many such among our informers of opinion, will still attack and belittle the achievement of Marshal Chiang. There will be an element of truth in these hostile representations, for Chiang's regime is admittedly far from perfect, but there will continue to be, as there long has been, a great deal of misrepresentation.

The Chinese are a very great people, inclined to be orderly, but never well organized. Perhaps no people ever got on so tolerably under what may be called "philosophic anarchism." But the long calm of the Chinese Empire was disturbed in the last century by the aggressions of foreign nations.

The last attempt to break up the country came from an oriental neighbor, Japan. It resulted in moving the masses of the Chinese to a fury of resistance. It developed in the lowest classes a sense of their national existence and a hope for their national greatness.

It is essential to the peaceful order of the world that China become a unified state without sacrifice of the liberal and individualistic principles upon which its society has long rested. China is today not only a member of the UNO, but one of the five principal powers. Asia is by far the most populous continent. It has three important popular movements represented by India, the Russian Soviet Empire, and China. The most important of these, for the right settlement of Asian life, is China.

Fortunately, after seemingly long hesitation, Washington realizes this, and now gives its support to the Government of Marshal Chiang. This Government is not free from objections; it contains several groups struggling for personal power; it is as yet incapable of performing well many essential services, but it is undoubtedly the best and most honest Government that China has had in modern times.

Also, this National Government is under the only leader who has the necessary qualities, including military and civil skill, and unrivaled influence with the Chinese masses. Marshal Chiang has surmounted the crisis which arose immediately out of the defeat of Japan. Most of north China, the railways, and important cities were in the possession of the Japanese armies, which numbered more than a million men. Manchuria was in possession of the famous Kwangtung Army.

Manchuria, after the Japanese surrender, was overrun by Russian armies. We do not know yet just what happened to the Kwangtung Army, but in large part it surrendered to the Russians.

The Communist army saw its opportunity to secure the surrender of the Japanese in northern China. In this way they would gain important territories, cities, and railroads, and the greatest prize of all—the arms and particularly the artillery of the Japanese forces.

Here is where the power of the United States exerted its best influence since the end of the World War. General MacArthur is known to have advised the Japanese Government at Tokyo that Japanese forces in China must surrender only to the Nationalist armies of Marshal Chiang or to those of the United States. A United States Marine Corps, picked up on Okinawa and Guam, was sent into north China to effect this Japanese surrender and to assure the position of the Chinese Nationalist Government.

This is the explanation of what has been going on in China and of the continued presence there of our Army officers and Air Force and of the United States Marines.

The Nuernberg Trial

EXTENSION OF REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. BALDWIN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

COUDERT BROTHERS,
New York, December 10, 1945.

FELIX MORLEY, Esq.,
Human Events, Washington, D. C.

MY DEAR MR. MORLEY: I have read with interest, as every lawyer must, your article on travesty of justice, which appeared in Human Events.

While I have grave doubts as to the wisdom of attempting to try the German leaders for organizing warfare and have so stated, I cannot but feel that your article is not wholly fair to Mr. Justice Jackson and to the participation of our Government in the present trial at Nuernberg.

I know that you are desirous of being altogether just and impartial in the matter, and therefore I write you this letter as one who has given some thought to the difficult problems presented by the post-war criminal situation.

I have never had any serious doubt that many of the atrocities perpetrated during the war could be prosecuted under the Military Code. I also felt that superior orders should not be allowed to stand as a defense for those who had actually committed these outrages against the fundamental dictates of humanity and all civilized systems of law. My doubt was as to the question of waging aggressive war. Until recent times, international law certainly had not definitely condemned war as a means of national policy. In fact, it had been looked upon as a development of political action. However, since the First World War, the Kellogg-Briand Peace Pact primarily, and many other non-aggression pacts between nations, have repudiated this conception of war. The Kellogg-Briand Peace Pact was signed by Germany as well as by the other nations. With such pact in force, a definite, avowed, and admitted conspiracy to wage aggressive war was entered into by the national, military, and civil leaders, under Hitler's direction—not only in defiance of treaty—but also to wage wars of extermination against the Poles, Jews, and others who stood in the path of the German superman. This would seem to present a situation which even the most indulgent could hardly claim to be free from criminality. As matter of fact, it was probably the greatest and most deliberately planned and calculated conspiracy to commit maximum crime that has ever been known on this planet.

Under the circumstance, should we be astute to place about those perpetrators American constitutional guarantees, which have no reference to such a situation, and to use them in defense of men to whom you would have no objection "if they had been shot by a military firing squad when captured"? While I incline to think that this latter course has certain advantages, as I watch the growing record of the trial I am impressed with the wisdom of bringing to the light all of the facts involved in this colossal conspiracy. From the standpoint of history it will certainly have the highest value; moreover, it will give to the defendants an opportunity to explain at the bar of

history whatever case they may have in justification of these monstrosities of calculated cruelty.

You will say, of course, that the court is not a neutral and impartial court. Indeed, that is not an unfair criticism, but I think it may be said that the case presented to the court will be of so overwhelming a character that the opinion of decent, civilized men throughout the world will be that no court, worthy of the name, could reach any other conclusion than condemnation.

If this should turn out to be the result, could we fairly call all this a "travesty of justice"? With a full realization of the novel, legal problems involved, I cannot believe that this is so. Might it not be more accurate to say that, while the proceeding might be doubtful in law, there could be no doubt of its essential justice? Usually law lags behind the dictates of justice, but in exceptional cases new law is and must be made to fit new circumstances. This is quite as true of international law as of national law.

After all, if general international agreements, such as the Paris Peace Pact, specific and definite in its renunciation of war, are to go for naught and be ranked with mere pious antiwar expressions, would not such a situation be hopeless, indeed? Is it not just that a group of men who had worked through the years with the definite purpose of destroying other nations and peoples through the violation of all law should be punished? If, as you admit, it might be well to shoot them summarily, is it not better first to observe the forms of law, to wit: giving due notice of the charge against them, opportunity to appear personally through counsel and to present their defense? If they can make out any defense which any respectable section of our public opinion thinks should exonerate them, I should be very much surprised, and would then feel that perhaps it would have been unfortunate to have shot them without trial.

I have no explanation of the Krupp incident to which you refer other than to assume that the younger Krupp was deemed by the prosecution to be equally guilty of criminal conspiracy with his father. If not, I can see no explanation for the substitution.

I am trying to look at the matter as objectively as possible as I have been, for many years, interested in the substitution of law for force. I am hopeful that this trial may in the end, although I have differed with some of its features and proceedings, set a precedent for the future, in which any attempt to organize aggressive warfare, by whomever practiced, may be recognized as a criminal offense on behalf of its perpetrators. Nations are composed of men and if treaties and international law are to have any sanction the men who designedly conspire to violate them should be held criminally responsible.

Believe me,

Faithfully yours,

FREDERIC R. COUDERT.

A Soldier's Letter

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 15, 1946.

DEAR MOM AND DAD: I'm sorry I haven't written to you for quite some time. I expected to come home, so I didn't think I need to write.

Well, we did leave for home on the 8th. We left Palawau in an LCT and went to Cavite receiving ship which is just across the bay from Manila. We got here the 10th. We were scheduled to leave here, for the States, on the aircraft carrier *Jacinto*. It left day before yesterday, but we weren't on it. We went to find out why, and they told us our orders were all fouled up. We asked them what was the matter with them, and they told us that the yeoman at Palawau didn't put our destination in the States in our orders. We asked them how long it would be before we could leave, and they said it would be about 2 or 3 weeks. Well, we knew that was a damned lie because it would only take about 2 hours to fix all our orders up, which are just 26.

Well, after we found that out of course we started looking around to see what we could do to hurry them up. Some of the boys went to the chaplain, others went to the personnel office. In the meantime the ship had left. The chaplain said if we had come to him sooner he could have gotten us on the ship. He said we would make the next one.

Well, today our names were called over the loud-speaker to report at such and such a place, so, naturally, we thought we were going home so we hurried up there. Then we got there and found out that we were on a permanent working party and P. A. L.'s, which means prisoners at large. We know we can't be prisoners at large without a charge, so we asked them the charge. They said that it was for missing our draft. Well, we didn't miss any draft, because we were never called for one, so we explained to them. They wouldn't listen, so we went to work. We tried to get to see an officer but they would not let us. After working about 2 hours we found out that we were not prisoners, but the working is punishment for raising such a stink because we didn't get to go home. They say we will go out on the next draft, but I don't know whether we will or not. We worked all day today, and we have to work tomorrow. I don't mind working, but to have to work for punishment for something we didn't do wrong makes me mad as hell.

I am just writing this to let you know just what kind of an Army I'm in. As far as I'm concerned, it's just a concentration camp.

Well, if I don't write in the next week, you will know that I have gotten out of this —— —— place.

I hope that I get home soon, and I hope you are all well.

Love,

A SOLDIER.

The Vital Stassen

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan from the Washington Post of January 28, 1946:

THE VITAL STASSEN

(By Mark Sullivan)

This writer last Saturday listened to an address by retired Navy Capt. Harold E. Stassen. It was, he said, his first address to a political body in 3 years, since he resigned as Governor of Minnesota to enter the Navy. (The occasion was a luncheon of the Women's National Republican Club in New York.)

Doubtless those who listened over the radio got the same impression of Captain Stassen's personality as the audience who both heard and saw. It is the writer's impression that, for whatever reason, the radio conveys with special definiteness personality and shadings of it, as expressed in the quality of a speaker's voice. Particularly does the radio convey a quality that is salient in Captain Stassen, vitality. What the radio conveyed of that was not materially increased by anything perceptible only by the eye. His gestures were few and very restrained, an occasional up-and-down movement of the right forearm. This rarity and slightness of gesture illustrates a special quality of Captain Stassen's forcefulness. His vitality is just there, like his arms and his features. It flows out of him as easily and as without effort as unhurried breath. It is vitality combined with temperateness; temperateness is as obvious in him as strength.

All that he said was temperate, even when he dealt with matters that are the heart of our present political controversy. Far from taking advantage of the failure of what President Truman has tried to do about strikes, Captain Stassen counseled further use, with changes, of the principle which Mr. Truman, up to a certain point, has used, but in the steel strike ceased to use. "The President," Captain Stassen said, "can never properly break off contact with an industrial dispute of as grave and Nation-wide significance as the current steel strike."

Captain Stassen suggested an over-all conference "to bring together all the economic groups involved." To these he would add, in the spirit of political cooperation, "the leadership of both political parties." He would include "expert advice from leading economists." All to the end that the conference would "develop agreement on basic policy."

If Captain Stassen were President and sat in such a conference, his immense store of vitality would count greatly. It is not that he would knock heads together; he is not that kind. It is not merely that he would outlast the others, as he would. It is rather that he would prevail by sustained and unexcited pressure in behalf of the necessity of agreement.

Captain Stassen, as a possibility for the Republican Presidential nomination, will be helped if the public realizes that sheer vitality is a seriously desirable quality in a President. Vitality can stand up to the number and burden of the tasks. It could dominate, instead of being overwhelmed by, the immense and sprawling number, partly mesh and partly tangle, of departments, agencies, and bureaus which the executive branch of the Government has come to be. And vitality could resist the pressure groups who drive ruthlessly for special interests.

Captain Stassen's vitality goes with his comparative youth, he is 39. He is young without being juvenile. (The distinction is material, we have seen men who were juvenile without being young.) Toward Captain Stassen, young voters might have a feeling of fraternity. That might offset a detriment the Republican Party bears.

Common observation sees, and polls bear out, that the Republicans are strongest in the age groups above 40 or so, that younger voters tend the other way. This may be because a voter who is now 25 has spent more than half his life, and all the part that takes notice of public affairs, under the administration that began with the inauguration of President Roosevelt in 1933. It would not be strange if such a young voter looked upon the idea of a Republican in the White House as an adventure into the unaccustomed. On the other hand, but to the same effect, it may be in part that the younger generation may have become indoctrinated with a spirit of skepticism about tradition and accepted institutions, making

them unsympathetic to the conservation with which the Republican Party is associated. In both cases and altogether, the Republicans need young voters, and nominating Captain Stassen might help to get them.

The Housing Prospect

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following editorial which appeared in the December 19, 1946, issue of the Mamaroneck (N. Y.) Daily Times entitled "The Housing Prospect":

THE HOUSING PROSPECT

Experienced observers at Washington advise against optimism with regard to early construction of homes. Some will be built next spring and summer—but not many. In fact, the shortage is likely to remain acute for at least 2 years. In view of such predictions, Westchester, where building long has been our principal industry, should arm itself with facts before it begins to plan.

Here is the general situation as it appears:

Low-priced and medium-priced homes will get priorities on materials; that is, houses costing $10,000 and less, exclusive of the land. Efforts will be made to induce builders to concentrate on the lower-priced dwellings first, and there will be strong governmental opposition to early construction of such buildings as those designed for clubs, theaters, and even hotels, on the theory that these will tend to serve classes instead of the masses. Such high-class suburban developments as have featured Westchester in the past may be delayed until 1947.

Veterans will get priorities.

The Government is preparing to release surplus building materials, and local chambers of commerce can help by locating local stocks and going after them through Federal Housing Expediter Wilson Wyatt. This holds true, too, for war industry housing and barracks.

City, town, and village councils may well overhaul their building and zoning codes; some requirements which were justified when first drawn may have disappeared. And there must be specific planning of what type of homes will be permitted if we are to avoid jerry-built "quickie" developments.

Builders and unions must get together to eliminate unfair practices on either side. The black market should be squashed and unions should stamp out any "feather-bedding." It seems contrary to general policy that, when painters expect to receive as much as $20 a day, union regulations should be considered limiting the size of the brush which may be employed, in order to lengthen the work.

Prices, we fear, are going to be much higher than the average potential homeowner contemplates. OPA price controls on materials are likely to be eased, to encourage the industry, and there is every indication that construction-wage scale, if not thrown overboard altogether, may be evaded. All this will push up the ultimate cost of a new home far beyond the prewar figure. One indirect benefit therefrom, whether welcome or not, will be enhancement of the values of existing homes, both as to sale and as to tax assessments.

Rents, it is predicted, may be as much as 20 percent higher, under the OPA formula.

Altogether, it is difficult to escape the conclusion that whatever may be said in Washington about holding the line, inflation has hit the building market, and there is little that can be done about it. You may say what you please about the danger; there is little logic in denying the actual condition. And you will find this when you lay your architect's plans before your contractor.

Veterans' Administration

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the national commander of the American Legion:

THE AMERICAN LEGION,
WASHINGTON HEADQUARTERS,
Washington, D. C., January 31, 1946.

DEAR CONGRESSMAN: A survey conducted throughout the Nation by the American Legion discloses that in the central offices in Washington and regional offices throughout the country there has been a tragic breakdown in the administration of the law pertaining to the care and the treatment of the veterans who are the special charges of the Veterans' Administration. Among other delinquencies we have found there are over 500,000 applications for service-connected ratings for compensation purposes, which have not been processed by the Veterans' Administration; 7,840 pending applications for hospitalization awaiting process; 102,830 applications for education and training under title II of the Servicemen's Readjustment Act which have not been processed; and literally hundreds of thousands of unopened letters pertaining to various phases of veterans benefits and insurance claims in Veterans' Administration offices throughout the Nation; 20,411 pending claims for waivers of premium on national service life insurance due to total and permanent disability, and 8,847 pending death claims undisposed of.

It is apparent from the above figures that the great promise of our Government to the returning veteran that he would be adequately cared for, together with his widow and orphans, is not being fulfilled by the present administration of the act.

It must be borne in mind that the figures given above are absolute minimum figures reflecting the extent of the neglect, since the American Legion is unable to have access to the fullest extent to the records of the Veterans' Administration. Our investigation discloses that there has been an apparent unwillingness on the part of the Veterans' Administration to utilize the staffed hospital beds available in Army and Navy hospitals throughout the country to service those in need of hospitalization in this emergency.

It further appears that although the Veterans' Administration has been given authority and ample appropriations for the construction of hospitals in various States to meet the present and impending heavy hospital load reflected in the 500,000 pending applications for service-connected disabilities, nevertheless, there is undue and persistent delay in new hospital construction. The American Legion has been advised that thousands of beds are now available in Army and Navy hospitals throughout the country, adequately staffed with doctors and nurses which could be used in the emergency. There appears to be no disposition on the part of the Veterans' Administration to make adequate or complete use of these beds. Only 7,848 of these beds have been accepted by the Veterans' Administration.

The American Legion feels that the time has come when it must speak positively of the dereliction of the Veterans' Administration in order that our people will see to it, through their representatives in Congress, that the Government keeps faith with those who sacrificed in its defense.

The American Legion, and we believe the American people, demand that Congress take immediate action to see that its mandates are not longer ignored by the Veterans' Administration; that measures for emergency hospitalization be adopted at once; that the authorized program for hospital construction be immediately launched; and that the unjustifiable and unwarranted delay in processing claims for benefits under the law be eliminated.

Yours very sincerely,

JOHN STELLE,
National Commander.

The Common Good

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. WOODRUFF. Mr. Speaker, today, Americans are all concerned with the improvement of their fellow citizens as a whole. It was true before the war; it was true during the war, and it is still true during the continuing conflict of reconversion, the battles of which we are fighting at this very minute.

What we do, what we say—even what we think—is based upon that immortal document, the Constitution of the United States. Our Constitution often mentions the terms "common defense" and "general welfare." When special groups are mentioned, they are only referred to in their relation to matters affecting the well-being of all the people. According to our Constitution and its record during the 157 years of existence, it is impossible to segregate any section, or class, or race from the citizenship of America, and say its welfare can be separate and apart from the welfare of the whole people. Americans want no Samurai, no Elite Guard, no dictatorship of Commissars. Americans will not tolerate the establishment of a "master" race in their midst.

The prospects were good for successful reconversion at the end of the late war. Then the United States stood at the pinnacle of world influence. Little by little that has been and is being whittled away. The State Department has frittered away some of this prestige in conferences at London and Moscow. There is an ever-present peril of losing still more of our influence which, once lost, can never be regained. That prestige may even be given away.

The situation resolved itself into this: We had to find a way to help ourselves reconvert because our former allies showed no disposition to help, and some have either secretly or openly opposed our reconversion attempts.

We became increasingly aware that the only possibility for successful reconversion and readjustment in the United States was for more goods and services to be produced at lower prices, without reducing wage, salary, farm, or fixed incomes. Above all, we have had it forcibly impressed on us that our key to sustained prosperity is mass production as the powerful means to attaining increased production at reduced prices without lowering wages. Furthermore, improvement of existing industrial techniques, or the discovery of new techniques, offers a way in which mass production may supply the American people—with even more goods and services at reduced prices without reducing wages.

The picture at the end of the war was one of promise. Yet, some 6 months later, more than 1,800,000 workers were out on strike. Whatever the real or publicized reason for these strikes, smokeless chimneys and silent factory wheels mean decreased production or no production at all. This situation affects more than just the strikers and their families, the management of the strike-bound industries and the individual and collective investors in those industries. Such a situation is a forerunner of hardship and real poverty for all our people; not for any race, section, or class. Decreased production means universal financial ruin. No production means that this financial ruin will come all the more swiftly and catch all of us all the more unprepared for its dire consequences. Wealth, national or individual, is not in dollars. Rather, it is in goods and service procurable and consumable—in exchange for dollars. When goods cannot be procured for dollars, or when services cannot be purchased by those dollars, savings lose value and meaning, and wealth ceases to exist.

This community of interest is no modern phenomenon although improved methods of communication and modern conveniences have emphasized it. Shakespeare recognized it in his Romeo and Juliet. The strife between the Montagues and the Capulets was reflected in strife throughout the dukedom. The duke's stern admonishment "a plague on both your houses" in the closing scene was directed at the damage they nad caused to all the people.

To this day, the underlying truth of the duke's admonition has not changed. Strikes, broken contracts, industrial dissension, labor disorders—and, even more dangerous—the entangling of the business of production in politics, have brought this Nation and our people to the very brink of disaster.

Let us examine the present situation objectively. It is not possible in a sound, free economy to raise wages or profits to a point where the cost of production exceeds the utility value of the products themselves. In this respect, there are always two values in whatever product is turned out:

First. The money value: The materials, plus the labor, plus the planning, plus the distribution and transportation costs plus the reasonable profit to the producer, wholesaler, and retailer.

Second. The utility value: The value of the product to the purchaser for the use required of it.

If costs and profits are permitted to crowd the price of any product to a point and beyond a point where the product is not worth the price asked for it, the most immediate result will be that the public will not buy. That is why any planned economy which contemplates planned production also carries the need for compelling planned consumption. Otherwise there can be no choice but for factory wheels to stop and for factory chimneys to be smokeless. With no purchasers, or insufficient and irregular purchasers of products, the machinery of production must rust. The next logical step is unemployment. Though the industry affected may be small, there is no assurance that the impact will be localized. Even a small industry may take the major part of the output of another small industry. The grocery stores, the filling stations—yes; and the banks—of many communities will suffer because an industry employing from a few score to a few hundred men has banked its fires and closed down.

How much greater is the implication of the closing down of large industries. The repercussions from such catastrophes spread over our entire Nation. Not one of us is immune from this industrial paralysis, because unemployment breeds unemployment. No job producing goods or services is safe. All Americans must win against this threat of no production or decreased production, or else every American will lose.

Labor and management are not alone committing slow economic suicide. The rest of the Nation must die with them unless production replaces disputes and strikes. Our nonproducing factories are of no value to capital, to labor, or to the public, irrespective of the reason for their nonproduction. We know that both labor and management are imperiled by engaging in industrial disorders. But it must always be kept in mind that in all industrial disorders it is the general public which suffers as much as managers, capital, and labor.

Unless President Truman can find better leadership for our industrial economy than he has thus far procured or produced, the Congress will be forced to move into the picture, because a long-term condition of Nation-wide industrial disputes simply should not be tolerated since everybody suffers, and in the end we will share ruin instead of prosperity.

There is no excuse for not summoning the best in industrial leadership now, for if the best leaders are not secured immediately there will eventually be nothing for them to lead. There can be no excuse for dilatory tactics. The self-evident truths involving the common welfare of all Americans were obvious—weeks, even months, ago. Platitudes and generalities were made to serve where understanding, know-how, and action were required. It is not too late now, but further procrastination can make it too late.

Abraham Lincoln knew the danger of class warfare and hatreds. He said:

> Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.

Then Lincoln summed up the whole philosophy of the American system, when he said:

> I like the system which lets a man quit when he wants to, and wish it might prevail everywhere. One of the reasons why I am opposed to slavery is just here. What is the true condition of the laborer? I take it that it is best for all to leave each man free to acquire property as far as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else.

By and large, we as a nation have followed these precepts of Lincoln. And in so doing we have become, down through the years, a light to lighten the way for freemen everywhere. Under that system we became so strong that when the world was threatened with destruction by the mounting tide of godless tyranny, all men with the love of liberty in their hearts turned to America as their great hope of salvation. The overpowering forces we brought to bear to turn that tide rightfully gave to us the respect of all the world.

But how long may we hope to hold that respect?

Only so long as we present to the world a united front, with confidence born of a united people, bonded together, working together, thinking together for the common good.

Today America stands in a new and peculiar relationship to the world. We not only have our own destiny hanging in the balance, for good or for ill, but to a very large extent the destiny of the entire world. Our influence is a tremendous power in world affairs. If the American system fails, in peace, to adjust itself, and to develop prosperity and harmony at home, this, the greatest example of free government ever known, will have failed all lovers of liberty everywhere in the world.

Employer Attitudes and Methods in Industrial Disputes

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. HOOK. Mr. Speaker, as background for an understanding of the attitude toward labor of General Motors management, I ask consent to insert in the Appendix a brief summary of the

findings of the La Follette Civil Liberties Committee:

GENERAL MOTORS MANAGEMENT ATTITUDES AND METHODS IN INDUSTRIAL DISPUTES

(Excerpts from a study of Employer Attitudes and Methods in Industrial Disputes, by Jack Barbash, New York University, 1937, based on Senate civil liberties hearings.)

THE GENERAL MOTORS CORP.

General Motors is responsible for the largest output of automobiles in the industry. The keynote of its labor policy as enunciated in a statement made by Alfred P. Sloan, Jr., and approved by the executive committee, is the principle "that there is no real conflict of interest between employes and employer." [1] It is possible, however, that a "divergence of ideas may result from lack of understanding. * * * In such instances (it) may be cleared up through some process which brings about a mutual comprehension of each others' problems. * * *" A harmonious relationship may be brought about by sincere and patient effort on both sides and by sympathetic intercommunication.[2] Then there is a reaffirmation of the law, "that no one seeking employment shall be required as a condition of employment to join any employees' association or to refrain from joining, organizing, or assisting a labor organization of his own choosing." [3] Further, the "prohibition against discrimination places an additional responsibility upon the management to furnish clear evidence of the justification of the discharge of any employee in the event that discrimination is alleged." [4] Although this statement was promulgated during NRA, "it is still the policy." [5]

Labor policies of General Motors

What does this declaration of principles mean in terms of the actual labor policies followed, which in summary form, look something like this:

1. Between January 1, 1934, and July 31, 1936, inclusive, General Motors Corp. and its division spent $839,000 for detective-agency services in the field of espionage, varying directly with the intensity of the auto workers union organization drives.[6]

2. It employed, among others, the Pinkerton Agency, Corporations Auxiliary, Railway Audit & Inspection Co., National Industrial Service, William J. Burns Agency, and practically every prominent espionage organization.

3. The agencies which it hired employed all of the standard devices of the espionage organization: corruption of union members and officials to act as spies, constant shadowing of union officials, and inciting to violence.

4. There is an abundance of evidence to support the accusation of discrimination against and intimidation of union members by GM officials.

The Pinkerton Agency, which was the greatest beneficiary of General Motors' expenditures for detective agencies, was hired in March 1934, which coincides pretty much with the beginning of militant union activity in the automobile industry. It seems clear from the testimony of General Motors executives that the major impetus for the employment of espionage agencies was the threat of union organization.[7]

As Merle C. Hale, a director of industrial relations for General Motors, puts it:

"I wanted to know what the outside union was doing; what the employees' interest was; how large the meetings were; and I wanted to know particularly what they were contending was the trouble with the management; what their selling talk was, if you can put it that way; on what basis they were getting membership, whether wages, working conditions, foremanship, or what not, because if we knew what they were complaining about then that would be a clue for us to get into the picture and try and correct it." [8]

General Motors and the Pinkerton Agency

Precisely, what activities did the Pinkerton Agency engage in to justify payments of $419,000 over a period of 2 years and 7 months? First it engaged a special office in the Hoffman Building in Detroit, which also housed the auto unions, in order, to know who was—contacting the labor organization." [9]

Then, the Pinkerton Agency acted as a sort of register of opinion to ascertain the reaction of certain groups and individuals to General Motors' policies and apparently, to public affairs in general. This was done in two ways, through a clipping service, and through direct contact with individuals This latter work was not performed in the role of General Motors representatives or Pinkerton informants.

For example, when the GM executive staff wished to learn the reaction of the workers to the announced labor policy, parts of which we quoted above, the Pinkerton agency was asked to canvass the situation thoroughly.[10] Apparently the employee representation plans in the various plants were not adequate to record a faithful picture of the situation.

A bill rendered by the Pinkerton Agency enumerates under the heading of For Services and Expenses in Case of "Public Opinion," the following items:

"Review of labor news and editorial comment in plant and city newspapers.

"Survey of employee reaction to factory management.

"Review of safety conditions in GMC plants.

"Surveys of employee reaction to William Green's speeches in Detroit, Cleveland, Toledo, St. Louis, and Buffalo.

"Survey of General Motors' position at Warren, Ohio.

"Survey of employee reaction to plant medical department.

"Survey of effectiveness of plant protection department.

"Survey of industrial disputes in the United States." [11]

Shadowing of union officials in behalf of General Motors constituted another aspect of Pinkerton activity. Among those who were under surveillance, were William Green, president of the American Federation of Labor, John Frey of the Machinists Union and the Metal Trades Department of the A. F. of L., Adolph Germer of the CIO, and Homer Martin and Walter Reuter of the CIO auto workers union.[12]

The basic function, however, of the detective employed was undercover work in the GM plants. As Lawrence Barker, an exoperative of the Lansing, Mich., plant of GM, related it, he was told to secure information about "supervision of the foremen, their treatment of the men, and favoritism. Personnel, including hospital, employment department, the treatment received from those places, and whether the service was good, slow, or just how they treated the men. Complaints and thefts, safety infractions, working conditions, plant conditions, plant police, outside labor activities, or to send in labor papers and other things pertaining to labor in the newspapers." [13]

Relating to union activities, he was told to "attend all meetings, open and otherwise. Find out how many were there, and get an approximate number, who spoke, and who acted as the chairman, and the number present. And any out-of-town speakers, and things on that line." [14]

Mr. Mason, the Pinkerton assistant superintendent, Barker's superior in the espionage work, "was well pleased" [15] when Barker joined the union. When Mason was informed that Barker had become an official in the local he said, "Well, I have got all of them in the union now. All the officers belong to me." [16] The local, however, had no members aside from the officers and Barker ventured the opinion that this might have been a consequence of the fact that the officers were in the pay of the Pinkerton agency and the General Motors Corp.[17]

The Pinkerton agency refused to list its operatives for the La Follette committee.[18] The General Motors executives suffered complete losses of memory in addition to the fact that they had stripped their files of material relating to espionage [19] so that it is impossible to arrive at any adequate number of Pinkerton operatives. Our knowledge on Corporations Auxiliary Co., however, is somewhat more exact. The records reveal that there were between 31 and 35 operatives in General Motors plants in the years 1934 to 1936, inclusive, under the direction of this agency.[20]

Effect of General Motors' espionage on unions

The effect of General Motors' espionage on the auto workers' union may be seen from a few case records. The Flint local of the automobile workers, with a membership of several thousand, fell to 200 members when Richard Adlen, an informant for the Corporations Auxiliary Co., retained by General Motors, started to operate.[21] Barker testified that the Lansing local of Fisher Body, starting with a hundred percent membership, dwindled to five as a result of espionage activities.[22]

General Motors' strike breaking

In its conduct of strikes, the General Motors Corp., consistently enough, utilized the methods and tactics which have become associated with the antiunion employer. The entire subject of strikebreaking is treated in some detail in a later section, which duly recognizes the contributions of

[1] A statement of General Motors Corp.'s basic policies governing its relations with factory employees, hearings, pp. 2509 ff, exhibit 657, pt. 7.

[21] Statement of Senator La Follette, hearings, pt. 6, p. 2068.

[22] Testimony of Lawrence Barker, hearings, pt. 6, p. 2104.

General Motors. At this point a brief sketch will suffice. Pinkerton operatives were among the strikers in the 1937 sit-down strikes in Flint, Mich.[23] The Railway Audit & Inspection Co., an espionage agency with none too savory a record, was employed by General Motors in 1935 for the Toledo strike. Wherever strikes took place in General Motors plants, there arose company-sponsored "loyalty groups" and "back to work" movements.

General Motors' campaign to curb union organization in its plants has not been carried on only through professional agencies, but it also has been waged by its own supervisory staff, which directed the "loyalty groups."

The testimony and affidavits of automobile workers in General Motors plants before the La Follette committee present evidence of the inspired character of the intimidation practiced against them, and the forceful establishment of what might be called the closed antiunion shop. In Baltimore, on January 20, 1937, active union men suddenly found themselves surrounded by hostile-looking men who in several instances used physical violence. The manager, upon being informed, invariably replied that the "boys refuse to work with union members."[24] The following is a typical account of a union man in the Baltimore Fisher Body plant:

"I work as a welder in the Fisher Body plant in Baltimore, Md. * * * I was employed by General Motors Corp. the same as these men, and got along peacefully until the 18th of January, when, somehow or other, they discovered I was a member of the union and chairman of the organization committee. Immediately a guard was placed over me at my work. Two foremen of the plant guarded me constantly while I was in the plant, even to extent of following me to the rest room and lunchroom.

"On the morning of the 20th of January we completed our work about 9:15 a. m. At that time I gathered my tools and turned them in to the proper authorities and received my clearance slip. I was then called by a subforeman, and I approached this man and he kept me standing there about 10 minutes without having anything to say to me. About that time a group of men, about seven, gathered nearby, and he said that it was all right for me to leave. I approached the pay table with these men following me. I received my pay, and the superintendent of my department was standing there and said, 'Now, I hope the union feeds you.' There were four company guards standing by and these seven men descended on me and grabbed me—two on each arm and two had me by the belt—and they escorted me to the plant office, where I was met by the plant doctor and the superintendent of the plant, Mr. Wismer, who disclaimed any knowledge of what was going on. While they were telling me this, they threw another union man into the office * * *."[25]

Meeting places were denied to union speakers in GM plant cities, such as Flint and Saginaw. Organizers were assaulted by armed bands in which were recognized GM foremen and officials of the so-called loyalty leagues. This state of terrorism showed every evidence of police connivance.[26]

The records of Federal laboratories reveal that that division of General Motors purchased $8,479 worth of tear and sickening gas, the greater part of that amount bought by Chevrolet in January 1937, in addition to an almost equal amount shipped to the authorities in the plant cities of GM.[27]

[23] Statement of Senator La Follette, hearings, pt. 5, p. 1767.

[24] Testimony of William Pearlman, hearings, pt. 7, pp. 2269 ff.; Glenn Rowland, pp. 2233 ff.; affidavits of James Scheibe, p. 2517.

[25] Affidavit of Joseph Winge, hearings, pt. 7, p. 2519, exhibit 698.

[26] Affidavits of union organizers and witnesses to these occurrences, hearings, pt. 7, pp. 2520 ff.

Department of Science and Research

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mrs. LUCE. Mr. Speaker, among the more important lessons we have to learn from the Second World War is the extent to which we—the whole human race—are now subject to the discoveries and inventions perfected during the past 5 years. The atomic bomb is only the most dramatic of these new and powerfully dangerous forces which now control the destinies of nations and may determine the very existence of life on our planet and perhaps the continued existence of the planet itself.

All these new, violent developments of physical and chemical science may be put to use for the service of mankind instead of its destruction if, and only if, the policies which guide us from now on are founded upon facts and are carefully chosen in the brightest light of common sense unshadowed by partisan bias. The difficulties of accomplishing this purpose of self-preservation have no precedent. Never before has any comparable situation arisen. To say that the problem must command attention from the very best and wisest minds should be so obvious as to need no mention. Yet in our system of government the fact of the problem must be made clear to the public, and every possible provision for its solution must be incorporated into the Government itself.

As is well known, various initial steps have been taken toward this end. One measure to create a National Science Foundation is now pending before the Military Affairs Committee of the Senate of the United States. The Navy Department has initiated a broad program to encourage scientific research in American educational and industrial institutions as shown by the appended article which appeared in the New York Times on January 27, 1946.

Many of us are aware that during the war the United States, alone among the great warring powers, refused to exempt its scientific students from conscription. Nearly every educator and scientist in the Nation protested against this policy and warned that it would lead to a grave scarcity of scientifically trained minds within a decade following the war. This folly we must now compensate as best and as speedily as we can by concentrating our Nation's tremendous organizational abilities upon the building of a framework which shall offer to scientists of all degrees of proficiency the most ample opportunities for study and research and shall assure talent the best reward.

This I believe can best be accomplished, and the results best integrated into the national defense and into the promotion of national health and welfare, by the creation of a separate executive department of the Government. Only the prestige which attaches to a regular member of the Cabinet will render the findings of any scientific body of sufficient weight to command the constant attention of the highest officials of the Government in the consideration and formulation of policy.

These are the reasons for which I have today introduced the following measure:

A bill to create a Department of Science and Research

Be it enacted, etc., That there is hereby created an executive department in the Government to be called the Department of Science and Research with a Secretary of Science and Research who shall be the head thereof, to be appointed by the President, by and with the advice and consent of the Senate, and who shall receive a salary of $15,000 per annum, and whose tenure of office shall be like that of the heads of the other executive departments.

The purpose of the Department of Science and Research shall be to foster, promote, and develop the study and spread of scientific knowledge and its practical application to the enforcement of peace and the attainment of high living standards throughout the United States and the world.

The Congress hereby finds that the fullest development and use of the Nation's scientific and technical resources is essential for the safety and continued welfare of the Nation. The Congress further finds it necessary for such development and use to create an executive department in order to correlate on the highest governmental level the programs of national defense, national health, and proper conservation and use of the production and natural resources of the Nation, all of which will increasingly depend upon and be affected by scientific discoveries and inventions of the most far-reaching character.

SEC. 2. That there shall be in said department five Assistant Secretaries of Science and research, to be appointed by the President, each of whom shall receive a salary of $12,000 a year. The Assistant Secretaries shall be charged with the duties, respectively, of:

(1) A Bureau of Physics and Mathematical Science.

(2) A Bureau of Public Health and Social Science.

(3) A Bureau of Scientific Education and Information.

(4) A Bureau of Biological Sciences.

(5) A Bureau of Engineering and Technological Sciences.

The functions of each of these Bureaus shall be defined by their respective titles and as may be further prescribed by the Secretary of the Department. In order to insure the greatest benefit to the national defense such additional personnel as may be needed in any Bureau from time to time may be filled by properly qualified members of the armed forces of the United States selected in the discretion of the Secretary by agreement with the Secretaries of War and the Navy.

Appointments of personnel necessary to discharge the duties of the Department of

Science and Research and to carry out the purposes of this act shall be made and compensation fixed, except for assistant secretaryships, in accordance with the provisions of the civil-service laws and regulations: *Provided*, That, when deemed necessary by the Secretary for the efficient administration of the Department and the fulfillment of the purposes of this act, the secretary shall be empowered to employ such technical, scientific, and other experts without regard to any civil-service laws and may fix compensation for such experts without regard to the Classification Act of 1923 as amended.

SEC. 3. That the Congress specifically disclaims any intent under this act to empower the Department of Science and Research to direct or control the course of independent research into the various sciences. It is the intent in creating the Department to provide a governmental instrument with which to utilize and coordinate all such discoveries and inventions as may best promote the national defense and welfare.

For this purpose, the Secretary shall solicit the active and continuous voluntary cooperation of all qualified technical and scientific educational institutions, and of the professional and learned societies which shall be invited to nominate candidates yearly for an advisory council to the Department.

Such advisory council shall consist of not less than 100 members, with adequate representation of all branches of science, appointed by the Secretary for a 3-year term, one-third of the membership being renewable each year. Temporary appointments for 1 year and for 2 years, will be made during the first 6 months after this act becomes law.

The council shall elect its own executive committee, and special committees to advise with the Secretary and the Assistant Secretaries, respectively, on the general and the specific activities of the Department and the bureaus.

Within 1 year after the passage of this act the Secretary, each Assistant Secretary, the advisory council and each special committee of the council shall issue separate reports and recommendations to the President and to the Congress regarding the operation of this Department and setting forth such changes, amendments, or extensions as may appear necessary or desirable in the light of actual practice.

He Served Faithfully

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following editorial entitled "He Served Faithfully," eulogizing the courageous and efficient public service performed as a member of the Westchester County (N. Y.) Board of Supervisors by the Honorable Benjamin I. Taylor, a former Member of the Congress, which appeared in the Standard-Star published in New Rochelle, N. Y.:

HE SERVED FAITHFULLY

The Westchester Board of Supervisors will not seem the same without Benjamin I. Taylor, of Harrison.

Since 1905, with two interruptions of service, he has represented his town courageously and efficiently. Where it was necessary to utilize practical politics, Mr. Taylor knew how to do it. Where reasonableness and logical persuasion would gain the desired end, Mr. Taylor was reasonable and persuasive.

But more than in his official course of duty, Mr. Taylor has given to the board of supervisors a sparkling personality, a keen wit, and a clear mind. And his retirement at the age of 68, upon doctor's orders, takes from the scene one of the two holding seniority.

We trust that Mr. Taylor, refreshed by relaxation and rest from official responsibilities, will be able to continue to serve his town and his county as an elder statesman. His experience, his advice, are too valuable to be wholly lost.

The Tragedy of Truman

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Journal-American of January 23, 1946:

THE TRAGEDY OF TRUMAN

(By Samuel Crowther)

IV

France, under policies such as are now being advanced here by the PAC, has steadily devalued its monetary unit since World War I and the thrifty portion of the French people have been wiped out.

Inflation hits hardest those whose salaries are fixed by law, such as school teachers and public officers, because their money buys less and less.

But it hits with nearly equal force all wage and salary workers, for their incomes lag behind prices. Only the speculators and the crooks benefit from inflation, or, as the poet Pope said many years ago:

"Blest paper credit!
Last and best supply!
That lends corruption lighter wings to fly."

The easy, unthinking reply to inflation is price control of the sort that we now have under the OPA. Price control is really production control, for unless the State takes over all the elements of production, including labor, and rations supplies, costs are bound to rise faster than ceiling prices and the profit incentive to produce is killed.

The most elaborate price controls ever evolved were those by Diocletian in the year 301 A. D. He produced the perfect planned economy and it all but ruined Rome before it was abandoned.

The OPA is only trying to do what every spendthrift government in history at one time or another has tried to do.

We are following the same old road. We are controlling prices, but we are not getting goods at the controlled prices.

Practically every shortage in goods and foods today is traceable directly to OPA policies.

This organization is not softening the effects of inflation. It is making them worse by stifling production.

That is well known within the OPA for it is the clearinghouse for those who want to change the Government of this country.

The drive to make the change is now on. It is spearheaded by the strikes called by the three great radical CIO unions—the unions in steel, automotives, and electrical machinery and appliances.

The strikes are all of the same pattern. They take advantage of the natural desire of the workingman to keep up his war earnings and to meet rising prices.

But it is to be noted that when the wage demands were first made, the union leaders were loud in their insistence that the wage advances could be made without any changes in ceiling prices. Their stand has been reinforced by their colleagues or coconspirators within the Government who have promptly furnished figures—mostly faked—to show that the wage demands could be met without raising prices.

The real basis for the demands, all of which average out at about $2 per day per man, has nothing at all to do with the supposed needs of the workers. The leaders have only crocodile tears for their serfs.

The demands have been carefully calculated to wipe out or all but wipe out the returns to owners of the large corporations. The plan is to force the large corporations to resist and then have the Government take over the corporations to end the strikes.

If the corporations are forced into accepting the wage rates and the ceiling prices are retained or modified only a little, the process of destroying private ownership is slower than if the Government takes over. But it is even more certain.

That is why the Communists have gone all out for the present strikes. It is not of moment whether the PAC-CIO is or is not Communist.

The course being followed is directly in line with Soviet desires and it exactly follows the revolutionary technique always to take advantage of inflation.

The measures proposed by the PAC and endorsed by President Truman fall exactly in line with the revolutionary course.

The big unemployment allowances and the "full employment" bill, as well as the lesser measurers, all demand further inflating of the money supply and bigger and better controls—as well as a bought vote. They would finish the job that the strikes are attempting to start.

In this situation no labor settlement can be more than temporary, for, as long as the money supply is being inflated, prices will continue to rise. Thus wages will always run behind prices and unrest will continue and increase.

The President's only answer in the present emergency is fact-finding boards.

We have had a trial run by an official fact-finding board, appointed by the President in advance of any statute, in the General Motors-UAW case. The report of this board shows no concern with facts, but a great concern with social theory.

By hitching wages and profits, it sought to reenact the undistributed profits tax which Roosevelt and Morgenthau forced into one tax bill but which the Congress, after a trial, threw out.

The object of that tax provision was to kill the expansion of and eventually to kill private industry by preventing any funds from being set aside for progress or for a rainy day.

The present board, turning logic upside down, says that these funds, instead of being turned into the Treasury by the tax route, should be put at the disposal of the radical labor-union officers to manage at will through wage demands.

There is a plain duty before the Congress. It is at once:

To end the President's wartime powers.

To abolish the OPA and all other Government controls.

To kill any appropriation that is not covered by taxation and thus halt inflation before it gets away from us.

Red River Navigation and Development

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of January 14, 1946, before the Army Engineer Board by John D. Ewing, editor and publisher of the Shreveport (La.) Times, member of the board of directors of the Kansas City Southern-Louisiana & Arkansas Railway System, president of radio stations KWKH, Shreveport, and KTHS, Hot Springs, Ark., and the News Star-World, Monroe, La.:

Technical engineering details and statistical data concerning potential freight cargo for the proposed Red River lateral canal running between Shreveport and the Mississippi River at the mouth of the Red River, have been or will be placed before this Board by authorities in such matters—Brig. Gen. Max Taylor, Maj. Gen. R. W. Crawford, the Louisiana State Department of Public Works, the Red River Valley Improvement Association, the chambers of commerce and port development authorities of the various cities and towns on the proposed barge canal.

It is not my intention to try to add to the complete and convincing data which comes to you from such sources. I do wish, however, to deal very briefly with some of the broader aspects of this barge-canal proposal, particularly in its value, economically and otherwise, to far greater areas than the valley through which it would be built. In so doing, I am expressing my own opinions entirely, but they are expressed from a background of business and civic interests and activities over many years which have given me opportunity for what I believe to be an unusually encompassing viewpoint.

I am a director of one of the Nation's large rail systems, but I am in complete disagreement with any who may oppose water freight transportation in the belief that it would compete unduly or unfairly with other forms of transportation—rail, motor van, or air. Available records are to the contrary. I believe that even a cursory survey of American industry would reveal that virtually all big industrial cities of the Nation are located on water transportation facilities and that the biggest freight-hauling railroads of the Nation all get a substantial volume of their freight business from areas where both water and land freight transportation exist.

The records show, I believe, that advent of water-freight transportation into areas backward in industrial development has been followed by widespread industrial development, and that advent of water transportation into areas already prospering through industry has increased industrial activity and brought added prosperity to existing enterprise.

In other words, the trend found in the addition of water-freight transportation facilities to land-transportation facilities is toward increase in existing business and creation of opportunity for development of new business; and this in turn means more freight for all forms of transportation. I believe that this will be found to be true already up and down the Mississippi and Ohio Rivers, which have been subject to great Federal development as water carriers in recent years.

It is a matter of factual record that Shreveport was a thriving port town when many other larger cities of today were unknown except by name. And it was only when Red River transportation was closed through the river becoming filled with its own silt that Shreveport lagged in economic development and other cities were able to surpass it. As for what water transportation means to an inland city and its contiguous territory, and the benefits such transportation bring to all other forms of transportation, Houston, Tex., is the most recent example. Its development as a port and the far-reaching values that development has produced, are well known to this Board.

I believe that construction of the proposed Red River lateral canal not only would bring new economic development to its immediate area, but that it would directly enhance the value of the entire Mississippi Valley waterway system, of which it would be an integral part. I believe that it would provide opportunity for expansion and development to the entire economy of a vast area of untold natural resources and industrial possibilities as yet untouched.

To me, in areas of established opportunity for future progress, limiting one form of public service, such as transportation, on the theory that a new form might compete to too great extent with another and established similar form of service is like saying that a thriving community should not increase the number of its drugstores, its doctors, its lawyers, its schools, its grocery stores, or its wholesale distributing houses. The opportunity for economic development of the South and Southwest is unquestioned, particularly in development of industry. There are as yet untouched tremendous natural resources in petroleum and minerals. As further brief, high-spot examples, the undeveloped iron-ore resources of a small section of central east Texas have been held by mineral experts to exceed in volume the deposits of the Birmingham, Ala., area, and it has been stated, by those who have investigated and should know, that virtually every commercially usable metal is found to some extent in Arkansas alone. Louisiana has vast deposits of oil, gas, sulfur, salt, and other natural resources. The whole Red River Valley is an area of tremendous possibilities for new development of forest products and of modern agriculture and all of this development—agriculture, industry, and commerce—would be given new impetus through added water freight transportation facilities.

Such development would hurt the business of no one, but would, in my opinion, help the business of everyone whose business is affected directly or even indirectly by transportation, and it would be difficult to find any sizable business which is not affected in some way by transportation.

I believe, also, that construction of the proposed Red River lateral canal would be a sound business venture. The sincerity of my belief to that effect is attested by the fact that it is my intention, if this canal is constructed, to take part in formation of a common-carrier barge-line company to operate freight service on the canal, and to promote use of the canal's freight service through all proper and legitimate use of the publicity facilities provided by my own newspaper and radio interests. Our papers are large shippers, particularly in receiving considerable annual tonnage of newsprint. A considerable portion of our shipping could be handled advantageously via the Red River lateral canal.

There is another value which construction of the proposed lateral barge canal would offer and which, I believe, has not been given as much consideration as it deserves. That is the military value the canal would have, both in time of war and in time of peace. Several million men of the Army received at least some of their training in Louisiana during and just preceding World War II.

I do not have the exact figures—they would be available to this Board, of course—but high Army authorities have told me that far more than 1,000,000 men of the Army at some time or other passed through the one town of Leesville, La., alone—normally of but 5,000 population—where Camp Polk is located. Camp Livingston, near Alexandria, constructed by the Army as a model for permanent posts of large size; Barksdale Field, topographically the world's largest military air reservation; the headquarters for the Eighth Naval District, and various other military installations—all of those mentioned being permanent in nature—are centered in Louisiana and would be aided directly through the additional transportation facilities for freight which the proposed Red River lateral canal would provide. The huge permanent Army maneuver area and the big permanent artillery ranges of Louisiana are in the heart of the area this proposed canal would serve. I need not remind anyone in uniform of the tremendous and stupendous freight transportation difficulties faced during the war in this area. The quantity of war material which traveled the Mississippi River and its connecting water transportation links during the war is testimony to the military value the proposed lateral canal would have from the standpoint of national security.

For 20 years before his death in 1931 my father, Col. Robert Ewing, publisher and owner of the Shreveport Times and of the New Orleans States, editorially advocated—and consistently so—the reopening of the Red River to navigation as a waterway leading to the four corners of the globe. Since his death in 1931 I have seen nothing but what convinced me that his policy was correct and therefore the Shreveport Times still consistently is advocating the making possible a great asset to our whole local and national economic life—water transportation through the lower Red River Valley.

H. R. 5262, the Case Bill

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD two telegrams relating to H. R. 5262. These wires from Mr. William Green, president of the American Federation of Labor, and Mr. Daniel J. Tobin, president of the International Brotherhood of Teamsters, very eloquently express the inadvisable features of this measure:

Hon. MELVIN PRICE,
United States House of Representatives, Washington, D. C.:

The American Federation of Labor is deeply concerned over H R 5262 introduced in the House yesterday and scheduled for general debate today. The American Federation of Labor hereby protests most forcefully the consideration of this bill which has for its purpose the destruction of fundamental and constitutional rights of workers without the holding of public hearings thereon. This bill would impose unlimited liability for damages upon workers and their unions and would destroy their right to act as bargaining agencies for alleged violation of the law

while no similar penalties are imposed upon employers for similar violation. It is inconceivable that Congress would wipe from the statutes of the Nation the Norris-LaGuardia Act passed in 1932 and signed by President Hoover without even according labor the opportunity to present its reasons in opposition to such drastic action.

The repeal of the basic provisions of the Norris-LaGuardia Act is in effect the reestablishment of the false and repudiated doctrine of conspiracy in labor cases and it will bring back the evil of government by injunction condemned in both the Democratic and Republican platforms of 1912, and which resulted in the passage of the Clayton Act of 1914. The establishment of a mediation board with power and procedure for functioning as provided in the bill requires much thought and consideration in order to assure a fair and impartial tribunal. It is apparent it has not had such consideration. The American Federation of Labor requests that full hearings be held on this bill and that representatives of labor be accorded the opportunity to appear at such hearings to acquaint the committee with facts and information which will clearly establish that the passage of this bill will not bring peace and harmony in industrial relations but on the contrary will cause confusion, chaos, injustice, and will disrupt industrial relations as long as this bill remains law.

AMERICAN FEDERATION OF LABOR,
WILLIAM GREEN, *President.*

Hon. MELVIN PRICE,
Member of Congress,
Washington, D. C.:

The International Brotherhood of Teamsters desires to record its opposition to H. R. 5262 now being considered in the House. This bill has not had the benefit of public hearing and thus the position of the International Brotherhood of Teamsters has not been made known. The bill is of such magnitude and importance that it is inconceivable that Congress will act upon it without according labor an opportunity to express itself at committee hearings. If enacted this bill will impose drastic civil penalties on labor. It will virtually nullify the provisions of the Norris-LaGuardia Act and it will subject workers and their unions to court injunctions for alleged violations for which they can be punished by fine and imprisonment. The procedures for mediation set forth in the bill require discussion and consideration. The International Brotherhood of Teamsters therefore not only protests the passage of this bill without committee hearings but it expresses most vigorously opposition to the bill which will destroy fundamental constitutional rights of the workers of this Nation. The executive board of the International Brotherhood of Teamsters is now in session and has unanimously adopted the foregoing statement on behalf of its 700,000 members.

DANIEL J. TOBIN,
Genral President,
International Brotherhood of Teamsters.

Lateral Canal for Red River Valley

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following additional information in support of Red River lateral canal, La., presented to the Board of Engineers for Rivers and Harbors at Washington, D. C., January 14, 1946, by Walter B. Jacobs, president, First National Bank, Shreveport, La.:

Mr. Chairman and gentlemen, there is real enthusiasm for the Red River lateral canal down in our section of the country, and it is quite logical that this should be true, because water transportation was such a predominant factor in the early development of Shreveport, La., and that trade area.

As you know, Shreveport, La., is located on Red River, and this was by no accident. The site was chosen because it was an excellent location for a port, and as the development progressed the settlement was often referred to as the Port of Capt. Henry Shreve, who brought the first steamboat up Red River in 1814. Logically enough when the city was incorporated in 1839 the name of Shreveport was chosen. For the next 50 years the business and social life of the city was built largely around steamboat traffic.

Historically, there is every reason for us to be intensely interested in water transportation, and based on all the technical information carefully prepared by the engineers and acknowledged experts in the various fields, there is every evidence that the Red River lateral canal is a sound project, the completion of which will have a most stimulating effect on the industrial development of the entire area.

During the past quarter of a century, the need for water transportation has become more evident, because we have seen so many cases where industries which would have logically located in our area have, for sound economic reasons, chosen locations where port facilities are available. Not only that, but what is perhaps even more depressing, we have seen concerns that employed many of our citizens cease operations in our locality because water transportation was essential for their survival, and this was the one thing we did not have to offer.

I have in my files a letter from the president of a large refinery, dated December 18, 1945, in which he lists 6 refineries, with a total annual output of 19,345,000 barrels, which have ceased operations in our area.

Without being free to disclose the authority for this assertion, I would like to tell you about a specific case where Shreveport lost a plant that cost almost $100,000,000, because all the other advantages that we had to offer could not offset the fact that we did not have water transportation. I refer to the Cities Service Refining Corp. plant which was recently erected at Lake Charles, La. Since the new plant has gone into production, this concern has ceased operating its refinery in our area, which had an annual output of 7,500,000 barrels. This discontinued refinery and its production was included in the six referred to as having ceased operations in our section. Being, as we are, in the center of one of the great oil-producing areas in the United States, and with so many factors favorable to industrial development, it would seem only natural that numerous refineries would locate in our area if it were not for the fact that we do not have water transportation.

From the standpoint of raw materials, we have an abundant supply in the Shreveport area. As previously stated, we are in the center of one of the great oil-producing areas in the United States; natural gas is plentiful; agricultural products in large quantities include cotton, peanuts, soybeans, alfalfa, sweetpotatoes, oats, and many others; livestock production is increasing rapidly and a real need has developed for larger markets and for processing industries using these products; we produce annually more than 5,000,000 cords of pulpwood and some 3,000,000 board feet of timber; in close proximity to Shreveport there are tremendous sulfur and salt deposits; we have fine ceramic clays, sand, gravel, limestone, and abundant deposits of lignite.

Our climate is most desirable, with a mean average yearly temperature of 66°, permitting year-round out-of-door work; Shreveport is excellently served by six major rail lines; paved highways go out of the city in all directions; we have excellent motor-freight lines and motor coaches and three major air lines. With adequate water transportation facilities, as would be provided by the proposed Red River lateral canal project, our section of the country would undoubtedly experience a tremendous industrial development.

Of greatest importance to the future growth of our area is the abundance of high-quality labor, with about 62 percent native-white, 3 percent foreign-born, and 35 percent Negro.

The bank with which I am associated has served the Shreveport area since 1877, which means that we were in business long before navigation on Red River became impossible. Our growth has been closely allied to the growth of our trade area, and we have been in an excellent position to feel the pulse of the people, so to speak. With a total of over 33,000 checking and savings accounts in a city of 115,000 population, we are afforded a real opportunity to learn how our fellow townsmen feel about important matters pertaining to our community. For the past several years, during the time when water transportation has been so widely discussed, my fellow officers and I have made it a point to find out what our customers think about the matter. I assure you that the Red River lateral canal project has the enthusiastic support of virtually every individual with whom we have discussed it, and it is quite obvious that this should be true.

I believe that the attitude of labor toward the Red River lateral canal project would be of interest, and I am pleased to read a letter received from Mr. E. H. Williams, president, Louisiana State Federation of Labor:

LOUISIANA STATE FEDERATION OF LABOR,
Shreveport, La., December 29, 1945.

Mr. W. B. JACOBS,
President, First National Bank,
Shreveport, La.

DEAR MR. JACOBS: It is my understanding that you are to be one of the speakers to appear before the Board of Engineers for Rivers and Harbors in Washington in support of the Red River Canal project.

As you know, the Louisiana State Federation of Labor is composed of all of th American Federation of Labor unions in the State, and we have a total membership of approximately 300,000. The Red River lateral canal project has been enthusiastically endorsed by this federation, and if you feel that the endorsement of this large number of laboring people would be of interest to the group that will have the responsibility of approving or disapproving this important project, you may feel free to use this letter in your presentation.

We realize full well that the industrial development in our area has been substantially curtailed due to the fact that we have not had water transportation facilities since Red River became unnavigable many years ago. It is most apparent that our future progress is wholly dependent upon our providing, at the earliest possible moment, suitable water transportation such as would be provided by the Red River Canal project.

Naturally we are vitally interested in the future growth and development of our area and if we can be of assistance in any way please feel free to call on us.

Yours very truly,

E. H. WILLIAMS,
President.

Regardless of the fact that we have failed in all of our efforts to provide water transportation since Red River became virtually unnavigable at about the turn of the century, substantial progress has been made because there are so many other factors so outstandingly favorable to the growth of our area.

The following information regarding our progress, as indicated by the total resources of Shreveport banks and the population of our city, in even thousands, during the past 68 years, at 10-year intervals, is indicative of the aggressive spirit of our people:

	Bank resources	*Population*
1877	$403,000	4,000
1887	931,000	8,000
1897	2,162,000	11,000
1907	12,203,000	16,000
1917	36,853,000	28,000
1927	57,067,000	44,000
1937	64,382,000	76,000
1945	196,478,000	[1] 115,000

[1] Estimated.

The fact that our population has increased more than 24 times, and our bank resources more than 487 times, in the past 68 years is, in itself, abundant evidence as to resourcefulness, energy, and aggressiveness of our people. Shreveport is today a thriving, growing city that is forging ahead with enthusiasm and initiative.

I appreciate the privilege of appearing before you gentleman, and on behalf of the citizens of Shreveport, I want to say once more that we are vitally interested in the proposed Red River lateral canal, and you may be sure that if this project which has been dreamed of for so many years is made a reality, we will make good use of it.

Thank you.

Veterans and Surplus Motor Equipment

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. COCHRAN. Mr. Speaker, I have just read a release from the War Assets Corporation which is now handling the Consumers Goods under the Surplus Property Act wherein it states that receipt and certification of applications from World War II veterans for the purchase of passenger cars and station wagons was discontinued Monday, January 28, 1946.

Much as I would like to see all veterans secure a good automobile I have taken the position from the outset that it would be a grave mistake for them to buy the motor equipment the Government agencies declare surplus for the reason that it will spend most of its time in a repair shop. When automobiles have been run 50,000, 75,000, and 100,000 miles by men who do not own them one can realize their condition. The agencies have withheld the best motor equipment for their own use.

Under the permission granted me, I include as part of my remarks the release from the War Assets Corporation. It follows:

Receipt and certification of applications from World War II veterans for the purchase of passenger cars and station wagons will be discontinued Monday, January 28, 1946, the War Assets Corporation, a subsidiary of the Reconstruction Finance Corporation, announced today. Certification of veterans' preference applications, formerly handled by the Smaller War Plants Corporation and transferred to War Assets Corporation by Executive order, becomes effective on the same date.

War Assets Corporation explained that the action is being taken because the number of veterans' preference certifications already outstanding for the purchase of passenger cars and station wagons is far in excess of the total number expected to be declared surplus.

Since veterans' preference certifications are handled in the order of date of filing, War Assets Corporation pointed out that discontinuance of further certification for passenger cars and station wagons would save veterans time, money, and effort, and eliminate false hopes of obtaining these items which are in such short supply.

War Assets Corporation also announced that when statistics and inventory records show that other items of surplus property are being considerably oversubscribed, receipt and certification of veterans preference applications for such items will be discontinued. As these situations develop public announcement will be made by War Assets Corporation. The procedure and policy is being adopted, War Assets Corporation explained, in order to provide the veterans with the facts on the availability of various kinds of surplus property.

Mr. Speaker, the following release from the Surplus Property Administration relates to the condition of motor equipment:

Sampling of the condition of motor vehicles available in surplus as of December 21, 1945, showed that more than 54 percent required repairs, 6.8 percent were not usable as vehicles, and only 6.1 percent of the trucks and jeeps were new, the Surplus Property Administration announced today. No new passenger cars were available.

The inventory as of December 31, 1945, listed 31,084 surplus motor vehicles, an increase of 3,406 cars over the November 30 inventory. The bulk of these vehicles were trucks and jeeps, totaling together 26,513 for November and 29,882 for December.

While acquisitions in December of trucks, jeeps, and passenger cars mounted above those of the preceding month, officials pointed out that the proportion of vehicles in poor condition will tend to increase in the inventory, since they move at a slower rate.

A total of 11,587 motor vehicles, largely trucks and jeeps, were acquired in December as compared with 10,187 the preceding month. Exactly 8,181 motor vehicles were sold in December for $6,965,027.62, representing $16,851,118.01 in original cost to the Government. November disposals were slightly higher, due to heavier sales of trucks and jeeps

The following table indicates the condition of 23,049 surplus motor vehicles inspected as of December 21, 1945:

	New	Used				Total
		Reconditioned	Usable without repairs	Repairs required	Not usable as vehicles	
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
Trucks (except jeeps)	3.0	3.6	21.9	45.6	5.9	80.0
Jeeps	3.1	1.3	5.5	6.1	.3	16.3
Passenger cars	0	.1	.6	2.4	.6	3.7
Total	6.1	5.0	28.0	54.1	6.8	100.0

Idaho State Pharmaceutical Association Makes Plea for Small Business

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. WHITE. Mr. Speaker, I am submitting for the earnest consideration of my colleagues, a letter from the Idaho State Pharmaceutical Association, Inc., with offices in Boise, Idaho, in behalf of small business. I feel that this letter is particularly timely for there is a certain element within the United States who see in the destruction of small business and the growth of monopolies the opportunity to destroy our American system of government and substituting some form of regimented socialistic totalitarian state. If small business is destroyed, big business cannot long survive, for if all business is reduced to a few great monopolies, it will be an easy matter for the demagog to point to them as great octopuses exploiting the people, and induce the people to replace private monopoly with state monopoly. There is room for neither monopoly nor bureaucracy within the United States—both are but the trappings of the totalitarian state. The letter follows:

IDAHO STATE
PHARMACEUTICAL ASSOCIATION, INC.,
Boise, Idaho, January 15, 1946.
COMPTON I. WHITE, Congressman,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WHITE: My knowledge of your friendliness to small business prompts me to write this letter. There are any number of men in Washington who are willing to give lip service to small business, who say that they are the backbone of our system of free enterprise—and then proceed to oppose everything the small businessman wants and needs to insure his survival as a part of the national economy. You are not one of these. In fact, Congress has usually been disposed to deal fairly with us. Our trouble comes chiefly from some of the people at the other end of "the Avenue" who are charged with the interpretation and application of the laws you men in Congress make—and who have uncanny skill in making those laws means something entirely different from what you Congressmen intended.

CIRCUMVENTING ANTITRUST LAWS

In that connection, I want to call your attention to the antitrust laws. When Congress passed the Sherman Act, the Clayton Act, and the Federal Trade Commission Act, its purpose was to check monopoly and prevent big business from becoming so big that it could dominate the Nation's economy. With that purpose we small businessmen are in full agreement. We applaud the objec-

tive Congress had in mind. But what do we find? The very laws passed by Congress to prevent integration of business into huge, monopolistic units have been so interpreted and applied that men have been able to use them to promote monopoly. After all these years of antitrust laws we have aggregations of power that would make Senator Sherman turn over in his grave if he could know what has been done under his law.

GROWTH OF MONOPOLY

I say that misinterpretation of the antitrust laws has promoted monopoly. Let me give you an example.

You are aware of the growth of corporate chains. One of them—it happens to be in the food field—did more than 13 percent of the retail grocery and food business in the United States last year. One general merchandise chain has annual sales of more than $1,000,000,000, and two others do business aggregating more than half a billion dollars each. The drug chains are not nearly so big, but there are two of them which, between them, operate more than a thousand drug stores.

TIPPING THE SCALES AGAINST PRIVATE ENTERPRISE

Now, I have no quarrel with chains as such. The thing I object to is that they are attaining their inconceivably enormous size because the Government, which should be a fair umpire, is tipping the scales in their favor. The Government in Washington, and more particularly the law-interpreting and law-enforcing branch of it, has, in effect, decreed that "to him that hath shall be given, and from him that hath not shall be taken even that which he doth have." In less Biblical language, this is what the Department of Justice has ordered: Individual merchants shall be sent to jail if they presume to do what great corporate chains may do with immunity, even although the result of this policy be to fasten upon small merchants inequalities of bargaining power that will inevitably doom them to eventual extinction and put all distribution in the hands of billion-dollar corporations.

NOT MORE EFFICIENT

The reason for the growth of big business is not that it is more efficient, for there is a preponderance of evidence to prove that it is less efficient. The reason is the possession of overwhelming bargaining power.

A corporation which buys for a thousand stores owned by itself, can go to a manufacturer and say: "We shall require you to sell your product to us on a basis that will enable us to resell it to the consumer at a price no higher than what you charge our small, independent competitors at wholesale. We grant that the price we demand is less than your year-around cost, but the volume we give you will enable you to operate at full capacity, even in slack periods, and will cover the actual cost of labor and material, plus, perhaps, a small profit. Your overhead, you can get out of your other customers. You will be required to supply all of our stores on this basis. Here is our business, take it or leave it."

WAS THIS THE INTENT OF CONGRESS?

Such an ultimatum is entirely legal, under the laws as now interpreted by the Government at Washington. In the contemplation of law, a corporation is a person, so there is no question of conspiracy involved— a person cannot be said to conspire with himself, although that person is a fiction representing perhaps thousands of individuals. The actual duress involved is not duress in the contemplation of law—it is duress arising from the unequal bargaining position of the parties.

Now, suppose that individual owners of a thousand independent stores were to undertake to do the same thing. What would follow: Investigation by the Department of Justice, the forced surrender of all books and records of the "offenders" under subpoena, indictments, the compulsory attendance of all defendants at a trial far from their own communities, the necessity of engaging counsel at fees beyond the financial capacity of the defendants, conviction on criminal charges, fines of up to $10,000 for each defendant—virtual confiscation of their life savings—and possibly imprisonment for a year. And that could happen in a country which poses as the one remaining exemplar of free enterprise, governed by men who shout their friendship for small business.

FREE ENTERPRISE OR CARTELS

But I have not yet touched upon the more serious consequence of this perversion of the antitrust laws. That consequence is not to individuals—for it will not make much difference a generation hence what happens to them. The more serious consequence is to our economic structure—to what its lip-servants have been pleased to call free enterprise. If big distributors are permitted to become indefinitely bigger and more powerful, how long will it be before they will have squeezed the manufacturers out of existence and taken over the whole process of manufacture? Then we shall have the perfect cartel—a cartel which controls the product from the raw material stage to the finished goods sold to the consumer over the counter, which has power to squeeze the raw material producer at one end and the retail buyer at the other. Long before that stage had been reached, 1,500,000 individual distributors would be forced out of business—the proletarian servants of their former competitors, or sharecroppers, or relief clients. If you think my picture overdrawn, scan the record between the First World War and the Second, and project the trend into the future, through the next 10 years, with the aid of available information on the chains' plans for postwar expansion. I am not dealing in mere possibilities, not even in probabilities, but in certainties—unless you men in Congress can be aroused to action.

EQUALITY BEFORE THE LAW

What we propose is not radical, it is not unreasonable, it will not hurt anybody. We are not asking for repeal of the antitrust laws, but for action by Congress that will make those laws do what they were intended to accomplish. We ask that the chains and the independents be placed in a position of bargaining equality, that the owners of independent businesses be allowed to do what big business is permitted to do with impunity. We ask for the speedy consideration and enactment of House Joint Resolution 19, introduced by Representative WRIGHT PATMAN, of Texas.

There are only two ways to deal with the inequality to which I have called your attention. This is the dilemma into which you are logically forced: You can either abandon the legal fiction that a corporation is a "person" and require each unit of a chain to bargain independently for the purchase of only enough merchandise to supply that store, and make cooperative buying by the members of a chain subject to laws against conspiracy; or you can write into the antitrust laws a provision that it shall not be deemed a violation for a group of independent merchants to bargain collectively with manufacturers or other suppliers to establish the prices to be paid or the discounts to be obtained in the purchase of goods bought for resale in their respective stores.

If it is thought that there is danger that the bargaining power built up by any group should become great enough to overbalance the bargaining power of manufacturers, we should have no objection to reasonable limitation on the size of the groups according to the amount of volume they handled, but we should insist that equal limitations be placed on corporate chains.

RIGHT TO BARGAIN COLLECTIVELY

We anticipate that the objection will be made that independent retailers now may form corporations to engage in the wholesale business and that, therefore, there is no need for this legislation. The answer is too obvious to require much elaboration. These mutual wholesale houses are themselves too small to exercise bargaining power equivalent to that of the great corporate chains. They serve a relatively limited number of stockholders in a small section of the country, and cannot effect enough savings to put their members on a footing of equality unless they themselves enjoy the immunity which House Joint Resolution 19 seeks to extend. Further, the class of retailers who most need the help which the bill seeks to extend have hardly enough capital to operate their retail businesses successfully. They have no surplus capital to invest in the wholesale business.

TWO KINDS OF ACCOUNTS

Further, many manufacturers have two kinds of accounts. The retailers buying in the smallest quantities must get their supplies from wholesale houses; those who purchase in larger amounts are what is known to the trade as "direct buyers." There is a wide range of direct buyers, from the individual operator who has one or two stores to the huge corporation which operates hundreds of stores, and there is a corresponding range in the prices they pay for goods. Direct buyers need the right to bargain collectively. Without it, they are frozen in a position of price disadvantage.

Yours very truly,

J. J. LYNCH,
Executive Secretary.

Secretary of State Byrnes on Need of International Information Service by Our Government

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. LUTHER A. JOHNSON. Mr. Speaker, the Foreign Affairs Committee of the House, on December 17, 1945, favorably reported to the House H. R. 4982, to enable the Department of State more effectively to carry out its responsibilities in the foreign field by means of public dissemination abroad of information about the United States and promotion of interchange of persons, knowledge and skills between the United States and other countries.

The House has not yet considered this bill, but it is awaiting action by the Rules Committee.

Under leave granted, I submit herewith a letter dated December 31, 1945, from Hon. James F. Byrnes, Secretary of State, addressed to President Truman which tells of the transfer to the State Department of the overseas information functions of the Office of War Information, and containing reasons for the passage of the legislation set forth in H. R. 4982:

DECEMBER 31, 1945.

MY DEAR MR. PRESIDENT: On August 31 you issued an Executive order transferring to the Department of State the overseas information functions of the Office of War Information and the Office of Inter-American Affairs.

You ordered them to be consolidated, until December 31, in an Interim International Information Service within the Department. At the same time you asked me to study our foreign informational needs and to formulate during the remainder of this calendar year the program to be conducted on a continuing basis.

The overseas information functions of the war agencies in this field have been transferred and consolidated as you directed. Their transferred personnel has been reduced by half, and many of their functions have been ended. The study which you requested from me has been made, and on January 1 a new Office of International Information and Cultural Affairs, within the Department, will begin to conduct those activities of the former war agencies which I feel should be carried on in peacetime in the national interest.

All of this consolidation, reduction, and planning has taken place without a break, anywhere in the world, in the effort to present what you described on August 31 as a "full and fair picture of American life and of the aims and policies of the United States Government."

There never was a time, even in the midst of war, when it was so necessary to replace prejudice with truth, distortion with balance, and suspicion with understanding.

The past 4 months have imposed critically important tasks upon our information officers in every country. Many of them have been serving in distant posts, cut off from their homes and families, uncertain about their pay and status, yet they have carried on in the finest traditions of American foreign service. I should like to commend them, and those who have continued servicing them at home, for living up to the trust which their country placed in them.

Detailed proposals for the future overseas information service, in terms of money and personnel required after July 1, 1946, have been submitted to the Bureau of the Budget for submission to you and to the Congress. These proposals call for the maintenance of American libraries of information abroad, the supplying of documentary and background material by wireless and by mail to our missions overseas, the scoring of documentary films into foreign languages, the continued publication of a Russian-language magazine for distribution in the Soviet Union, the continuing supply of visual materials about the United States, and the maintenance in 62 countries of small staffs to conduct our informational and cultural relations, under the direct supervision of the chiefs of our diplomatic missions.

To these activities will be added an extension to many other countries of the work now being done by the Department, principally in Latin America, in exchanging students, scholars, and technicians on behalf of 26 agencies of the Federal Government.

Finally, the proposals provided for the continuance of short-wave broadcasting on a reduced scale until recommendations can be made to you and to the Congress for the ultimate disposition of the transmitters and the frequencies now in the Government's hands. Many countries are interested in the development of this powerful new medium giving us direct access to the peoples of other lands who want to understand the American people and their policies.

The Department's proposals will constitute a modest program compared to wartime standards. We shall not seek to compete with private agencies of communication, nor shall we try to outdo the efforts of foreign governments in this field. Our program, however, calls for a significant expansion, in terms of personnel and budget, of the prewar expenditures of the Department of State. It will be a new departure for the United States, the last of the great nations of the earth to engage in informing other peoples about its policies and institutions.

We cannot expect to carry on our foreign relations effectively unless we recognize this activity as, in your own words, "an integral part of the conduct of our foreign affairs."

We would defeat our objectives in this program if we were to engage in special propagandist pleading. Our purpose is, and will be, solely to supply the facts on which foreign peoples can arrive at a rational and accurate judgment.

It is my firm belief that the proposed informational and cultural activities of the Department of State abroad will help to achieve the security and peace which our people so ardently desire.

Sincerely yours,

JAMES F. BYRNES.

The American Way

EXTENSION OF REMARKS
OF
HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. SAVAGE. Mr. Speaker, the social-security program has alleviated a great deal of human suffering in the last few years; and another important benefit to the Nation from the social-security program is that the purchasing power created by social security is now doing a great deal to supplement our wages and earning power here in this country. Thus it has amounted to a great shock absorber in this transition period.

I want to include with my remarks a very enlightening editorial on the subject entitled "The American Way," which appeared in the Boston Daily Globe of January 29, 1946:

THE AMERICAN WAY

Federal social security, regarded as a strange little creature with uncertain prospects when the measure creating it became law in 1935, is now presented to the American people as a sturdy specimen of human engineering by the Social Security Board report for the fiscal year 1945.

For its early period, many people felt annoyed when they realized that one cent for every dollar of wages, up to $3,000 a year, was being sequestered from their pay to be sent to the United States Treasury, along with another cent required from the employer's cash drawer, with a contribution from Uncle Sam.

A few, addicted to reading public documents, were able to point out that when the system got into full operation it would afford much protection in old age, considerable care for children after the death of the breadwinner and also work in unemployment insurance in the State in which one lived.

As the years have passed, appreciation of the helpfulness of social security has taken hold of the consciousness. The present report shows 39,000,000 fully insured. On the other side of the picture are 32,000,000 workers without protection under the act. Some of these have the benefits from other retirement systems. Railroad workers come under the Railroad Retirement Act set up by Federal law. Most of the national civil-service employees are looking forward to annuity rights at 62. About half of all the employees in State and local governments are members of retirement systems. There are also some in nonprofit organizations who are somewhat covered by special retirement plans. Examples would be in college, school, or church pension arrangements. But when all these groups are added together there are left something like 21,000,000 Americans who are not insured in any way, except as they themselves take out policies and meet the premium payments.

During the past decade countless individuals in these various occupations without involuntary or automatic coverage have looked, with curiosity at first and later with longing at neighbors sheltered under the protection offered by social security.

Many communities have examples of what it provides. There are old men retired after years of hard work who receive monthly checks There are fatherless children whose mothers could not have managed to keep her brood together had it not been for the help that comes to her regularly, not as charity but as a right, from the account her late husband paid into while he was employed.

The advantages of the system are now stirring the minds of many millions. Of these more than 8,000,00 are in agriculture, either as farm hands or as owners. More than half as many others belong to the class called self-employed. Some 6,000,000 are working for one of our governmental agencies. In addition are 2,000,000 in domestic service or drawing pay from one or another of lines of endeavor now excluded from social security.

It was not the purpose of the authors of the original measure to leave a multiude of their fellow citizens out in the economic cold. The reason was a desire to get the legislation through rather than indifference to human need. The fear of the proponents was of mass dissent which might prevent the proposal becoming law.

The success of social security during a decade, which began in economic darkness and went through a war in which production was speeded unbelievably, has been convincing.

The result is very naturally mass desire on the part of those not now participating for a share in the benefits of the system. The influences being felt at the National Capitol are not at all like those exerted by special pressure groups. As this is realized, various extensions in the law are probable.

Among others it is proposed that the qualifying age for women beneficiaries be reduced from 65 to 60, that benefits for low-paid workers be increased, that the sum subject to contribution be raised from $3,000 a year to $3,600 and also that the system be enlarged to include as many uncovered groups as possible.

As President Truman has declared, social security has become part of the American way of life.

UNCLE DUDLEY.

Red River Valley

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement in support of the Red River lateral canal, State of Louisiana, presented to the Board of Engineers for Rivers and Harbors, Washington, D. C., January 14, 1946, by S. S. Caldwell, mayor of Shreveport, La.:

Mr. Chairman and gentlemen of the board, illness has prevented me from being present

today for your Board's review and consideration of the proposed Red River lateral canal in the State of Louisiana.

For many years the people of Shreveport and the surrounding area have joined with the Red River Valley Improvement Association and other agencies in working for the reestablishment of a navigable transportation system in the Red River Valley.

Shreveport, La., first became a settlement and was founded because of its strategic location to water transportation. The very foundation of the economic development of the entire State was opened to future growth by this same medium. We, the people of Shreveport and the surrounding trade territory, cannot overestimate the importance of this necessary transportation system that completes the economic foundation for any growing and prosperous city, State, or Territory in the Nation.

A scientifically controlled navigation waterway in the form of the Red River lateral canal has been recommended as economically sound and feasibly possible to your honorable Board by the president of the Mississippi River Commission.

The city of Shreveport stands ready to assume its full share of the obligations stipulated by law in the construction and development of this project, and we respectfully urge that your honorable Board approve this project, which will provide the missing link in the city of Shreveport's transportation system, and will permit us to take our rightful place in the over-all economic development of the Nation.

England General Hospital, Atlantic City, N. J.

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. HAND. Mr. Speaker, under leave to extend my remarks on this subject, it will be recalled that an irresponsible accusation was recently made that there was pressure from Atlantic City to remove the England General Hospital. To put an end once and for all to this unfounded statement I herewith insert a letter from Maj. Gen. Norman T. Kirk, the Surgeon General, as follows:

JANUARY 31, 1946.

Hon. T. MILLET HAND,
House of Representatives.

DEAR MR. HAND: This is to acknowledge receipt of your letter of January 23, 1946, with reference to the Thomas M. England General Hospital, Atlantic City, N. J.

The questions raised in your letter were answered in my letter to you of January 23, but since our letters crossed in the mail I would like to assure you again that the selection of hospitals to be retained by the Army was based on the best professional judgment available and was made after a very exhaustive study several months ago. This office has never been requested by any individual or group, from Atlantic City or elsewhere, to release England General Hospital. On the contrary, the people of that city and nearby communities have been most cooperative at all times and have contributed greatly to the successful operation of the hospital.

Sincerely yours,

NORMAN T. KIRK,
Major General,
The Surgeon General.

The Church and Natural Resources Energy

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Hon. James P. Pope, one time Member of this body from the State of Idaho and now a director of the Tennessee Valley Authority at Alpine, Tenn., before the Tennessee Rural Life Conference on January 25, 1946, on the subject, The Church and Natural Resource Energy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is a living universe. The heavens and the earth abound with energy. The stars and planets swing in beautiful arcs and contain an inconceivable amount of energy. The earth as a source of energy is revealing itself in an amazing way. The recent demonstration of atomic energy bewilders the human mind. It opens a new field of almost unlimited possibilities. At once it is realized that this cosmic force may portend either the destruction or the upbuilding of civilization beyond our imagination.

There are two concepts that weigh heavily upon our minds—the immensity of the physical energy at hand and the enormous moral responsibility in its use. The results of the existence of the one without the other are unthinkable in their horror.

If without the atomic bomb the use of the lesser forms of mechanical energy has resulted in a distressing, war-torn world, what would be the result of the use of this new and infinitely greater energy? The use of atomic energy simply must be accompanied by the fulfillment of moral obligations. Since these moral obligations are the primary interest of the church, there looms before it the greatest task of all time.

ATOMIC ENERGY

Because of the newness of the use of atomic energy and its possibilities, it is literally the beginning and the end of every discussion these days. Our minds are full of questions. Will it take the place of our present sources of energy—hydro power, coal, oil, steam? Will these things be obsolete within a short time? Will men in their confusion wipe themselves off the face of the earth? There are no satisfactory answers to these questions. Nobody knows.

There are, however, two or three things that can be said about the matter. One is that we must go on performing the tasks at hand, utilizing the energy and facilities at our disposal, and hoping that humanity will be wise enough to cooperate in a moral way and save itself.

OTHER ENERGIES HAVE THEIR PLACE

One thing is historically true, so far as displacement of older forms of energy is concerned. As new sources of energy have been discovered in the past, those in use have not been discarded. Steam, for instance, has not been displaced by either electricity or gasoline, and today more steam energy is being used than ever before. And, of course, far more electricity and gasoline are being used than at any time in the past. There is a place for all of them, and an increasing demand for all of them. It seems entirely likely that our present sources of energy will continue to be used at least for a long time to come.

Still another thing seems very clear—that the technique of producing atomic energy cannot be kept secret by any nation or nations, and that the only way to control it is by the united effort of all the nations. This is the conclusion of the most eminent scientists in the world.

In modern industrial life, we are accustomed to thinking of energy mainly in terms of mechanical power. We think of what might be called mechanical energy, rather than the organic energy of plants and animals, as the main source of useful energy. Mechanical energy is certainly the more spectacular, and during the last century or two it has been developed into an almost endless variety of new uses and services. The steam engine, the gasoline motor, and the electric dynamo have never ceased to be of dramatic interest.

The great locomotive puffing black smoke, the electric crossarms silhouetted against the sky, the hum of the motor of the airplane 2 miles high, the radio carrying messages around the world with the speed of light, to say nothing of the atomic bomb, are marvelous mechanisms of energy. And in war the uses of these things have transformed war making from a more or less gentlemanly contest between professional armies into a mechanical process of wholesale destruction of peoples, their property, their homes, and their cities. They have increased the destructive power of men a thousandfold. Now comes the atomic bomb to increase it a millionfold.

MECHANICAL ENERGY SPECTACULAR

These modern developments, even before the appearance of atomic energy, greatly changed our ways of life, both in peace and in war. They have helped men to utilize natural forces and to change the face of the earth. It took a hundred thousand Egyptians 30 years to build the great Pyramid of Cheops. It has taken TVA, with from three to four thousand men, 6 years to build the Kentucky Dam, which is a third larger in cubic yardage than the great Pyramid. It took the Egyptians 1,750 years to build all the pyramids of Egypt and it has taken TVA less than a dozen years to build the TVA dams, which are something like 50 percent greater in mass than the pyramids. And the modern concept is that such dams are more useful in serving living people than are the pyramids in serving dead kings. As a visitor from India at TVA said the other day: "The mistake the Egyptians made was in building the pyramids on dry land instead of in the Nile River."

I know of no better example of the development of energy than in the Tennessee Valley during the last decade. Energy is manifested in different ways and serves different purposes. I have mentioned atomic energy, electricity, gasoline, steam, and the energy produced by food and feed. The amounts of these energies consumed in the Valley have largely increased, and the amounts of some of them produced have also been greatly increased.

The natural power of the Tennessee River and its tributaries has been converted into a large amount of electric energy. Last year, from the 22 dams and the several steam plants, more than 11,500,000,000 kilowatt-hours of electricity was generated by the TVA and used in the area. This is equal to the whole amount of electricity generated and used in the United States in the year 1912. Incidently, TVA is now the largest single producer of electricity in the United States.

TVA AND PUBLIC POWER

So spectacular has been this development of electric power that most people think of TVA as essentially a public power agency. And the fact that this phase of the work has

been the subject of much controversy in the courts and the country has added to that impression in the public mind. The fact is, however, that electric power is only one phase of TVA's development work in the Valley.

It is not my purpose to depreciate the importance of electric power in the Tennessee Valley development. It is a major factor in the development of the region when integrated with others. Its low rates (about one-third of those at the beginning of TVA) and its widespread and largely increased use in the Valley have been of very great benefit to its people. It means savings of something like $11,000,000 a year to them in their power bills, as compared to the rates 12 years ago. It has meant an increase of electrified farms from less than 3 percent to about 25 percent in the Valley.

Electric power has played a part in the much-needed development of industry in the valley. More than 400 new industries, mostly based on local resources, have been set up in the region within the last decade, with low-cost electricity a factor in many cases. Power is the paying partner in TVA's work. Receipts from its sale make it possible for TVA to reimburse the Federal Government for the money invested in the project. It is estimated that the full investment for power without interest will be returned within 30 years and the full investment in navigation, flood control, and power could be repaid within 60 years.

The supply of large quantities of electricity for war purposes has been an invaluable contribution to the winning of the war, including the development of the atomic bomb. About 75 percent of TVA's output has been used for these purposes. The service of this electric power to the people of the region and to the Nation in its war effort cannot be overemphasized in any discussion of the Tennessee Valley.

OTHER PHASES EQUALLY IMPORTANT

However, the other phases of TVA's work are equally if not more important. The savings on water transportation, it is estimated, will not be much less in the course of a few years than the savings on electric power and of like influence in the development of the region. The benefits of flood control will also approach the benefits of power. And the benefits of farm and forestry programs will undoubtedly be equal to if not greater than those of electric power.

The importance of soil improvement, of the production of better crops for food and feed, and of the creation of the vast amount of life-giving energy for men and animals cannot be measured in money, for in it are involved considerations of health, of nutrition, of living comforts, and of human well-being. It is about this matter that I would speak for the rest of my time tonight.

Perhaps one way of measuring its importance is to make some comparisons of the amounts of energy used. The different expressions of energy have different units of measurement. The familiar unit of electric energy is the kilowatt-hour, and the familiar unit of food energy is the calorie. These forms of energy are not interchangeable, of course; a man can't plug himself into an electric socket to obtain the energy for his daily tasks. But for the purposes of comparison they can be reduced to the same unit.

Thus the energy the average person obtains from food in a year is equal to 1,275 kilowatt-hours, and a family would consume three or four times that much. The average family that has electricity in the United States uses 1,117 kilowatt-hours of electric energy per year. It happens that the average use of electricity per family in the Tennessee Valley is much greater—1,707 kilowatt-hours. When the total consumption of food by men and animals is reduced to kilowatt-hours, it is found that in the Tennessee Valley the amount is about 44,000,000,000 kilowatt-hours a year, as compared to 11,500,000,000 kilowatt-hours of electricity used.

To put the matter another way: The average person consumes in food the equivalent of 3½ kilowatt-hours a day, and the family consumers in electricity 3 kilowatt-hours a day. Each person, then, eats more kilowatt-hours a day than the average family uses in electricity. And what about animals? Do they eat many kilowatt-hours a day? Listen to this: The old milch cow is a regular dynamo. She consumes the equivalent of 46½ kilowatt-hours every day of her life, when she can get it. That amount of energy would supply the average family with electricity for all the lights, washing machine, refrigerator, electric iron, cream separator, and all the other electric things on the place for over 2 weeks' time. She actually uses about as much energy as a 5-horsepower dynamo running 10 full hours a day. My hat is off to her—for a good many reasons.

There are some other interesting comparisons, too. The annual amount of energy generated by plants in food and feed crops in the State of Tennessee alone is equivalent to 34,000,000,000 kilowatt-hours, or about three times the production of electric energy by TVA. Even the energy from the wood used for fuel each year in the Tennessee Valley is equivalent to 25,000,000,000 kilowatt-hours, or more than twice the electric energy used. A calculation has been made of the amount of energy in kilowatt-hours created by the growth of the timber above 6 inches in diameter each year in the Tennessee Valley. That amounts to about 37,500,000,000 kilowatt-hours of energy.

And what about the energy contained in the coal that is mined in the Tennessee Valley every year? That is a surprising amount. It is estimated that about 15,407,000 tons are produced in the valley every year. The energy of this coal is equivalent to 122,000,000,000 kilowatt-hours, or more than 10 times the TVA production of electric energy in the region. Some of this coal actually is turned into two or three billion kilowatt-hours of electric energy in the valley. It should be emphasized here that coal comes from a definitely exhaustible source of energy, as does gasoline, while all these other sources are renewable. This is an extremely important consideration.

ENERGY OF FOOD AND FEED

I know of nothing that better illustrates the tremendous importance of food, feed, and fuel than these facts about their relative energy value. We can get along without atomic energy or electricity or gasoline or steam—humanity did up to 200 years ago—but we cannot get along without food and feed and fuel. These are the greatest producers of energy as they are the greatest factors in the life, the health, and the well-being of people.

TVA has from the beginning realized the supreme importance of this and of the necessity for the food and feed to have in it the essential proteins and minerals. It has recognized the necessity for preserving the bases of this vital energy. It has recognized the depletion of the soil and the forests which supply most of the things that men and animals live by. It has, in cooperation with other agencies, developed a program of soil-building and of forest conservation. It has developed a potential capacity of 130,000 tons a year of phosphatic plant nutrients—P_2O_5. Much of this capacity was used for munition purposes during the war, but some part of it was used on the 24,000 demonstration farms in the valley and the other thousands outside. TVA also has considerable capacity for producing nitrogenous plant food as a result of the munition requirements of the war.

TVA AND PHOSPHATE

This whole demonstration-farm program has been built around phosphate. At the beginning TVA decided to process and use phosphate rather than nitrogen, and here are some of the scientific reasons for the decision.

Each pound of phosphorus, with lime, can add to the soil 3 pounds or more of nitrogen through legumes. This 3 pounds of nitrogen can produce from 125 to 350 pounds of food material necessary to animal and human nutrition. This can in turn produce 160 pounds of milk, or 15 pounds of beef or 23 pounds of pork. All this production, then, stems from 1 pound of phosphorus. Up to July 1945, TVA supplied 54,500 tons of phosphorus for use on these farms, and it is estimated that this would produce some 818,000 tons of beef or 1,255,000 tons of pork or 8,720,000 tons of milk.

While you are coming up for air from this sea of figures, I will assert that here is energy for you. The old milk cow is getting in her work. She is producing energy faster than Norris Dam. In the eight-million-odd tons of milk there is energy of more than 5,000,000,000 kilowatt-hours of electricity. That is about half the present annual output of all TVA's dams and steam plants. And this milk energy represents not the total milk of the area by any means, but only the increase made possible by the TVA phosphate. If you have survived the statistics, I think this may indicate to you the enormous energy that is created by food, feed, and fuel, and on the business side it indicates a pretty fair return on the investment in phosphorus.

ENERGY AND NUTRITION

Talking about all this energy that comes from food and feed is simply another way of talking about nutrition—human and animal nutrition. And the story of the use of phosphorus on the land is simply a story of better nutrition. It is a story of more and better food and feed—more and better plants containing protein and minerals—more and better crops containing the elements that build up bone and muscle and sinew.

And the need for this has never been greater than now. The deficiency of nutrition at the beginning of the war was serious enough, as everybody knows. And certainly that deficiency has not decreased among the peoples of the world, for ever-increasing numbers have been without sufficient food of any kind. Millions have gone hungry and many have starved during the war, and millions more will suffer now that the war is over. Even in the United States, probably the best-fed country in the world, there is an alarming lack of nutrition.

LACK OF NUTRITION

In a recent statement, Dr. William A. Albrecht, head of the department of soils at the College of Agriculture in Missouri, used this language:

"Keen minds among doctors of medicine and dentistry * * * have seen degeneration in bodies, minds, and souls taking place at the highest rate among our people * * * Studies * * * make it possible to see human deformities associated with nutrition and this nutrition going back to the crop, the season, and the soil itself."

And he had this to say about our animals:

"Animal ailments are on the increase. Because of the declining soil fertility, animals have been pushed to the dangerous precipice until decreased reproduction, increased diseases, more body malformation, and other irregularities have compelled us to market these animals early. What the use of this meat has been doing to human health had not yet been given consideration."

And there has never before been such a drain upon all our natural base. In a report by a committee of the Department of Agriculture a year or two ago, the extent of the drain on crop and grazing lands and forests was pointed out. Soil erosion and loss of fertility have been very heavy. And the drain on forests has largely exceeded the growth of new timber.

All this presents a problem immense and vital. Its importance to human welfare is beyond measure. Improvement of the land, conservation of the forests, production of better food and feed, thus assuring the necessary amount of life-giving energy for men and animals, is certainly one of the "must" policies of the American people, and it is going to require the best efforts of individuals and of institutions to approach any solution of the problem.

FORWARD STEPS

There is considerable evidence, I am happy to say, of movement in this direction. Public consciousness of the problem is growing. Meetings of this kind are being held over the country. Educational forces are more active than at any time before. There is increasing discussion in magazines and newspapers. Significant experiments are being made in different parts of the country. Business concerns and banks have become interested in some places and are assisting in the task.

Recently my attention was called to a pamphlet entitled "Country Bank Action on the Soil Front," gotten out by the Federal Reserve Bank of Cleveland, Ohio. In it this bank talks about declining soil fertility, about soil-conservation districts, about changes in yield with phosphate and lime applications, and the like. One paragraph must be quoted:

"One of the great costs of the Second World War has been the accelerated deterioration of the Nation's soils. That soil productivity must be rebuilt is self-evident, for all human destiny is dependent upon it. It is not merely a problem for farmers, for, truly, the land is everybody's heritage."

A very important step forward is now being taken with respect to a national fertilizer policy. It is based on the concept of enabling farmers throughout the country to use the amount of phosphate and other fertilizers needed by the soil for its maintenance and for the economical production of nutritious food and feed crops. The Department of Agriculture has estimated that about twice as much phosphate is needed as is being used on the land now. The same is true also of some other kinds of plant food. Based upon its own experience for the last 10 years, TVA has issued a statement strongly recommending such a national policy.

A CHALLENGE

The life-giving energy that comes from the land can never be replaced by any form of mechanical energy, atomic or any other. It alone can sustain life. It alone can provide health and vigor and bloom. It alone can build strong bodies, clear heads.

Mechanical energy can give power and provide comfort. It can enable men to do prodigies on the land, on the sea, and in the air. It can carry messages with the speed of light. But it cannot tint the rose, green the grass, or ripen the corn. It cannot put the glow of health into boys' cheeks. Only the sunshine, the fresh air, and the energy of the fruits of the soil can do that.

To provide an abundance of this life-giving energy is a great task. It is of such importance as to challenge the best efforts of men. It is so vital to human well-being as to require nothing less than the keenest minds, the most skillful hands, and the most devoted souls that can be enlisted in it.

Understanding Russia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. JUDD. Mr. Speaker, in a world groping for concord, Russia is the most important and the most difficult nation for Americans to understand. The Minneapolis Star-Journal is publishing a series of five articles on Russia and her activities in Europe, written by Dr. Sverre Norborg, a distinguished American citizen born in Norway, who until lately was on the University of Minnesota faculty, and who, during the war, served in the Office of Strategic Services and was for a year in charge of UNRRA activities in northern Europe.

Under permission to extend my remarks, I am including an editorial from the Minneapolis Star-Journal of January 28, and the first two of Dr. Norborg's articles. The others will be included later:

[From the Minneapolis Star-Journal of January 28, 1946]

UNDERSTANDING RUSSIA

In contrast to some of our own seemingly aimless foreign-policy decisions, Russian international action may appear resolute and concerted. Yet a look behind the scenes at Moscow reveals schools of thought as widely divergent as those in America. Isolationism, chauvinism, and internationalism all have their champions in the Soviet capital.

A searching study of these men and their policies is provided in the series of articles by Sverre Norborg beginning in the Star-Journal today. As student, political philosopher, and UNRRA official, Dr. Norborg has watched the currents of public life on the Continent at first hand for many years.

The former University of Minnesota faculty member is convinced that we must know the Russians better to arrive at a basis for understanding with them. We must comprehend the not too complex motives which govern factions within the one party of the U. S. S. R.

The Russians have kept a smoke screen between themselves and the rest of the world, yet an objective study is possible. Russia's foreign maneuvers since VE-day, the behavior of her armies abroad, the few public utterances of her leaders all provide clues. Fortified by his acquaintance with European diplomats and professional scholars, Dr. Norborg has made that study.

His intelligent analysis should be read by every American interested in understanding the rulers in the other great powers of today's world.

MICROSCOPE ON RUSSIA—EUROPE MOVES LEFT AFTER WAR BUT SHUNS COMMUNISM—SOVIET UNION "MISSES THE BOAT" AS CONTINENT TURNS INSTEAD TO SOCIAL DEMOCRATIC CREED

(By C. Sverre Norborg)

In Paris last August, I asked a European economist what he thought of the Russian situation. In his radical youth he had served as technical adviser in Moscow on Stalin's first 5-year plan, but his enthusiasm has since cooled off to a state of critical objectivity.

His answer was: "The paradox of 1945 is a double one. The world is afraid of Russia and does not want to be so. The Russians are afraid for themselves and do not want to admit it.

"Since VE-day I have done considerable monitoring of Radio Moscow to find out whither the Soviet wind is blowing. Shcherbakov, the Soviet propaganda chief, is still plugging away, but the 'melody' is lost. The whole thing is improvised.

"During recent months, Russian broadcasts have reflected the uncertainty which has gripped Moscow ever since Europe began to show its postwar political colors. Politically speaking, the premature calculations of A. Y. Vishinsky (Soviet brain truster) on postwar Europe have backfired in the most miserable manner.

"Now I am waiting for the great realist, Josef Stalin, to make a frank admission of the mistaken hopes which the Soviet Union failed to see fulfilled in Europe during this summer of liberation. We may soon witness some startling changes in Soviet foreign policy."

(Andrei Y. Vishinsky is a leading Russian lawyer and Molotov's vice commissar of foreign affairs. A revolutionist at 18, he installed Russia's now legal code after the 1917 revolution. After Hitler's defeat he attempted to install Communist-controlled governments in the Balkans. He is Russia's chief delegate to the UNO sessions in London.)

After the glorious victory at Stalingrad in 1943 the foreign-policy planners of Moscow decided to accelerate their neat work on a "blueprint" for a New Europe. With the broad outlines and basic directives given by Marshal Stalin, the Politburo, Russia's supercabinet, left most of this planning work to Vishinsky, Bulganin, and Zhdanov.

A. A. Zhdanov is the keen, fiftyish, middle-of-the-road Stalinist, who in many respects serves Generalissimo Stalin as Harry Hopkins served the late President Roosevelt.

The comparatively unknown N. Bulganin wields an active and considerable influence on Russian foreign policy through his chairmanship of the Soviet commission on foreign affairs.

The brilliant but slightly visionary Vishinsky heads the unofficial circle of political scientists who constantly watch over what Russian Marxists like to call "the dialectics of Soviet world policy."

Outside Russia the best-known member of this Russian "brain trust" was the late Ambassador Oumansky, who, strangly enough, was transferred from Washington to Mexico (where he met death in January 1945 in a plane crash).

Piecing together all of the information gathered by the Russian political intelligence, this circle of Moscow planners called in Russia's top experts on European underground movements. Former Comintern leaders like pale, obstinate Georgi Dimitrov, voluntary exiles like Maurice Thorez and A. Kuusinen, and leading European representatives of the Communist underground, reported to Vishinsky, Zhdanov and company that they were convinced that Red Europe would be right around the corner once World War II came to an end. It was inevitable, it was demanded by that logic which Marxists are prone to find in history.

In this spirit of victorious fervor, the foreign affairs experts of Moscow accordingly laid plans for a postwar European policy in which special emphasis was put on—

The unification of all Slav nations.

Russian dominance of the Baltic.

The final unbottling of the Dardanelles.

A deep security belt of friendly nations along Russia's European borders.

A selling campaign of Russian good will and power throughout the world.

Since VE-day European history has staged a surprise party.

Europe has not gone Red.

True, the western European nations have followed in the political steps of the British Labor victory. And in France the party with the greatest popular following is the Communist Party. In all countries the native Communists have elected more representatives to the parliaments than at any earlier time. This is notably the case in Denmark.

Yet it is surprising to find Norwegian, Danish and Dutch Communists insisting, both privately and publicly, on strict adherence to Western democratic ideals and procedure.

Last summer in Copenhagen, a cosmopolitan group was discussing Europe's future with one of the Communist members of the interim Danish cabinet. Our conversation had inevitably wheeled around to the Red Army, when he suddenly broke into a spontaneous declaration:

"We must not forget what we owe the English people. We Danes always will remember that had it not been for Churchill and England in 1940, there would be no democratic Europe today."

A fresh breeze of European good will went through the room, and a smile or relief lighted up the serious faces.

How did it happen that the Moscow foreign experts were caught so badly off base in their diagnosis of political postwar Europe?

Was Russian political intelligence inadequate or misled?

Did Moscow underrate the political maturity of the European underground movements?

Did American victories on the Continent have anything to do with the change of the political climate throughout Europe?

Did the atomic bomb change the political climate?

The answer to each of these questions is: Yes, decidedly.

[From the Minneapolis Star-Journal of January 29, 1946]

MICROSCOPE ON RUSSIA—REFORM OR REVOLT?—POSTWAR EUROPE CHOOSES REFORM—BRITISH LABOR VICTORY SAVED CONTINENT FROM RED BRAND OF DEMOCRACY

(By C. Sverre Norborg)

American military victories in Europe changed the political climate on that Continent. Atomic bombs dropped half a world away confirmed the change. But there are two deeper reasons why Russia's postwar program for Europe has failed, and Europe has chosen instead to follow the social democratic instead of the Communist political philosophy.

Those reasons are psychological.

Discussions with scores of European underground leaders in the summer of Europe's liberation revealed them. Both factors were overlooked by Russian intelligence and neglected by the makers of Russian foreign policy.

First, the resistance against Nazi tyranny in all the fighting underground movements was motivated by a definite and all-embracing national spirit, which did not know or count political party lines.

I have heard Norwegian clergymen of underground fame give unstinted praise to the self-sacrificing patriotism of Norwegian Communists.

Danish Communists seeking asylum from the Gestapo have spent many a night in a shipowner's or an industrialist's home. Self-effacing patriotism was the key to the European underground.

The second factor, democratic individualism, is, if possible, of even greater and more lasting political significance. The national underground forces in the different European countries were under strict, unified discipline. Orders were given. Assignments were carried out. No questions were asked. No explanations were expected.

And yet this was the iron discipline of a freedom movement in which each individual held in his hand the safety and security of all the others—banker, professor, bricklayer, clergyman, bus driver, or housewife—this was a classless community of freedom-loving spirits.

They met at work, they shared concentration camps, they walked to execution—together.

"Now I know what true democracy is," said a crippled Belgian student just back from Dachau. "I have lived in it for 3 years. It is humanity itself."

In retrospect, therefore, it can be said that Russia's informants were too Marxist and too superficial in their political analysis of the spiritual forces at work. Deep under the stupid brutality of Nazi heels, a new moral experience was unifying Europe's democratic masses in a national and social cohesion of unknown strength.

Not that there was much more prophetic insight among us westerners than among the Russians. The Labor victory in England came as a shock in Europe as well as in Washington.

But the democratic nations of liberated Europe almost instantly jumped at British Labor's program as a welcome political alternative to the managerial centralism of Moscow.

Prof. Harold Laski's good-will tour during the summer of 1945 to the Scandinavian countries came at a turning point in European political history. Before his visit, the Communists and the Socialists in country after country had worked with fear and fervor to amalgamate their respective parties into a united popular front.

Then suddenly the Socialists broke off the negotiations. The leading Communist newspaper in Copenhagen wrote an editorial entitled, "Laski Came and Unity Went." The stinging irony of the editorial testified to the bitterness of a Marxist mind which had seen its European dream burst.

Moscow has never loved Social Democrats, who prefer reform to revolution. The invectives used by Communists before the war, in every country, against "these chicken-hearted, pink traitors to the cause of the proletariat" are too well known to need repetition.

Furthermore, Moscow no longer speaks of the proletariat. It proclaims socialism. It emulates democracy, and in its own way it believes in what it proclaims.

It is a matter of definition. It may be much more.

Vishinsky's famous Bucharest speech is still the clearest statement of the Russian idea of democracy which the outside world has received. It was a brilliant sales talk along somewhat obscure lines, on the mythical will of the people.

After analyzing the Vishinsky text, a keen British political philosopher observed:

"Add a new definition to your vocabulary—Vishinsky's concept of democracy. According to him, democracy is 'the greatest amount of happiness for the greatest number of people, whether they want it or not.'"

It is at exactly this point that United States foreign policy has been at loggerheads with Moscow.

The Russians forced a solution of the Polish problem on the basis of this mythical "will of the people." They installed Austrian, Bulgarian, and Rumanian "governments" as expressions of this mythical "will of the people." On the very same ideological basis they are strongly behind what has been called Titotalitarianism in Yugoslavia.

However, authentic reports of recent developments in Poland tell of a definite westernizing even of the Polish political situation.

The revealing victory of the political opposition party to communism in Hungary is another straw in the European wind. The Czechs are busy with nationalization of most of their industries, yet they remain political democrats in the constitutional sense of that word. In Austria the Russians have given in, after considerable pressure.

The Moscow agreement points to a compromise by the Big Three on the governmental situation in Rumania and Bulgaria.

And that military statesman, Gen. Dwight D. Eisenhower, has publicly stated that a free election in the Russian zone in Berlin would show up the German Communists as the pitiful minority group they really are.

What will the foreign policy makers of the Narkomindel (Russian foreign office) do about the political temper of the New Europe?

Will they accept it as a fact and cooperate in trade and cultural relations?

Will the Soviet Union insist on keeping a "security belt" along her European borders, while it otherwise withdraws from the rest of Europe?

Will it compensate for a loss of face in Europe by turning its attention even more than before to the Asiatic peoples?

Or, will Russia itself change, broadening democracy within her own borders and, with the United States, lead all nations toward one world?

The world has once again begun the Herculean task of making peace.

This time the main burden falls on the two former isolationist world powers—the United States of America and the Union of Soviet Socialist Republics.

Confusion, mistakes and frustration cannot meet the challenge of the atomic age.

Russia is in midpassage. So is the world.

The Negro Soldier

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mrs. DOUGLAS of California. Mr. Speaker, it is about the Negro soldier I wish to speak today. I wish to pay him the respect and to express the gratitude of the American people for his contribution in the greatest battle of all time—the battle which decided whether or not we were to remain a free people.

We should be especially mindful of the Negro soldier, remembering that he fought and shed his blood for a freedom which he has not as yet been permitted fully to share.

The service record of the Negro in World War II began with the Japanese attack on Pearl Harbor, December 7, 1941, and carried through to the day and the hour of the Japanese surrender.

Whether in the North African, European, or Pacific theater of war, the Negro serviceman responded to the call of duty to the fullest extent of his opportunity and to the very best of his ability.

The Negro soldier made his contribution in World War II as he has in every other war in which we, a free people, have fought. And he has again met the test of patriotism and heroism. The names of Negro heroes in this war are everlastingly recorded among the living and the dead. They won their citations

in every combat area, on land, on sea, in the air.

It should never be forgotten that Negro heroes in this war achieved their proud records under handicaps that did not have to be overcome by most of their white fellow citizens.

This was the most mechanical of all wars. Training had to be based on the education and experience of the average man. The average American boy going into the service of his country had some knowledge of, some experience with the mechanical gadgets that contribute to our much boasted high standard of living. And at least he could read and write.

Three-fourths of all Negroes in the armed forces came from areas in this land of the free where their people had been held down for generations, denied education, denied the use of tools any more complicated than a hoe, denied the right to participate in self-government, denied even the right to self-respect. For them, equal educational opportunities, equal pay for equal work, practically any opportunity to work at skilled trades, simply did not exist. They went into the armed forces ill equipped, through no fault of their own, for the tremendous job required of them.

But they did the job, all the same, handicap or no handicap. And they did it magnificently.

They were MEN—with the heart and the will and the courage—the stuff of which heroes are made. They may, as did one group, have had to memorize instructions because they could not read them. But while letters may have been foreign to them, devotion was not; nor was courage foreign to them. The qualities that cannot be indoctrinated—the qualities of greatness—were there.

Some of the most outstanding units in all theaters were made up of Negroes who had been classified in the lowest Army classification categories—those very boys who had never had a chance to run a machine or even to learn to read and write before going into the Army.

Despite the Selective Service and Training Act, which established a basic policy of nondiscrimination because of race or color in building up our Army, and in spite of improvement during the course of the war, it must not be forgotten that segregation, discrimination, and race prejudice, in all of its varied forms, placed an added burden on the Negro in the armed forces and dogged his steps from the induction center to the front line.

Navy Crosses—for "conduct in keeping with the highest traditions of the United States naval service"—were won by Negro mess attendants not permitted to enlist in their country's Navy as fighting men.

It was a mess attendant—not permitted, because he was a Negro, to train as a gunner—who manned a machine gun and fought back when the Japs strafed his ship at Pearl Harbor. For this and for dragging his mortally wounded captain to safety, Dorie Miller, mess attendant first class, won the Navy Cross.

It was Leonard Roy Harmon, mess attendant first class, who won the Navy Cross, posthumously, for heroic action. He lost his life aboard the U. S. S. *San Francisco* in battle off the Solomon Islands. Later his mother was brought from her home in Texas, by order of the Secretary of the Navy, to the shipyards in Hingham, Mass., to sponsor the destroyer escort U. S. S. *Harmon*, named after her hero son.

It was Pvt. Woodall I. Marsh, of Pittsburgh, of the Ninety-second Division, who won the Silver Star for taking 12 wounded paratroopers out of the front line to safety, fording a raging torrent in his truck, after an officer had said it could not be done. When he was told he could not get through because the water was too deep, Private Marsh replied, "Well, there's dirt underneath, ain't there?"

In December 1944 when the picture in Europe was dark, where our front-line losses were mounting with tragic swiftness, a call was sent out for volunteer replacements from troops assigned to noncombat duty behind the lines. More than 5,000 Negroes eagerly responded. Because only privates were accepted, many noncommissioned officers offered to sacrifice their stripes for a chance to get into the fighting. Twenty-five hundred Negro soldiers were accepted, but 3,000 more were turned back, because a quota for Negroes among the volunteers had been set. One of those who was accepted, Pfc Leroy W. Kemp, of Atlantic City, N. J., remarked, "We've been giving a lot of sweat. Now I think we'll mix some blood with it."

They did mix their blood—with the blood of their white brothers—and out of that mixing new understanding and respect were born.

One of the finest tributes paid these volunteers came from Brig. Gen. Charles T. Lanham, assistant commander of the One Hundred and Fourth Infantry Division, following the presentation of combat decorations:

"I have never seen any soldiers who have performed better in combat than you," General Lanham told the Negro doughboys.

Under the Selective Service Act, Negroes were trained for every branch of the service, but, although Negro fighter pilots were shooting down German planes over Italy, although the Ninety-second Division fought through the Italian campaign from start to finish and came out with 2 Distinguished Service Crosses, 1 Distinguished Service Medal, 16 Legion of Merit awards, 95 Silver Stars, 6 Soldier's Medals, 723 Bronze Stars, 1,095 Purple Hearts, and 7,996 Combat Infantry Badges, and although the Nine Hundred and Sixty-ninth Field Artillery Battalion was caught at Bastogne and fought it out side by side with the celebrated One Hundred and First Airborne Division and received, with the One Hundred and First, a Presidential Unit Citation, and although there were Negro combat troops in action on every front, the fact remains that the majority of the Negroes, sometimes regardless of qualifications, found themselves in service outfits.

And what did that mean? It meant building airports, bases, roads, and highways under fire, in freezing cold and blazing heat. It meant building an approach to a bridge across the Rhine, under artillery fire, unable to take cover, unable to shoot back. It meant landing ammunition on the Normandy beaches on D-day, always under fire. It meant setting up field kitchens on those beaches, even before the fighting troops which were to be fed and heartened had all come ashore. It meant Negro Seabees winning commendation for building an airport on a Pacific island under heavy Japanese fire. It meant stringing thousands and thousands of miles of communication wire—across rivers, through steaming jungles, over icy mountain passes, with artillery shells crashing around them, with snipers forever shooting at them. It meant trucking high explosives and octane gas over the Red Ball Highway—continuously under aerial bombardment. It meant building the Ledo Road, under impossible conditions, cutting and blasting their way through jungle and over mountain passes—riding their bulldozers down with tons of sliding rock when the narrow ledges gave way, to save the precious equipment. And again and again and again it meant dropping a shovel and picking up a gun from the stiffening hands of a fallen fighting comrade.

In 1940, when the Selective Service Act was passed, there were only 4,451 Negroes in our Army, including 5 commissioned officers and 11 warrant officers.

In February, a year ago, there were 690,282 Negroes in the Army. Of these, 52,884 were in the Infantry, 27,163 in the Coast and Field Artillery, 770 in the Cavalry, 140,154 in the Engineers, 63,079 in the Air Corps, and 406,232 in other branches of the armed services. Included in the total were 6,548 commissioned officers. Of that number, 120 were Dental Corps officers, 343 were nurses, 569 were Medical Corps officers, and 260 were chaplains. The Army had 820 Negro Wacs, the Navy had 68 Negro Waves, and the Coast Guard 5 Negro Spars.

Last August there were 695,264 Negroes in the United States Army. Of these, 495,950 were overseas. On the day of final victory in Europe there were 22 Negro combat units in action on the European front.

Here are some things that "Ike" Eisenhower, the man who broke the Axis, had to say about the Negro troops who served under him.

In July 1944, to the commanding officers and men of a Negro antiaircraft balloon battalion, the only outfit of its kind participating in the D-day landings:

The commanding officer, First United States Army, has brought to my attention the splendid manner in which you have carried out your mission during the period of June 6 to July 10, 1944.

Your battalion landed in France on June 6 under artillery, machine-gun, and rifle fire. Despite the losses sustained, the battalion

carried out its mission with courage and determination and proved an important element to the air-defense team. The cheerfulness and devotion to duty of officers and men have been commented on by the personnel of other units.

This report is most gratifying to me. I commend you and the officers and men of your battalion for your fine effort, which has merited the praise of all who have observed it.

On the same day to the commanding officer and officers and men of a Negro truck company:

I have received from the commanding general, First United States Army, a report of your exceptionally fine work during the landing in France and the period of a month subsequent thereto. The report confirms my own observation.

You landed under enemy machine-gun and artillery fire, which caused losses in men and equipment. Nevertheless, you salvaged most of your equipment at once and within 3 days 90 percent of your vehicles were operating on a 24-hour basis, a scale which was maintained for 5 weeks. During this time you continued the delivery of essential supplies. I want you to know that I appreciate your splendid work. Your accomplishments are a source of gratification to me and to your Army commander.

Reviewing the war at a press conference in Paris on June 15, 1945, General Eisenhower was asked to comment upon the contribution Negro soldiers made to the European Theater of Operations. He replied:

To start with, I would like to say this: That I do not differentiate among soldiers. I do not say white soldiers or Negro soldiers and I do not say American or British soldiers. To my mind, I have had a task in this war that makes me look upon soldiers as soldiers. Now, I have seen Negro soldiers in this war, and I have many reports on their work where they have rendered very valuable contributions and some of them with the greatest enthusiasm. In late November, when we were getting short of reinforcements, replacements, some 2,600 Negro soldiers volunteered for front-line service and they did good work. All my commanders reported that these volunteers did excellent work. But their major job has been in Service of Supply, engineer units, quartermaster units, ordnance units. There, so far as I know and certainly as far as any official reports, they have performed equally with every kind of ordnance battalion, quartermaster battalion, and engineer battalion. They have done their job and they have done the job given them.

Mr. Speaker, I trust that all of us, as we continue our task of building a firm and lasting peace, will emulate "Ike" Eisenhower. He did not differentiate between whites and Negroes—nor between Americans, British, French, nor Russians. They were all soldiers. It is my fervent hope that we will have the wisdom to look upon citizens as citizens—neither white nor black nor yellow—but simply as citizens—of a world community.

At this point I wish to introduce what at this time can only be a partial record of Negro devotion and heroism in the cause of freedom. My material has been gathered from the War and Navy Departments.

AFRICAN-ITALIAN CAMPAIGN

FORTY-FIRST ENGINEERS

On June 17, 1942, 18 months before United States troops were reported to have landed at Dakar—the first Negro troops landed in Africa. They were the Forty-first Engineer Regiment—the "singing engineers"—and their mission was to protect that vital area in the trans-African life line of the United Nations under an agreement between the Governments of the United States and Liberia. The pact, signed on March 31, 1942, gave the United States the right to construct, control, operate, and defend airports in the West African republic. In return for use of lands for American troops, the United States agred to protect Liberia's neutrality, provide $1,000,000 in lend-lease aid, undertake a road-building program and train a Liberian Army, using American equipment.

Pfc. Edward Taylor, of Baltimore, led ashore the first American expeditionary force ever to set foot in Africa. A handful of natives and civilian construction workers watched him step ashore. "Liberians," he said, "we are here to join hands and fight together until this world is free of tyrannical dictators."

The Forty-first Engineers worked at a grueling pace. A big job had to be done in record time, despite malaria, bad terrain, and the rainy season. But they built the airports, cantonments, and other installations that were needed. They unloaded ships and dispatched supplies through three big defense areas. They laid steel landing mats in the emergency airports and waged a constant battle against the verdant undergrowth. They built permanent structures to replace temporary shacks and sheds.

"For exceptionally meritorious conduct in the performance of outstanding service" in Liberia, Master Sgt. Albert F. Williams, of Waycross, Ga., Headquarters and Service Company, Forty-first Engineers, was awarded the Legion of Merit.

His citation stated that "As a member of the advance detachment of an expeditionary force, from April to June 1942, he distinguished himself by his soldierly qualities, leadership, and dependability. Upon arrival on a strange continent, by his example of cheerfulness, confidence, energy, and industry he was a constant source of inspiration to his fellow soldiers and a tower of strength to his commanding officer. Sergeant Williams set the pace for all duties assigned. He supervised his men every moment of the day, protecting their health so that there was no illness in a disease-ridden country. He used his 600 native laborers with patience, understanding, and skill. He was largely responsible for building up an enviable reputation for our soldiers abroad and contributing materially toward the preliminary mission of the force."

President Roosevelt stopped in Liberia on his way home from the Casablanca conference on January 27, 1943, and reviewed the Forty-first Engineers.

FOUR HUNDRED AND FIFTIETH ANTIAIRCRAFT ARTILLERY AUTOMATIC WEAPONS BATTALION

This battalion had the distinction of being the first Negro combat unit to land in north Africa and the first Negro combat unit to go into action on European soil.

As a matter of fact, before it even landed on the Italian peninsula, it won the commendation of Lt. Gen. Mark W. Clark, commanding the Fifth Army, for "outstanding performance of duty" in its baptism of fire. It accounted for two German bombers before it landed in Italy.

While the Negro troops of the Four Hundred and Fiftieth Battalion were still aboard ship in Naples Harbor, German bombers came over. The attack occurred at night. Soldiers of the Four Hundred and Fiftieth Battalion aboard one ship manned its 40-mm guns. Seachlights picked up the bombers, and the Negro gun crew shot down one German bomber.

Aboard another ship, carrying personnel and equipment of the Four Hundred and Fiftieth Battalion, M/S Johnson Clark, of Detroit, Mich., jumped into a loaded truck parked on deck and opened fire with a 50-caliber machine gun mounted on the cab. Other fire opened up from that ship, and a second bomber crashed into the sea.

Commending troops of the Four Hundred and Fiftieth Battalion for this accomplishment, General Clark declared:

"I am proud of the outstanding performance of duty of these soldiers in this baptism of fire. Their conduct was excellent and reflects the training and discipline of their unit. The Fifth Army welcomes such soldiers."

NINETY-NINTH PURSUIT SQUADRON

This unit of fighter pilots trained at the Tuskegee Army Air Field. After further training by veterans of the Tunisian campaign, the unit was committed to combat on June 1, 1943. It flew its first mission, over an air base at Fardjouna, the following day. Other early missions were over the island of Pantelleria, Italian stronghold guarding the Sicilian straits. Six of its pilots had their first brush with enemy aircraft over Pantelleria, and pilots of the Ninety-ninth dive-bombed Pantelleria daily until it was surrendered on June 11, 1943.

Next came the Sicilian campaign. During the first 9 days of July 1943, the Negro pilots of the Ninety-ninth Squadron escorted bombers to Sicily. On every trip they were attacked by superior numbers of enemy fighter planes.

By the middle of July the Ninety-ninth was escorting bombers over Italy. In a dogfight over Sciacca, Italy, one day, First Lt. (now Captain) Charles B. Hall, of Brazil, Ind., shot down the first Axis plane officially credited to the Ninety-ninth Squadron. On that same day the Ninety-ninth, flying close escort for medium Mitchell bombers, probably destroyed two more German planes and damaged three.

General Eisenhower was at the air base with the squadron's commander, Lt. Col. (now Colonel) Benjamin O. Davis, of Washington, D. C., when Hall and the others landed after that fight and congratulated them on their first confirmed victory.

From June 1 to September 3, 1943, the Ninety-ninth Squadron participated in about 800 sorties over north Africa, Sicily, and Italy.

Squadron's Biggest Day

The Ninety-ninth Squadron, by this time based in Italy, had its biggest day on January 27, 1944. In one of the fiercest air battles of the Italian campaign, over the Anzio beachhead, south of Rome, Negro pilots of the Ninety-ninth Squadron scored eight confirmed victories over the Germans.

Bent on driving the Allied landing force out of its beachhead, a hundred or more Messerschmitt 109's and Focke-Wulf 190's came over in two attacks, morning and afternoon on that day. Twenty-eight were destroyed during the day and the Ninety-ninth got eight of them, the largest number credited to any single squadron that day.

Flyers from eight States figured in this outstanding collective victory of the Ninety-ninth that day. Capt. Lemuel Rodney Custis, of Hartford, Conn., squadron operations officer got one "Jerry." Six other pilots of the Ninety-ninth got one each: First Lts. Robert W. Deiz, of Portland, Oreg.; Willie Ashley, of Sumter, S. C.; Leon C. Roberts, of Pritchard, Ala.; and Edward L. Toppins, of San Francisco, Calif.; Second Lts. Charles P. Bailey, of Punta Gorda, Fla.; and Wilson Eagleson, of Bloomington, Ind. The Ninety-ninth Squadron's eighth victory was shared by Second Lts. Clarance Allen, of Mobile, Ala., and Howard L. Baugh, of Petersburg, Va.

The Ninety-ninth shot down four more enemy planes on January 28, 1944, Captain Hall scoring a double.

Lieutenant Deiz was credited with his second German plane in 2 days, and two pilots, Lieutenants Baugh and Allen, were credited jointly with the destruction of one plane. The fourth German plane was shot down by

Second Lt. Louis C. Smith, of Los Angeles, Calif.

Second Lt. Elwood T. Driver, of Trenton, N. J., got the thirteenth German plane credited to the Ninety-ninth Squadron. Planes of the squadron were just arriving over Anzio beachhead on February 5, 1944, to take their turn at air cover, when a formation of German planes came over. The Ninety-ninth swooped down, and Driver sent one Focke-Wulf 190 crashing.

On February 7, 1944, Allied fliers brought down 18 Focke-Wulfs and 3 Messerschmitts, against a loss of only 4 of our own. Three of the German planes were brought down by pilots of the Ninety-ninth in the first of the day's engagements.

Sixteen Nazis in 10 days

In 10 days over Anzio beachhead, the Ninety-ninth brought down 16 enemy planes.

Gen. Henry H. Arnold, commanding general of the Army Air Forces, in a message to Lt. Gen. Ira C. Eaker, Allied air commander in the Mediterranean theater, commended the Negro Ninety-ninth Fighter Squadron on its exploits over Anzio beachhead. He said:

"The results of the Ninety-ninth Fighter Squadron during the past 2 weeks, particularly since the Nettuno landing, are very commendable. My best wishes for their continued success."

Exactly 1 year after they had flown their first mission over an enemy air base at Fardjouna, north Africa, pilots of the Ninety-ninth Fighter Squadron, on detached service with the Three Hundred and Thirty-second Fighter Group, flew their five hundredth combat mission.

The Ninety-ninth flew 3,728 sorties during its first year of service. During the first year, the squadron lost 12 pilots—5 killed in action, 4 reported missing, and 3 known to be prisoners of war.

THREE HUNDRED AND THIRTY-SECOND FIGHTER GROUP

From Allied headquarters in Naples it was announced on March 17, 1944, that the Three Hundred and Thirty-second Fighter Group, in which Negro pilots of the Ninety-ninth were flying, was operating from Italian bases, as part of the Mediterranean coastal air force. This group flew P-39's on convoy protection and harbor-patrol missions along the west coast of Italy. It also flew in close support of advancing Allied armies in Italy, in daily dive-bombing operations against enemy supply lines, motor transport, rail yards, and gun emplacements. Penetrating ahead of the Fifteenth Army Air Force bombers bound for Munich on June 9, 1944, the group battled more than 100 enemy fighters near Udine, Italy, and sent 5 of them crashing to earth. The bomber formation they were protecting suffered only a few losses.

The Three Hundred and Thirty-second Fighter Group destroyed a total of 111 enemy planes in the air and 150 on the ground. In addition, it is credited with destruction of 57 locomotives and damaging another 69. Perhaps the greatest single feat of the group was the sinking of an enemy destroyer, with machine-gun fire, off the Istrian Peninsula but its pilots are best known for the protection they gave Fifteenth Air Force bombers during concentrated raids on oil refineries at Ploesti and Vienna. On the D-day invasion of southern France the group flew cover for Allied landing forces and strafed radar installations along the coast preparatory to the landings. On March 24, 1945, the group flew escort to B-17's of the Fifteenth Air Force to Berlin and destroyed three enemy aircraft, probably destroyed three others, and damaged three. For its outstanding performance of duty, the group was awarded the Distinguished Unit Citation, which reads as follows:

"On March 23, 1945, the group was assigned the mission of escorting heavy-bombardment type aircraft attacking the vital Daimler-Benz tank-assembly plant at Berlin, Germany. Realizing the strategic importance of the mission and fully cognizant of the amount of enemy resistance to be expected and the long range to be covered, the ground crews worked tirelessly and with enthusiasm to have their aircraft at the peak of mechanical condition to insure the success of the operation.

"On March 24, 1945, 59 P-51 type aircraft were air-borne and set course for the rendezvous with the bomber formation. Through superior navigation and maintenance of strict flight discipline the group formation reached the bomber formation at the designated time and place. Nearing the target approximately 25 enemy aircraft were encountered which included ME 262's which launched relentless attacks in a desperate effort to break up and destroy the bomber formations.

"Displaying outstanding courage, aggressiveness, and combat technique, the group immediately engaged the enemy formation in aerial combat. In the ensuing engagement that continued over the target area, the gallant pilots of the Three Hundred and Thirty-second Fighter Group battled against the enemy fighter to prevent the breaking up of the bomber formation and thus jeopardizing the successful completion of this vitally important mission. Through their superior skill and determination, the group destroyed three enemy aircraft, probably destroyed three, and damaged three. Among their claims were eight of the highly rated enemy jet-propelled aircraft with no losses sustained by the Three Hundred and Thirty-second Fighter Group.

"Leaving the target area and en route to base after completion of their primary task, aircraft of the group conducted strafing attacks against enemy ground installation and transportation with outstanding success. By the conspicuous gallantry, professional skill, and determination of the pilots, together with the outstanding technical skill and devotion to duty of the ground personnel, the Three Hundred and Thirty-second Fighter Group has reflected great credit on itself and the armed forces of the United States."

Col. Benjamin O. Davis, Jr.

The leader of the Ninety-ninth Pursuit Squadron and later of the Three Hundred and Thirty-second Fighter Group, of which it became a part, was Col. Benjamin O. Davis, Jr., a graduate of West Point and son of Brig. Gen. Benjamin O. Davis, the highest ranking Negro officer in the United States Army.

Colonel Davis and three other pilots of the Three Hundred and Thirty-second Fighter Group—Capt. Joseph D. Elsberry, of Langston, Okla., and First Lts. Jack D. Holsclaw, of Spokane, Wash., and Clarence D. Lester, of Chicago, Ill.—were presented with Distinguished Flying Crosses in Italy on September 10, 1944. Lt. Gen. Ira C. Eaker, in command of all Allied air forces in the Mediterranean theater, attended the ceremony. It was held before a formation of the entire fighter group and the Fifteenth Air Force band, which was drawn up in review.

Concerning the leadership of the group by Colonel Davis, in a fight on June 9, 1944, when a bomber formation which his pilots were protecting was attacked by more than 100 enemy fighters, the citation said:

"Faced with the problem of protecting the larger bomber formation with the comparatively few fighters under his control, Colonel Davis so skillfully disposed his squadrons that in spite of the large number of enemy fighters, the bomber formation suffered only a few losses. During the engagement, Colonel Davis led one flight against more than 15 enemy fighters which were making repeated attacks on one group of bombers. His courage and combat ability have reflected great credit upon himself and the armed forces of the United States of America."

Colonel Davis also has been awarded the Silver Star, the Legion of Merit and the Air Medal with four oak-leaf clusters.

Capt. Joseph D. Elsberry

The award to Captain Elsberry was for "extraordinary achievement in aerial flight against the enemy in the North African and Mediterranean theaters of operations." His citation said:

"Throughout the extensive air offensive against the enemy in direct support of our ground troops and against targets of vital strategic importance deep within hostile territory, he, through his aggressiveness and courage, has consistently aided in the success of combat operations. Against heavy opposition from both aggressive and persistent fighter aircraft and intense, heavy, and accurate enemy antiaircraft fire, with his plane frequently seriously damaged by enemy fire, he has battled his way to his targets, defeating the enemy in the air and destroying his vital installations on the ground. Through severe and adverse weather conditions over treacherous mountain terrain, he has continually surmounted overwhelming obstacles for successful completion of his assigned mission to attack and destroy the enemy. Through his outstanding leadership and personal example, completely disregarding his personal safety at times of great danger, he has contributed to the ultimate and final defeat of the armed forces of the enemy, has upheld the highest tradition of the military service, thereby reflecting great credit upon himself and the armed forces of the United States of America.

First Lt. Jack D. Holsclaw

On July 18, 1944, Lieutenant Holsclaw led his flight as escort to heavy bombers attacking enemy installations in Germany and despite severe and adverse weather conditions, he brought his flight through to engage an enemy force of approximately 300 Army fighters. Of Lieutenant Holsclaw the citation said:

"In the ensuing engagement, despite the superiority in numbers of enemy aircraft, with complete disregard for his personal safety, Lieutenant Holsclaw, with an outstanding display of aggressiveness and combat proficiency, destroyed two enemy fighters and forced the remainder to break off their organized attack."

Lt. Clarence D. Lester

Lieutenant Lester participated in the same mission as that of Lt. Jack D. Holsclaw. The citation of Lieutenant Lester said:

"With complete disregard of his personal safety, Lieutenant Lester destroyed three enemy fighters, thus materially aiding in preventing the enemy from making concentrated attacks on the bombers."

The citations said of each of them that by his outstanding courage, professional skill and devotion to duty, evidenced throughout his combat career, he had reflected great credit upon himself and the armed forces of the United States.

A few months later back in this country, General Eaker presented Colonel Davis to the officers and men of the Four Hundred and Seventy-seventh Composite Group in a ceremony at Godman Field, Ky., June 21, 1945, as the commander of the group and of Godman Field. General Eaker said:

"Along with other officers in the Army Air Forces, I have followed closely the record of Negro pilots. As the commanding officer of the Mediterranean Allied Air Forces, I had under my command the Ninety-ninth Fighter Squadron and later the Three Hundred and Thirty-second Fighter Group. I watched closely as the pilots progressed through the

P-39, P-40, P-47, and P-51 aircraft. I likewise watched their assignments develop from routine but necessary coastal patrol missions to important heavy bomber close-escort missions.

"The Ninety-ninth Fighter Squadron and other squadrons of the Three Hundred and Thirty-second Fighter Group have done well. They have carried out the missions assigned to them and they have destroyed enemy aircraft both in the air and on the ground. By their efforts and performance they have won a place on the great Air Forces team. They came up the hard way."

NINETY-SECOND DIVISION

A regimental combat team of the Ninety-second Infantry Division went into the line on the Fifth Army front in Italy in August 1944. Ten minutes later they went into action against some of the best trained and seasoned troops Hitler had in his whole army.

From then on, until the Italian campaign finally ended with the surrender of a million crack German troops in April 1945, the Ninety-second Division fought in Gen. Mark Clark's Fifth Army. Some of them were in the line as long as 68 days at a stretch, more than 2 months.

It is one of the marvels of the war that the Ninety-second Division with an enlisted personnel made up almost entirely of Negro boys from the South—boys who had been sent out to work in the fields before they were even adolescents, boys who in many cases never had a chance to learn to read or write, boys who had grown up in an area where they and their people were always treated as inferiors—should have made the record it did, staying in there week in and week out, through some of the bitterest fighting in the whole war, against Hitler's best, a superb army of self-assured German veterans fighting with all they had to protect their homeland from the attack rolling up from the South.

The Ninety-second Division consisted of approximately 12,000 officers and men, including some 200 white officers and 600 Negro officers, 3 of whom were lieutenant colonels and 6 were majors. Its enlisted personnel was all Negro—a majority of them rated as IV and V, the lowest grades in the Army classifications. This was largely due to the fact that three-fourths of them came from Southern States, where educational opportunities for the Negro are practically nonexistent. And the Ninety-second Division was activated before the Army educational program—designed to carry a man only through the fourth grade in school—got under way.

But these men—ill equipped as they were—did their job. They stayed in there, giving their best, day in and day out, seesawing back and forth through the rain and cold and mud, locked in a titanic death struggle with an experienced, magnificently trained enemy who knew all the tricks and who had never known defeat.

Through the whole bitter experience, the men of the Ninety-second Division were dogged by the racial prejudice and segregation that had followed them from the Southern camps where they trained at home. Other troops might yield temporarily, but there was no comment. But if the Ninety-second Division lost a yard one day—even though they might gain it back the next day—the reports went back across the Atlantic and soon their letters from home would tell them of loud-mouths screaming, even on the floor of Congress, that the Negro soldiers were cracking, that the Negro soldiers were no good.

A polyglot army

It was a polyglot army, the Fifth Army in which they fought, made up of British, American, Brazilian, French, Italian, Greek, Polish, Palestinian, New Zealand, and East Indian troops. It was in this Fifth Army that the Japanese Americans so greatly distinguished themselves—the Japanese American One Hundredth Infantry Battalion, one of the first outfits to receive a Presidential Unit Citation for fighting in Italy.

On April 30, 1945, General Clark announced that the long, weary, bitter campaign, begun on the beaches of Salerno in September 1943, had ended. His polyglot troops had so smashed the German armies in Italy that they had been virtually eliminated as a military force. Nearly 1,000,000 Germans in Northern Italy and Western Austria laid down their arms in unconditional surrender on May 2, 1945, at 2 p. m. The surrender had been signed in the royal palace of Caserta on April 29, by representatives of the German commander, Col. Gen. Heinrich von Vietinghoff-Scheel, and of the Allied Mediterranean commander, Field Marshal Sir Harold R. L. G. Alexander.

Around this last Thanksgiving time, the Ninety-second Division came home, landing in Boston, New York, and Norfolk. Only 4,000 were left of the once 12,000-strong Ninety-second Division whose ranks, like those of other divisions that fought overseas, had been thinned by transfers, discharges, and deaths.

While overseas the Ninety-second had received 12,096 decorations—including 2 Distinguished Service Crosses, 1 Distinguished Service Medal, 16 Legion of Merit awards, 7 Oak-Leaf Clusters to Silver Stars, 95 Silver Stars, 6 Soldier's Medals, 723 Bronze Stars, 1,891 Purple Hearts, and 7,996 combat infantry badges. It also received 205 commendations.

Almost 25 percent casualties

On the day the campaign in Italy ended, the Ninety-second Division had lost almost one-fourth of its men through casualties. Three hundred and thirty had been killed in action, 2,215 wounded, and 616 were missing in action.

A soldier of the Ninety-second Division, Pvt. Woodall I. Marsh, of Pittsburgh, Pa., was the first Negro to win the Silver Star in Italy. He got it for taking 12 wounded paratroopers from the front lines to safety in his truck, after officers said it could not be done.

When he was told that he could not make it because the water of a raging torrent he had to ford to get to the wounded paratroopers was too deep, Private Marsh replied: "Well, there's dirt underneath ain't there?" and he proceeded to ford it.

Under terrific enemy fire, he drove his truck through water up to the hubs of the wheels to get to the wounded men. On the return trip, he tried another route, but it turned out to be just as bad. He had to dig his truck out of the muck and mire again and again. For 30 minutes during the trip, the Germans were trying to get him and his truck with heavy mortar and artillery fire.

Another hero of the Ninety-second Division was Second Lt. Vernon J. Baker, of Cheyenne, Wyo., a rifle platoon leader. He won the Distinguished Service Cross for the bravery he exhibited in action on 2 days, April 5 and 6, 1945, near Viareggio, Italy. The citation reads:

"Second Lieutenant Baker demonstrated outstanding courage and leadership in destroying enemy installations, personnel, and equipment during his company's attack against a strongly entrenched enemy in mountainous terrain.

"When his company was stopped by the concentrated fire from several machine-gun emplacements, he crawled to one position and destroyed it, killing three Germans. Continuing forward, he attacked an enemy observation post and killed its two occupants.

"With the aid of one of his men, Second Lieutenant Baker attacked two more machine-gun nests, killing or wounding the four enemy soldiers occupying these positions. He then covered the evacuation of the wounded personnel of his company by occupying an exposed position and drawing the enemy's fire.

"On the following night Second Lieutenant Baker voluntarily led a battalion advance through enemy mine fields and heavy fire toward the division objective. Second Lieutenant Baker's fighting spirit and daring leadership were an inspiration to his men and exemplify the highest traditions of the armed forces."

One of the officers of the Ninety-second Division awarded posthumously the Silver Star for gallantry in action was Capt. Charles F. Gandy, Jr., of Washington, D. C. On October 12, 1944, Captain Gandy was ordered to deploy his company in reinforcement of another company in position on difficult mountainous terrain. His citation states:

"He personally led his company out in broad daylight and, through further reconnaissance and by personal example and leadership, succeeded in getting his entire company across a canal, with an abrupt 12-foot wall. This was accomplished in rain and under extremely heavy enemy fire.

"Halting the company at its intermediate objective, Captain Gandy went forward alone to reconnoiter the route of the next movement. While engaged in this activity, he was mortally wounded by enemy machine-gun fire. His outstanding gallantry and leadership in combat exemplifies the heroic traditions of the United States Army."

Lt. Theodore O. Smith, aged 24 years, was killed in action in Italy on February 11, 1945, 1 month after he had been awarded the Silver Star for his bravery in leading a small patrol on a mission that netted the Americans two Nazi prisoners and four enemy dead. According to the citation, Lieutenant Smith led his 14-man patrol 2 miles across a mined area through enemy lines to climb up a mountain where the enemy was holding out.

Risking his life to lead the mission, his action made it possible for the Americans to accomplish their objective and capture a strategically important point on the Fifth Army front. Lieutenant Smith was a native of the District of Columbia. He was graduated from Dunbar High School and received the degree of bachelor of arts from Howard University, where he was a captain in the Reserve Officers' Training Corps.

First Lt. John M. Madison was posthumously awarded the Silver Star for gallantry in action with the Ninety-second Division in Italy on February 8 and 10, 1945. The first action for which he was cited occurred after his company had taken its objective against light enemy resistance. Immediately afterwards the enemy subjected the position to terrific artillery and mortar fire which killed or wounded all officers except Lieutenant Madison.

"Extremely heavy casualties and the loss of leadership disorganized the company, and it sought to withdraw," the citation said. "First Lieutenant Madison quickly gathered the remaining 15 men, and regardless of continuing enemy fire put them into positions to hold the hill. By sheer personal courage and disregard for his own life, First Lieutenant Madison inspired his men to repel three separate enemy counterattacks aimed exclusively at their position. He withdrew only upon orders. Two days later he captured seven enemy soldiers while leading his company in an attack routed through an extensive unmarked mine field."

Killed in subsequent action

Lieutenant Madison was killed in subsequent action with the Ninety-second Division on April 5, 1945.

First Lt. William E. Porter, of Indianapolis, who was also awarded the Silver Star for gallantry in action, exposed himself to enemy arms while his company advanced on its objective under a hail of machine-gun fire. With his unit pinned to the ground, Lieutenant Porter succeeded in eliminating the

machine-gun nest, killing the German officer in command and forcing the gun crew to surrender.

During a patrol action Staff Sgt. Mansfield Mason, of Baltimore, Md., distinguished himself by heroic conduct. Acting on information that some Germans had been seen to enter a house near a village, his patrol surrounded the building and effectively covered all of its approaches. Sergeant Mason then crawled to within 30 feet of the house in the face of withering machine-gun fire. He hurled three hand grenades into the building and shifted his position slightly. Out walked five Germans, including an officer, to surrender.

Among the Negro units operating outside the Ninety-second Division in Italy was a Signal Construction Battalion, assigned to the Fifteenth Air Force. This battalion established a record. It installed and maintained 2,300 miles of open wire, 500 miles of field wire, and 100 miles of cable in its first 4 months in Italy

EUROPEAN THEATER

COMBAT TROOPS

Slightly under 9 percent of the 259,173 Negro troops reported in the European Theater of Operations on May 15, 1 week after VE-day, belonged to combat organizations.

Twenty-two Negro combat units participated in the operations of the American Expeditionary Forces against the Wehrmacht. These were: The Three Hundred and Thirty-third, Three Hundred and Forty-ninth, Three Hundred and Fiftieth, Three Hundred and Fifty-first, Five Hundred and Seventy-eighth, Six Hundred and Eighty-sixth, Seven Hundred and Seventy-seventh, Nine Hundred and Sixty-ninth, and Nine Hundred and Ninety-ninth Field Artillery Battalions; Four Hundred and Fifty-second Antiaircraft Artillery Battalion; Seven Hundred and Sixty-first and Seven Hundred and Eighty-fourth Tank Battalions; Six Hundred and Fourteenth and Eight Hundred and Twenty-seventh Tank Destroyer Battalions: One Hundred and Eighty-third, One Hundred and Eighty-fourth, Sixteen Hundred and Ninety-fifth, Sixteen Hundred and Ninety-sixth, Sixteen Hundred and Ninety-seventh, Sixteen Hundred and Ninety-eighth, Sixteen Hundred and Ninety-ninth, and Seventeen Hundredth Engineer Combat Battalions.

The Three Hundred and Twentieth Barrage Balloon Battalion was the only Negro combat unit to take part in the initial landings on the Normandy coast on June 6. Classified as an antiaircraft organization, it was the only American unit of its type in Europe but was transferred from the theater before the end of the war.

Men from the Three Hundred and Twentieth Barrage Balloon Battalion waded ashore in the early hours of D-day, struggling with their "flying beer bottles" which they had brought across the channel on LSI's and LST's on the first assault waves. They brought their balloons to the shoreline, dug in with infantrymen of the First and Twenty-ninth Divisions, and proceeded under fierce enemy fire to erect a protective curtain of silver barrage balloons that proved highly effective in combating strafing German aircraft.

Negro artillerymen of the Three Hundred and Thirty-third Field Artillery Battalion landed their 155-millimeter howitzers in Normandy on D plus 10 and went into action shortly afterward as a unit of the Eighth Corps. Their first mission was to fire in support of the Ninetieth Infantry Division and take part in the bloody battles at St. Jores, Lessay, Hill 95, and Hill 122 in the Foret de Monte Castret.

This unit swept through the Avranches corridor with the Third Army and did considerable firing in Brittanny at St. Malo and Brest. When the German counteroffensive in the Ardennes began, the Three Hundred and Thirty-third had batteries staggered in Belgium and across the German border near Schoenberg.

LOSSES SEVERE

Along with United States units like the One Hundred and Sixth and Twenty-eighth Infantry Divisions, the Three Hundred and Thirty-third Field Artillery received the full fury of the spearhead thrust of Von Rundstedt's attack at the point of impact. Losses in men and equipment were severe. The battalion commander was captured and most of two gun batteries were casualties.

Survivors of this action and recently liberated prisoners captured during the fight told of stubborn resistance and examples of high courage by the artillerymen that prolonged the battle after large groups of men had been surrounded.

"We took our toll of Germans before we went down, either because we ran out of ammunition or because some of us were hopelessly cut off," reported one Negro RAMP of the unit, shortly before sailing for the United States from Le Havre.

The Nine Hundred and Sixty-ninth Field Artillery Battalion, another medium howitzer outfit, was the only Negro artillery unit in Europe to receive a Presidential Distinguished Unit Citation. It had fought through the Normandy, and northern France, campaigns, providing artillery backing for infantrymen of a number of United States divisions. When the Ardennes breakthrough started, the Nine Hundred and Sixty-ninth received orders to displace its guns and withdraw in the direction of Bastogne, Belgium.

It reached that little city in time to be pressed into service by the acting commander of the One Hundred and First Airborne Division, then Brig. Gen. W. A. McAuliffe, and to earn for itself a place in American military history as one of the units making up the gallant garrison that fought against overwhelming odds to save the strategically vital rail and road junction.

DISTINGUISHED UNIT CITATION

The Nine Hundred and Sixty-ninth Field Artillery Battalion received its Distinguished Unit Citation along with the One Hundred and First Airborne Division and other attached units which formed the garrison that fought the epic Battle of Bastogne. The citation reads:

"These units distinguished themselves in combat against powerful and aggressive enemy forces composed of elements of eight German divisions during the period from December 18 to 27, 1944, by extraordinary heroism and gallantry in defense of the key communications center of Bastogne, Belgium.

"Essential to a large-scale exploitation of this break-through into Belgium and northern Luxemburg, the enemy attempted to seize Bastogne by attacking constantly and savagely with the best of his armor and infantry. Without benefit of prepared defenses, facing almost overwhelming odds, and with very limited and fast-dwindling supplies, these units maintained a high combat morale and an impenetrable defense, despite extremely heavy bombing, intense artillery fire, and constant attacks from infantry and armor on all sides of their completely cut-off and encircled position.

"This masterful and grimly determined defense denied the enemy even momentary success in an operation for which he paid dearly in men, matériel, and eventually morale. The outstanding courage and resourcefulness and undaunted determination of this gallant force is in keeping with the highest traditions of the service."

FIRST ROUND ACROSS RHINE

The Seven Hundred and Seventy-seventh Field Artillery Battalion was the only Negro 4.5-inch gun unit in the ETO and fought with the Ninth Army. One distinction claimed by the Seven Hundredth and Seventy-seventh is that it fired the first American artillery round across the Rhine River near Munchen-Gladbach.

Other veteran ETO Negro artillery units were the Nine Hundred and Ninety-ninth Field Artillery Battalion, which fired its 8-inch howitzers from lower Normandy to Central Germany, and the Five Hundred and Seventy-eighth, another 8-inch howitzer unit that helped to stem the Nazi tide in the Ardennes in December and January.

In early November the Seven Hundred and Sixty-first Tank Battalion, commanded by Lt. Col. Paul L. Bates, of Boonton, N. J., was committed as attached armor of the Twenty-sixth Infantry Division in the Third United States Army, becoming the first Negro tank unit to go into action.

The Seven Hundred and Sixty-first fought in six European countries—France, Holland, Belgium, Luxembourg, Germany, and Austria—and was at various times attached to the Third, Seventh, and Ninth United States Armies. During these campaigns the battalion furnished tank support for the Twenty-sixth, Seventy-first, Eighty-seventh, Seventy-ninth, One Hundred and Third Infantry Divisions, and the Seventeenth Airborne Division during the Battle of the Bulge.

Eight enlisted men of the unit won battlefield commissions. Decorations included 40 Bronze Stars, 8 Silver Stars, 3 of them posthumously awarded.

These Negro tankers spearheaded the famous "Task Force Rhine," which crashed through the rugged mountain defenses of the Siegfried line in the Nieder Schlettenbach-Reisdorf-Klingenmunster area. Task Force Rhine consisted of the Seven Hundred and Sixty-first Tank Battalion, the Second Battalion of the One Hundred and Third Infantry Division's Four Hundred and Ninth Regiment, a detachment of combat engineers, and a recon platoon from the Six Hundred and Fourteenth Tank Destroyer Battalion, a Negro outfit. In 3 days the task force opened up a big hole in the Siegfried defenses through which passed the Fourteenth Armored Division on March 24.

Another Negro tank unit, the Seven Hundred and Eighty-fourth, arrived in Europe in time to assist the Thirty-fifth Infantry Division in crossing both the Roer and Rhine Rivers and the subsequent fighting that followed these crossings

MOST BRILLIANT RECORD

Probably no other Negro combat unit in Europe achieved as brilliant a record, both in terms of consistently outstanding performance in battle and excellence of morale, as did the Six Hundred and Fourteenth Tank Destroyer Battalion. Commanded by Lt. Col. Frank S. Pritchard, a white officer from Lansing, Mich., the unit was mainly officered by Negroes.

The unit moved into position with the Ninety-fifth Infantry Division in front of Metz in November, but soon after was transferred to the One Hundred and Second Infantry Division of the Seventh Army, where it remained as attached tank-destroyer support until the end of the war.

For "outstanding performance of duty in action against the enemy" at Climbach, France, on December 14, 1944, the third platoon of company C of the Six Hundred and Fourteenth Tank Destroyer Battalion received a Distinguished Unit Citation. The citation itself tells graphically the grim, heroic nature of the action:

"The third platoon was an element of a task force whose mission was to storm and capture the strategically important town of

Climbach, France, on the approaches of the Siegfried line. Upon reaching the outskirts of the town, the task force was halted by a terrific hail of fire from an enemy force firmly entrenced in the surrounding woods and hills overlooking the route of approach. The only position available for direct fire upon the enemy was an open field.

"As the Third Platoon moved into position, its commander and several men were wounded. Undeterred by heavy enemy small arms, mortar and artillery fire, which was now being directed against their position, the men of the Third Platoon valiantly set up their 3-inch guns and delivered accurate and deadly fire into the enemy positions. Casualties were mounting; two of their four guns were knocked out; nevertheless, the remaining crew members heroically assisted in the loading and firing of the other guns. At the height of the battle, enemy infantry converged on the position from the surrounding woods, threatening to wipe out the platoon's position.

"While a few members of the gun crews remained firing the 3-inch guns, others manned machine guns and individual weapons, laying down a devastating curtain of fire which inflicted numerous casualties on the enemy and successfully repulsed the attack. During the fight an ammunition shortage developed, and gun crews were reduced to skeleton size, one man loading, aiming, and firing, while the other men repeatedly traveled a distance of 50 yards through a hail of mortar and small arms fire, to obtain shells from a half-track which had been set on fire by a direct hit from an enemy mortar shell.

"Heedless of possible injury, men continuously exposed themselves to enemy fire to render first aid to the wounded. In this engagement, although the platoon suffered over 50 percent casualties and lost considerable matériel, its valorous conduct, in the face of overwhelming odds enabled the task force to capture its objective.

"The grim determination, the indomitable fighting spirit and the esprit de corps displayed by all members of the Third Platoon reflect the highest traditions of the armed forces of the United States."

INFANTRY

In December 1944 several thousand Negro soldiers answered a general appeal for volunteers for training as infantry riflemen. Some 2,500 volunteers from Negro units of Communications Zone were trained at a ground forces reinforcement command depot at Noyons, France, and committed to action with infantry and armored divisions of the First and Seventh Armies as assigned platoons and companies.

The setting of a quota for these Negro infantrymen resulted in the rejection of nearly 3,000 other Negro GI's who wanted to fight at the front.

In a story carried in its Paris edition on March 19, the Stars and Stripes announced the presence in the line of Negro infantrymen and said: "Long contemplated, the plan of mixing white and colored doughboys in fighting units was launched not as an experiment in race relations but as an answer both to the needs of the military situation and repeated requests by Negro service troops for an opportunity to get into the war as combat men."

The men gave many reasons for having volunteered. Some were sick and tired of dull rear-echelon activity. Many went in for idealistic reasons, determined to disprove the myth that Negroes are poor combat soldiers and lacking in courage.

Said Pfc Leroy W. Kemp, from Atlantic City, N. J.: "We're all in this thing together now—white and Negro Americans in the same companies—and that's how it should be. That's why I volunteered. Most Negro troops are in service units. We've been giving a lot of sweat. Now, I think, we'll mix some blood with it."

The record shows clearly that these men gave an extraordinarily fine account of themselves in combat, captured and killed hundreds of Germans, earned many decorations for front-line heroism, and won praise and respect from their white fellow infantrymen.

Negro rifle platoons fought with the First, Second, Eighth, Ninth, Sixty-ninth, Seventy-eighth, Ninety-ninth, and One Hundred and Fourth Infantry Divisions of the First Army, and Negro companies joined armored infantry battalions of the Twelfth and Fourteenth Armored Divisions.

"If comments of white personnel of these divisions are any indication, the plan of mixing white and colored troops in fighting units, a departure from previous United States Army practice, is operating successfully," a Stars and Stripes staff writer reported in an article in the paper's April 6 issue.

FRIENDLY WELCOME EVERYWHERE

Negro reinforcements reported a sincere, friendly welcome everywhere. They also spoke of excellent relations with their white fellow-doughs, of the making of inter-racial friendships.

One company commander's comment was typical. "The integration of the Negro platoon into this unit was accomplished quickly and quietly. There was no problem."

In its first action the Negro platoon of K Company of the Three Hundred Ninety-fourth Infantry Regiment of the Ninety-ninth Division, led an attack on the town of Honningen across the Rhine River, cleared one-fourth of it and captured over 250 prisoners.

Another platoon with E Company of the Three Hundred Ninety-third Regiment of the same division got its baptism of fire on March 25 when it attacked German positions near Jahrfeld, Germany. Employing marching fire, they advanced, routing the Germans, knocking out a Mark IV tank and a flak wagon, killing 48 of the enemy and capturing 60. These men gained their objective. Hill 373.

The Negro platoon of Company G of the Two Hundred Seventy-third Infantry Regiment helped the Sixty-ninth Infantry Division to become the first American unit to make contact with the Russian forces. During the platoon's first combat action at Hann Munden, Staff Sergeant Ames Shipper, of Philadelphia, Pa., took 118 prisoners from a barn.

This platoon was later attached to the Ninth Armored Division's Combat Command A for the drive across the German plains to the Mulde River. This platoon helped in the capture of Falkenharst, Wersenfeld, and a number of other German towns during this drive.

On VE-day, May 8, a group from the Negro platoon led by Lt. H. C. Hind, Los Angeles, Calif., and Staff Sgt. Elmans Starks, Washington, D. C., crossed the Elbe River, met Russian troops and held a victory celebration. It was the first time that these Russians had seen American Negroes and they exchanged stories and souvenirs and had a victory feast.

Sgt. Edgar E. Zeno, a member of the Negro platoon of G Company of the Thirty-ninth Infantry Regiment of the Ninth Infantry Division, received the Silver Star for "gallantry in action against the enemy." Near Siedlinghausen, Germany, Zeno's company met heavy enemy machine-gun fire. Zeno worked his way across open terrain, armed with a BAR, firing all the while.

Twenty-five yards from the machine-gun position, he hurled a hand grenade and rushed the emplacement. His action led to the capture of the machine-gun position, during which he killed 7 Germans, wounded 3, and enabled his unit to take 60 more prisoners.

ANOTHER SILVER STAR

Another Silver Star recipient was Pfc June Jefferson, Jr., of Company A, Four Hundred and Fourteenth Infantry Regiment of the One Hundred and Fourth Infantry Division. The award citation stated:

"When an enemy tank crashed through a road block and entered a recently captured town, Private Jefferson voluntarily and at great risk of his life, crossed open, fire-swept terrain in the face of direct fire from the tank, made his way to the house where the tank was located, and dropped incendiary and fragmentation grenades into the open turret of the tank, causing it to catch fire.

"As the crew emerged, he killed them with his rifle. He then returned to his position and quickly organized an assault on the enemy riflemen who were supporting the tank, killing, wounding or capturing all of the enemy infantrymen."

One of the finest tributes paid these volunteer infantrymen came from Brig. Gen. Charles T. Lanham, assistant commander of the One Hundred and Fourth Infantry Division, following the presentation of combat decorations of 11 of the men.

"I have never seen any soldiers who have performed better in combat than you," General Lanham told the Negro doughboys.

SIGNAL CORPS

During the campaign against the German Army in Europe, 5,500 Negro Signal Corps troops belonging to 20 signal units participated in the vital battle of communications.

These Negro troops worked in two main types of Signal Corps units—light and heavy signal construction battalions and companies.

Negro units that participated in various campaigns were the Twenty-fifth, Twenty-ninth, Thirty-seventh, Fortieth, Forty-first, Forty-second, Forty-third, and Forty-fourth Signal Construction Battalions, and the Two Hundred and Fifty-eighth, Two Hundred and Fifty-ninth, Two Hundred and Sixty-first, Two Hundred and Sixty-seventh, Two Hundred and Sixty-eighth, Two Hundred and Sixty-ninth, Two Hundred and Seventieth, Two Hundred and Seventy-fifth, Five Hundred and Thirty-fourth, Five Hundred and Thirty-fifth, Five Hundred and Thirty-seventh, and Four Hundred and Ninety-sixth Signal Construction Companies.

Negroes comprised 7½ percent of the total Signal Corps personnel in the European theater.

Several of these units made communications history. Negro signal outfits laid wire from the hedgerowed fields of Normandy, across France, Luxemburg, and Belgium deep into Germany.

A recent estimate of communications wire put in by Negro troops released by Communications Zone Headquarters included these figures: Over 10,000 miles of open wire set up, over 500 miles of field wire, and over 500 miles of rubber and lead spiral 4 cable.

The Twenty-ninth Signal Construction Battalion arrived in France on D plus 9 and 10. Its first major mission—rehabilitation of the Chef du Pont-Valognes railroad pole line, was accomplished in the face of enemy snipers, mines, and artillery fire.

After this the Twenty-ninth moved into Carentan on June 22, shortly after the town had been liberated by United States forces, and repaired damaged telephone lines frequently under heavy German artillery fire.

Another Negro Signal Corps unit—the Forty-first Signal Construction Battalion—arrived on the Continent on D plus 20 and was assigned to the rehabilitation of damaged French lines. The first line started at Valognes, Normandy, and ran into Cherbourg, where the Forty-first signal men worked before the city was completely cleared of enemy resistance.

The unit set up about 200 miles of open-wire pole lines and 40 miles of underground lead-covered cable. This latter is reported to be the longest underground cable laid in Europe by any one signal unit. The Forty-first also installed the communications system for the Continental headquarters of Communications Zone during the Normandy campaign, and assisted with the installation of communications for the first SHAEF continental command post.

The Forty-first Signal Construction Battalion was officially commended for its work in Normandy by Maj. Gen. W. S. Rumbough, chief signal officer of the ETO, who said: "This is to commend the officers and enlisted men of the Forty-first Signal Construction Battalion upon the construction work in connection with the establishment of the headquarters Communications Zone signal system. The work was done at high speed, and the men worked far in excess of their normal working schedule to accomplish their job."

CHEMICAL WARFARE

Chemical Warfare Service headquarters in the European theater of operations has disclosed that of the 9,500 Chemical Warfare Service troops in the theater on VE-day, 2,442 of these were Negro enlisted men and officers. Other Negro Chemical Warfare Service units were the three chemical decontamination companies, the Twenty-fifth, Thirty-second, and Thirty-fourth.

All of the smoke-generator units were not used in their primary function of manufacturing artificial fog, several being diverted to trucking operations under Transportation Corps supervision.

The record shows that the smoke-generator companies which saw action performed excellently, often under heavy enemy fire, winning praise from infantry commanders and chemical officers.

The Eighty-fourth Chemical Smoke Generator Company arrived in France on D-plus-1, but did not engage in smoking operations during the early part of the Normandy campaign. Its first important combat test came when it was attached to the Fifth Infantry Division in the latter part of Sepember 1944.

The Fifth Division was in the Moselle River Valley region and meeting severe German resistance there. The Eighty-fourth provided smoke for the screening of bridge-building operations across the river and materially assisted in the winning of the first major United States bridgehead east of the Moselle in that part of the valley.

There were casualties among the smoke men and a number of them distinguished themselves by gallantry under observed enemy artillery fire.

After watching men of the Eighty-fourth perform under fire during this action, the commander of the Tenth Infantry Regiment told them: "If I could, I would award the combat infantryman badge to all of you."

Some idea of the difficulties encountered during the Moselle operations can be obtained from reading the company operations record. The report covering the period November 12 to November 18 has the following facts recorded concerning the smoking of the Moselle crossing at Ancerville.

"Artillery fire was continuous over the entire area on November 15. At approximately 1200 on November 16, artillery fire at positions 1, 2, and 3 and on the surrounding roads made it impossible to bring supplies to these generator positions. Two trucks and one generator were hit by shrapnel."

Another Negro unit, the Seventy-fourth Chemical Smoke Generator Company, made smoke to cover the Ninth Army's crossing of the Roer River in February. It was attached to the Eighty-fourth Infantry Division for the attack across the Roer.

The division G-3 reported that the company had completed its mission "in an excellent manner." The G-2 of the division also reported that 300 enemy artillery rounds landed in Linnich, Germany, in 5 minutes on February 22 while the Seventy-fourth was working there.

One of the greatest artificial fogs in military history was created in December 1944 by the all-Negro One Hundred Sixty-first Smoke Generator Company when it shrouded the upper Saar River Valley with a dense cloud of fog that completely obscured the movements of one entire division, the Ninetieth Infantry Division.

The Ninetieth Division was effectively concealed for nearly 2 weeks, it is reported, during which time the entire division crossed the Saar, established a bridgehead, wiped out 260 pillboxes, wrecked a portion of the Siegfried Line and killed hundreds of enemy soldiers.

During this operation the One Hundred Sixty-first fed 146,000 gallons of oil into their M2 smoke generators.

The One Hundred Sixty-third Chemical Smoke Generator Company was assigned to the job of screening the crossing of the Neckar River at Heilbronn, Germany, by the One Hundredth Infantry Division of the Seventh Army. The mission was successfully accomplished.

A report of the operation states simply: "Hostile artillery and rocket fire was intense."

This unit also assisted in screening the crossing of the Rhine River at Speyer, Germany, on March 25 and 26, in support of advance elements of the Seventy-first Infantry Division. Its mission was to support the division's river crossing and to divert the enemy's attention from the site of the major river-crossing operation which was to take in another location.

Negro chemical smoke generator companies that operated on the Continent between D-day and VE-day were: The Eighty-first, Eighty-second, Eighty-third, Eighty-fourth, Eighty-fifth, Eighty-sixth, Eighty-seventh, Seventy-fourth, One Hundred and Sixty-first, One Hundred and Sixty-second, One Hundred and Sixty-third, One Hundred and Sixty-fourth, One Hundred and Sixty-fifth, One Hundred and Sixty-seventh, and One Hundred and Seventy-first Chemical Smoke Generator Companies.

Other Negro units in the Chemical Warfare Service were the Twenty-fifth, Thirty-second, and Thirty-fourth Chemical Decontamination Companies.

ORDNANCE

Of the 6,000,000 tons of ammunition handled by ordnance ammunition companies on the Continent between D-day and VE-day, more than 4,500,000 tons passed through the hands of Negro ordnancemen, Maj. Gen. Henry B. Sayler, chief ordnance officer of the ETO, said recently.

In releasing the figures on the amount of ammunition made available for use by United States fighting men, General Sayler paid high tribute to the 14,323 Negro enlisted men who accounted for 11 percent of the total ordnance personnel on the Continent.

"Not only did these Negro troops 'pass the ammunition,'" said General Sayler, "but on numerous occasions many of them fought the Germans, participated in patrols, and took prisoners."

The forward ammunition supply points operated by these Negro ordnancemen were the retail source for all types of ammunition, bullets, shells, fuses, and propelling charges, served directly to infantry, artillery, and armored units. As such, these ammunition supply points were behind the front lines and on several occasions, in front of them, especially during periods of fluid fronts.

One ammunition company, the Six Hundred and Twenty-sixth, although it had moved into its new location, was unable to operate until the infantry had cleared the enemy artillery from a hill less than 2 miles away.

The peak of ammunition handling was reached shortly after the Germans were repulsed in their Ardennes break-through During the period that followed, the 101 ammunition companies received and issued 24,000 tons per day, or seven to eight thousand tons over the average of 15,000 tons per day established in the European campaign.

In carrying out their mission of supplying ammunition to the men behind the guns, the Negro ordnancemen displayed courage time and again, General Sayler declared.

An example cited by General Sayler was the bravery demonstrated by the members of the Six Hundred and Fifty-fifth Ordnance Ammunition Company which unloaded a trainload of white phosphorous mortar shells on December 26, near Soissons, France, while shells were exploding around them. Their acts of heroism saved the French city from complete destruction.

Another noncombat Negro ordnance ammunition company earned the title of the "Fighting Fifty-sixth" when its members engaged 51 German SS troops near the Belgian border early in September. When the shooting was over, 36 Nazis were killed, 3 wounded, and the rest taken prisoner

Of the 20 ordnance motor-vehicle distributing companies in the European Theater of Operations, two of them were manned by 430 Negro ordnancemen. These distributing companies furnished the combat troops with armored vehicles and service troops with the trucks necessary to keep the front-liners supplied.

The remainder of the Negro personnel, 165 in number, were active in the administrative divisions of battalion headquarters.

MEDICAL CORPS

Negro personnel formed 2.2 percent of the total European Theater of Operation medical service strength or 5,482, a statement released by the office of the chief surgeon of the European theater of operations disclosed.

Negro officers were distributed as follows: Medical officers, 51; Dental Corps, 28; Medical Administrative Corps, 17; and Nurse Corps, 67. Sixty-five of the Negro nurses were attached to the One Hundred and Sixty-eighth Station Hospital in England.

Working with divisions at the front the performance of Negro medics was particularly outstanding.

The Four Hundred and Twenty-eighth Medical Battalion operating with the First Army, carried more than 1,200,000 patients in their ambulances in evacuating wounded to rear areas.

Of the 230,000 patients hauled by the Five Hundred and Ninety-second Ambulance Company only 2 were lost, those being caused by enemy action when an ambulance was strafed by enemy aircraft at Malmedy during the German counteroffensive last winter.

Typical of the heroism displayed by the medics is the story of Corp. Waverly B. Woodson, Jr., of Philadelphia, a medic of the Three Hundred and Twentieth Barrage Balloon Battalion.

At about 9:30 a. m. on D-day Corporal Woodson was wounded by shrapnel when the LST in which he was riding was damaged by a floating mine near the shore. The ship was under continuous mortar and machine-gun fire and was finally beached.

Corporal Woodson, along with three other enlisted men and an officer, went over the side of the LST onto the beach where they planned to set up a first-aid station. The shrapnel wound, which he had not noticed, was dressed by a member of the party. All other participants said that Corporal Woodson began caring for the wounded as a member of the group at 10 a. m. and remained on duty treating wounds ranging from bullet abrasions to intestinal wounds until relieved at 4 p. m. the next day.

When they were relieved Corporal Woodson found himself without bedding and started

down the beach to acquire blankets. He was called by a group of soldiers who had been completing a landing operation by a rope attached to an LST out in the harbor and anchored to the beach. The rope had broken and three of the men attempting to land had been submerged. Corporal Woodson's Red Cross brassard attracted the soldiers on the beach and they called him to assist in giving artificial respiration, which he did. The three joined their companions after his treatment. Corporal Woodson was then sent to the hospital for further treatment of his wound.

Following an investigation by Lt. Col. Leon J. Reed, of the Three Hundred and Twentieth Barrage Balloon Battalion, a recommendation for an appropriate award has been made for Corporal Woodson.

CORPS OF ENGINEERS

Of the 259,173 Negro troops in the European theater of operations as of May 15, a little more than one in every five was an engineer soldier, according to information released by the office of the chief engineer of the European Theater of Operations.

On May 31 there were 54,600 Negro engineer enlisted men, 320 officers, and 54 warrant officers, of a total of 337,000 in the theater's engineer command. This total includes personnel of general service regiments, engineer dump-truck companies, engineer firefighting units, aviation engineer battalions, and separate battalions. There were 165 engineer units of all types.

A survey of Negro engineer units showed that Negro engineers participated in all of the main operations by United States forces on the continent which required engineering, from D-day landings and beachhead operations of June 1944, to the conquest of the Rhineland.

Dump Truckers

One unit, the Five Hundred and Eighty-second Engineer Dump Truck Company, landed on Omaha Beach shortly after H-hour on June 6 and worked continuously up until and after the crossing and bridging of the Rhine.

The Five Hundred and Eighty-second was one of 58 Negro engineer dump-truck units in the ETO on May 31. This outfit came ashore on D-day with the One Thousand One Hundred and Sixth Engineer Combat Group, performing its "primary mission"—hauling bridging equipment and explosives. Almost immediately these dump truckers were conscripted to taxi combat personnel of the Eighty-second and One Hundred and First Airborne Divisions and the Fourth Infantry Division to forward areas.

Silver and Bronze Stars were awarded to several men of the unit for bravery under fire. First Sgt. Norman Day of Danville, Ill., received the Silver Star for heroism on the beach where he directed United States traffic under heavy shelling. Day also received the Purple Heart for wounds and the British Distinguished Service Medal.

During the Rhine crossing operations the Five Hundred and Eighty-second was significantly well up forward working as a XVI Corps unit, hauling crushed rock for bridge-building operations.

These dump truck units worked all over Europe but rarely hit the head. The Four Hundred and Thirty-fourth, another Negro dump truck company assisted the One Thousand and Fifty-sixth Port Construction and Repair Group in rehabilitating the port of Cherbourg in July 1944. They worked day and night on a double shift basis, removing thousands of tons of debris that had accumulated from bombing and demolition work.

Not all of the work done by the engineer dump-truck units was in the rear areas, however. The following excerpt from the unit history of the Five Hundred and Seventy-second Engineer Dump Truck Company, a Negro unit, describes a front-line incident:

"July 3, 1944, Pvt. William Wright, Jr., wounded by enemy shell fire while on operations delivering engineer supplies to a bridge site which was under enemy fire."

On July 20 this unit was given the job of hauling road-building material and debris for filling craters and building bridge approaches ahead of the armored columns which broke through the day after the capture of Lessay in Normandy.

The following account of a strafing attack on a Negro dump-truck convoy near Fontainebleau, France, was written by one of the drivers, and illustrates the dangers and difficulties under which the men frequently operated:

"The German planes came in very low dropping flares, lighting the area as far as one could see. The AA guns answered back with steady streams of cross-fire. The convoy was brought to a halt. The men scrambled to their guns and opened fire in unison with the ack-ack barrage.

"The accurate fire sent up by the men made it impenetrable. The barrage continued for what seemed an eternity before all was quiet. The Germans had gone on leaving the main bridge destroyed, their only damage. The men descended from their guns reluctantly. After finding a new road the convoy continued and delivered our much-needed cargo."

General Service Regiments

According to paragraph 318 of FM 5-5, which is the Engineer Field Manual, the mission of an engineer general service regiment is defined: "The engineer general service regiment performs general engineer work—particularly that requiring most skilled labor—throughout the Army service area and communications zone of the theater of operations. A general service regiment * * * is capable of executing extensive and permanent work."

This general phrasing of a general service regiment's function provided sufficient latitude for Negro general-service units to perform a wide variety of tasks on the Continent, from erecting tent camps and welding to repairing damaged rail lines and all-purpose excavations.

By VE-day 60 percent of all engineer general service regiments assigned or attached to Communications Zone were Negro units, 30 out of 50 reported on May 31.

When the Three Hundred and Fifty-sixth Engineer General Service Regiment moved into Granville, France, four days after the German garrison had left, it was given a few unexisting chores to do. One battalion was assigned to clearing and rehabilitating buildings and quarters in the city, removing debris, wiring, plumbing, and glazing a number of three-story houses.

"In addition," the regimental record states, "two kitchens were constructed and additional latrines and washrooms erected, showers installed, and an area of some 36,000 square feet graded and cleared."

After doing this, the regiment went to work on maintenance and repair of the road net from Granville to Vire to Mortain and Avranches, and all minor roads, a total of 245 miles of road net. The work consisted of repairing bomb craters and holes, "resurfacing of shoulders and general maintenance."

By and large this is the kind of work general service regiments were given to do. But it was precisely this work of rehabilitation and maintenance that helped to keep Communications Zone functioning.

Another Negro general-service regiment, the Ninety-fifth, arrived in France July 8. It had worked on the Alcan Highway to Alaska and in Wales. Its first operational mission said: "Road construction and maintenance, debris clearing and street reconstruction in the Valognes and Cherbourg areas."

But during this job, mines and booby traps were encountered in hundreds. They had to be removed and defuzed. The regiment also built during this period a very important traffic circle in the heart of shattered Valognes. Through that circle passed a vast and vital flow of traffic between Cherbourg and the beaches, toward the front.

This regiment was officially commended by Lt. Gen. C. H. Lee, Communications Zone commander for its work in constructing Communications Zone headquarters at Valognes.

Another job assigned to the Ninety-fifth was the rehabilitation of a single rail track from Alencon to Mortagne, France. How the job was completed is told in the regimental history:

"Three days were spent on removal of explosives in the yards at Mesles-sur-Sarthe before any heavy equipment could be put to work. The railroad bridge at Bressy-Mangis was damaged as a result of enemy demolitions, but the span was not completely dropped from the abutment, and a trestle bent placed under the end after jacking provided suitable bearing. The attempted demolition of the trestles themselves were very ineffective, and they were repaired in place by welding and patching.

"On September 2 a test run was made over the line with a locomotive. On the 4th the project was finished."

Another Negro general-service regiment, the Three Hundred and Ninety-second, was awarded the Meritorious Service Unit Plaque for work performed between September 23 and December 31.

"Despite numerous difficulties," the citation order states, "including inclement weather and limited supplies, this unit efficiently accomplished several difficult and hazardous projects. The enterprise, ingenuity, and unremitting diligence displayed by the members of the Three Hundred and Ninety-second Engineer General Service Regiment were in keeping with the highest traditions of the armed forces of the United States."

The Meritorious Service Unit Plaque is awarded for "superior performance of duty in the performance of exceptionally difficult tasks."

TRANSPORTATION CORPS

Negro troops made an impressive contribution to the operations of the Transportation Corps from D-day to VE-day, a survey compiled from information obtained from ETO Transportation Corps headquarters showed.

The mission of the Army's Transportation Corps is to transport men and supplies. Statistics released by the office of Maj. Gen. Frank S. Rose, chief of transportation in the European theater, indicate the magnitude of its achievements as well as the extent of Negro participation in the operations of the corps.

Of a total of 157,327 troops in the Transportation Corps in the ETO, reported on May 3, 1944, 69,914 of these were in Negro units—or 44.4 percent.

Thirty-two of the forty-one port battalions reported were Negro, while out of 50 separate port companies in the theater 38 were Negro, making a personnel total of 31,763 in all Negro port units.

In the quartermaster truck field, 316 of the 453 quartermaster truck companies operating under Transportation Corps control were Negro companies. Ten of the nineteen quartermaster groups were Negro, and there were 31 Negro battalions among the 86 quartermaster battalions listed. There was one Negro quartermaster car company, the Five Hundred and Twenty-fourth, and four Negro chemical smoke generator companies under Transportation Corps command.

PORT BATTALIONS

When the first United States elements reached the French coast in June, Transportation Corps units were among them and the battle of the beaches merged with the vital and hard-fought battle of supply.

Negro troops of the Transportation Corps were in the initial waves on D-day, came ashore with the engineer brigades and helped start what eventually became the greatest supply operation in military history.

The Normandy supply battle was won by units like the Four Hundred and Ninetieth Port Battalion, which came in with the second tide on D-day and unloaded crucial supplies of ammunition, food, and equipment to be used by the assault troops.

"We were in holes dug in on the beach when artillery fire from the bluffs started giving us hell," Corp. Joseph McLeod, of Tampa, Fla., a checker who landed with the Four Hundred and Ninetieth recalled. "That was about 10 in the morning. After it slackened, we got up and went to our LCT and unloaded .05 millimeter shells."

Another Four Hundred and Ninetieth man, Staff Sgt. Fred B. Jones, of Hazelhurst, Miss., was in charge of a platoon on an LCT carrying a load of antitank mines, detonators, and fuzes He said:

"We stacked the stuff up on the beach and then moved it inland. We were lucky that stuff didn't get hit by shellfire. We made a human chain and passed the cargo inshore by hand."

Other Negro units that arrived on D-day, D plus 1, and the first week of the beachhead fight were the Four Hundred and Ninety-fourth and Five Hundred and Second Port Battalions.

These operations were constantly under fire. To keep the invasion moving, men and supplies had to be discharged with split-second timing, and men worked the ships until exhausted. Work shifts ran into one another and men continued to volunteer to unload ships under hazardous conditions that included direct artillery fire and strafing.

"As one of the few regularly constituted Services of Supply units selected to accompany the Combat Engineer Battalions in the establishment of the beachhead, the Five Hundred and Second Port Battalion suffered some casualties," the unit history laconically reports. Their casualties included the battalion's commanding officer Lt. Col James T. Pierce, of Erie, Pa.

This unit sailed for France on June 2 and started unloading on the morning of the 7th. In accomplishing its mission in "Plan Neptune," as the invasion was called, the Five Hundred and Second met problems that were complicated by the element of "calculated risk." The record indicates it solved them all.

The GI stevedores had to devise special slings for handling bundles of pierced steel planking, a type of cargo that proved a problem during the ship DUKW operation.

The job of unloading cargo at the beaches and the ports never stopped. Tonnage schedules were reached and exceeded. Unloading records were broken weel after week.

By May 8, VE-day, total United States Army cargo arriving by water and discharged by port units amounted to 20,432,368 tons. How much of this was unloaded by Negro port units is not precisely known, but a general estimate can be obtained from the fact that 77 percent of all port units operating during this period were Negro units.

The next phase of the battle of supply following seizure of the beachhead and expansion of the Allied toehold on Europe, consisted of development of Cherbourg and the minor ports on the north side of the Normandy Peninsula. Negro port units worked all of these ports

How the battle of supply during this period was won is tersely told in "The Transportation Corps" in the Battle of France, volume IV, which is the official history of the Transportation Corps operating in Europe. An excerpt reads:

"Front-line Transportation Corps units from the battle of the beaches—the port battalions and the DUKW companies—played their part in the unspectacular but equally important work of getting supplies into the port of Cherbourg. The port battalions marched to the embarkation point at 0730 where they were ferried by the Navy in LCM's to ships waiting at anchor. The same battalion was assigned every day to the same ship until it was finished, and if possible, each group was given the same hatch to work in order to increase its efficiency."

By August 15, 10,000 long tons had been discharged at this port in a single day by an unloading force that was overwhelmingly Negro

Cherbourg was a key Allied port. Its reconstruction and development became a chief task of the Transportation Corps. Its development was vital to the speeding-up of military operations on the Continent. The whole supply build-up hinged on the exploitation of Cherbourg. Much credit for the success of the complicated and arduous Cherbourg operation must go to the port battalions and DUKW companies that brought the cargo ashore and to the port-construction groups and special-service engineers who repaired the harbor.

On July 21, the 11th Port moved from Omaha Beach into the small ports of St. Vasst, Carentan, and Barneur, and continued work begun at Isigny and Grandcamp. Negro Transportation Corps units participated in all these operations, as well as in the development of the port of Granville.

The Negro contribution to the supply victory further can be gaged from the following facts. Progress of the campaign and the time factor would not permit development of the large Brittany ports as called for in the original plans. The military operations were supplied and supported by Cherbourg and the smaller Normandy ports. Through these small ports and Cherbourg, sufficient supplies were funneled to support the decisive break-through at St. Lo on July 25. Negro port and DUKW units handled the bulk of these supplies

There wer 53 ports in all, exclusive of Utah and Omaha Beaches, used by United States forces between D-day and VE-day. The largest were Le Havre, Antwerp, and Marseilles. As already stated the major share of tonnage handled came through the hands of Negro stevedores and crane operators.

AMPHIBIAN TRUCK COMPANIES

Six Negro DUKW companies, the Four Hundred and Sixty-seventh, Four Hundred and Sixty-eighth, Four Hundred and Sixty-ninth, Four Hundred and Seventieth, Eight Hundred and Nineteenth, and Eight Hundred and Twenty-first Amphibian Truck Companies, had been attached to the Eleventh Port for "Plan Neptune," the invasion operation The first of these, the Four Hundred and Sixty-eighth, arrived on D plus 10. Others followed shortly after and helped importantly in the solution of the critical supply problem.

The official Transportation Corps historian states: "Great difficulty was experienced in locating ships at night. DUKW's were sunk by striking submerged objects and one was lost through the explosion of a mine.

"Guts and nerve, and the willingness to work long hours to help the soldiers struggling to enlarge the beachhead won the day, however. By June 26, these men discharged 14 coasters and 11 motor-transport ships and supplies were being built up on a scale sufficient to enable the fighting men to turn the landing into an offensive of decisive proportions."

These DUKW's saved the day following the severe coastal storm of June 20-22 which wrecked all of the Loebnitz piers on the beaches and temporarily halted port battalion unloading. The DUKW's stepped into the picture and carried the cargo night and day, onto the beach and sometimes inland to the waiting combat troops.

During this period an Eleventh Port officer estimated that these DUKW units hauled ashore 94 percent of all cargo unloaded at Omaha Beach.

On May 30, there were 16 amphibian truck companies in the ETO, 10 of them Negro units with a total personnel of 1,730. One Negro unit, the Four Hundred and Sixty-ninth, ferried supplies and personnel across the Rhine River during the attack that placed American forces on the east bank of the river.

TRUCK COMPANIES

As of May 30, 1944, 69 percent of all truck drivers in Tranportation Corps' motor transport branch in the ETO were Negro. This average remained much the same following the beachhead phase of the battle of Europe.

Some of these units operated continuously after D-day. Negro cargo truck units landed vehicles and personnel on Omaha Beach on June 6. The Three Thousand Six Hundred and Eighty-third Quartermaster Truck Company had vehicles ashore on D-day. The Three Hundred and Seventieth Quartermaster Truck Company, a transportation unit, was scheduled to land 55 vehicles and 115 men on the beach on D-plus-1. Instead, it got 24 men and 12 trucks ashore as early as the morning of D-day.

The Four Thousand and Ninth Quartermaster Truck Company landed 115 men and 55 vehicles on the beach on D-plus-1. The Four Thousand and Forty-second Quartermaster Truck Company landed 6 men and 34 vehicles on D-day.

These men went through unforgettable experiences. What they did is starkly told in comments of some of the drivers of the Three Thousand Six Hundred and Eighty-third Quartermaster Truck Company, D-day veterans all:

Corp. Clavon Brown: "About 25 yards offshore 8 to 10 shells hit right near us. We hauled till 1800 on D-day. We dug in on the beach. Hauled ammunition on D-plus-2 while enemy planes strafed around us."

Pvt. George McLain: "After we got on the beach, an 88 burst my truck radiator. Hawkins, the mechanic, used the radiator from a deadlined truck to keep it running. On D-plus-4 I was nicked on the arm by a bomb fragment."

Pvt. Herman Copeland: "Eighty-eights were hitting all around us. We were just lucky. While hauling ammunition, bullets hit the corner of the gas tank and left door, just barely missing me."

Pvt. Walter Pearson, Jr.: "My truck drowned out and I had to swim into shore. A couple of grenades were thrown at my truck while I was hauling ammunition. On D-plus-3 a bomb dropped in front of the truck and tore up the radiator and both front tires. The fragments killed several foot soldiers. I also hauled some wounded from the lines."

After Cherbourg and the smaller ports in Normandy had been opened and operating, the main burden of transporting supplies fell on truck transportation. As the tactical situation improved and the military railway service started to operate its first trains, trucks were used to clear the ports, supplementing the rail lines whenever possible, and hauling troops and supplies to the combat areas.

The St. Lo break-through lengthened American supply lines enormously. But Transportation Corps's motor transport followed General Patton's Third Army, making possible exploitation of the break-through and maintenance of the speed of advance.

The first motor express line—the famous Red Ball Express—was started on August 25, 1944. It was built on the one-way traffic principle. Trucks were kept operating 22 hours out of 24 with only 2 hours reserved for maintenance. Drivers worked an average of 36 hours on the road without sleep

At its peak Red Ball contained 67 percent Negro personnel. Its initial target was to

haul 4,850 tons daily from the ports and beaches to Army or forward destinations. Peak reached by the system was 6,000 tons daily.

Between August 25 and November 13, Red Ball's 132 companies hauled 412,193 tons from the beaches and Normandy ports to the First and Third United States Armies. An average Red Ball Express route round trip was 546 miles.

As the supply situation dictated the closing down of Red Ball, other motor routes were opened from other ports.

There was White Ball, ABC, XYZ, Yellow Ball, Green Diamond, Red Lion, B–B (Bayeux to Brussels), Yellow Diamond. These were all important truck express routes which combined to form the world's greatest supply operation.

The motor express lines alone accounted for transport of 3,169,744 tons between D-day and VE-day.

Bombing and strafing were routine dangers for Transportation Corps drivers before Red Ball started operating.

Red Ball Cited

On behalf of General Eisenhower, Maj. Gen. E. S. Hughes, decorated Corp. Robert E. Bradley, of Lynchburg, Va., Negro truck driver of the Army's famed Red Ball Highway, with a Bronze Star Medal, and lauded the work of the thousands of Negro quartermaster truck drivers who were hauling vital front-line supplies over this 400-mile one-way loop, day and night, to the fighting fronts. It was awarded in symbol of all drivers.

Sixty percent of the drivers were Negroes. Stopping a huge convoy on the outskirts of Paris, Major General Hughes pinned the decoration on Corporal Bradley in a surprise ceremony which caught the entire trucking group unaware. He told them that he would have liked to present all of them with medals, but that "Bradley was chosen as a representative of the whole Red Ball Highway, including the men who repair the roads and bridges, put up the telephone wires and do all the service work in the rear.

"General Eisenhower realizes that you men seldom get the same recognition as soldiers in the front line and wants you to know that the part you're playing is vital. His message is for every man engaged on this vast project; the troops at the front couldn't do without you."

Maj. Gen. Frank Ross, Chief of Transportation, Communications Zone, disclosed that the route was four times the length of the Burma Road, and that in its first 26 days of operation it hauled and delivered more than 200,000 tons of supplies to advance depots, where front-line units picked it up with their hauling units.

Speedier supply became acutely necessary when Lt. Gen. George S. Patton's Third Army broke through at St. Lo, and began moving with lightning-like rapidity through France. And so the Red Ball Highway came into existence, with thousands of truck drivers pulling 24-hour a day shifts, as the long convoys rolled across specially designated one-way military highways through France.

The vast line became the biggest chain of supply maintained by United States forces.

During Von Rundstedt's break-through in the Ardennes in December, hazards encountered by Transportation Corps' truckers in supporting front-line troops made the Normandy and central France operations look mild by comparison.

During the historic Bastogne fight drivers carried ammunition and food into United States pockets as German forces closed in behind them. There were times, too, when these drivers having delivered their cargo had to take their individual weapons and dig in with the infantry.

But the most impressive testimony to the work of the drivers of the Transportation Corps, including the 35,839 members of Negro Transportation Corps truck units, is the tremendous total tonnage forwarded by Motor Transport Service in Europe between June 17, 1944, and May 31, 1945. It is 22,644,609 tons.

PACIFIC THEATER

All through the Pacific campaign runs the story of the heroism of Negro soldiers. They were in at the start in the Philippines and at the finish, too.

In fact, the first American soldier of the armored forces killed in the Pacific theater was a Negro boy, son of a Kentucky sharecropper. He was Pvt. Robert H. Brooks, who died on the battlefield near Fort Stotsenburg, in the Philippines, on December 8, 1941. The main parade ground of the armored forces at Fort Knox, Ky., has been named Brooks Field in memory of Private Brooks.

The Ninety-sixth Engineer Battalion later the Ninety-sixth Engineer Regiment landed in Port Moresby, New Guinea, on April 29, 1942, the first American troops in New Guinea and probably the first American troops to face the enemy after Bataan.

In Alaska, the South, Southwest, and Central Pacific areas, and in the China-Burma-India theater, Negro troops played an important role in engineering activity. This included the construction of roads, airfields, ports, camps, and storage facilities and their maintenance.

Three of the seven Army engineer regiments—the Ninety-third, the Ninety-fifth, and the Ninety-seventh—which helped to build the Alcan Highway were Negro The highway, 1,671 miles long, runs from Dawson Creek, northwest of Edmonton, Alberta, to Fairbanks, Alaska. Although most of the Negro soldiers in these regiments had never before been out of the South, only 140 men were incapacitated by the cold, and all except 4 recovered completely with no ill effects. The four suffered minor amputations.

After helping to blast through the brutal terrain of Alaska, building the Alcan Highway, the Ninety-seventh was transferred to the steaming jungles of New Guinea. There they struggled for a year or more in sweat, mud, and mire. While in Alaska this regiment adopted for its slogan: "No task too great." And it carried that slogan with it into the jungle.

A Negro aviation engineer battalion participated in the victory of the Battle of the Coral Sea, which was fought on May 7 and 8, 1942. It worked 24 hours a day to construct an airdrome in New Caledonia, which was effectively used by Army and Navy aircraft engaged in the battle. Their accomplishment was revealed in a commendatory report by Lt. Gen. Alexander M. Patch.

General Patch also told how members of the battalion unloaded gasoline from a supply ship which had anchored in an uncharted roadstead of the island. The Negro troops transferred the fuel ashore in rafts and moved it rapidly to the airdrome just in time to service aircraft which engaged the enemy in the Battle of the Coral Sea.

Negro soldiers were engaged in combat in the Pacific in September 1942. An Australian dispatch of that date describes their first engagement. It relates an interview with three wounded men, who told how the tricky Japanese used a hospital ship as a shield in a surprise attack on Milne Bay at the tip of New Guinea. Two of the three soldiers were Negroes—Charles Brown, of Milwaukee, Wis., and Reginald Simonds, of Durham, N. C. They were in charge of an antiaircraft gun emplacement watching the harbor.

They saw the hospital ship moving in and thought that it was an American Red Cross vessel. Suddenly the ship "lit up like a Christmas tree" from the searchlights focused upon it from out in the bay. They were about to relax when someone yelled:

"It's a Jap cruiser."

They made out the outlines of a cruiser lying beyond the hospital ship.

The Americans trained their guns toward the cruiser hoping to get a chance to rake her decks, but the cruiser had the same idea. Every gun aboard her opened fire. After about 10 minutes, a shell from the cruiser hit the American gun position.

Hanson and Brown woke up in an ambulance headed for a field hospital. All the way to the hospital the wounded men were one jump ahead of Jap shells, which were hitting the road right behind the ambulance.

Simonds set up a machine gun on the edge of the Milne Bay airfield. Others did likewise. They watched for the arrival of Japanese ground forces who had been reported advancing through the jungle. Simonds was quoted as saying:

"I guess we did a pretty good job slaughtering those Japs when they came running out of the jungle. None knew very much about firing guns, but we knew enough to aim and keep them shooting at the Japs. And I guess that's all we had to know."

Both Brown and Simonds were seriously wounded; Brown by shrapnel and explosive shells and Simonds by machine-gun bullets and shrapnel. They were credited with saving the vital airdrome at Milne Bay by their quick perception, and response to the situation.

"ROAD TO TOKYO"

One of the most amazing construction feats of the war was the Ledo Road, Negro soldiers christened it "The Road to Tokyo." This highway from India to China via Burma was begun on December 12, 1942. Though they were originally brought in to construct United States airfields in Assam, a battalion of Negro aviation engineers was pressed into service as road builders after they had finished their initial assignment of building runways and dispersal areas. The road had just been started by the British Army with Indian labor when the Americans took over.

Three companies of the battalion spearheaded the drive into Burma from the Assam jungles in northeastern India. A Company cleared the point, cutting a road wide enough for heavy Army vehicles. B Company did the drainage work, installing pipes up to 6 feet in diameter to carry off the monsoon rains into the huge ravines that line the winding mountain road. C Company widened, backfilled, and graded the road.

It was a round-the-clock job, 7 days a week. At night, drivers pushing their bulldozers into rock and dirt were always in danger of rolling too close to the edge of cliffs 500 feet high. In the weird light cast by smudge pots, gasoline-saturated bamboo or flaming 5-gallon fuel oil cans, they carved a road out of jungles and rock masses, 100 yards wide. They carried their highway up over mountain ranges, the Himalayas, that rise as much as 1,000 feet in 2 miles. One of the toughest spots was encountered just west of the India-Burma border line. A 100-yard formation of solid rock along an almost vertical cliff stopped the lead bulldozer cold. The 16-ton D–7 could not even get a bite into the cliff. So the air-line hose and jack-hammers were put into the job, cutting 8-foot holes in the rock for the charges of dynamite that blasted ledges for the bulldozer to follow.

Ultimately these men succeeded in making the impossible possible. With blood and sweat, they vanquished both the swampy, disease-infested jungles, and the skulking Japanese to create a desperately-needed supply route.

Three Negro enlisted men were awarded the Legion of Merit for exceptionally meritorious services rendered at Guadalcanal. They were Jesse Harris, private, Infantry, Tuskegee, Ala.; Henry Smith, Jr., private, Infantry, Good Pine, La.; and Verna C. Neal, private, Infantry, Ruleville, Miss. In announcing the awards, Secretary Stimson em-

phasized the fact that the recipients were all infantrymen, and that they were fighting in one of the most difficult theaters. These men abandoned the comparative safety of a slit trench, and advanced 250 yards over open terrain, exposed to bombing from an enemy air raid to assist in evacuating casualties. The undertaking was accomplished despite continued enemy action, causing impenetrable dust and confusion.

SOUTH PACIFIC

NINETY-THIRD DIVISION

On March 21, 1944 the commanding general, United States Army forces in the South Pacific area ordered the Ninety-third Infantry Division to move its Twenty-fifth Combat Team to Empress Augusta Bay Perimeter on Bougainville Island with the least practicable delay. The combat team was composed of the Twenty-fifth Infantry Regiment, Five Hundred and Ninety-third Field Artillery Battalion, Five Hundred and Ninety-sixth Field Artillery Battalion, Company A of the Three Hundred and Eighteenth Combat Engineer Battalion, Company A of the Three Hundred and Eighteenth Medical Battalion, one platoon of Company D, Three Hundred and Eighteenth Medical Battalion, Ninety-third Reconnaissance Troop, a detachment of the Ninety-third Signal Company, a detachment of the Seven Hundred and Ninety-third Ordnance Company, and a detachment of the Ninety-third MP Platoon.

By March 31, the Combat Team was in position and at 2:30 p. m., on April 2, Pfc Isaac Moore of Brooklyn, N. Y., pulled the lanyard on the No. 2 gun of Battery A of the Five Hundred and Ninety-third Field Artillery which sent the first round fired by the Ninety-third Division into enemy positions. The Ninety-third Division was in combat.

On April 4, the Second Battalion of the Ninety-third Division which had been detached from the American Division and passed to operational control of the Commanding General of the Thirty-seventh Infantry Division closed with the enemy and killed approximately 25 Japanese soldiers.

Four men were lost by the A and P Platoon while it was returning from a supply mission to the Americal Division on Hill 500. These soldiers, Pfcs Hugh Carrol, Oginal I. Ryan, William W. Ash and Joseph C. Mallory, were the first men of the Ninety-third to be killed in action in this war.

On April 5, the men of the Five Hundred and Ninety-third Field Artillery received a commendation from Brig. Gen. W. C. Dunckly for their firing on the Numa Numa Trail.

On April 7, Company K contacted the enemy before an ambush could be established and in the fire fight that resulted one officer and 17 men were killed and 7 wounded. Our forces withdrew about 100 yards and called for artillery fire. All bodies were recovered and the men were buried in the Bougainville cemetery.

On April 15, litterbearers were subjected to enemy fire during the night and fought with as much vigor as the infantrymen. On one such occasion T5g Mose Wheeler, of Company A, Three Hundred and Eighteenth Medical Battalion, became the first casualty of his unit.

Thirty-five Japanese were killed by Company G on April 16 in repelling an attack by an enemy force aimed at a Fiji battalion located on the right of Company G. In this encounter the Five Hundred and Ninety-third Field Artillery fired 1,216 rounds.

Battle casualties of the Twenty-fifth Combat Team as reported through May 30, 1944, totaled 26 killed, 13 seriously wounded in action, and 27 slightly wounded in action.

The records of the War Department contain the names of many men such as Thomas J. Caveness, private, first class, Corps of Engineers, a native of Los Angeles, who was cited for heroism in risking his life in going to the assistance of his comrades buried under debris from an ammunition dump which had been set on fire by Japanese bombers.

LEGION OF MERIT AWARDS

The following Negroes received the Legion of Merit for performance in the Pacific theater of war:

Dennis Holt, staff sergeant, Infantry, Birmingham, Ala., and Isaac McGrew, Jr., staff sergeant, Infantry, Yazoo City, La.

Sergeant Holt was chief of a battalion wire section from May 4, 1942, to April 20, 1943, at a base in the South Pacific area. His leadership, skill, cheerfulness, and devotion to duty in the installation, maintenance, and operation of a wire net, in many respects comparable to that of a division, assured continuous communication. Without transportation, he led his men in cutting wire trails through miles of difficult jungle, in carrying wire up to a mountain top observation post, in crossing several miles of water to nearby islands, in all kinds of weather.

Sergeant McGrew was primarily responsible for the successful installation and maintenance of 300 miles of wire in the South Pacific area from May 15, 1942, to February 20, 1943. This task was performed under the most rigorous of tropical, climatic, and terrain conditions. By long hours, ingenuity, and perseverance, he performed remarkable feats of accomplishment.

The Silver Star was awarded to Mack B. Anderson, private, Corps of Engineers, Brenham, Tex., for gallantry displayed in the Asiatic theater of operations. During an attack by Japanese Zero fighters on an airfield in India, Private Anderson, while under continuous fire from the attackers, manned a machine gun until it went out of action, then continued firing with his automatic pistol while several Japanese fighters definitely centered their attack on him.

SOLDIER'S MEDAL FOR HEROISM

Several Negro soldiers received the Soldier's Medal for heroism in the Pacific area. Edward Williams, private, Quartermaster Corps, Hurtsboro, Ala., helped to extinguish a conflagration at a United States truck assembly plant in Iran, Persia. He risked his life to the peril of intense heat to save quantities of Government property from damage and destruction.

James Scott, private, Corps of Engineers, Montgomery, Ala., risked his life on June 25, 1942, near an airdrome in New Guinea to save a pilot. When a fighter plane, taking off to intercept enemy planes then overhead, struck a log and crashed into the nearby river splashing gasoline on the plane and water, and igniting both gasoline and ammunition. Private Scott in the midst of flames and expicding ammunition waded into the river and assisted in rescuing the pilot.

Roscoe E. Thomas, master sergeant, Corps of Engineers, Atlanta, Ga., went to the assistance of three comrades buried under debris from an ammunition dump which had been set on fire by Japanese bombers.

James Williams, private, Infantry, Indianapolis, Ind., save two of his buddies from drowning when they slipped and fell into the ocean while embarking in the Solomon Islands. He immediately dived into the water to help them.

Columbus Howard, private first class, Corps of Engineers, Inkster, Mich., proceeded within 200 yards of an exploding inferno to remove hot metal fragments from inflammable materials, and fought tirelessly to prevent the fire from spreading to other vital supply dumps.

Jesse E. Evans, private, Quartermaster Corps, Morristown, N. J., aided in the rescue of three sailors from the waters adjoining a United States island base in the South Pacific.

Private Evans was one of a party of soldiers working on a ship in the harbor when he heard the cry for help and located a small home-made boat not far away which had capsized. One of the three sailor occupants was unconscious and being held up by another. Without regard for his own safety, Private Evans plunged 40 feet over the side of the ship, swam to the men and helped keep the unconscious man afloat until a ship's launch could come alongside.

Nathaniel Hocker, sergeant, Coast Artillery, Brooklyn, N. Y., helped to save the life of a pilot on the island of Oahu, T. H., on March 24, 1944. With complete disregard for the gasoline flames and the danger of the unexploded bombs, Sergeant Hocker assisted in removing the pilot from a burning plane that had crashed near his gun position.

William Downing, technician fourth grade, Quartermaster Corps, Nyack, N. Y., plunged into the icy waters of the Bering Sea to rescue a soldier in danger of being crushed between a barge and a freighter.

Douglas D. Hopper, private first class, Corps of Engineers, Shelby, N. C., braved the treacherous currents of a river in India to rescue an officer.

OPINIONS ABOUT NEGRO INFANTRY PLATOONS IN WHITE COMPANIES OF SEVEN DIVISIONS

What do the white company grade officers and the white platoon sergeants in the European theater of operations think of the combat performance of Negro rifle platoons which were attached to their companies in March and April and fought side by side with white platoons through VE-day?

This question is answered by a survey, made in late May and early June 1945, by personally interviewing 250 respondents, namely, all available white company grade officers and a representative sample of platoon sergeants in 24 companies containing Negro platoons in several infantry divisions, namely, the First, Second, Ninth, Sixty-ninth, Seventy-eighth, Ninety-ninth, and One Hundred and Fourth. Standardized questions were used in the survey, which was conducted by five trained interviewers of the research branch, I and E Divisions, European theater of operations.

In all except one of the companies visited, the standard organization of three rifle platoons and one heavy infantry platoon had been augmented by one rifle platoon of colored soldiers. The colored platoons were made up of men from rear echelon units who volunteered for service with the infantry and were trained for approximately 6 weeks in reinforcement depots, usually by a white officer or noncom who later led them into combat.

In generalizing the opinions here reported, the fact that the Negro infantrymen in these platoons were volunteers must be kept in mind, as must also the fact that not all of the platoons experienced heavy and arducus fighting.

OPINIONS OF WHITE OFFICERS AND ENLISTED MEN IN COMPANIES WITH NEGRO PLATOONS

Question. How did you feel at first about serving in a company that had white platoons and colored platoons?

	Percent white officers	*Percent white noncoms*
Relatively unfavorable: Skeptical, didn't like it, thought it'd cause trouble, etc	64	64
Relatively favorable: Willing to try it, made no difference, didn't mind, etc	33	35
No answer	3	1
Total	100	100

Question. Has your feeling changed since having served in the same unit with colored soldiers?

	Percent white officers	Percent white noncoms
No; my feeling is still the same	16	21
Yes; have become more favorable toward them,[1] feel more respect for them, like them better, etc	77	77
No answer	7	2
Total	100	100

[1] No cases were found in which an individual reported his attitude had become less favorable.

Question. How well did the colored soldiers in this company perform in combat?

	Percent white officers	Percent white noncoms
Not well at all	0	0
Not so well	0	1
Fairly well	16	17
Very well	84	81
Undecided	0	1
Total	100	100

NOTE: In commenting on this question, respondents frequently gave detailed accounts of combat performance. Positive qualities stressed were aggressiveness in attack, effective use of fire-power, adeptness at close-in fighting, team-work in battle. Negative qualities reported in a few instances were that at first the men sometimes went forward too rapidly—too far in an attack. Some officers stressed the fact that these colored soldiers, being volunteers, may have had exceptional combat qualities. Others mentioned that in their units there had not been an adequate test under the most severe type of fighting, such as sustained attacks under heavy mortar or artillery fire. It should be noted, however, that the performance of the colored troops was rated just as high, if not higher, by the white officers and noncoms in those companies in which the colored platoons have had severe fighting as by respondents from other units.

Question. With the same Army training and experience, how do you think colored troops compare with white troops as infantry soldiers?

	Percent white officers	Percent white noncoms
Not as good as white troops	5	4
Just the same as white troops	69	83
Better than white troops	17	9
No answer	9	4
Total	100	100

Question. How have the white and colored soldiers gotten along together?

	Percent white officers	Percent white noncoms
Not well	0	0
Not as well in garrison as in in combat	14	4
Fairly well	7	36
Very well	73	60
No answer	6	0
Total	100	100

NOTE.—Replies are somewhat more favorable from white officers and white noncoms with a northern background than from those with a southern background, but differences in opinion are not great. Actual friction between white and colored soldiers is said to have been confined to isolated cases involving white soldiers from outside units who did not know the combat record of the colored troops. Evidence indicates that white and colored soldiers have gotten along best together in those units in which they have shared the heaviest combat. While many of the officers in further questioning expressed some doubt as to how well the situation would work out if their unit remains in the army of occupation, or other semipermanent garrison status, 9 out of 10 said there had been no difficulties as yet.

Question. If colored soldiers are used as infantry, do you think they should be set up by platoons as they are here, or would some other way be better?

	Percent white officers	Percent white noncoms
In the same platoon with white soldiers	7	1
In a platoon within the same company	62	89
In separate companies	18	12
In separate battalions or larger organizations	10	2
No answer	3	0
Total	100	100

NOTE.—Most of those interviewed volunteered one or more reasons for their answer.

Among those who favor the platoon basis, the reasons given, in order of frequency, are:

1. Competition - emulation (encourages friendly competition; each tried to make a good showing; gives them something to come up to).

2. Avoidance of friction (saves any chance of trouble to have them in their own platoon; because of the old feeling of boys from the South).

3. Better discipline and control among the colored soldiers (whites have a steadying influence on them; colored boys feel more secure in combat this way).

4. Feeling of participation or nondiscrimination on part of the colored soldiers (gives them the feeling of being with the white boys; avoids that feeling of being set apart and discriminated against).

5. Improved interracial understanding (work close enough together so they can each get to know the other better and see what they do).

Among the minority who favored separate companies or larger units, the main reasons given were avoidance of friction (especially in garrison situations) and better discipline. A few men gave as their reason their personal feeling of not wishing to be in a company containing colored troops.

INDEPENDENT CHECK IN A CROSS-SECTION SURVEY

In the course of a survey of a representative cross section of 1,710 white enlisted men in ETO field forces, to ascertain men's information and orientation needs, two questions were asked about the use of Negro troops. This survey was independent of the interviews tabulated above.

The responses to the two questions asked in the cross-section survey were tabulated separately for four subgroups indicated below. The sample in some groups is small and therefore subject to a larger margin of error than is customary in research branch reports.

Question. Some Army divisions have companies which include Negro and white platoons. How would you feel about it if your outfit was set up something like that?

Percentage of white enlisted men answering, "Would dislike it very much":

Cross section of field force units which do not have colored platoons in white companies (1,450 cases)	62
Men in same division, but not in same regiment as colored troops (112 cases)	24
Men in same regiment, but not in same company as colored troops (68 cases)	20
Men in company with a Negro platoon (80 cases)	7

Question: "In general, do you think it is a good idea or a poor idea to have the same company in a combat outfit include Negro platoons and white platoons?"

Percentage of white enlisted men saying, "Very good idea" or "fairly good idea":

Cross section of field force units which do not have colored platoons in white companies	18
Men in same division but not in same regiment as colored troops	50
Men in same regiments but not in same company as colored troops	66
Men in company with a Negro platoon	64

NOTE.—These differences in attitude, varying with extent of experience with platoons of colored troops, can hardly be attributed to differences in geographical origin. For example, 31 percent of the white soldiers whose company has a Negro platoon are from the South, as are 34 percent of the soldiers in the cross section of field force units.

BACKGROUND INFORMATION ABOUT COLORED TROOPS IN THOSE INFANTRY PLATOONS

The soldiers in the Negro platoons were somewhat superior to other colored troops in ETO in education and AGCT, but the differences actually are not striking.

Percentage who had graduated from high school:

Colored in infantry platoons	22
Colored in ETO (cross section)	18
White riflemen (cross section)	41

Percentage with AGCT scores above class IV:

Colored in infantry platoons	29
Colored in ETO (cross section)	17
White riflemen (cross section)	71

Percentage from the South (including border States):

Colored in infantry platoons	67
Colored in ETO (cross section)	76

As compared with white riflemen the Negro infantrymen were somewhat younger, 10 percent of the colored were 30 years old or over—as were 20 percent of the white riflemen.

Branches of service from which the transfer to infantry were made were as follows:

Percent of total Negro volunteers:

Corps of Engineers	30
Quartermaster Corps	29
Transportation Corps	26
Signal Corps	3
Ordnance Department	2
All other branches	2

Of all who were converted to riflemen, 63 percent came from the following six military occupation specialties, in order of frequency:

Truck driver, light (MOS 345).
Duty soldier III (590).
Longshoreman (271).
Basic (521).
Foreman construction (059).
Cargo checker (470).

NEGROES IN THE NAVY

When the United States entered this war Navy policy restricted Negroes to the steward's branch of the naval service. This was so despite the fact that Negroes had been an integral part of our Navy from the days of John Paul Jones.

Yet, despite this restriction, when the Japanese made their infamous sneak attack at Pearl Harbor, one of the heroes of that day was Dorie Miller, a Negro messman, who took a machine gun from the dead hands of its gunner and turned it on the Japs. For his quick thinking and courage Dorie Miller received the Navy Cross. He was cited for his "distinguished devotion to duty, extreme courage, and disregard for his own personal safety during the attack." Later, still a messman, Dorie Miller went down with the *Liscombe Bay*.

Dorie Miller's heroism symbolizes the eagerness of Negroes to get into the fight despite the restrictions which the dead weight of tradition and prejudice have imposed upon

them. This eagerness was recognized by the Navy in June 1942 when the Navy for the first time accepted Negro inductees from selective service.

At later dates, the Navy commissioned Negroes as naval officers, admitted Negroes into the WAVES, SPARS, and Nurse Corps, and began to assign Negroes for general duty aboard ships of all classifications.

On August 31, 1945, there were 165,506 Negro enlisted men in the Navy and 53 Negro officers. In the Marine Corps there were 16,964 Negro enlisted men; and 3,727 Negro enlisted men and 4 Negro officers in the Coast Guard.

On the same date Negro women in the naval service included 68 Waves and 2 officers and 38 officer candidates; while there were 4 Negro Navy nurses and 5 Negro enlisted Spars

As the number of Negroes in the Navy increased, and they showed their qualifications, the Navy began to relax its restrictions. On August 9, 1944, the Navy began to assign Negroes in special service to man, partially, 25 large auxiliary vessels. Most of these ships were then in combat areas as part of the fleet train in the Pacific. Approximately 500 Negroes were assigned to those ships, both as petty officers and nonrated men. The 25 vessels were of the following types: Store ships, ammunition ships, cargo ships, oilers, and miscellaneous auxiliaries.

ALL RATINGS INCLUDED

The petty officers assigned to these vessels included substantially all ratings required to operate the ships. Among them were coxswains, gunner's mates, quartermasters, storekeepers, carpenter's mates, shipfitters. Since then, the Navy has extended the assignment of Negro personnel to naval vessels so as to include all auxiliary and many fighting ships.

On July 13, 1945, Lester B. Granger, executive secretary of the National Urban League, held a press conference following completion of a tour of 12 naval stations, bases, and depots in the United States. "The Navy," Mr. Granger said, "has made remarkable strides in the last 2 years toward complete equality of expression in the service. It is a progress which reflects great credit upon the integrity and intelligence of the Navy's leaders and which should evoke a warm spirit of cooperation from the Negro and white public which is anxious to see our armed services more completely democratized."

Some of the gains which Mr. Granger cited were:

1. Admission of Negroes to general service.
2 Rating of Negroes in practically every category and training of Negroes as commissioned officers.
3. Assignment of Negro personnel to auxiliary craft up to 10 percent of a ship's complement.
4. Assignment of Negro commissioned and petty officers to these vessels to serve in their duties without regard to rank.
5. Important elimination of racial segregation in mess and in recreational facilities.
6. A beginning of assigning Negro personnel to combat duties on warships.

Dorie Miller was the first Negro decorated for heroism by the Navy in World War II. Some of the others were:

Elvin Bell

Elvin Bell, mess attendant, third class, United States Navy, 20 years old, of Jamaica, N. Y., on February 2, 1943, was awarded the Navy and Marine Corps Medal with the following citation:

"For distinguished heroism while serving aboard the U. S. S. *Lexington* during the battle of the Coral Sea on May 8, 1942. Voluntarily joining a repair party fighting a fire in an area frequented by violent explosions of gasoline vapor and ammunition, Bell, although emerging in an exhausted condition, unhesitatingly entered the most dangerous section of the stricken carrier and assisted in removing injured personnel who had been trapped below decks. His courageous initiative and utter disregard for his own safety were in keeping with the highest traditions of the United States naval service."

Charles Jackson French

Charles Jackson French, mess attendant, second class, United States Navy, 23, of Foreman, Ark., was commended by Admiral William F. Halsey, United States Navy, commander South Pacific Area and South Pacific Force, for heroism while serving on a destroyer in the Pacific area.

His commendation announced May 18, 1943, reads as follows:

"For meritorious conduct in action while serving on board a destroyer transport which was badly damaged during the engagement with Japanese forces in the British Solomon Islands on September 5, 1942. After the engagement, a group of about 15 men were adrift on a raft which was being deliberately shelled by Japanese naval forces. French tied a line to himself and swam for more than 2 hours without rest, thus attempting to tow the raft. His conduct was in keeping with the highest traditions of the naval service."

Leonard Roy Harmon (the U. S. S. "Harmon")

Secretary of the Navy Frank Knox, on June 8, 1943, designated Mrs. Naunita Harmon Carroll, whose address was post-office box 381, Cuero, Tex., to sponsor the destroyer escort U. S. S. *Harmon*, which she did when the vessel was launched July 10, 1943, at Hingham, Mass.

The *Harmon* received its name in honor of Mrs. Carroll's son, the late Leonard Roy Harmon, mess attendant first class, USN, who was awarded the Navy Cross posthumously for heroism while serving on the U. S. S. *San Francisco*. This is the first vessel to bear the name *Harmon*.

Harmon's citation issued with the award of the Navy Cross read as follows:

"For extraordinary heroism while serving aboard the U. S. S. *San Francisco* during action against enemy Japanese forces in the Solomon Islands area on November 12 and 13, 1942. With persistent disregard for his own personal safety, Harmon rendered invaluable assistance in caring for the wounded and evacuating them to a dressing station. In addition to displaying unusual loyalty in behalf of the injured executive officer, he deliberately exposed himself to hostile gunfire in order to protect a shipmate and, as a result of this courageous deed, was killed in action. His heroic spirit of self-sacrifice, maintained above and beyond the call of duty, was in keeping with the highest traditions of the United States naval service. He gallantly gave up his life in the defense of his country."

William Pinckney

The Secretary of the Navy, on behalf of the President of the United States, awarded the Navy Cross to William Pinckney, cook third class, USN, on June 10, 1943. Pinckney, 28 years old, was the son of Mr. and Mrs. Renty Pinckney, box 92, Beaufort, S. C. The Navy Cross was given with the following citation:

"For extraordinary heroism while serving aboard the U. S. S. *Enterprise* during the engagement with enemy Japanese naval forces near the Santa Cruz Islands on October 26, 1942. When a heavy bomb exploded in the near vicinity Pinckney, standing at his battle station in the ammunition handling room, was knocked unconscious. With several compartments completely wrecked and four of his five companions killed, Pinckney, regaining consciousness, groped his way through the burning and tangled wreckage to a point under an open hangar deck hatch. Just as he was about to escape he found a shipmate, the only other survivor of his party, struggling up through the hatch. When the man fell unconscious, either from his wounds or from smoke and fumes, Pinckney, unmindful of his own danger, lifted his comrade through the hatch to safety before he himself battled his way out of the burning and smoke-filled compartment. By his dauntless courage in saving his comrade's life at great risk to his own, Pinckney upheld the highest traditions of the United States naval service."

Joseph Cross

The Secretary of the Navy, in the name of the President of the United States, awarded the Navy and Marine Corps Medal to Joseph Cross, steward's mate, first class, USNR, of 2510 Thalia Street, New Orleans, La.

The citation says:

"For heroic conduct during four submarine war patrols in enemy-controlled waters. Performing his duties with excellent judgment and conscientious skill, Cross contributed materially to the destruction by his ship of an important amount of Japanese shipping. His resolute courage was in keeping with the highest traditions of the United States naval service."

Elbert H. Oliver

A Silver Star Medal was awarded Elbert H. Oliver, steward's mate, first class, United States Navy, by the Secretary of the Navy, in the name of the President of the United States. Oliver, who had been wounded in action, resided at 1112 Locust Street, North Little Rock, Ark

His citation reads:

"For conspicuous gallantry and intrepidity while serving aboard a United States warship during a raid upon that vessel by approximately 25 Japanese torpedo planes in the vicinity of the Solomon Islands on June 30, 1943. When members of his 22 mm. gun crew were severely wounded by a bursting projectile, Oliver quickly took over the station of the injured gunner and, although he himself was bleeding profusely, maintained accurate fire against the attacking planes until eventually compelled to give way to a relief gunner. His aggressive fighting spirit and grim determination to carry on in the face of acute pain and waning strength were in keeping with the highest traditions of the United States naval service."

Every branch of the naval service has seen courageous acts performed by Negroes in combat. Examples from the principal branches of the services are summarized below. All of them are based on official Navy Department releases.

A story of Negro steward's mates who received awards for their conduct under fire is told in an official Navy release.

"Six Negro steward's mates who manned their antiaircraft guns until a Japanese suicide plane crashed in flames among them have been awarded the Bronze Star Medal for their heroism in action aboard the U. S. S. *Intrepid*, the Department of the Navy said today.

"Vice Adm. John S. McCain, United States Navy, commander of Task Force Thirty-eight, made awards for their participation in the action of October 26 1944.

"The medals were awarded to—

"Johnell Copeland, steward's mate second class, USNR, 19 office box 1363, Haines City, Fla.;

"Que Gent, steward's mate first class, USNR, 22, of 132 Center Street, Atlantic City, N. J.;

"Harold Junior Clark, steward's mate first class, USNR, 25, of 910½ Fourth Street, West Palm Beach, Fla.;

"James Eddie Dockery, steward's mate first class, USNR, 38, of 28 Barclay Street, Newark, N. J.;

"Alonzo Alexander Swann, Jr., steward's mate first class, USNR, 19, of 353 Christian Street, Steelton, Pa.;

"Eli Benjamin, steward's mate second class, USNR, 20, of 734 Jefferson Street, Norfolk, Va.;

"The six men, who volunteered to man antiaircraft guns in the event of attack by the enemy, were stationed at a 20 millimeter machine gun by the gunnery officer of the U.

S. S. *Intrepid*, *Essex*-class carrier that was damaged four times by attacking Japanese planes."

The citations read:

"For distinguishing himself by heroic and meritorious service in connection with operations against the enemy, while serving aboard an aircraft carrier on October 29, 1944. When a Japanese dive bomber attacked from the starboard side of the ship, he continued to operate his portside gun in its fire over the flight deck although it became apparent that the enemy plane was headed directly for his gun tub. His gun fired until the Japanese plane crashed into his tub. The courage and skill he displayed were at all times in keeping with the highest traditions of the naval service."

NEGRO MARINES

A Navy press release dated February 13, 1945, states:

"On the beach nearest the enemy on Iwo are Negro marines of the Eighth Ammunition Company—worthy successors of the Negro marine ammunition companies in the Marianas actions and at Peleliu.

"They carry ammunition by day, feeding the front lines and building up supply dumps, playing a vital role in what is undoubtably the toughest battle in the history of the Marine Corps. At night they lie in foxholes among their kegs of TNT and dumps of high explosives, enduring the most persistent mortar and shell fire any American troops have faced in the Pacific.

"I've been using a TNT box for a pillow," says Corp. Coleman Bagwell, of Chester, S. C. "There's nothing any softer around, and if a mortar hits anywhere near I figure the whole ammunition dump will blow up anyway, so that's not being reckless."

Four of the men of the Eighth made a run to the front lines, loaded with ammunition, then stayed there under fire to assemble rockets which were to be used against the Japs.

The four are Pfc Walter Moore, of 1217A Sam Rankins Street, Corpus Christi, Tex.; Simms Pattin, of Spartanburg, S. C.; Pfc William L. Stephenson, of 212 Northwest Eleventh Avenue, Fort Lauderdale, Fla.; and Pfc Samuel Miller, of 3780 Monroe Street, Detroit, Mich.

"It's a rough beach," said Corp. Edward White, of Nacogdoches, Tex., standing beside one of the first trucks the marines managed to bring ashore under fire.

Some of the Negro marines, despite wounds, returned to duty after receiving medical treatment.

The men of the Eighth agree that it has been a rough beach, and their fellow marines agree that they have proved they can take it.

NEGRO SEABEES

One of the important contributions of Negroes to the Navy in the war was that of the Seabees. An official Navy release tells of the work of one unit.

"Veterans of 20 months of jungle warfare in the South Pacific, and bearing a unit citation for many outstanding feats of construction completed under great difficulties, the first battalion of Negro Seabees to go overseas has returned to this country," the Navy Department announced this week.

"The unit, the Thirty-fourth Construction Battalion, indoctrinated at Camp Allen in Virginia, sailed outside the continental limits of the United States on January 7, 1943, and arrived in Noumea, New Caledonia, 19 days later. Since that date the unit has suffered casualties of 5 men killed in action and 35 wounded.

"The first big job tackled by the unit was the construction of the Halavo Seaplane Base at Halavo in the Florida Islands. Brigaded there with the Acorn (Red) Four, an air unit, the Thirty-fourth Battalion helped carve its camp out of a deep jungle. During February and March 1943, the two outfits experienced two direct enemy bombings and were under almost nightly enemy air raids in the area for a period of 5 months. Casualties from these raids resulted in 2 killed and 28 wounded.

"A detachment of approximately 350 men were transferred, on March 19, 1943, to Guadalcanal to assist other battalions in constructing fuel and gas storage facilities. This detachment remained on Guadalcanal until November 1943, constructing all types of air-field facilities and housing. They were under frequent enemy air raids for the first 6 months of their duty there and then less frequent raids, the last of which occurred in October 1943. No casualties resulted.

"On April 20, 1943, another detachment of approximately 200 men with 75 percent of the battalion's heavy equipment was transported by LCT's to Russell Island where they laid out and constructed, together with the Thirty-fifth Construction Battalion, the second fighter strip north of Renard Sound on Banika Island. This detachment was a part of what was essentially a regimental command consisting of the entire Forty-seventh Battalion and one-half of the Twentieth Battalion. It was assigned to the task of constructing a 6,000-foot bomber strip and a 4,500-foot fighter strip on the Russells in time for the New Georgia campaign. These Seabee units completed their assigned tasks on time and the first three units later enlarged the bomber facilities south of Renard, completing this assignment by August 1943. At Russells the detachment was subjected to constant enemy bombing until the completion of the New Georgia campaign in July. The Negro detachment experienced five casualties, consisting of three killed and two injured with minor burns in the operation of the fighter strip, caused during the crash of a Navy plane on the field.

"The entire battalion was reunited in November 1943, in the Tulagi area; with approximately one-half of the battalion quartered at Halavo, and the other half scattered over the adjacent islands of Tulagi, Savo, and Phillips Peninsula on Purvis Bay. The construction tasks at Halavo varied from marine railways, fueling docks, and coastal defense gun mounts, to harbor boat nests, dolphins, piers, and considerable jungle and mountain roads for the Army defense. A unit at Tulagi took over and performed naval-base maintenance, relieving the Twenty-seventh Seabees until the arrival of the two CBMU's to release the battalion for assignment to Guadalcanal in March 1944.

"The battalion was reequipped with new housing facilities and a small quantity of new equipment and supplies early in 1944. The movement of the entire battalion personnel and equipment from the Tulagi area to Guadalcanal was completed in approximately 6 days aboard three LST's.

"A new camp was set up on the beach at Kukum to accommodate 1,200 men and 40 officers. The battalion duties were assigned by the public works division of the commander, Naval Base, Guadalcanal. In 2 months the battalion has cleaned up the unfinished priority projects in addition to numerous newly authorized projects assigned during this period. The duty hours of this battalion ran from 8 to 10 hours a day, 7 days per week for the first year, and for the last 5 months the hours were 8 hours per day, 6½ days per week.

"Just before the men embarked for home, Capt. Mark L. Halsay, Jr., United States Navy, commander of the naval base, sent them the following unit commendation:

"On the occasion of the completion of your work in this area, covering a period of 20 months, I wish to take this opportunity to congratulate you and the officers and enlisted men of your command for the splendid record which you have made and the outstanding reputation which your battalion enjoys. During this period your battalion has accomplished many outstanding feats of construction, too many to mention in detail, which will stand as a monument to your ability and efficiency for many years after the United States forces leave this area.

"Many of these construction jobs were completed under great difficulties, including bombing attacks by the enemy, in which 5 of your men were killed and about 35 wounded. In spite of these difficulties and dangers, and the impracticability of giving your men rehabilitation leave, your battalion continued to work at top efficiency until the day it was ordered to secure.

"The best wishes of this command for future success and continued usefulness to the naval service go with you and the personnel of your battalion."

NEGRO COAST GUARD MEN

Tribute was paid to Negroes in an official release on the one hundred and fifty-fifth anniversary of the Coast Guard, July 20, 1945.

"Approximately 4,000 Negro enlisted men, officers, and SPARS participated in the celebration, which honored the Nation's oldest fighting sea service and one of the world's most diversified fleets.

"One of the outstanding Negro heroes in the Coast Guard was 26-year-old Charles V. David, Jr., a mess attendant who gave his life rescuing his executive officer and others from the icy waters of the Atlantic during rescue operations of a torpedoed transport.

"The Navy and Marine Corps Medal, one of the highest naval awards, was presented to the Coast Guard man's widow, Mrs. Kathleen W. David, of 343 West One Hundred and Twenty-second Street, New York City, on June 20, 1944, by Rear Adm. Stanley V. Parker, district Coast Guard officer, with the Davids' 3-year-old son, Neil Adrian, standing by.

"Lt. R. W. Anderson, of 291 East Eighth Street, Brooklyn, N. Y., the Coast Guard officer whose life was saved by David's heroic act, was also present. Lieutenant Anderson, who had previously been decorated for his bravery during the dramatic rescue, paid tribute to the deceased:

"'David's bravery under the most hazardous conditions and his unselfishness in sacrificing himself was an inspiration to every officer and man on board the cutter. We were all impressed by his alertness, for his quick thinking, and heroic daring in face of certain death were responsible for the saving of the lives of many men, including myself, who would be dead today.'

"David was a mess attendant first class aboard a Coast Guard cutter that rescued nearly a hundred men from a torpedoed transport in the North Atlantic. In a heavy sea, with freezing temperatures hampering operations, David dived countless times into the sea, in total darkness, to haul survivors to safety.

"When the rescue operations were nearly completed, David noticed that Lieutenant Anderson was near exhaustion from his work on a life raft off the side of the cutter. Passing the word along to the bridge, David, himself near collapse from his efforts, dived overboard and hauled Lieutenant Anderson back aboard. He died shortly after from pneumonia, exhaustion, and exposure as the result of his heroic actions."

The citation accompanying the medal, signed by Secretary of the Navy James Forrestal for the President, reads in part:

"Quickly realizing that the benumbed and suffering men were too exhausted to climb aboard the rescue vessel because of the heavy seas and intensely cold wind, David unhesitantly volunteered to go over the side to assist them. Despite the rough, near-freezing water, and gale he worked tirelessly with several comrades until 93 survivors had been rescued from certain death in the steadily

mounting seas. His great courage and unselfish perseverance contributed to the saving of many lives and were in keeping with the highest traditions of the United States naval service."

THE MERCHANT MARINE

The contribution to victory of the Negroes who chose the merchant marine as their form of service has been a great one. It is significant that the records of the Maritime Commission, the War Shipping Administration, and the Coast Guard, the licensing and certificating authority for seamen, deliberately fail to include race and color data. Because of this lack of discrimination, it is impossible to determine the number of Negroes who served in the merchant service, the number who survived torpedoings or the number who were killed or injured through enemy action while delivering the supplies and men essential to the conduct of the war.

Negroes are known to have served in every capacity aboard ship; from master to ordinary seaman, chief engineer to wiper, and chief steward to messman. The 31 War Shipping Administration training schools all admit Negroes. The first Negro graduate of the Maritime Academy, Joseph B. Williams, of Annapolis, Md., went on active duty with the Navy and was the first Negro officer in the Naval Civil Engineer Corps.

There were four Liberty ships named for Negro merchant seamen lost on active service in the merchant marine. Fourteen Liberty ships were named for noted Negroes, and four Victory ships named for Negro colleges.

No vessel under War Shipping Administration control has ever sailed with an entire Negro crew and the good relations which existed among mixed crews were a surprise to many. The United Seamen's Service which operated hotels and recreation centers abroad for our merchant seamen reports that the crews of mixed race who sailed together, mixed excellently while ashore in foreign ports. All Brave Sailors, by John Beecher, published by L. B. Fischer, tells the story of the steamship *Booker T. Washington*, manned by a black and white crew under the command of the Negro master, Capt. Hugh Mulzac.

It is competently estimated that approximately 25,000 Negroes served in the merchant marine out of a total seagoing labor force of 250,000 men.

The Merchant Marine Distinguished Service Medal, the highest decoration, was awarded to Fred Carlos Archibald, of San Francisco.

"CITATION

"For distinguished service in the line of duty.

"For 18 months the ship in which he was serving operated in the Southwest Pacific under especially hazardous conditions, as it was at all times in the danger zone, was unescorted, and only lightly armed. In an attack on Port Darwin, and on the nine succeeding days, when most of the crew had left the ship, he with his captain and four officers and men, manned the two machine guns, and so successfully defended the ship that it was the only 1 of 12 merchant vessels in the harbor not destroyed. After the first attack, this small group protestingly left the ship upon orders of the military authorities, but subsequently returned, got underway, and took their ship out into the harbor each morning and returned to the dock each night to discharge cargo, so as not to endanger the dock during daylight. Because of the indomitable determination and courage of these six men, they succeeded in delivering the gasoline so vitally necessary to Army operations

"His loyalty to his ship and his devotion to duty have added another inspirational chapter to the history of the United States merchant marine."

Eight Commandments for Peace

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, February 4 (legislative day of Friday, January 18), 1946

Mr. TAYLOR. Mr. President, on October 24 I submitted a resolution calling upon the Senate to go on record as asking that our delegates to the United Nations Organization work toward the creation of a world republic and world disarmament. At that time I had printed at my own expense copies of the speech which I had made, as well as the resolution. I started including a copy in each letter I sent out. From that humble beginning I have received requests for 60,000 copies of the resolution. I do not mean 60,000 individual requests, but I have had requests for copies in quantities ranging up to 5,000, to be distributed by various organizations.

At this time I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Young Soldier Gives You Eight Commandments for Peace," written by Capt. Richard C. Davids, and published in Better Homes and Gardens for December 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A YOUNG SOLDIER GIVES YOU EIGHT COMMANDMENTS FOR PEACE

(By Capt. Richard C. Davids)

If ever man needs to think straight, the time is now.

More than the world needs strong, unselfish leaders, it needs clear-thinking and unselfish people.

For the world right now is coming to a maturity which can be the flowering of a genuine civilization—if the people of the United States and of Russia and Great Britain will make it so.

Dead ends of thinking are quick to trap you—as a few less fanatic Germans are beginning to realize—when you lose all sight of goals. So now is the time for you to formulate commandments of thought and action that will keep your thinking straight.

For already a crop of spellbinders and well-intentioned zealots is confounding the real road to world maturity with a tangle of crooked thinking that would do justice to a Goebbels.

In the frenzy of debate, the most honest man finds it all but impossible to keep to the course which certain truths, stripped to nakedness, demonstrate to be the true course toward an enlightened world.

Let's look at those truths, and when you're certain that they constitute the code for a mature world to live by, tack them to your kitchen wall, place them under the glass of your office desk, commit them to memory, so that during the morass of debate you can judge intelligently between what is wise and foolish, benign and dangerous. Use them as a master gage against which you judge debate and current history.

Let's proceed carefully, free of emotion-loaded words which confound. Let's admit at the start only those clearly defined ideas which need no argument.

1. DO NOT AGAIN TRY ISOLATION; TWICE IT HAS NOT WORKED

During World War I, 8,538,315 men died and 21,219,452 were wounded. Every last man died or was crippled for nothing. Those are cruel words with which to bury our dead. But no decent attempt was approved to prevent another war.

We tried isolation, failed to the tune of one-quarter of a million dead here and 10,000,000 dead the world over. Can one doubt the correct road?

We can never return to hermit-crab isolationism. Our world-wide fraternization must be genuine and complete—social, economic, and political.

2. LET NO MAN TELL YOU THE WORLD CANNOT UNITE; THERE IS ALREADY PROOF

There is nothing impossible about international teamwork. Russia, the largest country in the world, whose shores are washed by the Pacific, the Arctic, the Black Sea, and the Gulf of Finland, and stretching across two continents to form one-sixth of the world's land surface and take in one-twelfth of its people, has been unified into a single country, and the wars and bloodshed of a thousand years have been ended. Let no man tell you that the remainder of the world cannot unite.

3. GIVE LOYALTY, NOT TO NATIONS BUT TO MANKIND

National histories breed suspicion, distrust, a phony patriotism. People of a nation that worships gangsters and killers like Napoleon and Hannibal and Caesar can't help but be suckers for a brand-new faker with the same old snake-bite medicine of racial and religious intolerance. Heroes don't need to ride horses and brandish swords. Perhaps our truest heroes are among those unsung men who calmed a mob outide a city jail, or caused laborers and boss to bury the hatchet. Let's reappraise our own history and our own heroes. Let's take a lesson from the Chinese, whose greatest hero, a peaceful old man of 2,400 years ago, expounded the novel idea that man ought to love his brothers.

The word "patriotism" is one of the biggest hoaxes ever sold to a confused people. Tied to an idea, talk about sacred rights, and patriotic duties to family and home and country can sell the blackest lie for the whitest truth.

Whenever you hear the word "patriotic" ask your speaker, "Patriotic to what? To a self-seeking group who desires to perpetuate themselves? Or patriotic to the cause of decency and justice, and freedom for all people, black, white, yellow, red, and brown?"

As children we thought we were patriotic when we warred against the neighboring children, when we defended the high honor of our village against slander by the neighboring village. And there are children with gray beards in the Tennessee hills who believe with a certainty that they are patriotic to their family's high name when they kill and feud, generations on end.

4. FREE ALL COUNTRIES OF BOUNDARIES RESTRICTING TRADE

As children we used to draw a bold line in the dirt and dare a single comer to cross. A mature world could do infinitely better with its national boundaries than mimic the antics of 5-year-olds.

Europe must not and cannot be treated except as one cooperating whole, free of the strangle of national boundaries. Germany has no oil, Italy no coal, Czechoslovakia no seacoast. If those countries cannot get within their own boundaries the things they need to live, they'll have to trade. And if narrow boundaries and laws prevent that trading, of course, they'll bargain for more land, and fight for it.

There must be unrestricted trade, and eventually it will come, just as it did to the fabulous Union of States which never could exist because it wasn't "fundamentally sound" and was "against nature." You, by straight thinking, can unhinge the demagogs and speed the day of free-flowing trade.

Some may suffer temporarily, need to switch over to other work. But is this too high a price to pay? Is any inconvenience short of curtailing our freedom as high a price as what the world has just paid? Ten million dead. Fifty million dead, wounded, or missing. Can you convert those prices into dollars?

Competition helped make our country great. Won't that same competition by business the world over be healthy, permit smart management to make more profit, and reduce costs of goods as it has done here?

5. KNOW YOUR NEIGHBORS, AND YOU WILL CEASE TO FEAR AND HATE

There must be freer exchange of citizens between nations. Not only should we make it easier for Russians to enter our country but they should allow us easier access to Russia to tend our businesses, to study at the finest schools, and to settle there, if the place is to our liking.

The idea that the rest of the world would give its right arm to migrate to this country is an absurd bit of conceit. Since 1932 our trifling quotas have been only one-sixth to one-half filled.

When men travel and trade and live in other countries, even the least observant can see that men in Arabia are like men in Alabama—plenty good and plenty bad. There are straight-thinking Arabians as there are straight-thinking Alabamans. Remember the new kid who came to school? Until you beat him up and learned to know him better, you treated him as an outcast. It's easy to hate someone you don't know, and to teach others to hate as crazy mad as you. It's too easy to hate in the abstract, but did you ever talk to a Russian who had your brother's voice, your brother's thoughts, and his same warm-hearted friendliness? Once I guarded a German prisoner and learned how hard it is to hate a man face-to-face, a man who is good and clear-thinking.

6. BEWARE OF MEN AND THEIR IDEAS, NOT NATIONS

Wars are incubated not by one color of skin or roll of tongue, but by false ideals which hatch into false leaders. That is tremendously important to remember. Beware of men and their ideals, not nations. Men bound together by geography won't be completely good or bad, but men bound together because they fear, distrust, and hate alike may very well be.

Look closely at that man or band of men who talk fear, distrust, or hate of any nation or race. Don't make the mistake of looking too far—your neighbor next door, someone at the office or your club may be a far better Nazi than many Germans. You will probably find that your race-hater brands a nation with the same evil qualities with which he is endowed. If he blames the British with greed, you'll find he has more than his own share of greed. Look closely at the men you know who preach that the Jews are hell-bent on wrecking the world. They are unsuccessful men, not the captains of industry or business or science they would like to be. Rather than pin their failure on their own lack of brains and energy, which isn't at all pleasant, they choose Hitler's own scapegoat, the Jew.

The traitors of mankind are never exclusively one race or nation. They are those men and bands of men who whisper mistrust, suggest fear, and before long are shouting hate of races and nations. From nations we have nothing to fear, but beware those men and bands with diseased ideals and warped thinking who kindle mistrust and intolerance. They are the traitors of mankind.

7. RESORT TO INTERNATIONAL POLICE AND COURTS, NOT TO ARMED MIGHT

If we learn to recognize the traitors of mankind and their gullible followers, what then? How stop them and bring them to justice?

The answer is by an international police force. And let us never be confused between police force and standing army. A police force will root out evil-doers by name, single individuals whose crimes are obvious, or small bands of evil-doers whose crimes in deed and doctrine can be appraised by the courts, where unprejudiced thinking is a profession.

A police force can cope with half-crazed zealots before they spread their epidemic of mistrust and suspicion. It can deal with crooked-thinking bands of men whom the courts have proved to be dangerous.

There's an amazing amount of badness in us. One out of every 500 Americans has to spend all his time as a policeman to bawl out the rest of us for speeding, keep us out of our neighbor's silverware, and dissuade us from murder, rape, and arson. Something like one international policemen per 1,000 of us would probably do the job in the world community. Compare that ratio with the way your draft board picked your community clean of able-bodied young men. One in a thousand would be pretty small potatoes.

8. SIT NOT ON YOUR HAUNCHES IN DESPAIR; THIS IS MAN'S LAST CHANCE

You agree to the foregoing truths, but you smile indulgently and say, "Nice ideas. Wish I could live long enough to see them come true." Such indifference is criminal.

Here is the most vital truth of all—that a mature world community can, must, and will become reality.

Our so-called practical man a thousand years ago would have laughed at the hare-brained idea that nations could be united, the sun's circuit around the globe, into a British Empire. The same "practical" man was amused at the idyllic concept of uniting 13 scrappy colonies into a giant, fairly peaceful United States where State boundaries are no more important than fleeting signposts along the highways. A nation and a world can do anything it believes it can do. All that limits man is his own imagination.

If the American people can dig out their beliefs and give them an airing, they can help the world's people to know what they believe. They can begin a campaign of truth in diplomacy that will help eradicate suspicion, which is a requisite of war.

And when Americans do dig out those beliefs and strip them of emotion and prejudice and selfishness and "patriotism," they'll probably be surprised. They'll find some "everlasting truths" as dead as mackerels, as antiquated as the Great Wall of China and its charm against invasion.

The most significant changes don't come by war, but through changes in custom and habits of thinking. Without loss of blood, the Industrial Revolution shook the world to its foundation and boosted humanity to a plane of living unknown in world history.

Hopes and effort are better than despair—and despair is absolutely all that remains if we adopt the sit-on-your-haunches policy of noncooperation which has already offered up 50,000,000 dead and wounded in ghastly proof of its error.

There's no other course than to work together. We end war or we end mankind. This is our last chance.

Tribute to Robert H. Hinckley

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 4 (legislative day of Friday, January 18), 1946

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial paying tribute to Robert H. Hinckley, formerly Director of Contract Settlement, which was published in the Washington Post yesterday morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. HINCKLEY RETIRES

The sixth report of the Director of Contract Settlement has just been released coincident with the return to private life of the Director himself, Robert H. Hinckley, who was appointed to that post a year and a half ago. This official record of accomplishment amply warrants President Truman's praise of Mr. Hinckley's "superior performance of a difficult task." Perhaps the greatest tribute that could be paid to the skill and energy with which the Director has discharged the duties of office is afforded by the absence of unfavorable publicity. Because the complicated work of settling terminated war contracts has proceeded smoothly and rapidly, the public is apt to forget that this work might have been as badly bungled as it was after the First World War, when there was no sound contract legislation and no competent administration of the law.

It was widely believed in the early stages of the war that the primary impediment to speedy postwar reconversion would be lack of working capital for financing the change-over to civilian production—a lack aggravated by delays in discharging contractors' claims against the Government. As it turned out, strikes have become the most formidable obstacle to speedy reconversion, not any lack of funds with which to finance reconversion. During the last quarter of 1945, indeed, contract settlements were delayed and plant clearance work halted in some cases because the settlement personnel was not permitted to enter plants while strikes were in progress.

A great deal remains to be done, but the record to date warrants the forecast that less than 5 percent of the 168,000 unsettled contracts pending at VJ-day or since terminated will remain open at the end of next June. But with the work of settlement so far along, the planning and over-all direction of the program which has been the task of Mr. Hinckley is, he feels, nearing completion. Having laid down policies and tested them, completion of the actual work of settlement can be left to an increasing extent to the contracting agencies, with such assistance as may be required from Mr. Hinckley's successor in office, the former Deputy Director of Contract Settlement H. Chapman Rose. It is to be regretted that men of Mr. Hinckley's caliber are being lost to the Government service. We would rather see them being promoted to other posts than going back to private business. Government needs them as never before.

Statement of Facts Relative to Strike of United Electrical Radio and Machine Workers of America

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

1. UNITED ELECTRICAL RADIO AND MACHINE WORKERS OF AMERICA

Two dollars a day wage increase for 200,000 workers in 69 communities and in over 100 plants.

2. WHY $2 A DAY

(a) The average UE worker has suffered in many instances as high as 50-percent cut in take-home pay. Here are typical examples of six weekly pay checks of Robert Morrison, machine operator at the General Electric plant, Erie, Pa.:

1943: $48.55, 58.32, $64.19.
1945: $23.73, $29.02, $36.17.

The first paragraph contains pay checks for three typical weeks in 1943 when war production was in full swing. The second paragraph contains pay checks for three typical weeks in 1945 following VJ-day, August 15. Mr. Morrison has four small children and his rent is $35 a month.

(b) United States Office of Economic Stabilization estimates cost of living increase of 33 percent above 1941; CIO, 45 percent.

(c) Shifts to new jobs with lower basic hourly wage rates; cuts in incentive earnings.

(d) Loss of second and third shift differential, reduction in overtime.

3. WHAT DO THE COMPAN[illegible] OFFER?

General Electric: December 21 offered 10 percent increase then raised it to 10 percent for those making over $1—10 cents for those under conditioned on speed-up and wage rate cuts. Canceled contracts in existence for number of years.

Westinghouse: Has made no offer at all—canceled contracts in existence for number of years.

General Motors: Offered 10-percent increase, raised it to 13½ cents.

4. CAN COMPANIES AFFORD WAGE INCREASE?

	Profits before taxes 1935-39 (millions)	Profits before taxes 1940-44 (millions)	Profits after taxes 1935-39 (millions)	Profits after taxes 1940-44 (millions)
General Electric	$255	$1,000	$203	$314
Westinghouse	[1] 18	[2] 111	----------	[3] 33
General Motors	[4] 225	[2] 441	[4] 184	196

[1] Average for period 1935-39.
[2] 1944.
[3] $33,000,000 higher than any year in the period 1929-44.
[4] 1936-39.

NOTE.—GE reserves for 1944 were $262,000,000; Westinghouse, $127,000,000; General Motors $746,000,000.

5. WHAT HAS GOVERNMENT DONE TO SETTLE WAGE DISPUTE?

Union bargained for 4 months at own initiative; 3 weeks ago Secretary of Labor invited GE, Westinghouse, GM, nd UE to Washington for conferences; the union accepted, but companies refused invitation for 1 week then appeared in Washington to refuse mediation. UE kept the Government advised of developments. Three days before strike was scheduled to start, UE offered to all companies to postpone the strike if the companies would meet the offer of steel (15 cents) and negotiate the difference between 15 cents and 25 cents. The companies refused this offer. After fruitless meetings, the first strike in 9 years was called on January 15, 1946.

Communism Threatens the Peace of the World as Well as the Safety of America

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. RANKIN. Mr. Speaker, communism is now threatening the peace of mankind throughout the world, by spreading subversive doctrines, stirring up strife, and attempting to undermine the various governments—especially those of the English-speaking nations of the earth.

While that is going on abroad, the Communists and their fellow travelers are constantly busy in this country, fomenting trouble and stirring up strife throughout the land.

They and their fellow travelers continue to attack the Committee on Un-American Activities because of the stand the members of the committee take for the protection of American institutions.

The members of that committee are doing everything they possibly can to protect this Government against those subversive attacks by elements which want to destroy it and set up a soviet system in its place.

That is the object of the Communists and their fellow travelers, in and out of Congress, as I will now show.

Mr. Speaker, recently there was a change in the organizational set-up of the Communist Party in the United States.

Its present head, William Z. Foster, is one of the most dangerous proponents of revolution in this country that has ever been brazen enough to come before the American people and expound his subversive theories in plain and simple language. Foster recently replaced Earl Browder as head of the Communist Party because Browder was not revolutionary enough.

Before discussing Foster's revolutionary statements, it seems fitting that a statement of the Honorable Charles Evans Hughes be discussed; since it appears that some of our other law makers have never heard of Mr. Hughes' statement, I will repeat it. Here it is in his own words:

It will be seen that the question of whether Communist programs contemplate the use of force and violence has been passed upon by every class of tribunal which would pass upon it, namely, Federal and State courts, administrative tribunals and legislative committees of both Federal and State governments, and in every case the result has been in support of the position that force and violence are inseparable from Communist programs.

This statement was contained in Mr. Hughes' report to the United States Senate on January 21, 1924, in his capacity as Secretary of State. Mr. Hughes also said that the Communist Party in the United States is an organization created by and completely subservient to a foreign organization striving to overthrow the existing social and political order of this country.

It appears that Mr. Hughes' report has been forgotten as well as the public testimony of William Z. Foster, the present head of the Communist Party.

It is a matter of public record that on December 5, 1930, Mr. William Z. Foster testified under oath that he was a member of the Communist Party and at one time had been a member of the International Workers of the World, or as it is better known, the IWW. During his testimony, Foster said, in speaking of the American Revolution, or the war for independence, as we call it:

These early revolutionists found that government is not a matter of majority votes, but organized power which does not give way to the desires of the majority but only to a greater power.

In other words, Mr. Foster compares his proposed internal revolution in the United States with a fight fought by the forefathers of this country for freedom. Mr. Foster in his revolution merely wants to subject the descendants of the war for independence to the domination of a foreign ideology.

Mr. Foster is a standing candidate for nomination for the President of the United States under the banner of his party, the Communist Party which, according to his party's constitution, uses the hammer and sickle as its emblem. The constitution of this party, the Communist Party, is designed to replace the Constitution of the United States, for which men fought and died in the American Revolution, as well as every other war from that day to this.

This American Constitution adopted by the people of America after the American Revolution, uses the Stars and Stripes as its emblem, and not the hammer and sickle. The money issued by our Government functioning under the American Constitution says "In God we trust," but under another constitution it would probably say, provided there is any money, "In the loss of liberty, we glory."

With reference to Mr. Foster's views on a presidential election, it seems fitting that his views be expressed, and according to his own words. During the testimony referred to, Mr. Foster was asked the question, "You made an acceptance speech on May 25, 1928, when you accepted the nomination for President?" Mr. Foster's reply to this question was, "Yes." He was then asked whether or not in part he made this statement: "No Communist, no matter how many

votes he should secure in a national election, could, even if he would, become President of the present Government. When a Communist heads a Government of the United States—and that day will come just as surely as the sun rises—that government will not be a capitalistic government, but a soviet government and behind this government will stand the red army to enforce the dictatorship of the proletariat."

Mr. Foster's answer was: "I made that; I think I made that. It sounds like what I said. I do not know that is word for word, but that is in substance what I said." In other words, the ballot to Mr. Foster means nothing, the will of the majority means nothing, but the President appointed by the revolutionists will replace the duly elected president of the majority. These words of warning from Mr. Foster, should be heeded; he means that it is not necessary to have a majority in order to succeed in a revolution.

None of us knows how large the Communist Party is in the United States, but please note that when one of Mr. Foster's comrades named Carr spoke at the Moscow conference in 1922, he said:

> Many of the comrades were convinced that it was essential to organize a legal party. The underground party was to be continued and strengthened, but, in addition, a legal party was to be constructed, as an instrument of the Communist Party, that we might be able to work more effectively among the masses.

From this it is pretty definitely indicated that the Communist Party has concealed memberships and an underground group who subtly prescribe to its communistic doctrines.

With further reference to Mr. Foster's views on the American flag, the following extracts from his testimony regarding the flag of the Communist Party appear interesting. In answer to a question propounded to him by the chairman of the investigating committee, Mr. Foster said that the more advanced workers of this country look upon the Soviet Union as the r country. Then in answer to this question, "Do they, the workers, look upon the Soviet flag as their flag?" Mr. Foster replied:

> The workers of this country and the workers of every country have only one flag and that is the red flag. That is the flag of the proletarian revolution; it was also, incidentally, the flag of the American Revolution in its earlier stages. The red flag has been the flag of revolution for many years before the Russian revolution.

Mr. Foster then says:

> The workers, the revolutionary workers, in all the capitalist countries are an oppressed class who are held in subjection by their respective capitalist governments and their attitude toward these governments is the abolition of these governments and the establishment of Soviet governments.

Mr. Foster then says:

> I stated very clearly the red flag is the flag of the revolutionary class, and we are part of the revolutionary class. And all capitalist flags are flags of the capitalist class, and we owe no allegiance to them.

In other words, Mr. Foster and his party, the Communist Party, in addition to being revolutionists, openly say that the government of and the flag of the United States has no meaning to them.

The Communist Party, and Mr. Foster pretend to do everything in their power to preserve the American Bill of Rights which permits them, in their opinion, to carry of their gigantic and well-defined conspiracy to abolish the Bill of Rights after they have taken over the government of this country. For instance, this is what Mr. Foster has to say about the rights of individuals once he has established the Soviet form of government in the United States. The question asked him was, "if we are correctly informed—and possibly we are not—any man who would rise on the street corner in Russia, and inveigh against the Soviet government would be taken out and shot? What about that?" Mr. Foster's reply was:

> Yes. I will explain that. The situation of the Soviet Union is quite different than the situation in the United States. In the United States, the whole productive processes, the industries are owned by private capitalists and exploited for the benefit of a small ruling group of capitalists, and the government is the instrument for maintaining this exploitation, in which the millions of workers are exploited and forced into unemployment, and all the conditions that they comprehend. In the Soviet Union, the industries are owned by the workers, the government is their government, and it is carried on for the benefit of the masses. In America the worker who stands up and proposes the advocacy of the Soviet form of government and the struggle for the improvement of his conditions, is taking the stand on the side not only of the interests of the working class, but of the whole progress of human society The man who rises, the capitalist agent who rises in the Soviet Union and proposes to overthrow the Soviet Government and to reestablish capitalism there, proposes to turn the wheels of society backwards. The worker in America who fights for the program of the Communist Party is a fighter for the progress of society in general. The capitalist who proposes the otherthrow of the Soviet Government is an enemy of the human society.

In other words, if you believe in our form of government, you are a capitalist who is entitled to no rights, under the Bill of Rights, and who will be taken out and shot if he so much as says "I believe in private enterprise." A soviet government in America would establish the block-by-block, street-by-street system of espionage which is in vogue in the dictator nations of Europe. Who knows how many persons would be considered enemies of the state under the block-by-block espionage system?

Mr. Foster and his Communist cohorts believe that capitalistic nations are dead and giving way to the "newer and higher social order," which is socialism. Did not Hitler say that about certain governments, too? It appears that one capitalistic nation, the United States of America, had a large share in the winning of two wars just recently, and that Nation is not giving way to socialism, but has been giving away a lot of things to some other nations in order to keep them alive.

Remember that what the Communists mean by the capitalistic system is the right to own private property—the right to own your home, your farm, your store, or your factory. All this would be swept away under a Communist regime and every individual would become a slave of the state and told what to do by a few self-appointed commissars.

There is no more freedom, there is no more liberty, in a Communist country today than there is in the penitentiary of New York, Mississippi, Ohio, Illinois, or any other State, and not near as much religion.

The Communists' views on religion are also interesting. In his testimony Mr. Foster says:

> Our party considers religion to be the opium of the people, as Karl Marx has stated, and we carry on propaganda for the liquidation of these prejudices among the workers.

In other words he would make an atheist of every individual in America, if he could.

He goes on to say that—

> Many workers join the Communist Party who still have some religious scruples, or religious ideas; but a worker who will join the Communist Party must necessarily be in the process of liquidating his religious beliefs and, if he still has any lingerings when he joins the party, he will soon get rid of them.

He also says that—

> In my opinion, a member of the Communist Party of the Soviet Union who would be married in a church would not be of any value to the Communist Party.

Mr. Foster and his Communist cohorts therefore would eliminate religion; this would be in addition to the abolition of free speech and freedom of the press under the Communist conspiracy.

The Communists, according to their own statements, say that "We exist in every form of American life, we are in the theater, the motion-picture industry, the magazines and the newspapers, the radio, the unions, the schools, the church and in politics." They also say that "we publish more pamphlets than any organization in the world."

They hate the Committee on Un-American Activities for exposing their subversive activities in these fields.

All of these activities further their well-defined conspiracy to overthrow this Government and do away with the Bill of Rights and the Constitution of the United States, as well as the right to own private property.

In closing, it should be said that anyone who opposes these Communists is called a "Fascist" because he is an enemy of the communistic state which they hope to set up.

They brand the white people of the Southern States as "native Fascists" for resisting their treasonable activities.

They call everyone a "native Fascist" who opposes or exposes their subversive activities.

That is the reason for these attacks on the Committee on Un-American Activities.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Civil-Service Funds for Service to Veterans

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

UNITED STATES
CIVIL SERVICE COMMISSION,
Washington, D. C., January 25, 1946.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: I have your letter of January 7, 1946, requesting information regarding the insufficiency of funds available to the Civil Service Commission for rendering adequate service to veterans, as indicated in a resolution recently adopted by the Disabled American Veterans, of Massachusetts.

In response, let me assure you that we are all very concerned regarding the situation which has developed, not only in our central office, but throughout our regional offices, such as are located in Boston and 12 other major centers of Federal Government activity throughout the country, as a result of a substantial reduction in the funds available to the Commission at the same time that demands upon the Commission for rendering service to returning veterans has been increasing rapidly.

As an indication of the exact status of our available resources, in comparison with what we have estimated our requirements to be, may I cite the following record of our requests for funds for the fiscal year 1946 and the grants which have been made available to us:

1946 estimates and appropriations

	Requested of Bureau of the Budget	Allowed by Bureau of the Budget and requested of Congress	Allowed by Congress
1. Regular annual Budget (filed Sept. 15, 1945)	$19,522,363	$17,048,000	$14,705,882
2. First Deficiency (Second Deficiency Appropriation Act, 1945) (filed with Bureau of the Budget June 7, 1945)	1,859,000	1,311,118	[1] 670,000
Total available			15,375,882
3. First supplemental surplus appropriation rescission bill, 1946 (request filed Aug. 20, 1945)	[2]	[2]	[4] −2,032,000
Total available			13,343,882
4. First deficiency appropriation bill, 1946:			
(a) Request of Sept. 26, 1945	[3] 3,573,153	None	[5]
(b) Request of Dec. 3, 1945	1,600,000	1,600,000	600,000
Total available			13,943,882

[1] Totally for fees for medical examinations for veterans.
[2] That full amount of present appropriation be retained.
[3] Same as requested.
[4] In the first supplemental surplus appropriation rescission bill the Congress rescinded $2,032,000. While this bill failed of enactment, a Budget reserve of $2,032,000 has been established at the direction of the President.
[5] This is the amount requested for regular functions. An item of $584,822 for the Panama Canal construction annuity fund was also included in the request. This was allowed by the Bureau of the Budget in full and by the Congress in the amount of $510,000.
[6] Not submitted to Congress by Bureau of the Budget.

As a result of this drastic decrease in our available funds, the Commission has found it necessary to reduce personnel from the peak of 7,500 on its rolls just prior to VE-day to less than 4,750 on December 31, 1945, and a still further reduction to 3,889 has been ordered effective February 1, 1946. In our field offices, where the bulk of our veteran contacts are handled, this reduction has been effected largely since VJ-day, with the result that in most of the offices, as in the case of the Boston office, the personnel has been cut more than 50 percent since September 1. It has also been necessary to abandon 262 field stations which were located at various large employment centers throughout the regions.

At the same time we have been faced with an influx of applications from veterans being released from the armed forces and Federal employees separated because of reduction in force in other Government agencies. Even though the Commission, upon the cessation of hostilities, closed all examinations to the general public and established the policy of accepting applications only from veterans entitled to reopen examinations and Government employees separated for reduction in force, as long as these sources provided sufficient eligibles to meet the needs of the service, we are receiving thousands of applications each month from veterans. Also the number of veterans calling at the regional offices for information, advice, and the granting of veteran preference, has increased manyfold. Our correspondence from Members of Congress and individuals has increased to such an extent that we are rapidly creating a backlog of truly serious proportions.

In our veterans counseling and information work we have tried to take care of the veteran with a minimum of delay. However, we realize that veterans have had to take their turn and have had to wait some time before getting the information or advice they sought. This has been unavoidable because the number of veterans visiting our offices has been very large and we would have to have a tremendous staff of counselors to take of the veterans without delay. I can assure you that we are anxious to furnish the veteran every possible assistance and are endeavoring to staff our veterans counseling and information sections with as many qualified counselors as our funds will permit. After repeated reductions in our personnel in the face of this growing work load, it is not possible for us to make available sufficient personnel to handle all those who come to us for assistance without frequent and regrettable delays.

We have streamlined many of our operations and have revised many official regulations in the interest of getting the utmost speed and efficiency into our procedures, particularly as they relate to expediting the placing of veterans in Federal employment. To date, however, these have not afforded relief sufficient to offset the crippling effects of the curtailment in our total funds and personnel.

I trust that this information will be helpful to you. If there is any additional information desired, we shall be glad to furnish it to you.

Very respectfully,
WILLIAM C. HULL,
Executive Assistant.

Price Increases and Inflation

REMARKS
OF
HON. ROGER C. SLAUGHTER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. SLAUGHTER. Mr. Speaker, those of us who are interested in holding the line against inflation cannot but be alarmed at the proposal which has come up in renewed form to try to buy some temporary industrial peace by permitting the price of steel to rise $4.75 per ton, which, of course, is going to invite inflation. I have a letter here this morning which I am including as part of my remarks from a constituent. I have deleted the name of the sender, but I will be glad to show it to any Member who may be interested in seeing it. It is from a white-collar worker, a woman who lives in my district. The letter shows very clearly that the white-collar people of this country are at last becoming aware of the danger that they are facing if inflation comes.

The letter is as follows:

JANUARY 30, 1946.

The Honorable ROGER C. SLAUGHTER,
House Office Building,
Washington, D. C.

DEAR SIR: I am writing to you because I am one of that body of unorganized labor dependent upon a middle-class business for my livelihood. You are familiar with the problems of organized labor and big business, but a realization of their effect upon we in-betweens can come to you only through such individual appeals as mine.

My personal story is representative of thousands of women who are faced with a choice between an unhappy change of jobs for financial security or a lowered standard of living.

I have worked my way through 5 years of college and have a bachelor of science degree in textiles and clothing from Iowa State College. As a result of my education and special talents, I have chosen millinery as my trade. In the course of 3 years I have been through an apprenticeship and have been a maker for over two of these years. My job meets all of my requirements except that of pay. For the last year my wage rate has been 55 cents per hour, which economists have said is the lowest rate under which living standards can be maintained, and yet my living standard is above average. I have maintained an apartment, a well-balanced diet, and a wardrobe commensurate with my fashion career. Beyond the bare necessities I have a box seat to the Town Hall series, subscriptions to several periodicals, insurance sufficient for my needs, and a small savings account. This can be done on an income of $1,445 per year.

But if the price of food continues to rise and my rent were raised even $5 per month,

my wages will not rise; so the alternative is a lowered standard of living. The OPA has been the only reassurance that my cost of living would not so greatly exceed my income that I would be forced to give up a trade for which I have prepared for 8 years. I say, continue the OPA until labor and capital have agreed through arbitration and fact finding designed to prevent inflation.

What labor needs is not a union to blindly incite them in a quest for a few more dollars, but an organization to educate them in the real value of their income, whatever it may be. Freedom from want and freedom from fear are really what we are all seeking. The health of a human being is first judged by whether or not his weight is constant, so the health of a nation is determined by the stability of the general level of prices.

Sincerely yours.

Justice for Poland

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid speech, Justice for Poland, made over Station WSPR, Springfield, Mass., on December 9, 1945, by our former colleague, Hon. William J. Granfield, now chief justice of district court of Springfield, Mass., under the auspices of the Polish-American Congress, western Massachusetts branch:

JUSTICE FOR POLAND

(By Judge William J. Granfield)

Throughout the 1,000 years of her recorded history, Poland has been subjected to pressure on all its national borders. Her unfortunate geographical location in the very center of Europe, with virtually no defensible frontiers, has invited aggression from the west since the days of Otto I down to those of Hitler and from the east aggression since the days of Genghis Khan to those of Stalin. Added to this she suffered from periodic invasions from the north and from the south.

And yet, for 1,000 years Poland has served as the bastion of western civilization and the safeguard of Christendom in Europe, repelling one furious assault after another. Despite the exacting price in land, in life, and national wealth Poland has always had to pay for being the key to Europe, so dynamic a nation was she that the years of peaceful endeavors brought her achievements unparalleled in the history of the world.

Through centuries, Poles have contributed their share to the progress of mankind. Copernicus, Mme. Curie, Kosciuszko, Pulaski, Chopin, Paderewski, and Joseph Conrad are names to conjure with. Let us not forget that the Polish king, Jan Sobieski, saved Europe from the Turks in 1684. Let us remember the two Nobel prize winners for literature, Sienkiewicz and Reymont; the anthropologist, Bronislaw Malinowski; the discoverer of vitamins, Dr. Funk. And let us mention such giants of the musical world as Wieniawski, Szymanowski, Moszkowski, Rodzinski, Stokowski, Landowska, Hofmann, and Rubinstein.

THE CRIME OF 1772

Tolerant and freedom-loving Poland was in many ways so far ahead of the times in her love of culture and peace that her three powerful autocratic neighbors, Prussia, Austria, and Russia, took advantage of her weakness and in 1772 despoiled her for the first time, committing what President Wilson characterized "one of the greatest crimes in history."

For more than a century Poland was virtually wiped off the map of Europe. But the amazing thing about the Poles is that regardless of the odds against them, they never gave up, never took the easiest way out. Even during the long black-out of the partitions, the people of Poland demonstrated their will to be free by staging a bloody insurrection once every generation and by waging an unyielding underground fight for freedom and independence.

Poland, however, furnished the best proof of her vitality in the 20-year interval between World War I and World War II. It must be borne in mind that when Poland began to function as an independent state in November 1918, she had to start from a condition of utter feebleness.

THE RECONSTRUCTION DECADES

Poland received very little succor and aid from abroad in rebuilding her shattered economy. Yet in those 20 years Poland accomplished the impossible. She reduced illiteracy among her young people to a fraction of 1 percent. She brought under cultivation more than 11,000,000 acres of fallow land. She parceled out more than 11,000,000 acres of the large estates to the peasants. Her rolling stock was the envy of Europe. Her fleet increased from a few ships to 500 merchant vessels which plied the seven seas. Along her seacoast of a few miles she constructed her own modern port of Gdynia and turned it into the fifth seaport in Europe. Poland raised three times as many potatoes as the whole of the United States, more cattle than Great Britain, as much wheat and rye as France. She ranked fourth in coal export and fifth in zinc export. Her persistent industry, ladies and gentlemen, in the rehabilitation and reconstruction of her nation by her people was unexcelled by any nation in the history of this world.

Poland was especially proud of her progressive labor legislation in which she truly led the world. Labor unions were recognized by law as early as 1919. Health insurance, accident insurance, disability and old-age pensions were compulsory for the alleviation of all working people. Every factory employing 100 workers was required by law to maintain a nursery for the children of employed mothers. White-collar workers received a minimum of a month's paid vacation. Three months' severance pay was also provided for by statute.

The Poles were just beginning to reap the benefits of two decades of intensive effort when catastrophe struck again. Preferring to see their life work wrecked rather than compromise with their honor, the Poles dared to say "No" to Hitler, and again they paid a fearful price. Alone and pitifully unprepared, they resisted the vastly superior and ruthless forces of Germany in 1939 for more than a month. Fighting with their backs to the wall, they saw their mighty eastern neighbor, Russia, join the Nazis in partitioning their land along the Ribbentrop-Molotov line.

LOVERS OF FREEDOM

However, when the Polish campaign was over, the Poles showed their true mettle and their great love of freedom. Deported to slave labor in Germany or to the tundras of Siberia, killed inside concentration camps or ghetto walls, shot during manhunts or deliberately starved to death, the men, women, and children of Poland have suffered as never before in that country's tragic history.

In the 5½ years of German rule by terror the Nazis could not find a Quisling or a Laval in Poland. Marked for extermination, the Poles unrelentingly fought back. Inside Poland was organized an underground state which improvised methods of sabotage, published 120 secret newspapers, and recruited in the face of close German surveillance a regular home army to fight the Nazis. The world has paid little notice to their supreme act of sacrifice—the 63-day Warsaw uprising in 1944 in the course of which those parts of the Polish capital that escaped destruction in 1939 were leveled. A quarter of a million Poles laid down their lives in those terrible 63 days, hoping against hope that the aid promised them would materialize.

Fourth in size among the fighting forces of the United Nations, they shed their blood generously in the Battle of France, at Narvik, at Tobruk and El Gazala, at Monte Cassino, and in the great invasion. The Polish air force in the RAF destroyed more than a thousand German planes and the Polish Navy won more British decorations than any other Allied sea force in the recent war.

ATLANTIC CHARTER THEIR HOPE

In all these years of bitter fighting and suffering, the Poles drew courage from the noble principles of the Atlantic Charter and the pronouncements of Allied statesmen. They hoped that their sacrifices would bring them not only liberation but internal political liberty as well and the right to organize their life without outside interference, on a democratic basis.

A Soviet-dominated government, the presence of Soviet secret police and of Soviet troops, economic chaos, the absence of a free press, and the denial of political freedom—these are some of the reasons why the bulk of Poland's army and of the displaced persons prefer the uncertainty of self-imposed exile to a return to their Communist-ridden homeland.

The Atlantic Charter provides that all people shall have the right to self-determination. The Polish people were not consulted at Yalta when the three powers decided to turn the Moscow-created Lublin committee into a provisional government of national unity. Poland has been a loyal and brave ally. She deserves to be treated as such. She should not be punished for her adherence to the principles of a high idealism and for her belief in the triumph of right over might.

If we are to remain at peace with our conscience, if we are to feel that this war has not been fought in vain, we must demand justice for Poland.

In Defense of Our Boys Who Want To Come Home

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. O'KONSKI. Mr. Speaker, so much has been written and said in the last few weeks about the so-called hysteria of our soldiers to get home, and of their families to get them home, always with the inference, direct or indirect, that these men and their families simply do not know what it is all about, that they have no conception of our responsibilities here, there, and all over the world. Yet, almost without exception, the one basic fact that is fundamental to the whole question is overlooked or deliberately ignored. These men, soldiers and officers alike, who have expressed their impatience with delays

in returning them home, were drafted out of civilian life, out of schools, colleges, private jobs, away from wives, parents, and children, to fight our war against the Axis; not to occupy Germany for 15 or 100 years, or Austria, Japan, Korea, Burma, China, the Philippines, or any other of the many places where our forces are still scattered.

One amazing thing about the present situation is that anyone should be surprised at what has happened. Anyone who had the slightest understanding of American psychology should have realized that the discontent and these demonstrations were inevitable. According to reliable Army figures there have been 800,000 enlistments in the Regular Army since VJ-day, and there are still more than 4,200,000 men in the Army who were drafted to fight the war, making a total of more than 5,000,000 still under arms in the Army.

General MacArthur was undoubtedly right when he said he would be able to hold Japan with 250,000 trained regulars. He knew that draftees and reserves were not the men to do it, though this expression of opinion by this fine, experienced officer immediately brought down the wrath of the little men in our State Department—jealous of their plan to regiment and keep regimented our young men. The problem of occupying our third of Germany is far less difficult than the problem of Japan with its 60,000,000 people, and it would be stupid to say we would require more troops for our one-third of Germany than for all of Japan. In other words, not more than 500,000 Regular troops should be required for both Germany and Japan, and we already have 800,000 enlisted for that purpose. Then what is the sense of keeping the other 4,000,000 men still under arms? How foolish for Army officers in Washington to talk about sending fresh draftees, boys 18 years old, as replacements for the men who should be sent home. No 18-year-old boy is qualified in any way to do this job, which requires maturity and judgment. It is a job for a professional soldier, and yet we wonder why occupation with young draftees is not a success.

We constantly hear loose talk about our foreign commitments. What are they? The American people do not know and have never been told what our policy is—if there is any. The officers of the Army General Staff and the little men in the State Department all disagree with each other. One says the marines are in China to disarm the Japs; the very next man quoted—a Congressman who happens to be touring the Far East for some investigating committee—says: "The marines must be kept in China for many years as a stabilizing influence." Is it any wonder that servicemen and their families are confused and resentful?

We are told our men must guard our war materials in friendly countries scattered to the far corners of the world. Is it fair to keep the homes, lives, educations, careers of these men who were drafted to fight interrupted indefinitely because the Army or the Foreign Liquidation Commission cannot make up their minds how they are going to dispose of these materials?

To say that these demonstrations are leftwing-inspired is just silly, though of course the leftists will try to take advantage of them. These men are simply tired of being put off and their return delayed for one excuse or another, most of them with nothing to do worth doing, or knowing that what they are told to do should not be their job to do. It is all very well for men and women in comfortable jobs at home, in government, or out, to criticize these soldier demonstrations as hysterical, when neither they nor their sons, nor their fathers are being affected by the ineptitude, inefficiency, and stupidity of the bureaucrats in Washington.

What this situation cries aloud for is for the American people to recognize the fact: Since the occupation of Japan requires only 250,000 regular troops and the occupation of our third of Germany requires not more than that number, therefore, every man who is not a volunteer in the regular army should be sent home immediately.

China Progress

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of February 1, 1946:

CHINA PROGRESS

The People's Consultative Conference has taken a second step toward Chinese unity. All those interested in a stable far eastern peace—and Americans are especially concerned—will cheer this progress. We know, however, that the road ahead in China is still a long one, mined with factionalism, rutted with inefficiency and worse. All the patriotism and wisdom which Chiang Kai-shek and other leaders can summon will be required to make the new truce work.

Last night's agreement provides an interim coalition government and the method of choosing the National Assembly, which will meet in May to write a new constitution. This political agreement, in turn, was made possible by the earlier military truce brought about by our General Marshall.

In brief, Chiang's Kuomintang gives up its one-party totalitarian position and the Chinese Communists agree to the merger of their troops into a reorganized national army. In the temporary coalition cabinet the Kuomintang gives up seven or eight seats and creates several new ones, so that the total can be divided equally between itself and a combination of all other parties. In the national assembly the Kuomintang is to have a plurality, but not enough to steamroller the others. So-called democratic minority parties will hold the balance of power between the Kuomintang and Communists.

If Chiang is able to keep his promises China soon will have a representative government, individual rights and civil liberties. At best it is difficult to change overnight from a dictatorship to even a half-way democracy. Chiang faces added difficulties. The old guard in his own party has fattened too long on power and privilege to welcome change. And the Communists, who have been running their own dictatorship in the north even more tightly than Chiang, are not likely to be so enthusiastic about civil liberties for others when they are inside the government as when they were on the outside.

Probably Russia will be the determining factor. If Russia considers Chinese unity to be in her own long-run interest—as we believe it to be—Stalin may tell his boys to be good. Otherwise, they will have plenty of opportunities to wreck Chiang Kai-shek's plan for national unity.

Joseph V. Moreschi, General President, International Hod Carriers, Building and Common Laborers' Union of America, Vigorously Supports 65-Cent Minimum-Wage Legislation

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph V. Moreschi, general president of International Hod Carriers, Building and Common Laborers' Union of America, which has been made a part of the hearings before the House Labor Committee on the proposed 65-cents-per-hour minimum-wage bill. This statement sets forth in detail in a very direct and forceful manner the feeling of the members of one of the largest unions in this country.

The following is Mr. Moreschi's statement:

This statement is being presented for and on behalf of the International Hod Carriers, Building and Common Laborers' Union of America, an organization composed of approximately 300,000 unskilled, semiskilled, and skilled workers. This organization is an affiliate of the American Federation of Labor and its membership extends to every State of the Union.

We unhesitatingly endorse and urge the enactment of the proposed 65-cent minimum-wage law (S. 1349) now being considered by your committee.

In presenting this statement, we desire to point out that our unskilled labor members are already enjoying an average $1-an-hour rate. This standard is due to harmonious labor relations between employer and employee and as a result of orderly collective bargaining carried on over a long period of years.

We are justly proud of our record of achievement. We have been free of strikes and our record of production before, during, and after the war speaks for itself.

More than 100,000 of our members served in the armed forces. Hundreds made the supreme sacrifice and hundreds of others were given special citations for bravery in combat.

On the home front, all of our local unions and individual members bought bonds, gave blood to the blood banks, and in divers ways

contributed to the ultimate victory of our armed forces.

As good, loyal Americans, we feel duty bound to plead in behalf of the unorganized millions who are now suffering from substandard wages.

While the majority of laborers who are receiving substandard wages of less than 65 cents an hour are situated in the South, it is only fair to state that in isolated cases, there is a minority of workers in other sections of the Nation who are just as unfortunately handicapped.

It should also be pointed out here that in the South our organization has been able to substantially advance the wages of laborers from starvation to a minimum subsistence level.

The exceptions that cause us alarm are some few localities in the Southern States and, quite frankly, we fear that employing interests will endeavor to cause the present deplorable minimum to become the Statewide maximum in this group of States.

To be specific, Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Texas still have communities where wage rates on projects financed wholly or in part by Federal funds are substantially lower than the proposed 65-cent rate.

That laborers who were strongly organized have been denied equity in wage adjustments may be demonstrated by citing adjustments under the shipbuilding stabilization program to which the Federal Government procurement agencies were parties.

Mechanics in the South were advanced from $1.07 an hour to $1.20 an hour, bringing about uniformity of rates on a national basis while laborers were advanced from 54 cents an hour to 63 cents an hour. This 63-cent hourly rate for laborers in the South stood throughout the war as compared with 88.7 cents per hour for laborers doing the same class of work on the Pacific coast. This gross inequity was due to pressure of Southern shipyard operators who looked eagerly forward to holding down wages after the war.

Incidentally, it occurs to us that stabilization could have been best approached on the basis of a cents-per-hour in lieu of percentage basis of increase due to the fact that the low-income wage earner needed a greater increase than the higher wage group, as he was already suffering from increased prices of the basic commodities.

In arriving at minimum rates, it must also be borne in mind that the low-income group is the first to suffer from unemployment as they have no accumulated savings. They are also the first to feel the pinch of less carry-home pay as a result of the loss of overtime.

In substantiation of the argument presented herewith, I cite to you the Wage Report of the War Labor Board, dated February 22 1945, page 24:

"3. Substandards: It must be recognized that the situation of the lower-income wage and salary workers, upon whom the increase in the cost of living has fallen with disproportionate severity, has remained unsatisfactory under the wartime economy. This situation deserves the most careful consideration as we pass from war to peace."

Quoting further from the same report, we note:

"Legislative possibilities: For the most part the economic status of the 'unorganized millions' referred to in the President's message above can be improved only by legislative action, chiefly on the part of local governments. There are other millions of low-paid industrial wage earners whose cases, while falling under the War Labor Board's jurisdiction, never reach the Board and whose prospects for economic advancement are not favorable. Their status could most rapidly and effectively be improved by increasing the minimum wage requirements of the Fair Labor Standards Act."

We concur in this report and particularly stress the last sentence quoted; i. e., "Their status could most rapidly and effectively be improved by increasing the minimum wage requirements of the Fair Labor Standards Act."

That the majority of all the people favor the establishment of a 65-cent hourly minimum rate was borne out by the Gallup poll published in August 1945 that indicated a substantial majority favored the proposal.

That no relief may be expected by State legislation is indicated by the fact that only two Southern States have minimum-wage legislation and these laws are wholly inadequate to cope with the situation.

That poor health, poor education, and poor housing go hand in hand with low wages is graphically portrayed as follows:

In the South where wages are miserably low, we find:

Fifty percent of draftees rejected for poor health as compared with 35 percent non-South.

Twenty-five percent of southerners over 25 years of age with less than 5 years of schooling as compared with 10 percent non-South.

Fifty percent poor housing in South as compared with 19 percent non-South.

That present minimum-wage rates are entirely too low is recognized strongly by leading industrialists who point out:

1. High incomes, immense pent-up wants assure a high, continuing level of demand.
2. High income means high employment.
3. High employment will encourage spending of income and expansion of credit buying.
4. Rising rates of pay will tend to cushion the decline from current dollar income.

The Committee for Economic Development, in its News for December 1945, has pointed out in a most convincing manner that by doubling income we double consumption. It points out that the $50-a-week family spends 74 percent more for food than the $25-a-week family, 105 percent more for clothing, 112 percent more for home furnishings, and 167 percent more for formal education.

The enactment of this legislation will mean good prices for the farmer, stable profits for businessmen, and a higher standard of living for those who need it most.

Even though this proposed legislation becomes law, the average low-wage worker representing a family of four would enjoy only a three-quarters minimum living. This reasoning is arrived at as follows:

If you and your family all enjoy good health, you may skimp and try to save $2 a week. Then come the deductions for social security, etc. With seasonal lay-offs, you cannot expect to work more than 50 weeks. After deductions, you find you must get along on $1,000 a year—you, your wife, and two children.

Out of this $1,000 you will have to pay 1945 prices. Your $1,000 a year, or $83 a month, will buy only $69 worth of necessities. This means your 65 cents an hour today is exactly what 46 cents an hour was in 1939.

Best estimates are that the average family of four would require a wage of 87 cents an hour. You therefore find that you must try and exist on three-fourths of a minimum living.

Then, we ask, is it unfair to ask Congress to support the proposed 65-cent minimum wage law?

Again, we stress the fact that we, as an organization, have far less to gain from proposed minimum wage of 65 cents than others who have not been as successful as we have in improving the social and economic status of our members.

But as an unselfish organization, being desirous of helping those least able to help themselves, we therefore plead with you to promptly enact into law the proposed 65-cent minimum rate for those employed in interstate commerce and on work financed in whole or in part by Federal funds.

JOSEPH V. MORESCHI,
General President, International Hod Carriers, Building and Common Laborers' Union of America.

Bundles for Britain

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. LANDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I delivered over Station WLW, Cincinnati, Ohio, February 2, 1946:

My fellow citizens, America will support the United Nations Organization for international peace. We also will aid the starving nations with our surplus food. We have agreed to the Bretton Woods proposal to stabilize the currency and make it possible to borrow from the International Bank, but we will not bankrupt America in order to finance Great Britain and the rest of the world. America knows England cannot repay this loan and we cannot afford to make an outright gift of $4,400,000,000. It is time to call a halt on such foreign hand outs. Uncle Sam must not play the role of Santa Claus to foreign nations to make socialism work in England or communism work in Russia.

I am opposed to the British loan or similar loans to foreign countries unless such loans have proper safeguards to protect the American taxpayers. On the other hand, I would agree to a specific bond issue where the purchaser of the bonds would assume all the risks.

The New Deal has proposed to loan Great Britain a total of $4,400,000,000. The money will be repayable over a 50-year period at 2 percent interest, but repayments will not start until 1951. Under the proposed loan Britain would not pay interest for the first 5 years. Consequently, the actual rate of interest would be 1.62 percent. If our veterans and farmers wanted to borrow from the Government the interest rate would be at least 3 or 4 percent. Why the distinction?

Our own experience in foreign investment has not been a very happy one. Foreign countries now owe us $14,500,000,000 from World War I, of which Britain owes us $6,400,000,000. All but one of these nations will not even pay the interest on their war debts.

History shows that such loans will not make for peace. After the last World War we were severely criticized for trying to recover on debts owed us.

If we should make this loan to Britain other nations will also seek their share of our wealth. To refuse them would create dissension throughout the world. If we loan to all countries the initial cost will be $20,000,000,000 or $160 for every man, woman, and child in the United States. Where are we going to get the money? Of course, every American would be called upon to pay his share. The American people should not be required to continually keep their nose to the grindstone to aid foreign countries. The time has come to begin looking after our own people, more especially the veterans who will need help in reestablishing themselves in our economy.

It would be most unwise to invest and risk the taxpayers' money to finance these loans. There is no legal way in which such

debts can be collected from a foreign country. If payments were suspended, as they were back in the late twenties, we would be left holding the bag.

The proponents of the British loan contend that money will come back to America in wider markets, if the plan works. However, in the past, our entire exports to all countries only amounted to about 8 percent of our trade, and England's trade only amounted to about 2 percent. This is no time to retard domestic recovery and further inflate our currency by overliberal exporting. Our critical housing problem is due partly to the exportation of lumber and logs. The same is true of farm equipment and other things. If this money were distributed to our citizens in wages, farm prices, veterans' benefits, and old-age pensions, both the money and goods would remain in the United States.

Why should we make this loan to Britain? They now own 1,500,000 shares in United States industries. They have unmined gold reserves of $24,500,000,000, unmined diamond reserves of $8,800,000,000, and $14,000,000,000 in foreign investments. Let her use these assets before coming over here with cup in hand.

Do you believe American taxpayers are willing to finance huge salaries and allowances to support royal households in foreign lands? No, the New Deal is not going to fool the American people this time. If we take a look at our indebtedness Americans will understand why the British loan faces defeat. We now have a national public debt of $278,000,000,000. Additional billions will be needed to pay the interest on our debt for foreign relief, veterans' benefits, and reconversion plans.

Our first big job is to make the United States a solvent Nation. Everyone should know that we cannot continue to give away our money and resources without jeopardizing our own welfare. The American taxpayers cannot uphold the British Empire forever. There will always be a U. S. A. if we don't give it away. Beware of the leader who places the welfare of other countries before his own. He is not to be trusted.

Use of DDT in Promotion of Public Health

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the health commissioner of the city of Boston:

CITY OF BOSTON,
HEALTH DEPARTMENT,
Boston, Mass., January 29, 1946.

Congressman JOHN W. McCORMACK,
Washington, D. C.

MY DEAR CONGRESSMAN: In view of your unusual interest and concern for public health through the use of DDT, I feel that I should express not only my own gratitude, but the gratitude of the entire citizenry of this city, because of the results achieved in the application of this wonderful insecticide through the use of spray and powder.

We had heard of a very ethical undertaking through the use of this chemical for the control of insects which might have a bearing on the spread of infantile paralysis in an Illinois city. It was reported that official United States Army planes were used in the spraying and the whole project was carried out under the careful supervision of a professor attached to Yale University Medical School.

We had been endeavoring to obtain a pound of this DDT through regular channels, but were unsuccessful, and at the time of your presentation of the cask of this chemical, the problem which concerned us most, was the prevalence of infantile paralysis.

Between July 17 and August 29, 1945, in an area in the vicinity of Mattapan and Hyde Park, which area represents 3 percent of the geographical area of the entire city of Boston, there had been reported 15 cases out of a total of 28 cases throughout the city. In other words, over 50 percent of the infantile paralysis reported in this city occurred in this small 3-percent geographical area. We felt, therefore, that this was the place to utilize your gift.

We have, at no time, been under the impression that DDT will control the spread of infantile paralysis, because we agreed, as is stated in the enclosed bulletin from the National Foundation for Infantile Paralysis, that the exact means of spread of this disease is not known, but concur with their statement that "flies have repeatedly been shown to be carriers of infantile paralysis virus."

Fortunately, we had carried on, the previous months, an educational program in the various city departments, relative to DDT. We had brought our films and equipment to the various offices in city hall, so that all employees might be informed. We also had the field workers of the public works department attend two similar educational programs held at the Archbishop Williams Auditorium in the South End. Thus, all employees became familiar with the purpose and equipment, etc., used in the program and its application in the field of preventive medicine.

While we had no official report from the experiment in Illinois and many official and nonofficial opinions against the use of this insecticide in the field were elaborated upon in this vicinity, yet we sent forth on August 30, six of our public-works department employees, equipped with knapsack sprayers. These men attacked, first, the insects in areas adjacent to homes in Mattapan and Hyde Park wherein were located cases of infantile paralysis.

They then attacked homes adjacent to these and finally endeavored to attack the remaining homes in this area of but 3 percent of the geographical area of Boston, but which represented 50 percent of the cases in the city.

We must remember that this was early in the season for infantile paralysis and, therefore, we had no right to expect anything but a gradual reduction in the number of our cases of infantile paralysis. To our amazement all cases of infantile paralysis in this community ceased immediately. Although we closed our record on December 31, 1945, with a total of 107 cases, no other case appared in this small area from the day we started spraying with DDT. Of course, we do not claim that DDT carried this wonderful result into completion, but can claim that it possibly was a factor in the control of the disease and at least through this experimentation we have been able to present this very satisfactory result, let us call it, and one which would justify us in spraying by hand any community wherein this disease has appeared, especially in such force.

Authorities may claim that normally one person in seven might be expected to contract this disease in a mild form, and we feel that even a single case is worthy of our efforts if it can be eliminated. That this result was accomplished in spite of a marked increase in this disease in the city may be realized from the following statistics for this disease for the years from 1940 to 1945:

Cases:	*Resident*	*Non-resident*
1940	4	5
1941	15	57
1942	4	11
1943	23	64
1944	30	76
1945	107	211

One of the most annoying problems to children in a large city is that of head lice, or pediculosis, and we have had that problem, as well as almost every community. At times, in the past, this department has taken entire families to our detention hospital, where treatment was carried out, requiring the operation of the hospital and the services of nurses. Usually, after much effort and several days' work, improvement was noted. Often, reinfection was noted and so this became a serious problem for the health department.

While I was in the Navy, I saw the results of the use of this insecticide in the control of head lice. Immediate results were obtained by the application of DDT in powder form.

Upon a visit to various orphanages, etc., in the city, I noted that among the underprivileged children housed there, a routine daily examination and treatment showed infection of from 10 to 25 percent of the enrollment. A preparation consisting of 10 percent DDT powder was presented to various organizations and agencies and I am happy to report to you that we are justified in arriving at the conclusion that such head lice are a thing of the past because these institutions have reported to us that in 100 percent of the cases all such vermin are destroyed and the enrollment formerly harboring vermin have been free for the past 3 months.

We have also sprayed—

Yards and passageways	4,100
Boston public schools	175
Hospitals, orphanages, institutions, etc	42
Public lodging houses	6
Public buildings	10
Cow barn and piggery, Deer Island	1
Dead body for larvae and maggots	1
Apartments infested with vermin, body lice, bedbugs	90
Dead horses for the prevention and spread of organic matter following a fire	24

All this work has been carried on without a single complaint or a single instance of any person being made ill. Some establishments, who at the beginning of our campaign indicated that DDT would kill their pets, are themselves now selling some form of DDT 10 percent powder over the counters.

In addition to all the wonderful accomplishments enumerated, we have instilled into the minds of the people of this city by an educational program the great value of this insect-control program in their homes and premises.

Yours sincerely,
FREDERICK J. BAILEY, M. D.,
Health Commissioner.

Guiding the Handicapped to Happiness

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Irmis Johnson from

the American Weekly of February 3, 1946:

GUIDING THE HANDICAPPED TO HAPPINESS

(By Irmis Johnson)

Anyone who talks a few minutes with Betsey Barton promptly forgets that she has a physical handicap—legs made helpless 11 years ago when her back was broken in an automobile accident.

But she remembers the bitter, despairing years before she learned to live again and is grateful to the trained workers who re-educated her body and mind for a new life. For this reason Betsey Barton now is devoting much of her energy to plans for an unusual Foundation for Physical Rehabilitation, to be located at 117 East Fifty-fifth Street, New York City.

The main purpose of the Foundation—for which Miss Barton and some of her associates hope to raise $100,000—will be to train capable men in the complete art of reeducating the disabled. Its director will be J. M. Williamson, the man who through simple exercise helped Miss Barton learn to overcome her handicap and live with it.

The trainees will master all the exercises necessary to bring disabled bodies back to health and strength.

Reeducators must be extremely wise persons, Miss Barton explains, prepared to mend the broken personality, the broken mind, the broken body and even the broken heart.

For this reason the men to be trained will be selected carefully so that when they leave the foundation to carry on their work they will be fully capable of starting the handicapped on their way to a new life.

Today Betsey Barton gets around easily on crutches with the help of braces to support her legs. She leads a full and worth-while life and is eager to help others with physical disabilities do the same.

"The swift exchange of a once normal body for an impaired, abnormal one is very hard," she admits and likens the experience to exchanging one costume for another in the dressing rooms of Time.

At the age of 16 Miss Barton was completely helpless, but she has learned that to readjust to a handicap one must forget the old life and start an entirely new one—be a new character in a new role, so to speak.

Memories of feats that may never be accomplished again will mock and hurt at first, she warns. But under the right guidance those remembrances that may never be useful can be weeded out, others can be put to work helping muscles and nerves acquire the coordination they once had but have lost.

Today a great many families have members disabled by war, accident, or disease. Often there is little those near and dear to the invalided patient can do but wait and supply the love that is so necessary for any recovery.

It is the patient who must face the reality of his disability and admit to himself that from now on he will have an artificial leg, a mechanical arm, an artificial eye, or twisted and useless body muscles.

Facing the reality of being permanently endowed with new physical equipment that is less than normal is the first hurdle of the handicapped, Miss Barton believes.

The second step, perhaps the most difficult and time-consuming, is acceptance of this disability and the willingness to plan a new life with it.

Then comes the arduous task of learning to handle the disability at all times and in all ways.

When she took her first steps toward reconstruction under the special teacher whose help she values so highly, Betsey Barton tells disabled men and women there were ninety and nine things she couldn't do, and not many she could do.

She could breathe and use a few muscles.

By perfecting many simple exercises under his expert, understanding guidance, she made a start on which to build new strength and health, and acquired faith in her future.

When this had been accomplished she went to the Institute for the Crippled and Disabled, 400 First Avenue, New York City. Here she learned to walk down the long waxed corridors on crutches and mastered other abilities to handle herself so necessary in normal living.

Once the limitations of any physical misfortune have been mastered, Miss Barton explains, the final step is to learn to live creatively in spite of the disability.

The institute offers vocational training to help the patient meet his or her need for a normal usefulness, and employers are finding that a disabled person rightly placed in a job no longer is disabled at all.

Betsey herself, since her readjustment, has become an accomplished writer, as is shown by her recent book, And Now To Live Again.

Interested in all of the problems of the handicapped, who number 23,000,000 throughout the Nation, she recognizes the great value of large centers for rehabilitation now being planned for our leading cities, where skills of many specialists are pooled for the benefit of patients. Even so she still believes the ideal to be a one-man reeducator with a wide understanding of physical and mental ills.

Such a personal teacher can lay much of the groundwork when the mind and body are hurt and the danger of settling down to being a shut-in is great. Too many specialists, at first, may be discouraging.

That is why the foundation now being planned by Miss Barton is to be devoted to training such men.

The Tragedy of Truman

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Samuel Crowther from the New York Journal and American:

THE TRAGEDY OF TRUMAN—POLITICAL AIM FOLLOWS PLAN SET BY REDS

(By Samuel Crowther)

III

President Truman in his radio address was chiefly concerned with what seems to be a labor chaos in this country but which, as will be brought out, is not a labor chaos but something quite different.

He advocated the continuance of his own wartime powers, although he did not say why he wanted to retain the trimmings of despotism.

He wanted the continuance of price control—sharing and encouraging the curious but popular delusion that price control is the same as inflation control. He wanted to keep the Federal employment agencies instead of letting them pass back to the States. He wanted his bill to add Federal funds to local unemployment relief. He wanted a bill by which eventually the Federal Government would finance a job for every man who asked employment.

Wants fact-finding power

And finally he wanted a bill giving him the power to set up what he calls fact-finding bodies with the authority to postpone strikes for 30 days while the facts were being found.

The program that he urged was, with the exception of the fact-finding boards, exactly the program of Sidney Hillman's PAC, which in turn is the preliminary program of the Communist Party in the United States.

The program as urged by the President could not aid the cause of progress or liberty. It could not aid in finding an answer to the wave of strikes which is sweeping the Nation.

It could add nothing to human happiness but, on the contrary, it could and would greatly speed our regression into decadence and bring us the more quickly into the kind of state where the common man would be so common as to be a mere chattel moved about by slave masters with high-falutin titles.

We could, under the program, achieve more quickly the impotence in our domestic affairs that we have already reached in our foreign affairs.

It is highly improbable—as was noted in a previous article—that President Truman or any of his close political associates have any grasp of the meaning of the policies that he is advocating.

But it is equally improbable that they did not realize that all of these measures involved the heavy spending of Federal funds and the creation of a bought vote of sufficient size to carry this year's congressional elections and to lay a firm foundation for reelection in 1948.

Ignores root of the evil

The address was principally noteworthy in that it failed to touch the primary cause of our domestic difficulties. Therefore it did not propose doing anything about the cause.

The primary cause of all our domestic difficulties is inflation of our money supply.

The men who have infiltrated into every department of our Government and who do not believe in the American system of government fully understand that inflating the money is the quickest of all ways of breaking down public morale and government. They are promoting inflation while pretending to cure it.

President Truman and his close associates simply do not understand what is going on and hence they do not understand what their supposed subordinates are doing to them and to the people.

Inflation, it has been made to appear by devious but all-embracing propaganda, comes about from people being allowed to spend their money too freely. That being so, if the people can be restrained from spending too much by price fixing and other measures, they can be saved from themselves and inflation can be avoided.

That has been standard nonsense from at least the time of Diocletian. But the nonsense is a hardy perennial and it is in full flower today.

Inflation is not caused by the people spending money. It is caused by the Government printing money. The people have no more to do with bringing on inflation than the man in the moon.

Inflation is not fully understood by Americans because, until the coming of the Roosevelt administration, every political party in power accepted the preservation of the dollar as a sacred trust.

During the war, when the great bond campaigns were on, any man who raised his voice to question the methods of finance or to note the progress of inflation was smeared as disloyal. Now it should be disloyal to be silent.

Everyone understands that when the Government prints money, it is inflating. But few seem to understand that there is more than one way of printing money.

How United States causes inflation

No amount of money borrowed from the people in exchange for bonds can be inflationary. The bonds simply exchange for money and the amount of money is not increased.

But when the Government sells a bond or a note to a commercial bank, the process is very different. No money passes. The bank just opens a deposit account to the credit of the Government.

The Government draws checks against that account and these checks become deposits in other banks or are drawn out as hand money in the form of Federal Reserve notes. The bonds become the eventual collateral for the Reserve notes.

So when the Government borrows from a commercial bank, it just manufactures bank deposits—which is the same as printing money. That is what has been going on.

We now have a total money supply—bank deposits and bank notes—of well over $160,000,000,000 as against $61,000,000,000 in 1939 and $55,000,000,000 in the boom year of 1929.

We have a tremendously inflated money supply due to the Government policy of borrowing from commercial banks.

If a nation has more money than goods, the money will be used to bid up the prices of goods. That is one evidence of inflation, but it is not inflation. The inflation is in the supply of money.

If we have a reasonably large production—say, the production of 1940 or 1941—prices and wages in an atmosphere of confidence will gradually rise and adjust themselves to the supply of money.

In order to use all the money supply we now have on any reasonable projection of production, we shall require an eventual price rise of about 50 percent.

If we continue to inflate our money by loans to foreign nations, by relief payments, or other payments which cannot be covered by taxes, the money supply will be further watered—or inflated—and the value of the money will steadily decline. That is another way of saying that prices will steadily rise.

If production does not reasonably catch up with the money supply, the Government must devalue. This is a polite name for repudiation.

Proposed Substitute for the Case Bill

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. HAYS. Mr. Speaker, on Friday during general debate on the Case bill I spoke briefly on my intention to submit a substitute modeled after the Ball-Burton-Hatch plan for the settlement of industrial disputes. The proposed substitute contains only one modification in the revised bill submitted by the sponsors of this legislation (S. 1661), but eliminates all compulsory arbitration features in the original bill and also strikes out section 13 dealing with the reorganization of the National Labor Relations Board. My proposed substitute is as follows:

SEC. 1. (a) Declaration of policy: It is hereby declared to be the policy of the Congress to facilitate the prompt, peaceful, and just settlement of all labor relations controversies between employers and employees that may interrupt commerce among the several States or with foreign nations; and to that end—

(1) to encourage the making and maintaining of agreements concerning wages, hours, and other conditions of employment;

(2) to assist in maintaining the right of the parties to be represented in collective bargaining and in the making and maintaining of such agreements by duly authorized representatives freely and voluntarily designated by the respective parties without any interference, influence, or coercion exercised by any party over the self-organization or designation of representatives by any other party;

(3) to provide Federal settlement procedures for labor relations controversies likely to result in such substantial interruption of commerce among the several States or with foreign nations as to require or make appropriate Federal action; and

(4) to leave to the several States the handling of all other labor relations controversies that may interrupt such commerce among the several States or with foreign nations.

(b) Declaration of purposes: It is the purpose of the policy above declared (1) to promote continuity and regularity of employment, and (2) to avoid interruptions to employment arising from the inability of employers and employees to maintain satisfactory labor relations or from resulting strikes, lock-outs, shut-downs, or similar interruptions or cessations of the production or distribution of goods and services necessary to the health, safety, and welfare of the people of the United States.

ADMINISTRATION

SEC. 2. (a) Administration by Federal industrial relations board: This title shall be administered by the Federal Industrial Relations Board which shall be composed of five members appointed by the President by and with the advice and consent of the Senate. The terms of office of the members first appointed shall expire, as designated by the President at the time of nomination, one at the end of 1 year from the date of approval of this act, one at the end of 2 years, one at the end of 3 years, one at the end of 4 years, and one at the end of 5 years, from said date. The terms of office of all successors shall expire 5 years after the expiration of the terms for which their predecessors were appointed; but any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the unexpired term of his predecessor.

(b) Vacancies: Vacancies in the Board shall not impair the powers nor affect the duties of the Board nor of the remaining members of the Board. A majority of the members in office shall constitute a quorum for the transaction of the business of the Board.

(c) Salary: Each member of the Board shall receive a salary of $12,000 per annum, together with necessary traveling and subsistence expenses, or a per diem allowance in lieu thereof, subject to the provisions of law applicable thereto, while away from the principal office of the Board on business required by this act.

(d) Eligibility and removal: No person in the employ of, or whose conduct may be affected by any obligation to, or who has any pecuniary or other prejudicial interest in, any employer or employee organization shall be eligible to enter upon or continue to be a member of the Board. A member of the Board may be removed by the President for inefficiency, neglect of duty, malfeasance in office, or ineligibility, but for no other cause.

(e) Miscellaneous: The Board shall annually designate a member to act as chairman. The Board shall maintain its principal office in the District of Columbia, but it may meet at any other place whenever it deems it necessary. Each member of the Board shall have the power to administer oaths and affirmations. The Board shall have a seal which shall be judicially noticed. The Board shall make an annual report to Congress.

(f) Personnel: The Board may (1) appoint such experts and assistants to act in a confidential capacity and, subject to the provisions of the civil-service laws, such other officers and employees as are essential to the effective transaction of the work of the board; (2) in accordance with the Classification Act of 1923, as amended, fix the salaries of such experts, assistants, officers, and employees; and (3) make such expenditures (including expenditures for rent and personal services at the seat of government and elsewhere, for lawbooks, periodicals, and books of reference, and for printing and binding, and including expenditures for salaries and compensation, necessary traveling expenses, and expenses actually incurred for subsistence) as may be necessary, and as may be provided for by the Congress from time to time. All such expenditures shall be allowed and paid on the presentation of itemized vouchers therefor approved by the chairman of the Board, or other officer designated by the Board.

(g) Delegation of authority: The Board is hereby authorized by its order to assign or refer any matter arising with respect to its functions under this act or other law, or referred to it by the Congress or either branch thereof, (1) to one or more members or employees of the Board, to be designated by it in such order, or (2) to a joint board composed (as determined by the order of the Federal Industrial Relations Board) of one or more of its members or employees, to be designated by the Board in its order, and of one or more members of the appropriate agency of any State or States affected by the matter, to be designated by such State agency. The Board may by its order at any time amend, modify, supplement, or rescind any such assignment or reference. All such orders shall take effect forthwith and remain in effect until otherwise ordered by the Board. If so provided in the Board's order and in conformity therewith, such member or employee of the Board or joint board shall have power and authority to act for the Board in such matter assigned or referred.

(h) Rules of practice and regulations: The Board may from time to time adopt, amend, and rescind such interpretive regulations not in conflict with nor in addition to the provisions of this act or other law, as may be necessary for the administration of its functions.

(i) Utilization of services of other agencies: The Board may utilize the services of any other agency or officer of the Government or of any State agency whenever in the Board's judgment such utilization is desirable for the administration of its functions, and the Board may authorize any such agency or officer to act as the agent of the Board.

(j) Transfer of United States Conciliation Service: All functions of the Secretary of Labor or the United States Conciliation Service under section 8 of the act entitled "An act to create a Department of Labor," approved March 4, 1913 (U. S. C., title 29, sec. 51), or under the War Labor Disputes Act (U. S. C., title 50, sec. 1507) or such functions under any other law are hereby transferred to the Board, together with the personnel, records, property, and unexpended balances of appropriations, allocations, or other funds of the United States Conciliation Service. Such transfer shall not affect any proceedings pending before the United States Conciliation Service or any certification, order, rule, or regulation theretofore made by it or the Secretary of Labor.

DUTIES OF EMPLOYERS AND EMPLOYEES

SEC. 3. (a) Employers and employees subject to act: Employers and employees shall be subject to this act if controversies between them involving labor relations are within the scope of this act as hereinafter provided.

(b) Duty to make and maintain agreements: It shall be the duty of employers and employees subject to this act and their agents

and representatives to exert every reasonable effort to make and maintain agreements concerning wages, hours, and conditions of employment to the end of avoiding the occurrence, and providing for the prompt, peaceful, and just settlement of controversies within the scope of this act. In case any such agreement is in existence and one of the parties thereto desires a change in the agreement, such reasonable efforts shall include the giving of notice in accordance with the provisions of such existing agreement, or if there is no such provision, then the giving of adequate written notice of the proposed change to the other parties to such existing agreement. Unless otherwise fixed by agreement the time and place for a conference between representatives designated and authorized so to confer by the respective parties shall be agreed on by the parties within 10 days after receipt of such notice and the time agreed on shall be within 30 days after receipt of such notice.

(c) Duty to settle controversies: If there arises a controversy within the scope of this act, it shall be the duty of the employers and employees involved therein—

(1) promptly to arrange conferences between representatives designated and authorized so to confer by the employers and employees, respectively, and to exert every reasonable effort to settle the controversy expeditiously in such conferences; and

(2) in case the controversy is not so settled in such conferences and the Board proceeds to deal with the controversy through the settlement procedures hereinafter provided, then fully and expeditiously to carry out their respective duties under such settlement procedures.

(d) Maintenance or existing conditions pending exhaustion of settlement efforts: Whenever there arises a controversy within the scope of this act it shall be the duty of the employers and employees involved therein and their agents and representatives, pending the exhaustion of all efforts at settlement under this act in accordance with the terms thereof, to make no use of any unilateral arbitrary or coercive methods or compulsory process to end the controversy or to obtain an advantage in its final determination, and except by agreement of the parties or with the approval of the Board, to make no change in the conditions out of which the controversy arose. In case a special fact-finding commission is appointed, as hereinafter provided, in connection with any such controvercy no such method or process shall be used and no such change in conditions shall be made pending the expiration of 30 days after making of its report, as provided in section 7.

Nothing in this act shall be construed to require an individual employee to render labor or service without his consent or to make illegal the quitting of his labor or service or the withdrawal from his place of employment; nor shall any court issue any process to compel an individual employee to render labor or service or to remain at his place of employment without his consent.

(e) Right to strike: Except as provided in subsection (d) of this section, nothing in this act shall be construed so as to interfere with or impede or diminish in any way the right to strike.

(f) Designation of representatives: Representatives for the purpose of this act shall be designated by the respective parties in such manner as may be provided in their corporate organization or unincorporated association, or by other means of collective action, without interference, influence, or coercion exercised by any party over the self-organization or designation of representatives by any other party. Such representatives may be individuals who are not in the employ of the employers concerned, or organizations whose membership may include persons not in the employ of the employers concerned, so long as such individuals or organizations have been duly designated by the employers or employees who are concerned, as their representatives for the purposes of this title.

CONTROVERSIES SUBJECT TO ACT

SEC. 4. (a) Classes of controversies within scope of the act: Any labor-relations controversy shall be within the scope of this act, subject to the exclusions and limitations hereinafter specified. For the purposes of this act such controversies shall be divided into the following classes:

Class 1: Controversies over the right of representation of employees.

Class 2: Controversies over the making or maintaining of an agreement concerning wages, hours, or conditions of employment.

Class 3: Controversies arising out of any grievance against any employer concerning the application of any such agreement.

Class 4: Controversies not included in any of the foregoing classes.

(b) Exclusions by reason of character of employment: No controversy shall be within the scope of this act if it concerns—

(1) employment by the Government of the United States or of any State, or of any Territory or possession, the District of Columbia, the Canal Zone, or any other area under the jurisdiction of the United States, or of any political subdivision thereof, or by a governmental agency of any of the foregoing;

(2) employment by an employer (or if more than one employer has a common interest in the controversy, by employers) whose aggregate number of employees is less than 20, unless in the opinion of the Board the controversy threatens to result in such a substantial interruption of commerce as to require or make appropriate Federal action;

(3) employment of agricultural labor by farmers or cooperative associations of farmers;

(4) employment in the domestic service of any family or person at his home;

(5) employment by any labor organization (other than when acting as an employer) or by anyone acting in the capacity of officer or agent of such labor organization;

(6) a dispute for the settlement of which provision is made by the Railway Labor Act, as amended;

(7) a dispute over which the National War Labor Board takes jurisdiction under the War Labor Disputes Act or other law, or Executive orders thereunder, but only so long as the War Labor Disputes Act remains in effect.

(c) Exclusions by reason of local character of controversy: No controversy shall be within the scope of this act (1) unless the employment involved directly affects the producing, processing, preparing, or handling of raw materials, supplies, or goods for distribution in substantial quantities in national or international commerce of the United States, or directly affects their distribution in substantial quantities in such commerce; or (2) unless the employment involved directly affects the supplying of power, light, transportation, communication, or any other public or private utility service in substantial quantities in such commerce. For the purposes of this act, the national commerce of the United States is commerce between the several States (including the Territories, possessions, the District of Columbia, the Canal Zone, and other areas under the jurisdiction of the United States); and the international commerce of the United States is commerce between such States or areas and foreign countries: *Provided*, That the national and international commerce of the United States does not include such local handling or distribution of consumer goods or end products after termination of their interstate shipment or their importation as does not directly affect such commerce.

(d) Regulations defining controversies: The terms (1) "directly affects," (2) "substantial quantities," and (3) "such local handling or distribution of consumer goods or end products after termination of their interstate shipment or their importation as does not directly affect such commerce," as used in this section, may be further defined by the regulations of the Board. In any such regulations, such terms shall be so defined as to exclude controversies that are predominantly of a local character or effect and that do not directly affect national or international commerce of the United States. Such regulations shall be adopted after due notice of proposed regulations and opportunity for public hearing thereon and shall, when adopted, have the force and effect of law.

(e) Controversies where employment is outside United States: No controversy shall be within the scope of this act where the place of the employment incident to the controversy is outside the several States, the Territories, possessions, the District of Columbia, the Canal Zone, and other areas under the jurisdiction of the United States, unless the employment is in connection with international transportation or communication facilities operated by a business organized under laws of the United States, or the several States, or such areas.

(f) Applicability of State laws: The laws of the several States, Territories, and possessions may apply to any labor relations controversy occurring therein, whether or not such controversy is one within the scope of this act: *Provided*, That in case of a controversy within the scope of this act, the laws of the State, Territory, or possession shall remain applicable only so long as the services of the Board have not been invoked or proffered as provided in section 5. The Board shall cooperate with State and local authorities in the preparation and application of State and local legislation to carry out the purposes of this subsection.

HANDLING OF CONTROVERSIES BY BOARD

SEC. 5. (a) Invocation or proffer of Board's services: Any party to a labor-relations controversy within the scope of this act shall have the right to invoke the services of the Board, but in case of a class 3 or class 4 controversy only if in the opinion of the Board the controversy threatens to result in such a substantial interruption of commerce as to require or make appropriate Federal action. The Board may on its own motion proffer its services in any class of controversy if it finds and publicly announces that the controversy threatens to result in such a substantial interruption of commerce as to require or make appropriate Federal action and that the services of the Board are necessary or desirable in the settlement of the controversy.

(b) Use of appropriate settlement procedures: In the event that the services of the Board are so invoked or proffered with respect to any controversy, the Board, having determined that the controversy is within the scope of this act shall proceed promptly to deal with the controversy with due expedition through the appropriate settlement procedures as hereinafter provided.

(c) Controversies handled by State authorities: If a labor-relations controversy within the scope of this act is being handled under State law by the appropriate State authority, then, notwithstanding the foregoing provisions of this section, no party to the controversy may invoke the services of the Board unless he does so on or before the tenth day after jurisdiction over the controversy was assumed by the State authority. In the event that the Board's services are not so invoked within such 10-day period, then the jurisdiction of the State authority to handle such controversy under State law shall continue until such time as the controversy is settled or the State authority

ceases to act unless prior thereto the Board on its own motion proffers its services after a finding and public announcement as provided in subsection (a).

SETTLEMENT PROCEDURE FOR CLASS 1 CONTROVERSIES

SEC. 6. Determination of employee representation: In case of a class 1 controversy (that is, one relating to representation of employees) the Board shall refer the dispute to the National Labor Relations Board for determination in accordance with the provisions of the National Labor Relations Act.

SETTLEMENT PROCEDURE FOR CLASS 2 CONTROVERSIES

SEC. 7. (a) Mediation: In case of a class 2 controversy (that is, one relating to making and maintaining an agreement) the Board shall use its best efforts by mediation and conciliation to bring the parties into agreement. If such efforts to bring about an amicable adjustment through mediation and conciliation are unsuccessful, the Board shall then endeavor to induce the parties to agree to submit their controversy to arbitration under the provisions of section 10.

(b) Fact-finding commission: If any party declines to submit the controversy to such arbitration, the Board shall determine whether the controversy threatens to result in such a substantial interruption of commerce as to make it necessary or desirable in the public interest to create, or to request the President to create, a special fact-finding commission. If the Board determines that a special fact-finding commission is necessary or desirable, the Board may thereupon either create and appoint or request the President to create and appoint a special fact-finding commission to investigate and report respecting such controversy. Such commission shall be composed of such number of persons as may seem desirable to the Board (or to the President, if he shall act). No commissioner appointed shall be pecuniarly or otherwise privately or prejudicially interested in the employees or employers concerned. The compensation of such commissioners shall be fixed by the Board at an amount not exceeding $75 per day, or in case of commissioners appointed by the President, fixed by the President at an amount not exceeding $100 per day. Such special fact-finding commissions shall be created separately for each controversy or for each group of controversies presenting similar issues and pending at the same time. The commission shall investigate promptly the facts as to the controversy and make a report thereon to the Board (or to the President if the commission was appointed by him) with its recommendations as to the manner in which such controversy should be adjusted. The report shall be made within 30 days from the date the commission is created. The time for making such report shall not be extended except by action of the Board, which, in exceptional cases, may allow an additional 30 days on request of the commission.

SETTLEMENT PROCEDURE FOR CLASS 3 CONTROVERSIES

SEC. 8. (a) Adjustment board: In case of a class-3 controversy (that is, one relating to a grievance) the Federal Industrial Relations Board shall direct the parties to such controversy, to refer such controversy to an adjustment board which shall be authorized to make an award binding on the parties. It shall be the duty of the parties in making agreements to provide for an adjustment board to settle grievance controversies. In the event of the failure of the parties to establish such a board by agreement, the Board shall be authorized, when grievance controversies arise, to establish an adjustment board for their settlement and to designate an equal number of representatives of the parties as members of the board and to appoint, as hereinafter provided, an impartial chairman. An adjustment board shall consist of an equal number of representatives, not less than two, designated by, or on behalf of, each party. No member thereof shall be immediately involved in any controversy to be decided by the adjustment board.

(b) Impartial chairman: If the adjustment board is not able promptly to adjust such controversy, the Federal Industrial Relations Board shall appoint an impartial chairman who shall be an additional member of the adjustment board. An award certified by a majority of the adjustment board so constituted shall be binding on the parties and may be filed by any party thereto within 6 months of the date of the award in the clerk's office of the district court of the United States for the district wherein the controversy arose, and when so filed shall be subject to the provisions of section 10 (c).

(c) Expenses of adjustment boards: The parties shall agree on an appropriate division of the expenses of an adjustment board, including compensation of an impartial chairman. In case of dispute his compensation shall be fixed directly by, or made subject to the approval of, the Federal Industrial Relations Board.

(d) No interference will unfair practice complaints: The Board shall take no action under the provisions of this section which will interfere in any way with the consideration or determination of complaints of unfair practices by the National Labor Relations Board in accordance with the provisions of the National Labor Relations Act.

SETTLEMENT PROCEDURE FOR CLASS 4 CONTROVERSIES

SEC. 9. In case of a class 4 controversy (that is, other controversies not specially provided for), the Board shall proceed as in the case of class 2 controversies.

VOLUNTARY ARBITRATION

SEC. 10. (a) Boards of arbitration: (1) Whenever the parties to a labor relations controversy agree to submit the controversy to arbitration under this section, the controversy shall be arbitrated by a board of three (or if the parties to the controversy so stipulate, a board of six) persons: *Provided*, That the failure or refusal of any party to submit a controversy to arbitration shall not be construed as a violation of any legal obligation imposed upon such party by the terms of this act or otherwise.

(2) Such board of arbitration shall be selected in the following manner:

In the case of a board of arbitration of three, the representatives of the employer or employers and the representatives of the employees, parties respectively to the agreement to arbitrate, shall each select an arbitrator. The two arbitrators thus chosen shall select a third arbitrator. If the arbitrator chosen by the parties shall fail to select the third arbitrator within 5 days after their first meeting such third arbitrator shall be selected by the Federal Industrial Relations Board.

In the case of a board of arbitration of six, the representatives of the employer or employers and the representatives of the employees, parties respectively to the agreement to arbitrate, shall each select two arbitrators. The four arbitrators thus chosen shall by a majority vote select the remaining two arbitrators. If the arbitrators chosen by the parties shall fail to select the remaining two arbitrators within 10 days after their first meeting the said two arbitrators or as many of them as have not been selected shall be selected by the Federal Industrial Relations Board.

(3) When the arbitrators selected by the respective parties have agreed upon the remaining arbitrator or arbitrators they shall notify the Federal Industrial Relations Board, and in the event of their failure to agree upon any or upon all of the necessary arbitrators within the period fixed by this section they shall, at the expiration of such period, notify the Board of the arbitrators selected, if any, or of their failure to make or to complete such selection.

(4) The board of arbitration shall organize and select its own chairman and make all necessary rules for conducting its hearings: *Provided*, That the board of arbitration shall be bound to give the parties to the controversy a full and fair hearing which shall include an opportunity to present evidence in support of their claims and an opportunity to present their case in person, by counsel, or by other representatives as they may respectively elect.

(5) Upon notice from the Federal Industrial Relations Board that any party to an arbitration desires the reconvening of a board of arbitration (or a subcommittee of such board of arbitration appointed for such purpose pursuant to the agreement to arbitrate) to rule upon any controversy over the meaning or application of their award the board of arbitration or its subcommittee shall at once reconvene. No question other than or in addition to the questions relating to the meaning or application of the award submitted by the party or parties in writing shall be considered by the reconvened board of arbitration or its subcommittee. Such rulings shall be acknowledged by such board or subcommittee thereof in the same manner and filed in the same clerk's office as the original award and become a part thereof.

(6) No arbitrator except those chosen by the Federal Industrial Relations Board shall be incompetent to act as an arbitrator because of his interest in the controversy to be arbitrated or because of his connection with or partiality to any party to the arbitration.

(7) Each member of any board of arbitration selected by any party to the arbitration shall be compensated by the party selecting him. Each arbitrator selected by the arbitrators or by the Federal Industrial Relations Board shall receive from the Board such compensation as the Board may fix together with his necessary traveling expenses and expenses actually incurred for substistence while serving as an arbitrator.

(8) The board of arbitration shall furnish a certified copy of its award to the respective parties to the controvery and shall transmit the original together with the record of the proceedings and a transcript of the evidence taken at the hearing certified under the hands of at least a majority of the arbitrators to the clerk of the district court of the United States for the district wherein the controversy arose or the arbitration is entered into, to be filed in said clerk's office as hereinafter provided. The board of arbitration shall also furnish a certified copy of the award and of the record of the proceeding and transcript of evidence to the Federal Industrial Relations Board to be filed in its office.

(9) All testimony before the board of arbitration shall be given under oath or affirmation and any member of the board of arbitration shall have the power to administer oaths or affirmations. The board of arbitration or any member thereof shall have the power to require the attendance of witnesses and the production of such books, papers, contracts, agreements, and documents as may be deemed by the board of arbitration material to a just determination of the matters submitted to its arbitration and may for that purpose request the clerk of the district court of the United States for the district wherein said arbitration is being conducted to issue the necessary subpenas.

Upon such request the said clerk or his duly authorized deputy shall be, and he hereby is, authorized and it shall be his duty to issue such subpenas. In the event of the failure of any person to comply with such subpena or in the event of the contumacy of any witness appearing before the

board of arbitration, the board of arbitration may invoke the aid of the appropriate district court of the United States to compel witnesses to attend and testify and to produce such books, papers, contracts, agreements, and documents relevant and pertinent to the proceedings pending before the board of arbitration to the same extent and under the same conditions and penalties as provided for in the act to regulate commerce, approved February 4, 1887, and the amendments thereto. Any witness appearing before the arbitrators shall receive the same fees and mileage as witnesses in courts of the United States, to be paid by the party securing the subpena.

(b) Form of agreement to arbitrate: The agreement to arbitrate—

(1) shall be in writing;

(2) shall stipulate that the arbitration is had under the provisions of this act;

(3) shall state whether the board of arbitration is to consist of three or of six members;

(4) shall be signed by th duly accredited representatives of the employer or employers and the employees, parties respectively to the agreement to arbitrate, and shall be duly verified by said parties and filed in the office of the Federal Industrial Relations Board;

(5) shall state specifically the questions to be submitted to the said board of arbitration for decision and that in its award or awards the said board of arbitration shall confine itself strictly to decisions as to the questions so specifically submitted to it;

(6) shall provide that the questions or any one or more of them submitted by the parties to the board of arbitration may be withdrawn from arbitration on notice to that effect signed by the duly accredited representatives of all the parties and served on the board of arbitration;

(7) shall stipulate that the signatures of a majority of said board of arbitration affixed to their award shall be competent to constitute a valid and binding award;

(8) shall fix a period from the date of the selection of the arbitrator or arbitrators necessary to complete the board (as provided for in the agreement) within which the said board of arbitration shall commence its hearings;

(9) shall fix a period from the beginning of the hearings within which the said board of arbitration shall make and file its award: *Provided*, That the parties may agree at any time upon an extension of this period;

(10) shall provide for the date from which the award shall become effective and shall fix the period during which the award shall continue in force;

(11) shall provide that the award of the board of arbitration and the papers, proceedings, and transcript of the evidence when certified under the hands of at least a majority of arbitrators shall be filed in the clerk's office of the district court of the United States for the district wherein the controversy arose or the arbitration was entered into, which district shall be designated in the agreement and when so filed such award, papers, proceedings and transcript of evidence, shall constitute the full and complete record of the arbitration;

(12) shall provide that the award when so filed shall be final and conclusive upon the parties as to the facts determined by said award and as to the merits of the controversy decided;

(13) shall provide that any difference arising as to the meaning or the application of the provisions of an award made by a board of arbitration shall be referred for a ruling to the same board or by agreement to a subcommittee of such board and that such ruling when acknowledged in the same manner and filed in the same clerk's office as the original award, shall be a part of and shall have the same force and effect as such original award; and

(14) shall provide that the respective parties to the award will each faithfully execute the same.

The said agreement to arbitrate when properly certified, as herein provided, shall not be revoked by a party to such agreement: *Provided*, That such agreement to arbitrate may at any time be revoked and canceled by the written agreement of the parties signed by their duly accredited representatives and, if no board of arbitration has yet been constituted under the agreement, delivered to the Federal Industrial Relations Board or any member thereof; or if the board of arbitration has been constituted as provided by the agreement, delivered to such board of arbitration. The award of a board of arbitration having been certified as herein provided shall be filed in the clerk's office designated in the agreement to arbitrate.

(c) The arbitration award: (1) An award certified and filed as provided in this section or in section 8 (b) shall be conclusive on the parties as to the merits and facts of the controversy. Unless with 10 days after the filing of the award a petition to impeach the award on the grounds hereinafter set forth shall be filed in the clerk's office of the court in which the award has been filed, the court shall enter judgment on the award. Such judgment shall be final and conclusive on the parties.

(2) Any such petition for the impeachment of any award shall be entertained by the court only on one or more of the following grounds:

That the award plainly does not conform to the substantive requirements laid down by this act for such awards or that the proceedings were not substantially in conformity with this act;

That the award does not conform nor confine itself to the stipulations of the agreement; or

That a member of the Board rendering the award was guilty of fraud or corruption or that a party practiced fraud or corruption which fraud or corruption affected the result.

(3) No court shall entertain any such petition on the ground that the award is invalid for uncertainty. In such case the proper remedy shall be a submission of such award to a reconvened board or subcommittee thereof for a ruling. An award contested as herein provided shall be construed liberally by the court with a view to favoring its validity and no award shall be set aside for trivial irregularity or clerical error going only to form and not to substance.

(4) If the court shall determine that a part of the award is invalid on some ground or grounds designated in this section as a ground of invalidity but shall determine that a part of the award is valid, the court shall set aside the entire award: *Provided*, That if the parties shall agree thereto and if such valid and invalid parts are separable, the court shall set aside the invalid part and order judgment to stand as to the valid part.

(5) At the expiration of 10 days from the decision of the court upon the petition filed as aforesaid final judgment shall be entered in accordance with said decision unless during said 10 days either party shall appeal therefrom to the circuit court of appeals. In such case only such portion of the record shall be transmitted to the appellate court as is necessary to the proper understanding and consideration of the questions of law presented by said petition and to be decided.

(6) If the petitioner's contentions are finally sustained judgment shall be entered setting aside the award in whole, or, if the parties so agree, in part; but in such case the parties may agree upon a judgment to be entered disposing of the subject matter of the controversy which judgment when entered shall have the same force and effect as judgment entered upon the award.

ENFORCEMENT

SEC. 11. (a) Violations of act: It shall be a violation of this act for any person—

(1) to fail to perform the duties imposed on him by section 3;

(2) whether or not a party to a labor-relations controversy or proceeding for the enforcement of the requirements of this act, to interfere, or to incite or to support any interference, with the performance by any person of duties imposed on him by section 3, or in concert to attempt to prevent the effectuation of the purposes of this act or the making effective of regulations or orders issued under the authority of this act.

(b) Civil actions brought by Board: The Board is authorized by filing its complaint to institute a civil action to restrain or enjoin any violation or threatened violation of this act or to compel the performance of duties imposed by section 3. The district courts of the United States shall have exclusive original jurisdiction of any such civil action. In any such civil action instituted by the Board, the limitations upon the jurisdiction of the Federal courts imposed in the act entitled "An act to amend the Judicial Code and to define and limit the jurisdiction of the courts sitting in equity, and for other purposes," approved March 23, 1932 (U. S. C., title 29, secs. 101 and the following), shall not be construed or applied so as to prevent or restrict the granting of injunctive relief to the Board in aid of enforcement of this act.

(c) Any employee who fails to perform the duties imposed on him by section 3 (d) of this act (which subsection relates to maintenance of existing conditions pending exhaustion of settlement efforts) shall not be entitled to reinstatement by, or any back pay from, such employer under section 10 of the National Labor Relations Act.

DEFINITIONS

SEC. 12. As used in this act—

(1) The term "person" includes one or more individuals, partnerships, associations, corporations, legal representatives, trustees, trustees in bankruptcy, or receivers.

(2) The term "employer" includes any person acting in the interest of an employer, directly or indirectly.

(3) The term "employee" includes any employee, and shall not be limited to employees of a particular employer, and shall include any indivdual whose work has ceased as a consequence of, or in connection with, any current labor relations controversy or because of any unfair labor practice, and who has not obtained any other regular and substantially equivalent employment.

(4) The term "representative" includes any individual or labor organization.

(5) The term "labor organization" means any organization of any kind or any agency or employee representation committee or plan, in which employees participate and which exists for the purpose in whole or in part of dealing with employers with regard to the making or maintaining of agreements concerning wages, hours, or conditions of employment or with regard to grievances or other types of labor relations controversies.

(6) The term "Board" means the Federal Industrial Relations Board.

SEPARABILITY CLAUSE

SEC. 13. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SEC. 14. This act may be cited as the "Federal Industrial Relations Act."

Amend the title so as to read: "A bill to protect interstate and foreign commerce by providing for the prompt, peaceful, and just

settlement of labor relations controversies between employers and employees, to establish the rights and obligations of the parties thereto, and for other purposes."

H. R. 5328—Substitute Labor-Management Bill

EXTENSION OF REMARKS
OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the complete text of H. R. 5328, a bill introduced by me, which I shall, at the proper time, offer as a substitute for the Case bill. The text as here given differs from the text of the printed bill only in that I have here added section 15. That section will be included when I offer the bill in the House.

H. R. 5328

A bill to provide additional facilities for the mediation and peaceful settlement of labor disputes, and for other purposes

Be it enacted, etc., That the Congress hereby declares that the objectives of this act are to avoid and diminish strikes and other forms of industrial strife or unrest, which have the intent or the necessary effect of burdening or obstructing commerce, and to aid in attaining increased prosperity by achieving the highest degree of production at wages assuring a steadily advancing standard of living, by encouraging the acceptance of collective bargaining and voluntary conciliation, mediation, and arbitration agreements, thereby disposing of controversies between labor and management by peaceful means and discouraging avoidable strife through strikes and lock-outs.

DEFINITIONS

SEC. 2. When used in this act—

(1) The term "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia or any Territory of the United States and any State or other Territory, between any foreign country and any State, Territory or the District of Coulmbia, or within the District of Columbia or any Territory or between points in the same State but through any other State or any Territory or the District of Columbia or any foreign country.

(2) The term "industry affecting commerce" means any industry or activity in commerce or in which a labor controversy would burden or obstruct commerce or tend to burden or obstruct commerce or the free flow of commerce.

(3) The term "labor controversy" includes any disagreement, or any dispute, concerning terms, tenure, or conditions of employment or concerning the association or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, regardless of whether the contestants or disputants stand in the proximate relation of employer and employee; but the term shall not include any matter subject to the provisions of the Railway Labor Act, as amended (44 Stat. 577, 48 Stat. 1185, 49 Stat. 1189).

(4) The term "employer" includes any person acting in the interest of an employer, directly or indirectly, but shall not include the United States, or any State or political subdivision thereof, or any person subject to the Railway Labor Act, as amended from time to time, or any labor organization (other than when acting as an employer), or anyone acting in the capacity of officer or agent of such labor organization.

(5) The term "employee" shall include any employee, and shall not be limited to the employees of a particular employer, and shall include any individual whose work has ceased as a consequence of, or in connection with, any current labor controversy or because of any unfair labor practice, and who has not obtained any other regular and substantially equivalent employment, but shall not include any individual employed as an agricultural laborer, or in the domestic service of any family or person at his home, or any individual employed by his parent or spouse.

(6) The term "representative" includes any individual or labor organization.

(7) The term "labor organization" means any organization of any kind, or any agency or employee representation committee or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers, concerning grievances, labor controversies, wages, rates of pay, hours of employment, or conditions of work.

MEDIATION AND CONCILIATION DIVISION

SEC. 3. (a) There is hereby created in the Department of Labor a division to be known as the "Conciliation and Mediation Division" (hereinafter called the Division), at the head of which shall be a conciliation and mediation administrator (hereinafter called the Administrator). The Administrator shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive compensation at the rate of $14,000 per annum, together with necessary traveling and subsistence expenses, or per diem allowance in lieu thereof, subject to the provisions of law applicable thereto, while away from the principal office of the Division. The Administrator shall not engage in any other business, vocation, or employment.

(b) The Administrator may appoint and fix the compensation of such officers and employees and make such expenditures for supplies, facilities, and services as may be necessary to carry out the Division's functions. Without regard to the provisions of the civil-service laws and the Classification Act of 1923, as amended, the Administrator may appoint such experts, mediators, conciliators, and their assistants and fix their compensation as may be necessary to carry out the Division's functions. The Administrator may, subject to the civil-service laws, appoint such clerical and other personnel as may be necessary for the execution of the Division's functions, and shall fix their compensation in accordance with the Classification Act of 1923, as amended.

(c) The principal office of the Division shall be in the District of Columbia, but the Division shall establish regional offices convenient to localities in which labor controversies are likely to arise. The Administrator may by order, subject to revocation at any time, delegate any authority and discretion conferred upon him by this act to any Deputy Administrator, regional director, or other officer or employee of the Department of Labor and shall do so to the extent necessary to assure the decentralized exercise of the Division's functions. The Division may utilize the services of other agencies of the Government, part-time employees, and such voluntary and uncompensated services as may from time to time be needed.

(d) The Administrator may from time to time adopt, amend, and rescind such regulations and rules as may be necessary for the administration of the Division's functions.

(e) The Administrator shall make an annual report to Congress through the Secretary of Labor.

(f) Upon the appointment of the Administrator, those officers, commissioners of conciliation, employees of the Department of Labor, engaged in carrying out the conciliation and mediation functions now vested in the Secretary of Labor under the act of March 4, 1913 (37 Stat. 738), commonly known as the United States Conciliation Service, and those officers and employees of the National War Labor Board whose services in the judgment of the Administrator are necessary to the efficient operation of the Division, shall be transferred to and become employees of the Division. All records, papers, and property of the Department of Labor in carrying out these functions shall become records, papers, and property of the Administrator, and all unexpended funds and appropriations for such purposes shall become funds and appropriations available to be expended by the Administrator pursuant to this act. All conciliation and mediation proceedings pending before the Department and undisposed of at the time of such transfer shall be handled to conclusion by the Division.

(g) The Administrator may recommend for appointment by the President special mediators who shall act individually or in panels, when the Administrator shall deem such appointment necessary or desirable in furtherance of the objectives of this act. Each mediator appointed by the President shall receive from the Administrator such compensation as the President may fix at an amount not exceeding $100 per day together with his necessary traveling expenses and expenses actually incurred for subsistence while serving as mediator. Mediators appointed in accordance with this subsection shall not serve as arbitrators during their service under such appointments.

DUTIES OF EMPLOYERS AND EMPLOYEES

SEC. 4. (a) It shall be the duty of employers and employees engaged in any industry affecting commerce and their agents and representatives to exert every reasonable effort to make and maintain agreements concerning wages, hours, and conditions of employment to the end of avoiding the occurrence, and providing for the prompt, peaceful, and just settlement of labor controversies. In case any such agreement is in existence and one of the parties thereto desires a change in the agreement, such reasonable efforts shall include the giving of notice in accordance with the provisions of such existing agreement, or if there is no such provision, then the giving of adequate written notice of the proposed change to the other parties to such existing agreement. Unless otherwise fixed by agreement the time and place for a conference between representatives designated and authorized so to confer by the respective parties shall be agreed on by the parties within 10 days after receipt of such notice and the time agreed on shall be within 30 days after receipt of such notice.

(b) If there arises a labor controversy within an industry affecting commerce, it shall be the duty of the employers and employees involved therein—

(1) promptly to arrange conferences between representatives designated and authorized so to confer by the employers and employees, respectively, and to exert every reasonable effort to settle the controversy expeditiously in such conferences; and

(2) in case the controversy is not so settled in such conferences and the Administrator proceeds to deal with the controversy through the procedures hereinafter provided, then fully and expeditiously to cooperate with the Administrator in respect to such procedures.

DUTIES OF ADMINISTRATOR

SEC. 5. (a) It shall be the duty of the Administrator, in order to prevent or minimize interruptions of the free flow of commerce growing out of labor controversies—

(1) to encourage employers and employees within industries affecting commerce to make and maintain agreements concerning wages, hours, and conditions of employment, and to encourage such employers and employees to settle their differences by peaceful means and by negotiations between the parties without resort to strikes, lock-outs, or any form of violence; and

(2) to assist parties to labor controversies within industries affecting commerce to settle such controversies through conciliation and mediation.

(b) The services of the Administrator may be invoked by the parties, or by either party, to any labor controversy in any industry affecting commerce, if such controversy is not referable to an adjustment panel hereinafter provided for in this act. The Administrator may proffer his services whenever there arises a labor controversy involving or threatening an immediate and substantial interruption to the free flow of commerce. In either event it shall be the duty of the Administrator promptly to put himself in communication with the parties and to use his best efforts, by mediation and conciliation, to bring them to agreement.

(c) If the Administrator is not able to bring the parties to agreement by mediation or conciliation, within a reasonable time, he shall seek to induce the parties voluntarily to submit the controversy to arbitration. If arbitration at the request of the Administrator is refused by one or both parties, the Administrator shall at once notify the Secretary of Labor and both parties to the controversy, in writing, that his efforts at mediation and conciliation have failed.

MAINTENANCE OF CONDITIONS DURING NEGOTIATIONS

SEC. 6. In the case of any labor controversy within an industry affecting commerce, it shall be the duty of the parties to the controversy to make no change, except by agreement, in the rates of pay, hours, or conditions of employment in effect prior to the time the controversy arose, until the expiration of 5 days after the Administrator has notified the parties that his efforts at mediation and conciliation have failed, unless a period of 10 days has elapsed after the termination of conferences between the parties without the services of the Administrator having been invoked or proffered in connection with the controversy.

UNITED STATES BOARD OF ARBITRATION

SEC. 7. (a) There is hereby created as an independent agency in the executive branch of the Government a Board to be known as the "United States Board of Arbitration" (hereinafter called the Board), composed of three members who shall be appointed by the President by and with the advice and consent of the Senate. One of the original members of the Board shall be appointed for a term of 1 year, one for a term of 2 years, and one for a term of 3 years. Their successors shall be appointed for terms of 3 years, except that any person chosen to fill a vacancy occurring prior to the expiration of any member's term shall be appointed only for the unexpired term of his predecessor. The Board shall annually designate a member to act as chairman. Any member of the Board may be removed by the President, upon notice and hearing, for neglect of duty or malfeasance in office, but for no other cause.

(b) A vacancy in the Board shall not impair the authority of the remaining members to exercise all the functions of the Board, and two members shall at all times constitute a quorum for the transaction of business. The Board shall have an official seal which shall be judicially noticed.

(c) The Board may from time to time adopt, amend, and rescind such regulations and rules as may be necessary for the administration of its functions.

(d) The principal office of the Board shall be in the District of Columbia, but it may meet and exercise any or all of its functions at any other place.

(e) Each member of the Board shall receive a salary at the rate of $12,000 a year, together with necessary traveling and subsistence expenses, or per dim allowance in lieu thereof, subject to the provisions of law applicable thereto, while away from the principal office of the Board on official business. Members of the Board shall be eligible for reappointment, and shall not engage in any other business, vocation, or employment.

(f) The Board shall make an annual report in writing to Congress.

POWERS OF THE BOARD OF ARBITRATION

SEC. 8. (a) The Board may appoint and fix the compensation of such officers and employees and make such expenditures for supplies, facilities, and services as may be necessary to carry out its functions. Without regard to the provisions of the civil-service laws and the Classification Act of 1923, as amended, the Board may appoint such experts, arbitrators, and their assistants and fix their compensation as may be necessary to carry out its function. The Board may, subject to the civil-service laws, appoint such clerical and other personnel as may be necessary for the execution of its functions, and shall fix their compensation in accordance with the Classification Act of 1923, as amended. All expenditures of the Board shall be allowed and paid on presentation of itemized vouchers therefor approved by the chairman or by any employee designated by the Board for that purpose.

(b) The Board may utilize the services of the Department of Labor and of other agencies of the Government in accordance with section 601 of the act of June 30, 1932, as amended: *Provided*, That by agreement of the Board with the Secretary of Labor the expenses of all or part of the services rendered by the Department of Labor may be paid out of the appropriation of that Department. The Board may utilize such voluntary and uncompensated services as may from time to time be needed. The Board may by order, subject to revocation at any time, assign or refer any part of its functions under this act to any member, agency, or employee of the Board. The Board may establish suitable procedures for cooperation with State and local mediation and arbitration agencies.

(c) The Secretary of Labor shall supply the Board with offices and hearing rooms in the District of Columbia and whenever possible when the Board's functions are exercised at any other place in accordance with section 601 of the act of June 30, 1932, as amended.

(d) Upon the appointment of the three original members of the Board and the designation of its chairman, all arbitration functions now performed by the Department of Labor shall be transferred to the Board. All records, papers, and property of the Department of Labor principally used in carrying out such arbitration functions shall become records, papers, and property of the Board. All arbitration proceedings pending before the Department and undisposed of at the time of such transfer shall be handled to conclusion by the Board.

PROCEDURE FOR VOLUNTARY ARBITRATION

SEC. 9. (a) (1) Whenever the Board is requested to do so by both parties to a labor controversy, it shall cooperate with the parties in forming a board of arbitration in accordance with an agreement to arbitrate conforming with the provisions of subsection (b) of this section signed by the parties: *Provided*, That the failure or refusal of either party to agree to arbitration shall not be construed as a violation of any legal duty or other obligation imposed by this act.

(2) It shall be the duty of the Board to establish a roster of arbitrators having a reputation for fairness and objectivity from which the Board or the parties to a controversy may select an arbitrator or arbitrators (as provided in section 10 (b) 3) familiar with the industrial and employment problems in the region or locality where the controversy arises.

(3) The board of arbitration formed in accordance with paragraph (1) of this subsection shall organize and select its own chairman and make all necessary rules for conducting its hearings: *Provided*, That such board of arbitration shall be bound to give the parties to the controversy a full and fair hearing which shall include an opportunity to present evidence in support of their claims and an opportunity to present their case in person, by counsel, or by their collective-bargaining representative.

(4) Upon notice from the United States Board that any party to an arbitration desires the reconvening of a board of arbitration (or a subcommittee of such board of arbitration appointed for such purpose pursuant to the agreement to arbitrate) to rule upon any controversy over the meaning or application of their award the board of arbitration or its subcommittee shall at once reconvene. No question other than or in addition to the questions relating to the meaning or application of the award submitted by the party or parties in writing shall be considered by the reconvened board of arbitration or its subcommittee. Such rulings shall be acknowledged by such board or subcommittee thereof in the same manner and filed in the same clerk's office as the original award and become a part thereof.

(5) No arbitrator except those chosen by the United States Board shall be incompetent to act as an arbitrator because of his interest in the controversy to be arbitrated or because of his connection with or partiality to any party to the arbitration.

(6) Each member of any board of arbitration selected by any party to the arbitration shall be compensated by the party selecting him. Each arbitrator selected by the arbitrators or by the United States Board pursuant to paragraph (1) of this subsection shall receive from the Board such compensation as the Board may fix at an amount not exceeding $100 per day together with his necessary traveling expenses and expenses actually incurred for subsistence while serving as an arbitrator.

(7) The board of arbitration formed in accordance with paragraph (1) of this subsection shall furnish a certified copy of its award to the respective parties to the controversy and shall transmit the original together with the record of the proceedings and a transcript of the evidence taken at the hearing certified under the hands of at least a majority of the arbitrators to the clerk of the district court of the United States for the district wherein the controversy arose or the arbitration is entered into, to be filed in said clerk's office as hereinafter provided. Such board of arbitration shall also furnish a certified copy of the award and of the record of the proceeding and transcript of evidence to the United States Board to be filed in its office.

(f) All testimony before a board of arbitration formed in accordance with paragraph (1) of this subsection shall be given under oath or affirmation and any member thereof shall have the power to administer oaths or affirmations. Such board of arbitration or any member thereof shall have the power to require the attendance of witnesses and the production of such books, papers, contracts, agreements, and documents may be deemed by such board of arbitration material to a just determination of the matters submitted to its arbitration and may for that purpose request the clerk of the district court of the United States for the district wherein said arbitration is being conducted to issue the necessary subpenas.

Upon such request the said clerk or his duly authorized deputy shall be, and be

hereby is, authorized and it shall be his duty to issue such subpenas. In the event of the failure of any person to comply with such subpena or in the event of the contumacy of any witness appearing before such board of arbitration, the board of arbitration may invoke the aid of the appropriate district court of the United States to compel witnesses to attend and testify and to produce such books, papers, contracts, agreements, and documents relevant and pertinent to the proceedings pending before the board of arbitration to the same extent and under the same conditions and penalties as provided for in the act to regulate commerce, approved February 4, 1887, and the amendments thereto. Any witness appearing before the arbitrators shall receive the same fees and mileage as witnesses in courts of the United States, to be paid by the party securing the subpena.

(b) Form of agreement to arbitrate: The agreement to arbitrate—

(1) shall be in writing;

(2) shall stipulate that the arbitration is had under the provisions of this act;

(3) shall specify means not inconsistent with the provisions of this act for selecting the board of arbitration;

(4) shall be signed by the duly accredited representatives of the employer or employers and the employees, parties respectively to the agreement to arbitrate, and shall be duly verified by said parties and filed in the office of the United States Board;

(5) shall state specifically the questions to be submitted to the said board of arbitration for decision and that in its award or awards the said board of arbitration shall confine itself strictly to decisions of the questions specifically submitted to it;

(6) shall provide that the questions or any one or more of them submitted by the parties to the board of arbitration may be withdrawn from arbitration by agreement of all the parties on notice to that effect signed by the duly accredited representatives of all the parties and served on the board of arbitration;

(7) shall stipulate that the signatures of a majority of said board of arbitration affixed to their award shall be competent to constitute a valid and binding award;

(8) shall fix a period from the date of the selection of the arbitrator or arbitrators necessary to complete the board (as provided for in the agreement) within which the said board of arbitration shall commence its hearings;

(9) shall fix a period from the beginning of the hearings within which the said board of arbitration shall make and file its award: *Provided*, That the parties may agree at any time upon an extension of this period: *Provided further*, That if the award of the said board of arbitration is not made and filed within the time agreed upon, and in the event the parties will not agree to any extension, the said board may extend the time for a period not to exceed an additional 15 days.

(10) shall provide for the date from which the award shall become effective and shall fix the period during which the award shall continue in force;

(11) shall provide that the award of the board of arbitration and the papers, proceedings, and transcript of the evidence when certified under the hands of at least a majority of arbitrators shall be filed in the clerk's office of the district court of the United States for the district wherein the controversy arose or the arbitration was entered into, which district shall be designated in the agreement and when so filed such award, papers, proceedings, and transcript of evidence shall constitute the full and complete record of the arbitration;

(12) shall provide that the award when so filed shall be final and conclusive upon the parties as to the facts determined by said award and as to the merits of the controversy decided;

(13) shall provide that any difference arising as to the meaning or the application of the provisions of an award made by a board of arbitration shall be referred for a ruling to the same board or by agreement to a subcommittee of such board and that such ruling when acknowledged in the same manner and filed in the same clerk's office as the original award, shall be a part of and shall have the same force and effect as such original award; and

(14) shall provide that the respective parties to the award shall each faithfully execute the same.

The said agreement to arbitrate when properly certified, as herein provided, shall not be revoked by a party to such agreement: *Provided*, That such agreement to arbitrate may at any time be revoked and canceled by the written agreement of the parties signed by their duly accredited representatives and, if no board of arbitration has yet been constituted under the agreement, delivered to the United States Board or any members thereof; or if the board of arbitration has been constituted as provided by the agreement, delivered to such board of arbitration. The award of a board of arbitration having been certified as herein provided shall be filed in the clerk's office designated in the agreement to arbitrate.

(c) The arbitration award: (1) An award certified and filed as provided in this section shall be conclusive on the parties as to the merits and facts of the controversy. Unless within 10 days after the filing of the award a petition to impeach the award on the grounds hereinafter set forth shall be filed in the clerk's office of the court in which the award has been filed, the court shall enter judgment on the award. Such judgment shall be final and conclusive on the parties.

(2) Any such petition for the impeachment of any award shall be entertained by the court only on one or more of the following grounds:

That the award plainly does not conform to the substantive requirements laid down by this act for such awards or that the proceedings were not substantially in conformity with this act;

That the award does not conform nor confine itself to the stipulations of the agreement; or

That a members of the board rendering the award was guilty of fraud or corruption or that a party practiced fraud or corruption which fraud or corruptions affected the result.

(3) No court shall entertain any such petition on the ground that the award is invalid for uncertainty. In such case the proper remedy shall be a submission of such award to a reconvened board or subcommittee thereof for a ruling. An award contested as herein provided shall be construed liberally by the court with a view to favoring its validity and no award shall be set aside for trivial irregularity or clerical error going only to form and not to substance.

(4) If the court shall determine that a part of the award is invalid on some ground or grounds designated in this section as a ground of invalidity, the remainder of the award shall not be affected thereby.

(5) At the expiration of 10 days from the decision of the court upon the petition filed as aforesaid final judgment shall be entered in accordance with said decision unless during said 10 days either party shall appeal therefrom to the circuit court of appeals. In such case only such portion of the record shall be transmitted to the appellate court as is necessary to the proper understanding and consideration of the questions of law presented by said petition and to be decided.

(6) If the petitioner's contentions are finally sustained, judgment shall be entered setting aside the award in whole, or, if the parties so agree, in part; but in such case the parties may agree upon a judgment to be entered disposing of the subject matter of the controversy which judgment when entered shall have the same force and effect as judgment entered upon the award.

BUREAU OF LABOR STATISTICS

SEC. 10 (a) For the guidance and information of interested representatives of employers, employees, and the general public, the Bureau of Labor Statistics of the Department of Labor shall maintain a file of copies of (1) all agreements reached as a result of mediation, conciliation, and arbitration pursuant to this act; (2) all arbitration agreements made and awards rendered pursuant to this act; (3) all reports made by a fact-finding board pursuant to this act; and (4) any other collective labor agreements submitted for such purposes by any of the parties thereto. Such file shall be open to inspection under appropriate conditions prescribed by the Secretary of Labor.

(b) The Bureau of Labor Statistics in the Department of Labor shall be authorized and equipped to furnish upon request of the Board, the Administrator of Mediation and Conciliation, employers, employees, or their representatives, or any fact-finding board appointed under this act, all available data and factual information which may aid in the settlement of any labor controversy.

FACT-FINDING BOARDS

SEC. 11. (a) When the Administrator notfies the Secretary of Labor that his efforts at mediation and conciliation have failed in any controversy within an industry affecting commerce, if the Secretary of Labor finds that such controversy seriously affects the national public interest, he shall certify such finding to the President.

(b) At any time within 5 days after the date of such certification by the Secretary of Labor, the President, in his discretion, may appoint a board to investigate such labor controversy and to make a report containing its findings of fact and recommendations with respect to such controversy. Such board shall be composed of three or more persons, none of whom has any pecuniary or other private interest in the employers or employees who are parties to the controversy. The board shall proceed expeditiously to make a thorough investigation of all facts which it deems revelant to the controversy. The board shall give the parties to the controversy a full and fair hearing, which shall include an opportunity to present evidence in support of their claims and an opportunity to present their case in person, by counsel, or by their representatives. Within 20 days after the date of its appointment, the board shall submit to the President a report containing its findings of fact and such recommendations concerning the controversy as the board deems appropriate. The time for submitting the report of the board may be extended by agreement of the parties, or their representatives, with the approval of the President.

(c) Any board appointed under this section may prescribe or adopt such rules and regulations as it deems necessary to govern its procedures and the exercise of its functions. Each of the members of such board shall receive compensation at such rate, not exceeding $100 a day, as may be fixed by the President, and shall receive his necessary travel and other expenses incurred in connection with the work of the board. Such compensation and expenses shall be paid by the Secretary of Labor.

(d) The Secretary of Labor shall provide for the board such stenographic, clerical, and other assistants and such facilities, services, and supplies as may be necessary to enable the board to perform its functions. When a board appointed under this section has made its report, the board shall be dissolved and its records shall be transferred to the Secretary of Labor.

(e) After the President has appointed a board under this section and until the expiration of 5 days after such board has submitted its report, it shall be the duty of the parties to the controversy to make no change, except by agreement, in the rates of pay, hours, or conditions of employment in effect prior to the time the controversy arose.

ADJUSTMENT OF GRIEVANCES AND INTERPRETATION OF AGREEMENTS

SEC. 12. (a) The United States Board of Arbitration shall establish such adjustment panels as may be necessary for the adjustment of labor controversies growing out of grievances or out of alleged violations or the interpretation or application of collective agreements between employers and employees. Such adjustment panels may be established on a regional basis or an industry basis, or both, and each such panel shall have jurisdiction with respect to controversies to which this section is applicable in such region or in such industry or industries as may be prescribed by the Board. The members of each adjustment panel shall be selected by the Board. Each such panel shall consist of one or more representatives of employers, an equal number of representatives of employees, and one or more members, officers, or employees of the Board. The Board may authorize any member of the Board to serve on any adjustment panel at any time in place of any officer or employee of the Board who is a member of such panel. Members of such panels who are representative of employers and employees shall not receive any compensation from the United States, but no provision of law prohibiting officers or employees of the United States from receiving compensation from other sources shall be deemed applicable with respect to such members.

(b) The Board shall from time to time adopt, amend, and rescind such rules and regulations as may be necessary for governing adjustment panels in the exercise of their functions. The Board shall provide for adjustment panels such stenographic, clerical, and other assistants and such facilities, services, and supplies as may be necessary to enable such panels to perform their functions.

(c) Whenever a labor controversy between an employer and employees within an industry affecting commerce arises out of grievances or out of alleged violations or the interpretation or application of a collective agreement, if no method is provided in such agreement for the final settlement of such controversy, such controversy may be referred by petition of the parties or petition of either party to the appropriate adjustment panel with a full statement of the facts and all supporting data bearing upon the controversy. If such panel finds that the controversy so referred to it is within its jurisdiction it shall proceed to consider such controversy. Parties may be heard either in person, by counsel, or by other representatives, as they may respectively elect, and the adjustment panel shall give due notice of all hearings to the parties involved in the controversy. Any panel may empower three or more of its members to conduct hearings and make findings upon controversies, at any place designated by the panel, but final decisions as to any controversy must be made by a majority vote of the entire panel. Each adjustment panel shall deliver a written opinion in respect of each controversy referred to it, setting forth its decision as to the respective rights of the parties and requiring the parties to take such action as the panel deems just and equitable. The decision of the panel shall be transmitted to the Board; and if the Board finds that such decision was made in accordance with the provisions of this section, the Board shall issue an order requiring the parties to the controversy to comply with the requirements of such decision.

(d) If either party to a labor controversy does not comply with such an order of the Board, any party to such controversy or any other person for whose benefit such order was made may, at any time within 2 years from the date of the order of the Board, file in the appropriate district court of the United States a petition setting forth briefly the causes for which he claims relief, and the opinion of the adjustment panel and the order of the Board in the premises. Such suit in the district court shall proceed in all respects as other civil suits, except that on the filing of such suit the findings and opinion of the adjustment panel shall be prima facie evidence of the facts therein stated, and except that the petitioner shall not be liable for cost in the district court nor for cost at any subsequent stage of the proceedings, unless they accrue upon his appeal, and such cost shall be paid out of appropriation for the expenses of the courts of the United States. If the petitioner finally prevails in such suit he shall be allowed reasonable attorney's fees, to be taxed and collected as part of the costs of the suit. The district courts shall have jurisdiction to make such orders and to enter such judgment as may be appropriate to enforce or modify or set aside the order of the Board.

RIGHT TO QUIT EMPLOYMENT

SEC. 13. Nothing in this act shall be construed to require an individual employee to render labor or service without his consent, nor shall anything in this act be construed to make the quitting of his labor or service by an individual employee an illegal act; nor shall any court issue any process to compel the performance by an individual employee of such labor or service, without his consent.

SEPARABILITY OF PROVISIONS

SEC. 14. If any provision of this act, or the application of such provision to any person or circumstance, is held invalid, the remainder of this act or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SEC. 15. Nothing in this act shall apply to employers or employees covered by the Railway Labor Act.

Should the Selective Service Act Be Extended?

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. SIKES. Mr. Speaker, under leave to extend my own remarks in the CONGRESSIONAL RECORD, I wish to include notes used by me on the program Congress on the Air, which was broadcast over Station WINX in Washington Sunday, February 3. Since this material contains figures which I believe will be of interest to the membership on the subject of the extension of selective service, I call it to the attention of the House. The material follows:

SHOULD THE SELECTIVE SERVICE ACT BE EXTENDED?

I am glad to appear on this program with the distinguished Senator from Idaho, Mr. TAYLOR, and with my close and able friend, Congressman CLASON, and with Ernest Lindley, whose work is so well and so favorably known.

Congress, which is already laboring under heavy responsibilities, will, as Mr. Lindley has indicated, soon have the hot subject of draft extension added to its worries.

In effect, the War Department has stated that we must continue selective service beyond its present expiration date of May 15 or we shall have another lag in demobilization which I can assure you, Congress doesn't want to face, or we can abandon some of the commitments of the armed forces. If these are the actual alternatives, Congress will find itself in another hot spot. And if there are no other alternatives, Congress may find it necessary to continue the draft. This much is certain: we shall not abandon the things we have won honorably with American blood.

But I believe there are other alternatives, and Congress believes it. I'll go further and say that the heads of the armed forces can develop other alternatives. I have a great deal of confidence in their leadership. We have seen them lead our forces to victory; we have seen them put into operation a plan of demobilization which, despite weaknesses which may have been developed, has brought men home faster and in a more orderly manner than any other nation has ever done.

There is another very practical reason why the heads of the armed forces must develop suitable alternatives to the extension of the draft. Until the Congress has positive proof that there is no other way out, it won't be possible to muster a corporal's guard on Capitol Hill in support of continued selective service.

DRAFT VERSUS RECRUITMENT

I said a few moments ago that the War Department has stated in effect that we soon shall be right up against the choice of continuing the Selective Service Act or of causing a lag in demobilization, or an abandonment of commitments. If this should be the case, the choice will indeed be a most difficult one for Congress. Under such circumstances, Congress would continue the draft. But I don't believe those are the real circumstances.

Let me point out the basis for the War Department's reasoning that the draft must continue. The Army wants 1,500,000 men on July 1, 1946. I think we can confine this discussion to Army needs because both the Navy and the Marine Corps expect to get sufficient personnel from volunteers. The Army says recruitment will not provide enough men to fill its needs; that the others must come through selective service.

Let's examine the known facts to date. The prewar Regular Army was small. Recruiting was a more or less haphazard affair. By the standards then in effect, we could not hope to recruit many men. However, we may as well admit that no nation in history has maintained by volunteer recruitment a force as large as we now contemplate. And to complete that picture, we had, in September 1945 but 12,000 enlistments in the Regular Army.

But during September and October, Congress wrote a bill providing material inducements for service in the Regular Army and Navy. And in October the number of enlistments went up to 65,000; in November to 185,000; in December, the number was 131,000; and in January 71,000 for the first 3 weeks. By the end of January, the number had totaled more than 475,000. Enlistments are now running about 4,000 per day.

To me, here is a significant point. Representatives of the War Department testified in September before the Military Affairs Committee, of which I am a member, that it could not expect to secure more than 300,000 volunteers during the 10-month period from September 1945 to July 1946. The present high rate is unexpected, and the War Department does not believe the present rate of enlistments will continue. Many of the men who are enlisting are men already in the service who see advantages in the new act.

But War Department estimates for recruits for the 10-month period named already have been revised upward from 300,000 to 750,000.

On the other hand, the drive for volunteers from civilian life is just getting under way. Recruiting has never been pushed to the limit in this country. Military careers are now much more attractive than they have ever been before, and the public is not yet fully acquainted with this fact.

At any rate, the Army now thinks it can get 750,000 volunteers by July 1. I think it can get more, and if additional inducements for peacetime service are required, I am confident Congress will provide them. But, using the Army's figure of 750,000 as a basis, we arrive at a startling fact: This figure is nearly as large as that which the Army expected to secure from both enlistments and selective service. I want you to think on that. Representatives of the War Department stated that they needed 800,000 men in the period September to July, of which they expected to secure 500,000 by selective service and 300,000 by enlistments. By judging from past experiences, the Army greatly underestimated its ability to get volunteers.

NUMBER INDUCTED THROUGH SELECTIVE SERVICE

Now, let's take a look at selective service during the same period. Early in 1945 draft quotas were 120,000 per month. In September the Army reduced its monthly call to 50,000 men per month. But with the easing of pressure on the local boards the number secured began to drop. In September, 41,000 were received through selective service; in October, 37,000; in November, 35,000; and, in December, 21,000; in January the number was 21,000 for the first 3 weeks. This gave a total of something over 135,000 for the 5-month period.

I want to emphasize the fact that the Army anticipated 50,000 men per month for the 10-month period from September to July. It is falling far short of that mark. Local draft boards are quite naturally giving more and more consideration to family and hardship conditions. Even if selective service were continued, I do not think the Army could secure by this means the replacements which it needs to relieve men now in service.

ALTERNATIVES

I suggested that there are alternatives to selective service. I would like to discuss them.

The first, obviously, is added stress on voluntary enlistments. Service in the peacetime army should be made as attractive and distinctive as service in time of war, if that is possible. It may be necessary to provide some additional inducements for military careers through legislation, but I believe that policy changes by the departments are more important than additional legislation. I suggest:

1. Elimination of the caste system which relegates enlisted personnel to the lower social strata.

2. Homes for family men on or near military posts.

3. More promotions, including promotions from the ranks to commissioned status. I'm inclined to the view that all officers should first serve as enlisted men.

4. Continuation of family allotments.

5. Revision of pay scales periodically to make service compensation comparable to industrial wages.

6. Uniform and liberal retirement benefits for all services.

7. Improved educational opportunities.

I do not doubt that there are others which could be named.

As a second alternative, I suggest the reduction of requirements for men in the armed forces, by—

1. Greater use of PW's in processing of equipment for reshipment to this country and in rolling up overseas bases. It appears that we've got to feed them. We may as well work them.

2. Use of more civilian employees—at home and abroad. I have in mind Americans preferably, but I don't limit it to Americans at overseas stations.

3. More efficient use of men in the armed forces. I think this is a field for real improvement. I get letters every day from and about men in the services who have nothing to do. They want to get the job done and get home.

NOW, LET'S SUMMARIZE

With due respect to the men who direct the policies of the War and Navy Departments—and I do not think we have ever had an abler or more progressive group—I believe they have yet to learn a few things about the psychology of the American people. The people are not concerned about the fact that we are not now in a position to fight an engagement. They see no necessity to fight engagements now. I do not believe that the task of closing up shop and bringing our belongings home has been made sufficiently clear. To the people, this war, except for policing, is over. They want the boys home. When they get them home, they will be ready to start thinking about the next war, or of means for preventing it. Our people respect the armed forces and their leaders. They are in the mood for strong peacetime defenses. They don't want to abandon the things we fought for. But the job of demobilization and the job of building peacetime forces should be completely separated just as fast as possible.

I don't think the American people can be sold on continuation of the draft. But they will gladly endorse steps to make peacetime service in the armed forces by voluntary enlistments attractive and distinctive in peace as in war.

Needs for an Experimental Forest in Northern Wisconsin

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. O'KONSKI. Mr. Speaker, the people of Wisconsin are vitally interested in their forest lands because the cutting and manufacture of wood products has been and still is a leading industry in the State. Concern over the future of the wood-using industries has been growing for a number of years as the more valuable species and sizes of raw supplies of standing timber became scarcer. A few figures will illustrate that there are real reasons for concern and that action must be taken to guide a revival of forest enterprises.

For several decades Wisconsin was a leading State in lumber production and vast quantities were exported to other areas. But annual production has declined steadily from over 3,000,000,000 board feet prior to 1900 to about 1,000,000,000 in 1925. Since 1935 annual production has been under half a billion board feet and Wisconsin has been forced to import lumber to meet its own requirements. This decline has resulted in loss of industries, employment opportunities, sources of taxable wealth, and entire communities.

The condition of the present forest resource is the key to possible future expansion and shows clearly some of the steps that must be taken. There are about 17,000,000 acres of forest land in the State, with 10,000,000 acres of it concentrated in the northern part.

This 10,000,000 acres covers 80 percent of all land in that northern territory and is primarily suited to tree growth rather than agriculture. It was once the major source of raw material for the lumber business but liquidation of saw timber stands was so rapid that today only 1,000,000 acres bear commercial stands of value to the lumber and veneer industries. These 1,000,000 acres are not supplying all of the remaining mills and some are continuing operation for a time by importing logs from other States. An additional 1,600,000 acres is forest of cordwood size. These areas produce pulpwood badly needed by our paper and pulp manufacturers but because of the small sizes of trees provide few raw materials for industries requiring larger timber. Diversification of industry is therefore limited in these cordwood areas. The saw timber and cordwood areas combined total 2,600,000 acres, or only 26 percent, of the entire forest area in northern Wisconsin. The remaining 7,400,000 acres is contributing very little raw material, because nearly 6,000,000 acres of it is covered with young growth too small for commercial use and the rest is deforested.

Maintenance of the forest-products industries now present in northern Wisconsin means that cutting in the small area of commercial forest must be prolonged until the young growth can grow to suitable size for cutting. Growth rate on the young forests must be increased so that trees will reach commercial size in time to meet the demands for raw supplies as older stands become exhausted. Deforested and brush areas should be converted to productive-forest growth by planting or other means. All this means more intensive management of forest land under improved methods.

Research is needed to develop these methods but no adequate program is available in Wisconsin. The Dukes experimental forest in northern Michigan is a practical demonstration of how research in forestry can benefit the people and industries in timbered sections of the country. Technical foresters have found out at Dukes how to prolong indefinitely the annual cut from a given forest area. This kind of information adapted to northern Wisconsin conditions is needed to help solve one of the most critical needs in that area. Improved methods to help with other important problems can also be worked out by tests and studies on an experimental forest. People needing the information can then see practical demonstrations on the ground by visiting these areas as they are already doing in great numbers in other parts of the United States.

Last year the Congress appropriated funds for setting up more experimental forests in the South but provision was not made for other regions where forestry is important. There is a great deal of public interest in expanding this program to include northern Wisconsin. Farmers are vitally concerned because as landowners they continually face problems of

forest management. Bankers and businessmen realizing the importance of forest industries to the State are in favor of an experimental forest to develop methods of intensive management that will help in putting the industries on a sounder permanent basis. Northern Wisconsin labor has the biggest stake in this program. Whether or not northern Wisconsin will have jobs in paper mills and pulp mills and other wood-product industries depends on the future of the wood, lumber, and timber supply. Other groups, including sportsmen and recreationists, see in better management an advancement of their interests.

Northern Wisconsin needs the services that an experimental forest program can provide, and $50,000 should be appropriated for the support of this work. This Congress cannot and must not let us down.

Pending Labor Legislation

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

For the Members of the House of Representatives:

We, the undersigned, representing seven maritime unions, of 250,000 members, and meeting in the city of Washington on February 4, 1946, call upon Congress to reject pending legislation aimed at the destruction of American labor unions and to take immediate steps to break the conspiracy of dominant industrial and financial interests which today threatens the future of America.

This coalition is embarked on a program which spells crisis, unemployment, suffering, and stagnation. They seek monopoly control and monopoly profits. They would foster unemployment and low wages, restricted production, and high prices.

Organized labor stands as a barrier in the way of their putsch.

There has been no repetition of the ugly and open repressions of the past, of the Memorial Day massacre, of the Mohawk Valley formula, because the solidarity of working people foredoomed such attempts to failure. Veteran and nonveteran workers, male and female workers, Negro and white workers stand shoulder to shoulder.

Unable to breach labor's solid wall, these conspirators now attempt a flank attack. They seek to shackle labor with legislation railroaded through on the wave of a manufactured hysteria. They have calculated their plot to exclude public consideration of the issues. They seek to impose their absolute control over the American people by a process akin to the dictum of a dictator.

The subvention of the Norris-LaGuardia Anti-Injunction Act, the bans on peaceful picketing, the prohibitions of the right of workingmen to organization, the initial move to destroy labor's basic right, are steps to the denial of freedoms achieved only after long years of uphill struggle.

The opening of union treasuries to mulcting by the combined industrial and financial interest is a hideous mockery of equality under law. These giant corporations with their unlimited reserves will deplete the workers' fund as rapidly and callously as they have destroyed our natural resources in their drive for unlimited profits.

As if their own giant holdings were not sufficient, the present strike of industry, the war against the American people, the withholding of vitally needed goods to clothe and shelter our returning veterans and to ward off dangerous inflation are being financed by the United States Treasury through excess-profits credits.

In the interest of a strong, free and prosperous America we call upon Congress to:

1. Repudiate the Case bill and all other variations of strait-jacketing antilabor legislation.

2. Repeal the carry-back carry-forward provisions of the Revenue Act of 1945.

3. Investigate immediately the conspiracy of corporative interests utilizing the full resources of the Congress, the Justice Department, the OPA and other agencies.

Joseph Y. Rubin, Murray Winocur, Jack Winocur, E. L. Gillman, Harry Morgan, Walter A. O'Brien, American Communications Association; Fred Bruette, V. J. Malone, E. A. Ramsay, Walter Stack, Walter Harris, Marine Firemen, Oilers, Watertenders and Wipers Association; Hugh Bryson, Sid Kaufman, Irv Dvorin, Dennis Hooper, Marine Cooks and Stewards Association; Joseph E. Curran, Joseph Stack, John Rogan, Harry Conner, E. E. Williams, Jack Lawrenson, Howard McKenzie, National Maritime Union; Harry R. Bridges, Louis Goldblatt, J. R. Robertson, International Longshoremen's and Warehousemen's Union; Samuel J. Hogan, R. Merriweather, Warren C. Evans, National Marine Engineers Beneficial Association; Ralph Goldsmith, Inlandboatsmen's Union.

Settlement of Industrial Disputes

EXTENSION OF REMARKS
OF
HON. JAMES P. GEELAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. GEELAN. Mr. Speaker, I cannot say that my experience in the Congress thus far has impressed me too much with the effectiveness of debates.

Usually Member after Member takes the floor and gives his opinion on the subject matter under discussion and very often without too much regard for the facts in the case.

It would seem, therefore, that a much better contribution could be made in debates if the Members were in possession of the facts, so probably the better course to pursue would be to postpone consideration of this legislation at this time until Congress had done a little fact finding of its own. In support of that contention I submit the following as proof of the wisdom and necessity for following such a course of action. Two days following the request of the President that legislation be adopted to provide adequate means for the settling of industrial disputes the distinguished chairlady of the Committee on Labor [Mrs. NORTON] introduced in the House of Representatives a bill now known as H. R. 4908, to implement the suggestion of the President, and public hearings were held by the Committee on Labor on this bill on December 10, 12, 13, and 14. Now, I submit that that was speedy and expeditious action on the part of the Committee on Labor, which I have heard accused numberless times on this floor as being dilatory in their tactics and irresponsive in their actions to the will of the people of the country. Following the hearings on December 14, it was decided that in view of the fact that the House was scheduled to adjourn on the 21st, that it would be impossible to conclude the hearings, have the report printed, and the bill reported to the House for action before that date.

The majority of the committee felt that in view of the testimony that it heard that the bill in its present form was certainly not the answer to the problem confronting the Nation. As a result of that conclusion a motion was adopted to continue hearings following the recess and to broaden the scope of the subject matter so that we might get at the basis for the real cause of these industrial disputes and as a result of that information would be able to submit corrective legislation to the House.

During the recess, as you know, the President appealed to the people of the country in an attempt to break the log jam which was holding up his legislative program.

This evidently caused the strategists in the Republican Party to go to work, and the first manifestation of their plan was exhibited on January 17, the first day on which a hearing was held by the Committee on Labor following the recess. The bills under consideration at the public hearing on that day pertained to the return to the States of the employment offices. When the gentleman from Indiana [Mr. LANDIS] moved, even though we were still conducting a public hearing on a definite subject matter, that we proceed to the consideration of H. R. 4908, the so-called fact-finding bill, and to report the bill with an amendment striking out the cooling-off period and the subpena power of the fact-finding boards to the House. Despite the irregularity of such proceedings, the motion was only defeated by a narrow margin.

The committee continued its hearings on the employment service bills, on the 18th and 19th. On the 21st a request was made to the Rules Committee for a rule on H. R. 5142 and on Tuesday, January 22, the committee went into executive session on H. R. 4908, the fact-finding bill. This bill was reported out of committee with the Landis amendment again attached late that afternoon. On Wednesday, the 23d, a request was made of the Rules Committee for a rule on H. R. 4908 with the result that we neither have the fact-finding bill as suggested by the President nor as a suggested substitute, a bill which any person professing to be fair could say that he would support. Much has been said about the method

used in bringing the Case bill to this floor for action so I will not dwell further on that point other than to say that no star-chamber proceedings ever conducted could match the operation of the Rules Committee on their handling of this matter. I think I have shown to all fair-minded people that the Labor Committee has acted expeditiously and intelligently. I think it is now very evident to all who will see that this subject requires much more investigation and study before anything resembling an honest or factual decision as to what the correct method of handling these disputes should be.

It has been contended here by a number of Members on the other side of the aisle that they were acting at the request of the President. If this is correct I dare say it would mark the first time since 1932 with the possible exception of the declaration of war that the members of the minority party in this House followed the advise, council, and suggestions of the President or of our late President. They also forget to tell you that largely by the efforts of the members of their party they have other legislation which the President recommended securely locked up in committee and is still so pigeonholed. No mention is made of that, no promise that the suggestions of the President's in those respects will be followed out.

As a result of questioning on the floor the other day it became quite evident what the plan in the back of the framers of the Case resolution was. As I stated before, on January 17 the gentleman from Indiana [Mr. LANDIS] moved that H. R. 4908 be favorably reported to the House with the subpena power of the fact-finding boards and the cooling-off period stricken from the bill. Obviously this was merely a move to get the bill out of committee, and it was felt that by amending the bill as suggested he would satisfy opposition that management had to the subpena power of the fact-finding boards and would satisfy labor by the removal of the cooling-off period. The obvious intent for such a move was to use the bill as a vehicle to which could be attached much more drastic and punitive measures as has been done. The reference he made as to why I think this is so is that on Thursday, as a result of a question by the gentleman from Pennsylvania [Mr. GREEN] addressed to the gentleman from Indiana [Mr. LANDIS] as to whether the gentleman from Indiana knew, at the time he made his motion in the committee to report out the fact-finding bill, of the Case bill. His answer to that question and subsequent contributions on the part of the gentleman from South Dakota [Mr. CASE] left no doubt in the minds of all who heard the question and answers that the gentleman from Indiana did know that a measure along these lines was to be presented.

I am sure that with this explanation all fair-minded Members will agree that neither of these bills are the answer to the problem and that only by a further painstaking investigation will we be able to come up with the right answers, a solution that will be fair to the public, to industry, and to labor.

Shall We Have Peacetime Military Conscription

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by me over WWDC, Washington, D. C., December 5, 1945; over KDRO, Sedalia, Mo., and KGBX, Springfield, Mo., on Saturday, December 15; and over KWTO, Springfield, Mo., Sunday, December 16, 1945:

My fellow countrymen, today Congress is faced with more headaches than ever before in our history. Among the many complex, baffling problems that confront us, none is more important or momentous in its consequences than the highly controversial and hotly debated question of universal military training.

As a member of the Special Select Committee on Postwar Military Policy that listened for weeks to voluminous testimony, and as a member of the House Committee on Military Affairs that is now holding hearings on this widely disputed question, I propose briefly to discuss it. Like every other question, it has two sides, and is a matter on which honest, intelligent, and patriotic people differ. We should be charitable or at least reasonable with those who differ from us.

There is one fundamental point upon which all the members of our committee, and I believe the whole Congress and the American people agree—and that is—America must be strong during the postwar period of readjustment and in the midst of confusion and uncertainty in a troubled and unstable world. All of us want adequate preparedness for this country and differ only as to the means whereby we can achieve it. We all want a just and lasting peace.

As most of you know, I made the motion in our committee to postpone action on this legislation until next January. And though the motion failed by the narrow margin of 3 votes, I think I can assure you tonight that there will be no action on this legislation until next year, and also that H. R. 515, which grants blanket authority without any definite plan to the Federal Government to conscript young men at the age of 18, will not pass without modification.

We who opposed the consideration of this legislation now are not necessarily opposed to some kind of military training because we believe in adequate national defense. We want a superior Air Force, the largest Navy, not necessarily the largest but certainly the most highly trained and best equipped Army on this earth. We also want two more things: 1. Scientific research and technological development in the latest weapons and most up-to-date techniques of warfare. 2. A centralized intelligence service which will inform our Government and our people what is actually going on in every other nation.

It is generally agreed that the next war will be as different from the one just ended as this war was from the one fought a quarter of a century ago. The next war will largely be fought in laboratories and test tubes—perhaps by pushing buttons, touching off pilotless planes, and jet-propelled rockets carrying atomic energy which would render obsolete any large standing army within a few years or even months after its training. While trained men are still necessary, future wars will not be won by mass armies.

There is no occasion for hysterical haste and any attempt to use wartime emotions to pass this legislation is unwise. The fears of the people are being played upon. Like a Mother Hubbard this bill covers everything and touches nothing. We want more details in this specific measure, more information about the President's negotiations with foreign powers and the possibilities of universal agreements in the United Nations Organization which might make the military draft unnecessary. Questions have developed which make it advisable to review the whole structure of our national defense and our military establishments. We must not hurriedly adopt recommendations for makeshift solutions which in the long run may only weaken this Nation.

Can we not afford to wait for a little while until some definite decisions are reached upon the handling of the atomic bomb and until our foreign commitments are made known under the United Nations Organization?

It is generally admitted by everyone that Germany, Japan, and Italy have been all but annihilated and rendered impotent for years to come so that there is no great need for building up a huge military establishment in order to defend ourselves. General Eisenhower recently said there would never be war between the United States and Great Britain, and that Soviet Russia did not want war with us.

The truth of the matter is both Britain and Russia are exhausted by this war and are now coming to us with hat in hand, each asking for a $6,000,000,000 loan. Russia will be kept occupied for the next quarter of a century in rehabilitating herself, rebuilding her cities, and setting her own house in order. Britain has more irons in the fire than she can handle. Of whom, then, are we afraid? We still have superiority in the air and on the sea, with a reservoir of 12,000,000 men and women who fought in this war, and half of whom will be the best reserves on earth for the next 5 years. Why not wait just a little while until we find out what our contribution will be to the international organization that will establish a just and lasting peace? Why not center our attention on peace instead of war? Why challenge others to an armament race?

There is no danger of an immediate attack on the United States from any quarter in this world. We have the secret of the atomic bomb and intend to keep it until we can reach a mutual understanding and agreement that will not jeopardize our safety.

But the militarists and those who rely only upon physical force are working feverishly to cram down our throats this bill. Naturally, the admirals and generals have a vested interest because they want to maintain their rank and pay. They like to command large bodies of men and think little of other phases of our national defense, except the military.

Certainly, such legislation, which is a radical departure from our whole philosophy of life, should not be acted upon until the millions of men and women in our armed services—many of them still overseas—are returned to this country to give their own free and untrammeled opinions after their discharges. We have been told that those in our armed services are overwhelmingly in favor of this legislation. This, I do not believe any more than I do the Gallup poll. I can truthfully say that my heavy correspondence has been 10 to 1 against peacetime conscription or universal military training.

The proponents of this legislation have adroitly called it universal military training and they have belabored the point that

it is not peacetime conscription. A rose smells the same by any name you call it and the point is, every youth when he reaches the age of 18 is drafted for 1 year to take military training. He must do this whether he wants to or not. This is the essence of coercion and compulsion which is repugnant to free men. It is so contrary to our American tradition that it deserves the most careful scrutiny and mature consideration.

I dare say that most men and women in our armed services, as well as our civilian population, have not read this bill and thought it through to its inevitable conclusion. If men in our armed forces are so strong for it, why do the proponents of the measure want to rush it through before these men are brought back home? Why saddle this un-American scheme and foreign system upon them when they are abroad? The ones who have suffered most and made the greatest sacrifices are entitled to be heard on a matter of such major importance. Men in uniform are not free to give their honest opinions—not so long as they remain in the clutches of their officers. We should wait until the servicemen come home and are out of uniform. Then they will be free to talk and express their full and honest judgment.

My fellow Americans, those who are advocating the passage of this legislation have been very careful to say little or nothing about its tremendous cost. The money called for under this program would give every boy and girl in the United States a 4-year college or university education. It was admitted by the Secretary of War that the enactment of the pending bill will create a standing Army of 500,000 men to train every year 700,000 inductees, which with the upkeep and equipment will cost the taxpayers of this country $4,200,000,000. Yesterday we passed a naval bill in the House which will add its annual expenditure of $3,500,000,000. This means a total of $7,700,000,000 for the Army and Navy alone in peacetime. The Veterans' Administration will spend next year $3,600,000,000 and the interest on our staggering national debt of nearly $300,000,000,000 will amount to $6,000,000,000 a year. Think of it—an annual Budget of $17,300,000,000 for only our armed services, the Veterans' Administration, and interest on our national debt. This does not include social security or any appropriations for the regular departments and establishments of the Government. It is safe to predict that our annual Budget following this war will be about four times as large as it was before the war. Can the American people carry such an overwhelming burden? Any sane person knows we cannot continue forever to spend two and three dollars for every one we take in.

Yes; we believe in national defense, but the military arm is only one part of it. Economic soundness and financial strength are just as important. Military prowess is no good if we are bankrupt. No sane person will deny that it was America's industrial capacity, her business acumen, and her financial strength which supplied the sinews and weapons of war, as well as the fighting heart of our men and women on the battle fronts that won this war.

This calls for a word about industrial mobilization. If we will not have time to mobilize men in the next war, certainly we will not have time to convert from peace to war time economy. So if we are to have conscription, let's make it total. If we have draft of manpower, let's have industrial mobilization. Men are at least as important as money. If we want to stay out of war, let's take the profits out of war. Those who are so eager to conscript their neighbors are not so keen on having their own money and their own business drafted. There was a plan of industrial mobilization before this war, but we could not put it through Congress.

My fellow Americans, I want to keep this country free. I want it to be a land of freemen and of free enterprise. Because it always has been, we have repelled every attack made upon us. Only recently Congress passed a bill with liberal provisions to stimulate voluntary enlistments. We reduced the period of training from 3 years to 1. We made the Army more attractive by increasing servicemen's pay, by encouraging promotions within the ranks, by giving benefits to their families, by offering travel and educational opportunities, and in the first 2 months 60,000 men enlisted or reenlisted in our Army. They are coming in now at the rate of more than 6,000 per day, or four times the number volunteering in September. Why not give the volunteer method a fair trial? A volunteer army is the best army on earth. Freemen always have outworked, outproduced, and outfought slaves.

It is significant that Germany, Japan, and Italy—the three Axis Powers—as well as every other major nation in history which has had universal military training or peacetime conscription, inevitably has been led into war and eventually to defeat and utter ruin.

If we begin drafting men and then pass the equal rights amendment to the Constitution, we will also draft women and finally and inescapably we will draft all business. We have not fought to destroy militarism and dictatorship abroad to establish them here at home. We do not feel that it is morally safe, economically justifiable, or politically wise to take 18-year-old adolescents from the influences of their homes, churches, and schools and segregate them in Army camps where influences are none too good. In military life discipline is imposed from without. In civilian life discipline is created from within. Education and health of our youth can be developed much more efficiently and cheaply in our schools than in Army camps. Blind obedience to military commands is not conducive to the free scientific spirit of inquisitiveness. Servility to superiors makes a boy weak—not strong. One can differ and talk back in a college classroom, but not in an Army camp.

We do not feel that America, which is populated by many peoples—most of whom came to this New World to escape the tyranny of the Old—should now adopt the foreign philosophy and the alien idea from which they fled. Millions of our men have fought and many thousands have died to avoid such slavery.

Mr. Speaker, it is rather significant that our Committee on Military Affairs, after reconvening in January 1946, decided to postpone hearings on this controversial measure indefinitely. Perhaps it is because they heard from the people when they were back home during the recess, or maybe it is because General Eisenhower has justified fully the stand I took on this legislation before hearings began November 8, 1945.

Demobilization of Doctors and Dentists

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following portions of a letter received from a dentist on duty in the Philippines. Apparently the same old hoarding of doctors and dentists still exists.

LUZON, PHILIPPINES, *January 20, 1946.*

DEAR DR. JUDD: I'm a dentist in the Army stationed on Luzon for the present. I feel very strongly that the War Department is not accomplishing this demobilization as fast as they can and the reasons they give for the slowing down are certainly not valid in a majority of the cases here. There are still a lot of question that I think Congress ought to investigate.

1. Why has the Army Dental Corps stopped giving commissions to ASTP graduates and yet will not discharge men 35 to 40 that will have to go out and start building a practice again? I am 25, 2½ years Army, overseas 14 months, and so have no complaint at present but I am afraid that I will be in a couple more years if a fire isn't set under the man in charge. There are men here that have been declared surplus a month ago by Base M but they are just left here although we have eight dentists doing work that could easily be handled by two dentists.

2. Why isn't the medical department relieving the doctors overseas and discharging more doctors? The doctors are as badly overstaffed as the dentists with 32 doctors for 900 patients but again the surplus is just left. A majority of the doctors (75 percent) have had 3 years' service and 1½ years overseas. One young doctor has been sent here and he says that the Army is holding the fresh graduates in the States for some reason or other. He volunteered to come overseas or would be in the States himself.

There are many more lesser points that should be cleared up but I do not wish to bother you with the minor items. A doctor whom I know is being held up for discharge because he is a specialist in internal medicine. He has not been practicing internal medicine for better than a year.

I am like the rest of the men over here, perfectly willing to do my duty and stay if necessary, but I haven't done a day's work since the war ended and I know that most of the soldiers in the islands have done the same. I think we deserve an honest statement as to why we are here or else a trip home.

I realize that you aren't on the committee investigating the demobilization but I thought that you could forward the facts. My aim was to let you and the other Representatives know about the situation over here from a person who has been over here quite a while and traveled around Luzon a good deal.

Sincerely yours,

_____,

Captain, Dental Corps.

Loan to England

REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. ELLIS. Mr. Speaker, as the time approaches for us to consider the application for a loan to England, it is significant that British figures generally popular in this country begin to arrive on our shores. We have Mr. Churchill, Lady Astor, Labor Party Floor Leader Herbert Morrison, Food Minister Sir Ben Smith, and we are told a trip was planned for Princess Elizabeth, but for some reason her trip was canceled. Our friends across the sea have found by experience that this operation pays big dividends. The King came to see the President just

before our entry into the Second World War.

Our internationally minded folks in New York and Washington, sometimes referred to as parlor pinks, now can be expected to whoop it up for the Empire.

This past week Lady Astor reminded us of our obligation to England although we have canceled war debts and lend-lease obligations to the tune of $35,000,000,000.

At the time Bretton Woods was approved by the Congress we were told by the proponents that this bank would afford facilities for foreign loans along with the Export-Import Bank and make direct loans unnecessary. Now we are informed that practically all our allies are coming in for loans. First comes the British for $4,500,000,000, then the Russians for $6,000,000,000, and five or six billion for other allies. Why does not the administration give us the overall picture of the loan situation so we can approach the problem intelligently?

The opposition to the Truman loan by some of the British spokesmen has been the subject of much speculation in this country. We have some interesting information from an authoritative source which will throw some light on the subject. This source discloses Mr. Dalton, the Chancelor of the Exchequer, as saying the loan agreement gives England a substantial and undisputable advantage. It is further evident that England must have the Truman loan in order to fulfill one of its provisos, to wit, to have the financial strength to participate in the Bretton Woods agreement. Again we have a picture of the cunning deceit of our administration.

The American people were told that our allies would contribute to the Bretton Woods Bank. Now it appears that the Allies will contribute to the bank, whose sole purpose is to lend money to and stabilize the currency of foreign nations, provided we give them the money for their contribution. This certainly presents an interesting situation, and it is my intention to discuss this subject to a greater extent when the loan proposal comes to the House.

Polish Problem

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and to the point editorial on the Polish problem that appeared in the Washington Evening Star of Saturday, February 2:

POLISH PROBLEM

The grave charges made by London and Washington against the law-enforcement branch of the present Polish Government brings back into the limelight of public interest the thorny problem which that unfortunate country presents. In virtually identical terms, Foreign Secretary Bevin and Secretary of State Byrnes accuse the Polish security police of murdering prominent members of political parties which are in the Polish Government's bad graces. These open charges follow repeated diplomatic representations by the British and American Ambassadors to Warsaw which have had no effect.

The indications are that the Polish Government is not minded to heed these protests. The reaction of the Polish official press and Government spokesmen to Mr. Bevin's statement was an angry denial of the charges, coupled with assertions that Poland was an independent nation whose Government would do as it saw fit. Now, in answer to Secretary Byrnes, the Polish Ambassador here denies the charges, puts the blame on agents of the London government in exile, and goes so far as to assert that those exiled elements, headed by Gen. Wladyslaw Anders, maintain contact with their "terrorist" agents in Poland "through a group of the national armed forces stationed in Coburg in the American zone of Germany."

Whatever may be the truth about the doings of those "reactionary" agents, the Polish Government is not free to do as it pleases, because it is bound by the terms of the Yalta and Potsdam agreements, to which it assented in order to get recognition from Britain and America. One of those terms is the establishment of a democratic, representative government, attained by free elections. And both Secretary Byrnes and Foreign Secretary Bevin have pointed out that their governments assumed responsibility for the carrying out of those pledges.

However, the weight of reliable evidence is to the effect that the present Polish Government is ruthlessly persecuting all those who do not bow to its policies; also that those elements constitute a majority of the Polish people. Under such circumstances the holding of free elections is impossible. Furthermore, a high Polish official has announced that the elections, when held, would be "democratic in the sense that the Poles understand democracy, and not in the western sense." This is, of course, the line taken by Soviet Russia and all its satellites. It reveals more clearly than ever how thoroughly the present Polish Government, originally Moscow's creation, is Moscow's tool. In view of all this, it seems that Washington and London have reason to regret what seems to have been premature recognition of a regime which makes a mockery of its international obligations.

Industrial Dynamite

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Chicago Times of Friday, February 1, 1946, on the strike situation:

STOP, LOOK, AND LISTEN, CONGRESS

Events of the past few days bring thoughtful citizens to the unhappy conclusion that the Lower House of Congress has been stampeded into consideration of a labor-control bill which has the earmarks of industrial dynamite.

The pressure on Congress to "do something" about the current strike situation apparently has built up a mood of mob psychology among some legislators. The House yesterday voted, 258 to 114, to consider a labor bill introduced only 3 days ago by Representative CASE, Republican, of South Dakota.

This bill has never been considered by a legislative committee. There have been no public hearings on it. It was not even in printed form when it was first submitted on Tuesday. It stands a fair chance of being passed by the House next Tuesday, whooped thoroughly by Republicans and southern Democrats.

Aside from the merits or demerits of the Case bill, Congress, by hasty action, has shown it is in no mood to pass important legislation which should have all the study and preparation as was given to such a bill as the Wagner Labor Relations Act in 1935. Passage of half-baked legislation could make matters worse, not better. Congress should recall the fiasco of the Smith-Connally bill, which was passed during a wave of anger against John L. Lewis and which caused more strikes than it prevented.

The Case bill may contain provisions which eventually must be adopted, in some form, by Congress. But it contains others which at the very least have nothing to do with the present controversies—such as prohibition of formation of foremen's unions. It includes one provision that could take away from certain workers their hard-won rights under the Wagner Act in the event of a fist fight on a picket line.

ACTION NOW, HEADACHES LATER

These are matters for long-range legislation to be considered when the country, through Congress, writes a definite labor policy. Hasty action now can bring headaches later. Calmer heads in Congress should ask their colleagues: Is there anything at all that we can do now about the present strike situation? William M. Leiserson, Chairman of the National Mediation Board and a towering figure in American labor history, says it's too late to aid the settlement of the current strike condition by legislation.

Mr. Leiserson says the Government cannot absolutely prevent strikes. That's a plain fact. The Case bill is advertised as a measure that will prevent strikes. All the Government can do is to secure the rights of both unions and employers, to protect the rights of the public, to use its good offices in bringing employers and employees together, and in the most stubborn cases to facilitate the settlement by mobilization of facts.

After the Government has done all of that, there still will be strikes unless collective bargaining is conducted in a spirit of good will on both sides. We have seen that genuine bargaining can be made to work, as witness the settlement of the Ford and Chrysler issues without strikes. The prevention of strikes must come voluntarily from the relationship which capital and labor create between themselves.

WAGNER ACT VERSUS HUMAN NATURE

The question has been raised whether the Wagner Labor Relations Act has failed. It was supposed to remove certain sources of industrial strife and unrest. The Wagner Act was not a cure-all. It eliminated one cause of industrial strife; the refusal of employers to recognize the inherent right of employees to organize into unions. It equalized the position of capital and labor at the bargaining table—but it couldn't force them to agree. The Wagner Act couldn't change human nature.

The Wagner Act was a long step on the road to harmony between those who own the tools of industry and those who work them. The Wagner Act eliminated most of the violence from the labor disputes. It has brought disagreements from the picket line to the conference table. Now, perhaps, we have reached the stage where the two powerful groups, capital and labor, must write their own rules to facilitate agreement or find themselves in a maze of musts that Congress will attempt to write.

The answer to that problem does not lie in passing laws such as the Case bill with which would have the effect in many instances of going back to the days when there were no labor laws at all. In some cases it would nullify the Wagner Act and the Norris-LaGuardia Anti-Injunction Act.

The answer should lie, in the long run, in better defining the social obligations of both capital and labor, and, in some industries, such as utilities, setting up better machinery for bargaining patterned after the Railway Labor Act.

Congress should stop, look, and listen—especially to experts such as Leiserson—before it takes any action that it, or the country, may later regret.

Where Was the American Legion When the Veterans' Administration First Caught on Fire?

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. H. Leib, past vice commander, past service officer, chairman, servicemen's hospitality committee:

WHERE WAS THE AMERICAN LEGION WHEN THE VETERANS' ADMINISTRATION FIRST CAUGHT ON FIRE?

(By J. H. Leib, past vice commander, past service officer, chairman, servicemen's hospitality committee)

The vicious and demagogic attack by the national commander of the American Legion upon General Bradley, Administrator of Veterans' Affairs, backfired so fiercely that the echo was heard throughout the Nation.

Why did the leadership of the American Legion wait to bombast the befuddled Veterans' Administration at such a late date?

It is amusing to recall that during the original assault upon General Hines and his deplorable administration of veterans' affairs, which was led by this writer, the leadership of the American Legion had the audacity to come before the House of Representatives Veterans' Committee in June 1945 to defend the very predicament and state of affairs that they are now attempting to criticize.

I submit that the leadership of the American Legion more than any other single force is responsible for existing conditions within the Veterans' Administration. This assertion is based upon the following facts:

When this writer as an officer in the Legion launched an attack upon the Veterans' Administration early in August 1944, predicting the very situation that now presents itself, the national headquarters of the Legion sent representatives to the king makers of my post to demand that I be ousted from office. I was coerced, threatened, and finally bitterly reprimanded by the District of Columbia department commander of the Legion at an open post meeting.

This feeble censure came at the specific request of the national headquarters of the American Legion.

In other words the leadership of the Legion did everything it possibly could to silence a single voice that was crying in the wilderness—pleading and urging that immediate action be taken to prevent the existing chaotic scandal, which now has been heaped upon the shoulders of General Bradley and who is trying his utmost to correct these conditions.

The leadership of the Legion not only refused to take part in such a farsighted campaign but went out of its way to vilify those who were extremely anxious to see that the machinery was set up to ease the burden of returning veterans who might have business before the VA.

When I, and later others, demanded an immediate shake-up and the necessity for the streamlining of procedures for claims and hospitalization in the Veterans' Administration—didn't the American Legion rush to the defense of General Hines, heaping praise and additional honors upon him?

It was during this very period that the break-down of the Veterans' Administration was well under way. The American Legion showed no concern then—why is it doing so now?

Didn't the national rehabilitation director of the Legion say during last spring's congressional investigation of the Veterans' Administration that the American Legion had no other choice but to defend their benefactor—General Hines, and his dispirited administration, simply because the VA was "our baby—and we must defend ourselves in face of the charges"?

Didn't the National Legionnaire—official publication of the Legion, carry a story in its June 1945 issue headlined as follows: "An appreciation of General Hines—by director of division that worked closest with veteran leader"—meaning the rehabilitation director.

I ask—appreciation for what? For the callous disregard of human feeling and public responsibility that the Hines' administration displayed in the rehabilitation of disabled veterans—for his lack of foresight and incompetency that was so obvious then, as it is now?

Didn't the leadership of the Legion on August 31, 1945, present a gold watch to General Hines, as a token of "love, respect, affection, and esteem of every member of the Legion"—for his outstanding service as Administrator of Veterans' Affairs?

This stupid occasion took place 2 months after General Hines was ousted from office and while the newspaper headlines were still burning with such articles like "Veterans treated like dogs in veterans' hospitals," "Northport Hospital manager confirms abuse of patients," "Care of tubercular at veterans' hospitals scored," "General Bradley on surprise visit finds bad state at Northport," and while disabled soldiers were flooding official Washington with shocking cases of mistreatment and confusion at the hands of the Veterans' Administration.

During the same period did not the American Legion protect General Hines when he refused to clean up the artificial limb scandal and it finally took a Justice Department indictment of the limb industry on antitrust violations to give amputated veterans better equipment.

Finally, when this writer urged the immediate construction of badly needed veterans' hospitals to care for veterans of this war, pointing out over and over in the CONGRESSIONAL RECORD that only 8,000-odd beds had been added to Veterans' Administration facilities throughout the Nation since Pearl Harbor, did the American Legion lift a finger to help bring about these needed beds? In fact, when this writer raised the issue of the pauper oath, which was intended to force the immediate construction of additional hospitals, the national headquarters of the American Legion wrote three letters to Washington demanding that I refrain from pressing the matter any further.

Now we find Johnny-come-lately Stelle, the national commander of the Legion, emerging from his hole a day before groundhog day, charging in a punch-drunk manner that "hundreds of thousands of veterans' claims for hospitalization, compensation, and so forth" are stalled in the Veterans' Administration under General Bradley—a man who took over a mess left behind by an incompetent public official.

Need anything else be added? Yes; thanks to the short-sighted leadership of the American Legion and to their protégé, General Hines—for their joint refusal to act when action was so vitally necessary.

Compulsory Military Training and the Future of the United States

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. WHITE. Mr. Speaker, in considering the proposal to establish permanent compulsory military training in this country, we should follow the advice of an eminent educator, when he said:

We should postpone action on conscription until the subject has been much more fully investigated and the President appoint a national commission to survey all the aspects of the proposed training program.

A condensation of an illuminating article by Arthur E. Morgan entitled "Conscription and the West Point Mind," taken from the February issue of Mercury, is presented herewith:

The value of (case for) compulsory military training has been ably presented by high Army, Navy, and Government officials, in the press, on the radio, and before congressional committees. Let us now look at the other side.

Both sides agree upon the importance of the proposed step. Hanson Baldwin, the military critic of the New York Times, and an opponent of conscription, says: "Permanent peacetime conscription—universal military training—will profoundly influence our social, economic, physical, and educational life, as well as our military organization." General Marshall, former Chief of Staff and a vigorous exponent of conscription, states in his recent biennial report: "By this method we would establish, for the generations to come, a national military policy."

The Army works ceaselessly for more power and prestige. It has disclosed no limits to the craving for power.

The authoritarian and dictatorial temper of West Point rules the Army. It is not just a regime for training military men, but a cult, with a deep-rooted tradition and philosophy. Few religions or other cults anywhere put their novices through such intense training. Few Americans realize what medieval, coercive indoctrination of young minds goes on at the Academy.

Three factors have helped West Point to perpetuate that pattern: The habit of appointing its own graduates to its teaching staff; the admission of immature and impressionable youth, mostly just out of high school; and the system of extreme isolation. In such an environment the spirit of the young cadet is broken and his mind is deeply indoctrinated. Only a few exceptionally strong characters withstand that process.

General MacArthur, as Superintendent of the Academy, tried to modernize the institution, but was opposed and eliminated before his 4-year term was completed.

Extension of West Point influence would menace long-time military security. Its regimentation and arbitrary subordination to

authority has been deadly to alert, creative inquiry.

Everyone remembers the unsuccessful efforts of General Mitchell to get recognition in the Army of the significance of the airplane in war. I am told by an able and well-informed physicist that rudimentary radar equipment was designed, built, and furnished to some of our warships during the First World War. It was not perfect, and was left unused. The equipment lay on shipboard for about a decade, while no one in the Navy showed enough creative imagination to explore its enormous possibilities.

As for the atomic bomb, Alexander Sachs, who was directly effective in bringing the project to the attention of the President, states that both the Army and the Navy were initially uninterested and for a considerable period remained indifferent. This most powerful of all military forces, therefore, like so many other concepts requiring ranging imagination, would have been lost if the West Point and Annapolis judgments had not been overruled by an imaginative President, with the encouragement of the civilian head of the United States Bureau of Standards, Lyman J. Briggs.

There is reason to believe that military shortsightedness continued to impede the atomic bomb project, and there can be no doubt of its well-nigh disastrous influence on the development of science generally. Dr. Charles Allen Thomas, vice-president of the Monsanto Chemical Co., had charge of a critical phase of the project—the chemistry and purification of plutonium. He holds that the Army failed utterly to see the significance of science to the war effort, and insisted on drafting science students vitally needed to sustain our national strength. Dr. Thomas said:

"The present selective-service policies may have a profoundly adverse effect on the atomic bomb program, and might even cost the United States its head start in atomic bomb research over other nations. * * *

"Postwar scientific research in the United States has been set back by at least from 2 to 4 years by the drafting of young natural scientists. * * *

"Already it will take until 1955 for the universities of this country to catch up with the need for scientifically trained young men at the rate at which that need was growing before the war. * * *

"In contrast with United States policy, both Great Britain and Russia have been careful to conserve their young natural scientific and research talent."

He stated that 20 percent of his research staff now face induction. More are classed I-A than during the war! "It takes 6 or 7 years from high school to give a young man the necessary training for research work, and the moment he finishes this schooling in college and industry he is 'right in the middle of the draft.' The average age of the natural scientists working on the atomic bomb project at Santa Fe was around 30 years."

Senator LA FOLLETTE wrote (CONGRESSIONAL RECORD, November 23, 1945): "It is a well-known fact that most of the startling technical progress of the past war came from outside the armed forces. And many a scientist and engineer will bitterly tell you that his developments and contributions were made in spite of, not with the help of, the services." Military strength, as Hanson Baldwin has pointed out, is not to be confused with peacetime conscription. In this age of science and rapid technological change, the spirit of active creative inquiry is indispensable to military strength; conscription is not. Rocket ship and atomic bombs make it necessary that we have as many resilient, imaginative minds as possible if we are to avoid chaos. West Point strait-jackets the minds of its own. Can we expect that the youth of the Nation will escape the deadening impact of its regimentation under a program of compulsory military training which it dominates?

In addition to paralyzing the inquiring spirit, this Prussianization of youth also threatens democracy itself. The lessons of discipline and obedience, which military establishments preach, tend to suppress liberal tendencies and to uphold the status quo. Universal compulsory military training spread those lessons effectively in Prussia.

Training Manual 2000-25, published by the United States Army in 1928 as an official textbook on citizenship for the citizens' military training camps, attacks labor legislation and efforts to outlaw war. Its definition of democracy is illustrative:

"Democracy. A government of the masses. Authority derived through mass meetings or any other form of direct expression. Attitude toward property is communistic—negating property rights. Attitude toward law is that the will of the majority shall regulate, whether it be based upon deliberation, or governed by passion, prejudice, and impulse, without restraint or regard to consequences. Results in demagogism, license, agitation, discontent, anarchy."

Following public objection, this and some other passages were deleted, but the militaristic, antidemocratic tradition which inspired them was not. It is in the blood and fiber of West Point. Significantly, an official Army textbook has also complained that among "the defects in our (national) policy" is "direction of military operations by a civilian Secretary of War."

One benefit claimed for military training is that it improves health and morals. Under the proposed program about a third of the men, those most needing help, would be rejected and not helped. A civilian program would aim to help those most needing help.

Records of the Army and Navy Surgeons General and of the United States Public Health Service indicate that in 1939 the incidence of syphilis in the general population was 5.1 per 1,000, in the Army 29.6, and in the Navy 85.9. As draftees were inducted the rate in the services fell, but as they took on Army and Navy ways it rose again, the rise being very rapid in 1945.

In the CONGRESSIONAL RECORD for November 20, 1945, is a detailed account of the Navy policy of operating a large house of prostitution in Japan, with others contemplated. The account describes men lined up four abreast for a block, supervised by military police while waiting admission, with a return line waiting to receive prophylaxis from Navy medical men assigned to that purpose. The military caste system was protected by reserving geisha houses for the officers. Hanson Baldwin writes, "No one knowing the Army can describe the standard of morals and habits formed there as uplifting. Quite the contrary." The same, of course, is at least equally true of the Navy.

As to the educational value of conscription, a letter on the subject signed by Presidents Conant, of Harvard; Dodds, of Princeton; Day of Cornell; Hutchins, of Chicago; Sproul, of California State, and seven others reads: "Military training offers no real solution to national problems of education, health, or responsible citizenship in a free society. Moreover, we do not favor the control of even a year's education of young men by the Federal Government." As another commentator remarked, forcing a high-school boy into military life "will not bring democracy into militarism; it will bring militarism into civilian life and undermine democracy."

Why not give voluntary enlistment a fair trial? The common soldier has been looked on throughout history as a sort of slave, to be paid little more than subsistence. Treat him as an American citizen and pay him as such, and probably enough young men will join the services.

What can be done? Four things specifically. First of all, we should postpone action on conscription until the subject has been much more fully investigated. The American Council on Education, which includes all the major organizations in the educational field, recommends that the President appoint a national commission of representative leaders from industry, agriculture, labor, the church, education, and the Congress to survey all aspects of the proposed training program—among them its relationship to other aspects of national defense, to the educational system, and to the program of international peace through world organization.

Second. When a national policy is formulated and adopted, then if it should include some elements of military training, a somewhat similar commission should have over-all control of that program, to insure that such training does not destroy the self-directive freedom which is the genius of America, and the source of its long-time strength. The state is only one aspect of society. A wise state will be modest and restrained in exercising power over its subjects. The American concept of life has included a high regard for personal autonomy. Any program, such as peacetime universal compulsory military training, which would require a boy of 17 or 18 to surrender his life philosophy if he has one, and make himself an uncritical and obedient instrument of imposed authority while being indoctrinated in the philosophy of force, would be a blow to freedom.

Third. At present West Point is an antidemocratic outpost in America, with plans to capture America for the spirit of blind obedience, arbitrary power, and rigid caste stratification. It should be reorganized, making it a graduate school, receiving men of greater maturity and educational background; and all except the explicitly military members of the faculty should be drawn from other educational institutions, where the American spirit survives and modern scholarship prevails. West Point should be Americanized before it Prussianizes America.

Fourth. America should study most carefully the conditions necessary for peace, and not only the conditions necessary for waging war.

Farm Surpluses—Portion of Hearings Before Senate Committee on Agriculture

---

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 4 (legislative day of Friday, January 18), 1946

Mr. YOUNG. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a portion of the hearings before the Senate Committee on Agriculture dealing with the uses of farm surpluses in the production of various industrial items such as alcohol and rubber. This proposed legislation is designed to make use of the many alcohol and other surplus war plants now situated in many areas of the United States.

Present at this meeting held Friday, February 1, 1946, were Senator THOMAS, chairman, and Senators AIKEN, BUTLER, HOEY, SHIPSTEAD, and YOUNG. The pages

which I wish to have inserted are 14 to 30 inclusive.

There being no objection, the matter referred to was ordered to be printed in the RECORD as follows:

Senator YOUNG. Mr. Johnson, in the days of the great surpluses, every farmer in my part of the United States looked for a solution of the surplus problem, as you have outlined it, and this bill, it would seem, would take care of that. In my opinion, we will again be faced, before long, with large surpluses. This seems like a most intelligent approach to the problem of surpluses. Every farmer in my part of the United States is for it. The North Dakota legislature passed an appropriation 6 years ago to go into research along this line and planned to build a plant, but about that time the war came along and Federal Government plants were built; we let it go for the time being.

Senator BUTLER. And it is a fact that the largest plant of this kind constructed by the Government as a war instrument happened to be in Omaha, in my home town. I have the opportunity to see the possibilities of following such a program as this through as a permanent policy, as we were forced to fall into during the war.

The CHAIRMAN. What did the Omaha plant cost, if you know?

Senator BUTLER. Seven million, and it has been operated by a local company and they have paid the RFC a magnificent sum in the way of a lease. They are operating now, and have been, on a surplus of potatoes as well as grains.

The CHAIRMAN. Is it in operation now?

Senator BUTLER. Yes.

The CHAIRMAN. What are they making?

Senator BUTLER. Alcohol.

Mr. JOHNSON. I am getting ready to make sirup.

The CHAIRMAN. What do they make it from?

Mr. JOHNSON. Corn, and possibly wheat also.

Senator BUTLER. I might say, Senator THOMAS, that when sorghum grains got to a low peak, it was found abundant in Texas and Oklahoma; this plant was looking for these opportunities, and when they got in the market the price advanced tremendously. It was a direct benefit to the growers of your immediate area.

Mr. JOHNSON. Whenever you have a process that can consume 100,000 bushels of grain that would be a drug on the market every day, it does not take long before you can step into the spot markets and clear up a situation in a very short time. We did it in Texas and Oklahoma in less than 2 weeks' time.

Senator YOUNG. This happened in our potato area, just a few extra carloads of potatoes break the market.

Mr. ROBINSON. We experimented with potatoes to find out if we could take the starch out of potatoes. I think with research work in these plants, when they are able to operate a year or so, we will be doing a wonderful lot of things.

The CHAIRMAN. Mr. Johnson, I would like for you to complete your statement.

Mr. JOHNSON. You may be wondering why we think there is an emergency in a matter of this nature because they are now operating. We are operating by sufferance at the moment. RFC could cancel us out tomorrow if they thought it proper to sell the plants. They have been advertised. You will recall Senate Resolution No. 176 asking for a study of their uses; that is going on now.

The CHAIRMAN. Who is making that study?

Mr. JOHNSON. The Department of Agriculture.

The CHAIRMAN. I remember the resolution, I just forgot who had the charge of it now.

Mr. JOHNSON. That is the reason it seems so imperative to get a bill introduced and to get people thinking on it, crystallizing public opinion in this direction, and pointing up some of the things we are talking about. I know that today the research organizations have enough things in their bag of tricks, and are developing those things every day, that require the assistance rendered, or would be rendered, by this legislation.

The CHAIRMAN. What are the additional needs for this legislation, you suggested industrial alcohol, and we have suggested molasses, indicates some of the things that might be developed or made available as a result of the passage of this bill.

Mr. JOHNSON. Mr. Chairman, I am not a chemist or a technician, but when you start with the grain production, there are so many things, and cotton, celanese—cotton is the purest celanese that grows, and instead of using the cotton materials the farmer grows—I mean by using some of the cotton materials the farmer grows instead of the carbons that are in our industrial research piles and converting those—of course that might develop into a competitive question—but celanese is one of the things that is produced from cotton—then, there is rayon, nylon, housing materials for fabricated houses, paints, plastics—the field is full.

There is a question whether or not in such cases it would not be good economy to use those crops that come along year by year or take it out of the stock pile that nature has built up during the centuries.

The CHAIRMAN. At the present time the country is short of paints, and this committee reported legislation, which became law, authorizing subsidies to be paid to the growers of flax, in order that that product might be increased, that linseed oil might be increased, that paint might be increased. Now, I have information that it is possible to make a fine paint with soybean oil.

Mr. JOHNSON. Yes; and sesame seeds, and other things, and that is what we are looking to from this bill, getting their uses, the uses of these agricultural commodities channeled into the production of these paints, and other industrial uses.

The CHAIRMAN. That is what I am getting in the record. You have suggested industrial alcohol, and molasses, and paint, that can come from agricultural products—are there others?

Mr. JOHNSON. Well, there are lacquers, and all kinds of solvents.

The CHAIRMAN. What are they used for?

Mr. JOHNSON. Solvents are used in toilet articles, in food, in medicines, and many things, and some are imported. We feel they ought to be made out of surpluses when surpluses are available.

The CHAIRMAN. Have you any further suggestions?

Mr. JOHNSON. I believe not.

The CHAIRMAN. If not, I will call the other gentleman.

STATEMENT OF FRANK L. ROBINSON

The CHAIRMAN. Will you please state your full name?

Mr. ROBINSON. Frank L. Robinson.

The CHAIRMAN. Where do you reside, please?

Mr. ROBINSON. Senator, I am from Nebraska——

The CHAIRMAN (interrupting). What is your occupation?

Mr. ROBINSON. I am a farmer at heart, and have been for close to 45 years, also a cattle raiser.

The CHAIRMAN. What do you mean, "at heart"?

Mr. ROBINSON. I have had to leave that because I got imued with an idea from Henry Ford in 1935 that if our agriculture was to prosper we must have the assistance of industry and chemistry to utilize our surpluses, and I have talked and worked on that program, more or less, all of these years, at the neglect of my farm operations.

The CHAIRMAN. Mr. Robinson, you made a statement awhile ago, and I will ask the reporter to lift out what you said and have it go in now, so we will have it all; now go ahead.

(The previous remarks of Mr. Robinson are as follows:

(Mr. ROBINSON. We experimented with potatoes to find out if we could take the starch out of potatoes. I think with research work in these plants that we will be able within a year or so to do some wonderful things.)

Mr. ROBINSON. I really appreciate the work that Cecil Johnson has been doing in preparing this bill, as I have been more or less associated with Cecil Johnson for the past 10 years, and during that time we have thought along the lines of the necessity of such a program as he has presented here today to this committee.

Incidentally, I would like to also state that back 5 or 6 years ago, even less, when the Triple A program was in operation, with the curtailed production in a big way, that the thoughts represented and presented by Mr. Johnson were thoughts in our minds years ago, but we did not get the cooperation for the idea across until that curtailed program came along, which has cost the Government $4,000,000,000 since it has commenced to break up, and with the mechanized equipment now usable on the farms, and the fact that three men can do the work of five on the farm and produce about 30 percent more farm production, we all realize that we had better get ready for the surpluses before they really break upon us.

The CHAIRMAN. Indicate, if you will, the time you can envision or foresee what might come about if this bill becomes law, referring to what Mr. Johnson says—tell us how you make molasses out of potatoes.

Mr. ROBINSON. It is a dextrose sweetening mostly—not real molasses. The Farm Crop Production Association at Omaha, who are operating this industrial alcohol plant, received an appropriation from the RFC of about $460,000 about a year ago for the installing of equipment to extract the corn oil from corn before the starch from the corn was used into alcohol process. Incidentally, a bushel of corn contains about one-third of a pound of corn oil.

The CHAIRMAN. Would that make about half a pint, would that be about half a pint of oil?

Mr. ROBINSON. Just about

The CHAIRMAN. About half a pint—all right, go ahead.

Mr. ROBINSON. That oil——

The CHAIRMAN (interrupting). What is the color of the oil?

Mr. ROBINSON. It is just about the color of Mazola—you have seen Mazola.

The CHAIRMAN. I am afraid I would not recognize it. What is it used for?

Mr. ROBINSON. For salad dressing, cooking in restaurants, cafes, and hotels; hotels prefer it because this oil does not smoke, and it is used in the sizing of paper and cloth, and is used in a great many industries which were manufacturing essential materials during the war.

The CHAIRMAN. That is the first product taken out of corn; what is the second?

Mr. ROBINSON. In the manufacture of dextrose sirup, which is comparable to many highly advertised sirups. We extract a starch from the corn which is about 33 pounds to a bushel of corn. We cook this starch, adding a malt and a mold bran, and we shake out a starch and press the oil from this starch, recovering 56 pounds of sirup from a bushel of corn, believe it or not.

The CHAIRMAN. What does that look like?

Mr. ROBINSON. That is just about as near the color of genuine maple sirup as you can imagine and about as sweet.

The CHAIRMAN. What is it used for?

Mr. ROBINSON. Table sirup and the manufacture of foods, and used in soft drinks like the Coca-Cola and Pepsi-Cola and all those drinks, and it is used in the manufacture of candy.

The CHAIRMAN. Does it have a trade name?

Mr. ROBINSON. We have not one for it—Cecil, do you know?

Mr. JOHNSON. It is the same thing as Karo——

The CHAIRMAN. Karo sirup?

Mr. JOHNSON. Yes.

The CHAIRMAN. Another question—does it have any other uses, is it used in the manufacture of certain medicines?

Mr. ROBINSON. Yes.

Senator BUTLER. I would like specially for the record to show that you get 36 pounds of sweetening from a bushel of corn, as a substitute for sugar out of each bushel of corn, that the United States produces only about one-third or one-fourth of its requirements from sugar.

The CHAIRMAN. At this point, for the record, state how much sugar you can produce out of a bushel of corn.

Mr. ROBINSON. I am not familiar with that, there is a good deal of corn sirup made, but I don't know.

The CHAIRMAN. Is the sugar a refined product from the sirup?

Mr. ROBINSON. No, the sugar is made in a different way.

The CHAIRMAN. Go right ahead.

Mr. ROBINSON. I might add that the manufacture of this sirup might be of interest to the officials in the Department of Agriculture who are disturbed over our sugar shortage and sweetening shortage in general and that may exist for a couple of years yet, and we thought it was our duty to carry on this research work, and we thought we should do it in a big way, and we asked the RFC for a grant of $218,000 to install equipment to make sirup for this tremendous shortage that now exists, but they could not see their way clear to grant us that sum, so we are furnishing our own money to install this equipment, and pay the freight on it, and I might say, incidentally, that some of the large presses we are using in the manufacture of sirup are furnished from other plants that were erected by the DPC, and I think you will appreciate that is why these properties should be in sympathetic hands. If you have had the experience of running the gantlet here in Washington you will know that it is trying.

The CHAIRMAN. Go ahead.

Mr. ROBINSON. I will say, if we had not had the sympathy of the Department of Agriculture in getting these plants erected in the Middle West for the manufacture of industrial alcohols I doubt very much if you would have had the Normandy invasion yet today because 70 percent of the synthetic rubber that was used for our mechanized equipment during the war was made from grain alcohol.

The CHAIRMAN. Answer this question, if you can. What is the relative cost of rubber made from alcohol and that made from petroleum?

Mr. ROBINSON. I think if the facts were taken into consideration of the use of the material resources of the country to convert any of these into butadiene for rubber, and the fact that the depreciation on the synthetic and gas plants that produce the synthetic alcohol were also considered, and that if we were allowed to continue producing a certain amount of synthetic rubber from grain alcohol, thereby allowing us to continue the research so necessary in reducing the cost of alcohol, we could make synthetic rubber from grain alcohol, and from these agricultural products, as cheaply as any other process, and as cheaply as we could import natural rubber from foreign countries, giving those natives a reasonable sum in wages—or perhaps we could do it cheaper.

We must continue to operate these Government-owned plants not only to take care of the grain situation but the sweetpotatoes—always a critical situation in the South—and waste forest material in the West, and excess spoilage wheat, which you always have more or less, whether it is a short or a large crop.

For instance, Senator BUTLER spoke about grain sorghums.

A year ago this summer we had excessive rains in Dakota and Minnesota whereby the wheat could not be threshed from the shock. It sprouted and grew in the shock. We heard about that. We communicated with the officials connected with the Agricultural Department located in these States, and they sent us samples of this sprouted wheat, which was unfit for human consumption and we bought a good many thousand bushels of that kind of wheat, and, strange to say, it really produced more alcohol per bushel than the good wheat, believe it or not.

Senator YOUNG. And, I believe, you paid the market price.

Mr. ROBINSON. Yes, before they knew there was any market for it at all, and by the time we had bought several cars it went up 40 cents a bushel.

The CHAIRMAN. Maybe wheat sprouts makes better alcohol than the other.

Mr. ROBINSON. Maybe so, but we prefer that it is not sprouted. That just goes to show you how useful plants of this nature can be to agriculture, and how necessary it is that such plants as we have mentioned be in friendly hands.

The CHAIRMAN. Have you considered the possibility of making synthetic motor fuel?

Mr. ROBINSON. I am glad you mention that. That is my hobby. That is one of the things that I became imbued with many years ago when I attended this conference called by Henry Ford. At that time we were selling grain at 10 or 12 cents a bushel.

The CHAIRMAN. What kind?

Mr. ROBINSON. Corn, oats, wheat, and barley.

The CHAIRMAN. Wheat at 10 cents a bushel?

Mr. ROBINSON. Yes, in my county.

The CHAIRMAN. What year was that?

Mr. ROBINSON. About 1932.

The CHAIRMAN. Wheat sold in Enid, Okla., for 19 cents a bushel, that was the lowest I heard of.

Mr. ROBINSON. I bought wheat, corn, oats, and barley for cattle and hog feed at 10 cents a bushel.

The CHAIRMAN. Was it good wheat?

Mr. ROBINSON. Not all of it always, but even the good wheat was not worth more than 25 cents.

The CHAIRMAN. I am glad to get that on the record.

Mr. ROBINSON. Yes. Now, about that time I was associated with some people in the East who had investigated the use of alcohol in motor fuels, in a great many of the foreign countries, and learned that the United States was practically the only country in the world that did not use alcohol in their internal combustion engines.

Senator BUTLER. Is that true today?

Mr. ROBINSON. Yes, so far as I know, it is true today, yes sir.

Mr. JOHNSON. And many oil companies in this country are sponsoring its use in other countries.

Senator YOUNG. This policy was followed by Germany preceding the World War, and was probably responsible for their apparent prosperity; they used many of their farm products industrially.

Mr. ROBINSON. They perfected the manufacture of synthetic rubber, which was first introduced by the Russian Government and followed by the research of the Germans and the Poles, and strange as it may seem, that after the use of synthetic rubber in those countries for 12 years in a big way, and most of that synthetic rubber was made from grain and potatoes, that we should have had to go through all of the painful processes and hard work of the Gillette committee to build synthetic alcohol plants that could produce synthetic alcohol from grain to save our Nation in this last war.

I would like to go back to the alcohol and motor fuels.

I have had considerable experience in the blending of alcohol with gasoline over a period of years, selling it to users directly on the farms in their tractors, trucks, and automobiles.

The CHAIRMAN. What do you call the product?

Mr. ROBINSON. An alcohol blend—ethyl alcohol. I learned over a period of years, with the actual use and observation that alcohol blended with gasoline is a most remarkable fuel and the fact that we were using our natural resources, in the way of petroleum at a very rapid rate, which is becoming more or less recognized since the war, that we must, in the years to come, and now, commence to supplement our motor fuels with alcohol made from starches and grain, grown on the farm, which is nothing but air and water and sunshine and can be replaced annually from the soil.

Is that enough on that?

The CHAIRMAN. What was the best result you got in blending alcohol with gasoline?

Mr. ROBINSON. The nicest blend I have had experience with is about 7 percent of alcohol in 68 70 octane gasoline. It makes a most perfect fuel.

The CHAIRMAN. How much grain would be required for a 1-percent blend?

Mr. ROBINSON. On a 5-percent blend it will require—we are using in this country about 25,000,000,000 gallons of gasoline a year, and a 5-percent blend would require about 500,000,000 bushels of grain. I think I have those figures right; if not, they can be checked before we leave.

Senator BUTLER. That approximates all the surplus we normally would have in grain, does it not?

Mr. ROBINSON. Yes. I think the grain tonnage in normal years is about 5,000,000,000 bushels, and if you remove 10 or 15 percent of that from the market you would stabilize the market. I think the history of the market over a period of years will show that.

The CHAIRMAN. Could you make 100-octane motor fuel out of alcohol?

Mr. ROBINSON. Yes, sir. It has an octane rating of 140.

Senator YOUNG. You have not mentioned what effect it would have on unemployment; would it not provide a vast amount of additional jobs?

Mr. ROBINSON. Yes.

Mr. JOHNSON. And especially, if you went into fields like sweetpotatoes, as Senator ELLENDER told us of the program in Louisiana, converting lands that were devoted to cotton to sweetpotatoes because they were so rich in starches, it would be a natural.

The CHAIRMAN. Have you any further suggestions?

Mr. ROBINSON. No; I think not. There is a great deal more that can be said, but I think we have covered the ground very well.

Mr. JOHNSON. There are lots of people with a great many ideas that would like to be heard if and when this bill comes up, some very important men like, for instance, Mr. William Dow, and a number of others that see in this a way of tying their industries into this other thing.

Mr. ROBINSON. This will keep the farm going, together with soil conservation, and will balance up agriculture. It is a problem we have all been thinking on for years and years, and it is very interesting and also wonderful to note that after many years of curtailed production that the best thinkers in our Government today, as well as in industry and agriculture, see the great possibilities of this kind of an operation for the balancing of agriculture.

Senator YOUNG. I fully agree. The problem lem is to get them all to see the possibilities.

Senator BUTLER. Mr. Chairman, this is all appreciated by me and the others interested, that we have had the opportunity to make this record today.

I am sorry that a good many members could not be here. I assure our guests that they are busily engaged elsewhere—not loafing, but I want to ask the chairman if he thinks he has the information now so we can get the benefit of his counsel and suggestions as to how to proceed with the introduction of the bill.

Veterans and the Peace

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting herewith an article which appeared in the Christian Century for January 30, 1946. It is most timely and indicates that there is much to be done if we are to win a permanent peace. At least, there must be a realistic approach to present world problems:

THE VETERAN AND THE PEACE

A familiar refrain is beginning to echo through the dispatches sent American newspapers by their correspondents in Europe. It is impossible, the American people are being told, to stabilize the European situation, or to assure any durable peace on that war-torn continent, so long as doubts persist as to what the United States is going to do. A little examination will show that the recurrent phrase, "what the United States is going to do," really refers to the probable length of American occupation in Germany and other parts of Europe, or to the readiness of this country to pledge itself to military intervention in case there are attempts to overthrow the peace terms now being worked out. Demonstrations by American soldiers for rapid demobilization are credited with having increased European doubts as to America's future role in continental affairs.

This tendency to imply that American remissness lies at the bottom of Europe's persistent instability will hardly stand up under close scrutiny. It is at least arguable that the current European jitters owe as much to Russian as to American failure to define a hard-and-fast future policy. And there are many other factors besides the puzzling uncertainties of Soviet policy which are keeping postwar Europe from settling into a definitive pattern. Nevertheless, international understanding might be served by meeting this reported European misgiving on its own terms. If Europe's future so largely depends on what the United States is going to do, what will American foreign policy be for the next 10 or 20 years?

No certain answer to that question can be given. The United States is enough of a democracy so that its foreign policy, at least in its major aspects, must conform to public opinion, and there can be no assurance as to what course American public opinion will support for the next two decades. We are sure, however, that there is one factor of tremendous importance which is not being sufficiently taken into account by most of those who are trying to predict or influence future American policy. That factor is the veteran. Twelve million former servicemen will make up the most influential element in this Nation's political life for the coming 40 years. Asking what the United States will do in Europe, or anywhere else, without taking the veterans into account is like asking what the future policy of the Roman Catholic Church is going to be without taking the composition of the college of cardinals into account.

This curious indifference to the part the veteran is certain to play may grow out of the fact that so far he has been slow about getting into political action. (Yet not so very slow; there is already a $25,000,000,000 bonus bill before Congress.) With the veterans' organizations bequeathed by former wars competing for his membership, and new organizations of those who wear the service button coming into being every month, the veteran's interest has been largely centered up to now on the choice of agencies through which he will wield his power. But this is only a preliminary stage. It will soon pass into a period in which the veteran's vote and the veteran's views will be the first consideration of every politician. If Congress and State legislatures have kowtowed in years past to the Legion, what is to be expected when there are 12,000,000 votes at stake?

While the war was in progress it became the fashion to deplore the lack of political indoctrination of the men in uniform. It was charged that they were not told what it was all about at the time they were fighting—or if efforts were made to tell them, through lectures and through films, these largely failed to register. Now it is being charged that the failure to convince them of the rightness of our present policy is responsible for the soldier riots. A great opportunity to send 12,000,000 citizens back into civilian life informed on the issues of international relations has been lost. The veteran is coming out of his term of service as politically naive and uninformed as he went in.

There is a large measure of truth in this. But it is not the whole truth. In his service overseas the veteran has received a political indoctrination of a sort, and it has sunk deep. It may not have been the sort of indoctrination that holds out hope for the future, but as to its actuality there can be no question. In some degree, this indoctrination has simply embedded more deeply prejudices which the veterans carried into the service. That does not lessen its influence; it increases it. What are the ideas which these 12,000,000 men are bringing home? Admitting the existence of exceptions, the overwhelming majority of the returning servicemen are thinking in much this fashion:

They have a scorn for other peoples and countries which they do not bother to conceal. They judge the regions into which their service has carried them by American standards of living, of working methods and of social customs. In most cases their conclusions are far from complimentary.

Those who have served in occupation posts in Europe regard the politics of that continent as a hopeless mess. They know little about the details, or about the nature of the contending forces. They know only what confronts their eyes, and they characterize that in the same words, whether they have been stationed in Italy, in Trieste, in Austria, in France, or in Germany—"it's a mess."

They believe that American intervention in Europe, apart from political purposes which they declare they have been unable to fathom, started out to save the bacon of our allies, and did so, and now serves to hold down a military lid on a boiling pot that would overflow the moment American forces were removed.

They believe that American intervention in the Far East, again apart from purposes which they have been unable to fathom, gave the Japanese a licking they had coming to them, and now serves to prop up a collapsing colonial imperialism and a tottering central Chinese government. They sometimes express their suspicions of the meaning of American deployments in the Orient vis-à-vis Russia.

All this adds up to a belief that millions of servicemen are being kept from home to do something that is none of America's legitimate business. Partitioning Germany, reducing the German diet to a near-starvation level and then policing against outbreaks, holding Trieste or the industrial areas of Italy for one political group or to prevent the rise of another, clearing the way for restoration of the colonial empires, umpiring the internal politics of China—all such things the serviceman lumps under the single phrase, "It's none of our business."

Along with this, it must be recognized, there goes no recognition that the United States may be contributing to the increase of international difficulties by, for example, such policies as the Potsdam program in Germany or the plans to build an island empire in the Pacific.

An Englishman or a Frenchman or a Chinese may look at such an account as this and call the American veteran self-righteous, snobbish, ignorant, callous, and a general threat to international understanding and cooperation. We will not argue the point. But that does not alter the fact that he must be taken as he is. And as he is, we find him thoroughly indoctrinated with the sort of ideas we have tried thus briefly to summarize. It is on the basis of the existence of those ideas that he must be dealt with.

What is the hope of changing the views of the American veteran? What is the hope of getting him to welcome American participation in world cooperative action to preserve the peace and to build toward a powerfully functioning world organization? We doubt whether that hope is very great. We are sure that it will remain dim unless the veteran can be made to believe, by the evidence of his own eyes and of the eyes of his comrades who continue in service overseas, that the United Nations Organization has begun to serve the ends of justice in Europe and the spread of liberty in the Far East. Of course, the Government of the United States is as responsible for seeing that the UNO does this as any other government. It is more responsible than any government except those of Great Britain and Russia. If the American Government hopes to persuade the American veteran that its international commitments through the UNO, or through other agreements, are really serving peace, justice, and freedom, it will have to act fast.

There is one phrase which any listener will hear often on the lips of these men who have served in the European and Asiatic theaters: "The whole thing makes no sense." When one faces the question as to America's part in future international relations, that is the phrase to remember. The veteran doesn't talk about "isolationism" or "imperialism" or "fascism" or any of the other slogan terms that fill the editorial columns. But he talks in the terms of the frustration of that recurring judgment: "The whole thing makes no sense." We were suckers. Our comrades whom we buried, when we could find their bodies, were suckers. The American people who sent us into this war were suckers. It meant nothing—nothing beyond giving two or three guys the beating they asked for. Worse than that, it will mean nothing. It's coming out in a worse mess than ever. ("Mess" is another keyword among the veterans.) So what is there to do but for us to go out to get ours and to forget the fancy words about world cooperation and all the rest? That is pap for the feeble-minded.

Thus speaks, and thinks, the veteran. There are, we repeat, 12,000,000 of him. Can anything be done to change him? Is anything being done? No amount of lecturing will have any effect. From now on he is resolved to believe in only what he sees.

What is he going to see? That's the question for those to answer who are worrying about America's future participation in international affairs.

Oscar Youngdahl

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. SHORT. Mr. Speaker, though it was not with surprise, it was with profound sorrow, that many of his friends in this Chamber learned today of the death of our former colleague, Oscar Youngdahl, which occurred yesterday morning in Minneapolis, Minn.

Mr. Youngdahl came from a fine and distinguished family of that great State in the Northwest. One of his brothers is an eminent clergyman; another is a renowned jurist, serving today as a justice of the Supreme Court of Minnesota; and still another brother is a famous professor at Washington University in St. Louis, my own State.

Oscar Youngdahl was born in Minneapolis, attended the grade and high schools of his native city and was educated at Hamline University in St. Paul, and received his bachelor of arts degree from Gustavus Adolphus. Later he received his bachelor of laws degree from the Minnesota College of Law, and after serving in the Navy during World War I, as his elder son did in World War II, he practiced law in Minneapolis and served as department commander of the American Legion.

In 1936 Mr. Youngdahl was the Republican candidate for attorney general of Minnesota but, like most Republicans in that year, was defeated. However, he made many friends and 2 years later was elected to the Seventy-sixth Congress, and was reelected to the Seventy-seventh Congress.

During the 4 years—1938 to 1942—that Mr. Youngdahl served in this body he made many warm personal friends. He was generous to a fault and loyal to the core. Those of us who knew him well and often visited his office will never forget the delicious smörgåsbord, and the genuine pleasure we derived in listening to Oscar's almost inexhaustible fund of Scandinavian stories. He understood and loved his people and could make even a stranger understand and appreciate them.

It was my privilege to speak for Mr. Youngdahl in Minneapolis during one of his campaigns and on other occasions I traveled with him through northern Minnesota. I have been a guest in his Christian home and I know the devotion which each member of his family has for the others. He leaves a charming wife, two fine, stalwart sons, and two sweet, lovely daughters, with many relatives and friends to mourn his passing.

How vividly I recall many evenings I have spent with him in his office when he expressed the regret in being separated from his family, and his keen desire to return to them in Minnesota when he was forced to spend so much time in Washington.

Oscar Youngdahl had strong convictions and stubbornly fought for them. He was afraid of no man. We all appreciate the fact that he served not only his own constituency in Minnesota, but all the people of his State and the Nation, faithfully and well. Most of all we remember the hours of enjoyable fellowship spent with him, and shall always cherish the memory of this true friend.

Microscope on Moscow

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I am including the third and fourth installments of a penetrating analysis of the situation in Russia, particularly with relation to the rest of Europe. The author, Dr. C. Sverre Norborg, is a careful student and observer who has recently returned from a year of work with UNRRA in northern Europe:

[From the Minneapolis Star-Journal of January 30, 1946]

MICROSCOPE ON MOSCOW—5,000,000 TROOPS, MILLIONS OF DISPLACED PERSONS WORRY RUSS

(By C. Sverre Norborg)

Article 132 of the new Soviet Russian Constitution proclaims military service to be "an honorable obligation of citizens of the U. S. S. R." The Red Army was originally organized by Leon Trotsky as the arm and shield of the Communist revolution and the Communist Party. By now, it has become the vast citizens' army of a self-conscious Russian Empire.

By its massive and historic victories over the eastern part of the Nazi military machine, the Red Army serves as the cornerstone of Russian foreign policy in Europe and Asia.

At the same time this Red military machine is posing one of the most delicate and fateful problems ever tackled by the rulers of the Soviet Union.

Wherever one goes in postwar Europe, one finds our American soldiers have only one longing: to get home to the United States. Reports from all Russian-occupied areas indicate that nowhere is the Red soldier showing any such delighted eagerness about his pending repatriation and demobilization.

A Red Army captain in Warsaw sent his fifth vodka down a wet throat, exclaiming: "I love this army life. It is a man's paradise. It makes me forget the drabness of Omsk. This is the best form of collective living I've ever seen."

Hundreds of thousands of Red soldiers will not get home for months or maybe years. After demobilization their work will be needed in other parts of the Soviet Empire.

Thousands of Red soldiers have deserted since VE-day. Their violence and banditry are bringing stinging discredit to the Red Army from the Vistula to Sofia and Bucharest.

Admittedly discipline is not an easy thing in any army of occupation. But the Red Army battalion commanders are today struggling with morale problems created by the Russian propaganda system itself.

First, Russian commanders are attempting to neutralize the gigantic hero-worship by which Moscow, during the war, entreated each and every Red soldier to feel like a superman.

In a collectivist state it is obviously dangerous to instill any excessive individual pride into citizen soldiers, since heroes are not readily reconverted to the gray obedience of the orders of state supervisors of collective farms, factories, or labor gangs.

No one could envy the former security police chief, Laurenti Beria, his job of neutralizing and controlling the proud spirits of 5,000,000 to 6,000,000 Red Army heroes.

Beria relinquished his police post last week and was succeeded by Col. Gen. Sergei Nikolaevich Kruglev, who stands 6 feet 2 inches and weighs 245 pounds.

HE LOOKS LIKE A POLICEMAN AND IS ONE

Kruglev bossed the police detail that guarded Stalin at Yalta and Potsdam, and Molotov at San Francisco and London.

At Potsdam he so impressed President Truman that the President gave him an autographed photo and decorated him with the Legion of Merit.

No one except Stalin seemed to know what the change in police chiefs means. It was generally accepted, however, the move was to give Beria a freer hand in keeping returning Russian soldiers down on the farm.

Moscow reports previously have told of intense disagreements between Beria and A. A. Zhdanov, Stalin adviser on the enforcement of strict security policies against the Red Army personnel.

Zhdanov is advocating comparative leniency in the treatment of soldiers' individualism. In this fight he has the support of Marshal Zhukov, his friend and collaborator from the heroic days of the Leningrad siege.

On the outcome, the future balance between a strict control and a growing democracy in Russia may depend.

According to best available estimates, 2,200,000 Red soldiers remain outside the Soviet Union. Unforeseeable developments may speed up Red Army repatriation, but this will depend to a great extent upon whether the Politburo decides that the Red soldiers have seen enough of the outside world.

There is a growing feeling in Moscow circles that Russian eyes have seen too much already.

They have burned with flaming hate beside the ruins of what used to be the cities, factories, and farms of Hitler's new order. Looted and denuded, East Prussia, home of the Junkers, has now felt the total revenge of the Russians for Ukraine and White Russia. And 1,200,000 cattle were driven through Poland last summer on the way to Russia.

But Russian eyes have also beheld the dignity of progressive Prague, the charred beauty of Vienna, the ruins of lush Budapest. They have stared with unbelieving admiration at the magnificent workers' apartment buildings in Copenhagen. Eighty-two thousand pondering Russians have gone home from the valleys and cities of resistance Norway.

Thus Russian soldiers and refugees are returning home with a varied and disturbing treasure of impressions with which to compare things and ways at home.

Moscow is prepared to reeducate her returning children.

Comparatively the easiest group for the Russian secret police to handle and control will be the multinational world of deportees and prisoners. These have been streaming into Soviet Union for more than a year now: 200,000 Estonians, 250,000 Latvians, 280,000 Lithuanians, 100,000 Ruthenians, 100,000 politically suspect Poles.

In this group the German slave laborers also belong. Their total number has been estimated variously at 1,800,000 to 3,000,000.

There is nothing uncertain about the fate which awaits these 3,000,000 to 5,000,000 new

inhabitants of Arctic Russia, the Ukraine, and eastern Siberia.

In 1944 G. Malenkov, who as boss of Soviet heavy industries, is spearheading the vast expansion of industrialization, suggested that these millions of "imported labor" be screened for industrial skilled workers, technicians, and scientifically trained personnel.

His suggestion was supported by Y. N. Voznessensky, young genius of USSR state planning. But under pressure from the leaders of the Soviet labor reserve schools the screening plan was abandoned, reportedly to the great satisfaction of the NVKD commissariat, which runs great projects and factories of its own by slave labor in Kazakh, Tadjik, and Kirghis Republics.

With the imminent return of Red Army soldiers and Russian prisoners of war Shcherbakov, Soviet propaganda chief, and Beria argued there was no reason to multiply "obstructionist cells" and "unrest centers" throughout the country.

Political nonconformity, increased crime, and the war-created threat of a spreading "individualism" promise to keep Russia's 2,200,000 secret agents busy enough during the next decade.

Truly staggering problems confront Russia's centralized government today in the political control of the Red Army soldiers and Russia's millions of slave laborers.

On the other hand, an immeasurably greater task lies in the rebuilding and reconstruction of the Russian system of state socialism.

The economic life of Russia has been devastated by a ruthless enemy. Its huge manpower has for years been squeezed by the greatest burden of war which any great power ever faced.

We Americans cannot even begin to understand what desolation and suffering hide in the fact that cities, farms, and homes of 88,000,000 Russians were in the grip of Hitler's armies and his subhuman Gestapo torturers.

It is only too bad that Moscow never realized what disservice it did to its own cause by keeping Allied newspapermen from giving a full report on the heroism and the nightmares of the eastern front.

To heal the wounds of this war in the Soviet Union will, under the best circumstances, take many years.

Finally, a strange tragedy has occurred: international uncertainty has prevented Russia, so far, from making an effective decision on an early, integrated program of national rehabilitation and reconstruction.

[From the Minneapolis Star-Journal of January 31, 1946]

MICROSCOPE ON MOSCOW—RUSS RECONVERSION WAITS AS THREE GROUPS SEEK SOVIET POWER

(By C. Sverre Norborg)

Reconversion and reconstruction are not being handled with too much efficiency in Great Britain or America. But Russia's task is of such staggering dimensions that decisions on reconstruction cannot be delayed long if Russia wants political tranquillity and social progress.

Let us examine some of the causes for Russia's delay in rebuilding the cities, plants, and farms of a desolated, war-torn country.

Moscow likes to mystify the world. And other nations have been too willing to accommodate Soviet party leaders at this harmful and irrational game.

Russia is no mystery. At least, it is consistently becoming less a mystery than it was before Russia became our ally in World War II.

A high European diplomat, recently come from Moscow, explained the situation this way:

"The war has changed the Soviet Union every bit as much as it has changed any other nation. It has not, however, changed Russian psychology, which still remains more Asiatic than western. What we might call a feeling of inferiority is to the Russians the most realistic and rational procedure in the world. There is an almost cosmic loneliness in a Russian's soul when he meets strange people who speak strange languages and express strange ideas about government and international cooperation."

Working closely with Russians, meeting many more of them casually, I have become convinced that unless western minds show a lot of imagination we will never be able to meet Russia as the world's second greatest nation must be met.

Without true understanding, without ability to take an objective look at our own self-righteous western dogmatism, we may be led catastrophically close to an international policy which the late Lloyd George called "muddle, bungle, and blunder."

One of the deceptive ideas which has taken hold of western minds is the impression that there is always celestial agreement and absolute unity in Moscow. The known facts do not bear this out. Moscow is human, and where human beings are, there are disagreements, prejudices, jealousies, fights, dissensions, and compromises.

One of the fundamental psychological lessons which our alliance with Russia during the war should have brought home to us Americans is the discovery that Russian statesmen, diplomats, generals, soldiers, secret police, or the millions of Russians driven by evil Nazis into slave-labor camps in Europe are perfectly understandable samples of the human race.

Their emotions are deeper, their internal sense of belonging to one another is keener and more primitive than ours. Their suspicions are more easily aroused.

Russians do disagree, and disagreement is well known even in the Russian supercabinet, the Politburo.

In fact, it is exactly there, on the highest level of Soviet authority, that violent and fateful disagreements have appeared during the months since VE-day.

The full story of the clash in high Moscow circles probably never will be recorded in history. We do know, however, that since the San Francisco meeting three schools of thought have come into deep conflict in Moscow. The world may soon learn which of these groups is winning the argument about foreign policy within the Moscow Government.

We must not make the mistake of putting this disagreement down in our mental notebook as a rift in Moscow. The tidal wave of a new Russian nationalism has united the peoples of the Soviet Union, under Stalin the great, to a degree which the two earlier Russians, Peter the Great and Catherine the Great, never could have conceived.

A day in any camp for Russian prisoners of war in Europe convinced an observer that, fearful though some of these prisoners might be about their individual fate all of them were Russians—intensely proud Russians.

I will never forget my impressive first meeting with the new Russia in the excellent Danish camp for Russian prisoners of war at Taegerspria.

Here they were—Mongolians, Tartars, Ukrainians, White Russians, Georgians, an empire of many nationalities and races—and yet united into a living proud unity of national consciousness and language.

Their methods are not ours. Their political ideals we reject. But no one could escape the impressiveness of thi new people, nor fail to sense the power of the great mother Russia to which they were going back after the long, inhuman, bitter years of exile and slavery.

Whatever line the Soviet Union rulers, therefore, finally decide upon in question of international policy, one can be sure the decision will be guided again by Molotov's famous dictum of 1939: "It is our duty to think of the interests of the Union of Soviet Socialist Republics."

If this most fundamental fact of Russian national policy is clearly understood and accepted, we will have the necessary background for correct appreciation of the present struggle in Moscow circles between three dominating schools of national Russian thinking on the international future.

These schools are:

1. Socialist isolationism.
2. Communist imperialism.
3. Russian internationalism.

From 1918 to 1939 Russian foreign policy was characterized by a strange duality.

In the main, Soviet leaders kept fanatically aloof from the affairs of power politics. On the other hand, Russia spent hundreds of millions of dollars, through the Comintern in an attempt to instigate proletarian revolutions in other countries.

The official aloofness and the persistent conspiracy were both employed with the knowledge of the Moscow foreign office.

Habits die slowly—especially when they express a logical pattern of conscious purpose.

Russian aloofness is the mechanism by which Soviet leaders today express resentment of foreign criticism and rejection of foreign interference.

And fear, nourished by suspicion and violent consciousness of independence, has made Russian foreign policy uniquely difficult to grasp.

Paradoxically, the Russians do not like to be misunderstood, but at the same time they seem to hope that they will not be completely understood. This inner contradiction is the heart of Russian isolationism.

Long Beach City Councilman, City Attorney, Harbor Board Come To Attend Senate Hearings on Tideland Bill—Newspaper Editorial From Long Beach States City Interest at $50,000,000

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mr. DOYLE. Mr. Speaker, this House passed the Sumner resolution relating to tidelands of all the States by a vote of 108 to 11. I voted for the resolution; I spoke for it and was an author of one of the bills before the Judiciary Committee at its hearings. The Senate Committee has announced hearings on the same subject to begin February 5.

The great and significant public interest in this subject as a matter affecting the entire public fiscal policy and program of Long Beach City—both past and future—is clearly stated by the editorial of the Long Beach Press-Telegram of Thursday, January 10, 1946, which I include in my remarks.

Long Beach, Calif., is my beloved home city and is the largest in the Eighteenth Congressional District which I have the honor to represent in this Congress. Every person, and every piece of property, is interested in this matter. If any oil company is also interested—the great public concern and interest is paramount and the interest which concerns me.

This editorial states clearly the emergency as it affects my home city:

THIS CITY'S OIL FIGHT

Long Beach city councilmen have voted themselves authority to go to Washington and support pending legislation to surrender any Federal claim to oil in submerged lands within the boundaries of this municipality. Harbor commission, city attorney, city manager, port manager, and city clerk will go, as they should, for this is an emergency.

Whoever has an interest in Long Beach, and is in a position to exercise any influence in support of this city's oil rights, is urged to use the influence while there still is time to accomplish something.

The House of Representatives has passed a bill to quiet title to oil-bearing tidelands and submerged lands, thus upholding State and municipal ownership of coastal lands and their mineral contents which was unchallenged for 100 years, until Secretary Ickes, former Attorney General Biddle and others at Washington having their slant on questions of government and law, advanced the theory that the oil belonged to the Nation.

The Attorney General of the United States, carrying out the policy of the national administration, has filed a suit in the Supreme Court to contest the submerged land rights of the States and their subdivisions.

Unless the Senate passes the quitclaim bill already approved by the House, California and all cities, including Long Beach, to which the State granted tidelands and submerged lands within their borders, will be pitted against all the legal powers of the United States Government in the pending litigation. Although precedents of a century uphold the coastal land rights of States and cities, it would be foolish to ignore the uncertainties of any legal battle with the National Government.

It would be equally foolish to overlook anything which can be done to strengthen the case of California and Long Beach at the hearing on quitclaim legislation before the Senate committee, beginning February 5.

The State legislature has before it a bill appropriating $150,000 to finance the battle against the Federal Government's claim to the coastal oil.

Long Beach, with its upward of $50,000,000 in oil deposits at stake, is the principal interested party. All of its plans for harbor development and related public improvements, upon which its future growth and prosperity largely depend, are involved. No effort, no reasonable outlay, should be spared to safeguard its interests.

Effect of Wages, Prices, and Inflation on Income-Tax Collections

EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. DOUGHTON of North Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

STATE OF NORTH CAROLINA,
DEPARTMENT OF REVENUE,
Raleigh, January 28, 1946.

Hon. O. MAX GARDNER,
Shelby, N. C.

DEAR GOVERNOR: Because of your familiarity with conditions in the textile industry, I am writing to request your help. As you know, we are always interested in getting the views of well-informed people as to what we may expect in the State in income-tax collections.

We now see in the papers much discussion of wages, prices, and inflation. I want to know, in your opinion, what effect these factors may have on our income-tax collections that will be based on the calendar year 1946 and which will, of course, be payable in 1947.

With kindest regards, I am,

Cordially yours,

EDWIN GILL,
Commissioner.

SHELBY, N. C., *January 30, 1946.*

Hon. EDWIN GILL,
Commissioner of Revenue,
Raleigh, N. C.

MY DEAR EDWIN: In reply to your letter of the 28th requesting my opinion on wages, prices and inflation and what effect, if any, these factors may have on State income tax collections for the calendar year 1946, I am pleased to give you my hurried opinion.

This wage price controversy is a struggle between conflicting economic philosophies that are as old as the human race. It seems that one view may be said to be represented by Anderson, Secretary of Agriculture, and the other view by Bowles, of OPA. My own view lies somewhat moderately between the two. This struggle has taken on the form of a crusade and you know a crusader makes a fetish out of a cause and is prone to forget that what is good for the country is likewise good for the consumer and that, after all, we are all consumers.

As Chairman of the Advisory Board on War Mobilization and Reconversion under Byrnes, Vinson and Snyder, I have favored price control, rationing and rent control. I believe that any evils created under these controls have been infinitely less than the evils that would have occurred if there had been no controls at all. The conditions prevailing for 18 months after the first World War when practically all controls went off within a few days after the Armistice created a nightmare of wild prices for scarce articles and this condition contributed to accelerate the depression of 1921. Of course, you know that after every war in American history there has occurred a temporary period of inflation and this condition always existed until production caught up with consumptive demand, but it always caught up!

It is my belief that reasonable and flexible controls should be preserved with proper safeguards until we can emerge from the abnormalities of war, and I am sure this is the view of Director Snyder and President Truman.

My record as Chairman of the Advisory Board is clear and consistent on this issue. I have repeatedly stated in full meeting of the Board at the White House that if price controls are to stand the pressure for wage and price increases, one of two things will happen—they will bend before the storm or they will break before the storm. I have always contended that in the long view we are shortsighted if we do not recognize that wage-price adjustments will have to be accepted as a government policy to meet changing conditions created by the destructive demands of war.

If we are to retain controls, there is no doubt in my mind that prices generally will have to be increased to offset and take care of increased costs. This condition will be relieved when the law of supply and demand goes to work and it always has gone to work and it always will.

But this raises the big issue—the real issue—upon which there is such a wide divergence of opinion: The issue of inflation. I have decided convictions on this vital subject, the soundness of which to my mind no politician, bureaucrat or economist has been able to shake.

Just remember one thing when thinking of inflation and that is the fact that inflation feeds on scarcity. If we could drive this fact home to the leadership of America, our fears of inflation would soon vanish. Mankind has never feared inflation in a land of plenty.

I do not have the history of inflation before me but if I remember correctly, neither France, Germany, nor Holland ever had runaway or uncontrolled inflation at any time unless there was an epidemic of sustained distrust in their governments or unless the nations affected were unable or incapable of supplying the basic and essential necessities of life. I believe, therefore, that the one way to avert the threat of uncontrolled inflation is to vaccinate our economy with the virus of confidence and full production. With our tremendous capacity to produce, I have too much faith to seriously fear the dreadful effects of uncontrolled inflation in this country, provided we give American labor, industry and agriculture full go-ahead, fair play and honest, cooperative incentive to produce. What we need in America today is to turn on the motors and let the goods flow. Inflation is a coward—production is faith and courage.

You must bear in mind that in spite of our controls in the war period, we have not been entirely free from inflation, black markets, and high prices. Controls have been effective and they have been helpful, but they have been far from perfect—they have minimized but have not eliminated inflation.

It is, therefore, disturbing to me to observe the sudden, desperate fears of the ghost of inflation when, as a matter of fact, inflation is in the very air we breathe. It will remain there until we purify the air with the oxygen of full production.

The only way in my judgment to keep effective, sensible, and accepted controls at this time is to move prices moderately upward in harmony with the necessity for increased costs. Wages, please bear in mind, are not the only cost that has increased.

I do not say that there is no risk in this proposal—there is risk, but in this period I had rather assume the risk incident to this flexible policy than to permit the country to drag its heels. We must remember that the American people are willing to give up everything in time of war, but they love freedom too much to follow a field marshal in time of peace. There comes a time when we must assume risk—Eisenhower assumed it when he hit the shores of Normandy; Lincoln assumed it when he freed the slaves; and Truman assumed it when the atomic bomb hit Nagasaki.

I know one thing. The American public is assuming a great risk when 2,000,000 essential workers quit work. This condition is merely deferring inflation and contributing to existing scarcity, in addition to doing great damage to future human relations and to the national welfare.

You asked me what effect these factors may have on State income-tax collections for the calendar year 1946. It is too early in the year for me to express a set opinion on this point. There are too many "ifs" involved. I would suggest that you get in touch with Charlie Cannon, W. J. Carter, A. G. Myers, Thurman Chatham, Spencer Love, Ben Gossett, and Herman Cone. These leaders will be able to give you a fair cross section of opinions concerning cotton, rayon, hosiery, and wool. I can speak with accurate knowledge about the Cleveland Cloth Mills and Stanley and I would like to cite you a few facts about the Cleveland Cloth Mills. Since 1938 we have had eight voluntary wage increases at Cleveland Cloth Mills totaling a 164-percent increase in our minimum wage. Within the last 11 months we have had two wage increases, one on March 21, 1945, of 9.52 percent, and one effective Monday, February 4, 1946, of 15 percent. The latter gives us a minimum wage of 66 cents per hour. These increases have occurred without any increase in ceiling prices. Our ceiling prices have not been increased since the ceilings went into effect. The last 15-percent increase will add $150,000 annually to our costs.

We have already reached and passed the limit where efficiency in machinery, labor, and management is able to absorb these costs. We have no excess-profit carry-back, although we paid excess-profit taxes during the war. Our last quarter of 1945 showed a decrease in gross earnings of over $100,000 from the earnings of the last quarters of 1943 and 1944. I will say in conclusion, therefore, that unless the Cleveland Cloth Mills gets an increase in its ceiling price commensurate with its increased costs you, as commissioner of revenue for the State of North Carolina, will receive considerably less income from it for the calendar year 1946 than you have received in the previous years.

I think I should say in all fairness that our gross income for the last quarter of 1945 is not typical of the industry as a whole and is in part explained by the fact that we were undergoing building improvements which, to some degree, interfered with our production; but our increased costs were beginning to bear down on us in that quarter and the recent increases are really hitting the nerve center. We are planning to lay our problems before the OPA and in justice and fair dealing request an increased price in the ceiling of our products. Please bear in mind that any gain we will receive by the repeal of the excess-profits tax has already been absorbed by our wages and other increased costs.

I did not intend to write you at such length when I commenced this letter, but you touched on a subject with which I am greatly concerned and I took the liberty of giving full expression to my views.

With every good wish and kindest regards, believe me

Sincerely yours,

O. MAX GARDNER.

Exclusion of Negro Artists From Constitution Hall

EXTENSION OF REMARKS
OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mrs. LUCE. Mr. Speaker, on December 3, 1945, Mr. Ernest S. Griffith, Director of the Legislative Reference Service of the Library of Congress, wrote to Mrs. Raymond C. Goodfellow, organizing secretary general of the Daughters of the American Revolution, in Washington, as follows:

The Legislative Reference Service has been asked by a Member of Congress to obtain the list of all existing DAR local chapters, together with the addresses of the towns where located. Not finding any such thing in our printed collection, we approached national headquarters with this request. We have been informed that your permission is necessary for us to obtain the right to photostat it or obtain a duplicate copy. This letter is to make a formal request for the same.

I might add that it is the feeling of the Member in question that the national corporation of the organization has the requirement in its incorporation that it must report annually to Congress, making it a not unreasonable request.

Inasmuch as the matter is one of some urgency, I would appreciate it if we might have a reply, in the first instance, by telephone, and if there is any hitch, a reply in writing.

Sincerly yours,

ERNEST S. GRIFFITH,
Director, Legislative Reference Service.

On December 5, Mr. Griffiths received the following reply from Mrs. Goodfellow:

MY DEAR MR. GRIFFITH: Your letter has been received, regarding the request for the mailing list of the Daughters of the American Revolution.

I am sorry that we cannot grant you the use of our list, as it is not available to the public.

Yours very truly,

EDNA B. GOODFELLOW
(Mrs. Raymond C. Goodfellow).

Mr. Speaker, the addresses of DAR chapters not being available to the Congress which gave the DAR its charter—a truly remarkable situation—it is, therefore, impossible for any Member of Congress to seek the opinion of all chapters concerning the "white artists only" clause in the Constitution Hall contracts. However, it is my opinion that more than a majority of chapters would protest if they knew the real facts of the case, and if their opinions could be sought.

It seems to me that the DAR, in refusing to supply a member of the DAR and of the Congress with a list of its chapters, reveals the extent to which it fears to put its social discrimination policies to a democratic test among its Nation-wide membership, which, if polled, would undoubtedly reject those policies.

I have asked unanimous consent to revise and extend my remarks today to include therein some resolutions passed by chapters of the DAR in protest against the action of the Washington national board of the DAR in denying the use of Constitution Hall to Hazel Scott, Negro pianist, which were sent to me voluntarily.

The Eunice Dennie Burr Chapter of Fairfield, Conn., on November 26 adopted the following resolution:

Resolved, That we of the Eunice Dennie Burr Chapter, DAR, do recommend to the Board of Management of the National Society DAR that the policy of discrimination on racial basis in renting Constitution Hall be discontinued. We find further in making this study the fact the National Society DAR recognizes the right of any citizen to request the use of Constitution Hall and it also reserves its individual right to grant or deny a request for its use. This fact we believe to be fully justified and is approved by us.

The Wadsworth Chapter of Middletown, Conn., on October 18, 1945, protested the action of the national board in a resolution stating—

It deprecates and deplores the action of excluding artists from the use of Constitution Hall solely on the basis of color, as not in accord with the principles of our organization or representing the sentiment of our members, and it is our hope that future action will be more liberal and more traditionally democratic.

The Mary Silliman Chapter of Bridgeport, Conn., by a vote of 34 to 4 in January 1946, submitted certain suggestions to the national board including among others:

1. That the Board of the National Society, Daughters of the American Revolution, delete the words "white artists only" from the amendment to the rules for the management of Constitution Hall, adopted on March 23, 1932—and that "artists of merit and ability" be substituted.

2. That a committee be established by the national board representing members of ability, artistry, and breadth of vision, to assist the management in determining the merit of the applicant; and that we further recommend

3. That the national society engage a salaried publicity director, to interpret to the public, the policies and activities of the national society, Daughters of the American Revolution.

The Saghtekoos Chapter, of Bay Shore, N. Y., in November 1945 went on record as follows:

The executive board of Saghtekoos Chapter recommends that our chapter protests the attitude of the national board and recommends that the words "white artists only" be stricken from the rules of management for Constitution Hall.

The Mendota Chapter, of St. Paul, Minn., at its regular monthly meeting for October 1945 adopted the following resolution:

Whereas it has come to our attention that the national board of management on October 11, 1945, reaffirmed the policy of the rule governing the use of Constitution Hall, as adopted March 23, 1932, we do protest, and recommend to have stricken from the records "white artists only," as in conformity with that which identifies itself with the best traditions of the United States and of the DAR: And it is hereby further

Resolved, That the regent, Lucia W. Armstrong and the executive board be, and they hereby are authorized and directed to forthwith direct a true copy of this resolution to the national society at Washington, D. C.

The Orford Parsh Chapter, of Manchester, on January 22, adopted a resolution calling for the elimination of the words "for white artists only" from the rules governing the use of Constitution Hall.

The Polly Wyckoff Chapter, of West Englewood, N. J., submitted the following statement to the board of governors of the New Jersey State society to the national society in Washington, and to the local press in October 1945:

Polly Wyckoff Chapter, DAR, has heard with regret of the refusal to allow a Negro artist to use Constitution Hall for a public concert.

This regret is based on the following reasons:

1. Constitution Hall is not a local Washington city possession and should not be controlled by any gentleman's agreement made to satisfy the prejudices of local Washingtonians. This hall was built by contributions from every State in the Nation and the customs of the donors have a right to consideration in the use of the building.

2. Polly Wyckoff does not believe that an enlightened public opinion is promoted by so limiting the use of this building, or that such an action fosters patriotic citizenship or aids in securing for mankind all the blessings of liberty, all of which are set forth in our ritual as the objects of our society, to which objects Polly Wyckoff has always given loyal adherence.

3. More especially do we regret the exhibition and perpetuation of racial prejudice at a time when the whole force of our Nation has been engaged in combating such prejudice and its fearful consequences the world around.

4. Our chapter has a long roster of men and women of our own families who have served, and some of whom have died, to achieve true liberty on earth. By their sides men and women of every race and color have served and suffered. To deny the use of our facilities solely on the basis of race and outworn

custom is a denial of every principle for which this war was fought.

5. Polly Wyckoff believes that the National Society of DAR should show the way in this time of crisis, in order to break down all barriers raised in our Nation which prevent true brotherhood and liberty.

Therefore Polly Wyckoff adopts this statement as its conviction that the true objects of our society are not served by perpetuating racial discrimination in the use of our buildings located in the National Capital.

A copy of this statement will be sent to the board of governors of the New Jersey State Society, to the national society in Washington, and to the local press.

The seniors of the Crosby High School of Waterbury, Conn., in January 1946, voted 150 to 80 to sustain the motion of Carol Wall to refuse to participate in the annual good citizenship pilgrimage award of the DAR because of that organization's refusal to open Constitution Hall to Negro artists.

The following editorial, which appeared in the Bridgeport Post on January 20, 1946, concerns this incident and another courageous group of high-school students in Massachusetts:

WASHINGTON DAR TAKE WARNING

Two groups of high-school students, one in Connecticut, the other in Massachusetts, have declined to participate in the annual good-citizenship contest sponsored by the Daughters of the American Revolution, on the ground that the national headquarters of this organization which controls Constitution Hall in Washington is not itself setting an example of good citizenship by the rule which bars Negro artists from the use of the hall.

The protests of these youngsters ought to awaken the DAR managers in Washington to the fact that they have taken an utterly indefensible and impossible position. It does not represent the true opinion of the rank and file of the members of the DAR. Of that we are certainly convinced.

The local chapters are beginning to express their disapproval of the use of the word "white" as a qualification for artists desiring to rent Constitution Hall in Washington. The excuse of the national board of governors that it is a local custom is a cheap and unconvincing evasion. The whole spirit of our Declaration of Independence is denied when we start to discriminate on racial grounds. And in this case the DAR has the very opposite duty. By its own principles it ought to lead in the fight against discrimination.

Here in Connecticut we have some DAR chapters taking the field in the right way. First, Eunice Dennie Burr Chapter in Fairfield, then Mary Silliman Chapter in Bridgeport, sent resolutions to their national organization asking that the stand be changed. Then the Stamford chapter, which at first had upheld the national action, reversed itself and petitioned for a change. Other chapters throughout the Nation will follow suit, we believe.

In the meantime the action of the high-school seniors has high lighted the issue so that the Washington board ought to see the point. It is impossible for the DAR to fight public opinion and to lead it at the same time. It cannot act unpatriotically itself while urging others to be patriotic.

Washington is our National Capital, belonging to all of us and if some of the local customs there are bad customs, stemming from vicious precedents and evil ways of thinking, it is time that the rest of us exerted ourselves to change them, not to kow-tow to them.

Representative CLARE LUCE, who brought the issue to the attention of the Nation by resigning her membership in Greenwich chapter (which supported the racial ban) and asking for a transfer to the Fairfield chapter which opposes racial discrimination, may have made herself unpopular with some of the Washington old ladies who chatter over their teacups but throughout the Nation there is ample evidence of growing appreciation of the courage, vigor, and patriotism of her stand.

It might also be appropriate to insert a letter which was written on December 4, 1945, by Mrs. Allen A. Johnson to each regent of Connecticut DAR chapters. Mrs. Johnson has been a member of the Eunice Dennie Burr Chapter of the DAR since 1923:

FAIRFIELD, CONN., *December 4, 1945.*

In 1942, at our National DAR Congress in Chicago, a slim slip of a girl from our Tamasshee School recited a most inspiring speech she had written and for which she was awarded the prize offered in a national contest by the American Legion. The subject of this young girl's speech was the United States Constitution. Never was I more thrilled and inspired than by that young girl and the fire of her oratory. Many times have I thought of her earnestness as she pleaded for America to wake up that "your Constitution live."

Again today her words ring in my ears and I hear her voice plead once more. This time it pleads in behalf of the Constitution that we of the DAR wake up and realize what we are allowing our national society to do by practicing racial discrimination in the renting of our Constitution Hall. Now that this question has been allowed to become what it has—a deplorable mess—our national board will undoubtedly feel the present policy cannot be changed without expressions of opinions from the local chapters. Local chapter members do make up the national society. Therefore, I am writing to ask if your chapter will not wake up and rise up and express itself in behalf of the elimination of racial discrimination as now practiced in the renting of our Constitution Hall.

Our ancestors had the courage to fight for freedom. We of the North fought to free the Negro slaves brought here by white men. Now, cannot we have the courage to urge that equal consideration be given to artists of all races? I am not asking that the standard of measurement used to decide upon the type of artistry to perform in the hall be lowered by one iota, but only that all races receive equal consideration. This is American. This is in accordance with the United States Constitution. This is in accordance with our national society, DAR objects. This is above all and beyond all—Christian.

Now is the time. Let us act courageously. No organization is stronger than its weakest policy. We have a weak policy in our society. Will not your chapter work to strengthen it? Wake up, Daughters of the American Revolution, that your Constitution live.

Very sincerely and earnestly yours,

MRS. ALLEN A. JOHNSON.

Farm Security Administration

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement on the need for the Farm Security Administration proposed by Roger Davis, an outstanding public-spirited citizen of Texas and one of the ablest and best informed men, especially on this subject, I have ever known. He has a lifetime record of unselfish service for the low-income group of farmers. It is as follows:

LONGVIEW, TEX., *December 26, 1945.*

To: Mr. Ted Watson, Assistant Regional Director, Dallas, Tex.

From: Roger Davis, District FSA Supervisor, District I—Bowie, Camp, Cass, Franklin, Gregg, Marion, Morris, Red River, Titus, and Upshur Counties.

Subject: Reasons why a rural rehabilitation program is essential to our democracy.

I. WHY A RURAL REHABILITATION PROGRAM?

Unfettered, trained thought expressed through universal franchise is essential to the development and success of our democracy. These cannot be without economic independence. Neither can economic independence exist without them. The purse strings are the greatest factor in economic success, freedom of thought, and universal franchise. This is especially true with reference to a large percent of the farm families who are more isolated than other groups.

Shall the power of the "filthy lucre" be conducive to the social, economic, and political development of these families or shall it be used to suppress the essentials to our democracy? It depends wholly on whether the group holding the purse strings are interested in the development of the families or interest income on loans.

II. WHAT IS NEEDED AND HOW MANY FAMILIES NEED IT?

Census figures for 1935 in district I are 28,909 farms; 1940, 23,766; 1945, 22,546. There are now 78 percent as many farms as in 1935. Each farm family used only 50 percent of the land they used in 1935. A 50-percent reduction by 78 percent of the families is a 36-percent reduction of the whole. Twenty-two percent reduction of families effects 22-percent reduction of land used. Twenty-two percent plus 36 percent equals 58-percent reduction in acres of land used since 1935. These figures are fairly accurate and corroborate results of surveys by AAA and other estimates.

A. How many farmstead building units?

There are now no farmstead building units vacant. Five percent of the 22-percent decrease of farm families are now back and need farmstead building units. This is 1,000 farmstead building units. One thousand more couples have attained family status and need farmstead building units. This is a total of 2,000 in 10 counties or an average of 200 farmstead building units per county now needed. Fifty percent, or 11,000 of the existing farmstead building units, are in need of major repairs.

There will be 100 couples per county annually attaining family status and needing farmstead building units. There is no other private or Government agency set up to adequately and satisfactorily provide funds and leadership to meet this demand than FSA.

B. How many need loans to buy farms?

There are now 10 tenant families per county qualified for farm ownership who cannot buy farms other than through the Bankhead-Jones or GI bill of rights provisions. There will be 20 annually per county of veterans and nonveterans who will qualify and cannot be adequately financed other than as above or similar provisions.

C. How many other farm families need money and assistance in farm and home management?

1. Fifty percent, or 11,000, of the farm families of the district will fail to have adequate medical and hospitalization services if deprived of FSA financing and supervision.

2. At the present rate, 60 families per county, or 600 families, will have obtained initial loans and arrangements made for assistance in farm and home management for

1946. A conservative estimate is double this or 1,200 families who will need initial loans and supervision in 1947. This estimate of 600 and 1,200 is based on needs for tools, machinery, power, livestock, and supplies.

Only 5 percent of the farms of the district have adequate farmstead water systems. Twenty-five percent, or 5,000, of the farm families will install farmstead water systems under the FSA water facility plan as fast as they can be contacted and arrange for the loans.

All of the above families who need loans and supervision for the above purposes need assistance and will accept leadership in increasing incomes to support an acceptable standard of living, improved health program, improved food production, conservation and use, improved home furnishings and equipment, and home management.

There are now 1,300 active standard and 150 FO borrowers in the district. Additional loans and supervision are essential to the success of 90 percent of these.

D. Round number summary of needs. The urgent need is information and assistance in farm and home management. This is the first need, and then loans are needed to execute the new ideas and farm and home plans. Fifty percent, or 11,000, of the farm families are in dire need of the FSA services. There will be an additional 200 or 300 families annually per county. FSA is the only private or governmental set-up which can render this service.

III. FAMILY-TYPE FARMS AND DEMOCRACY OR LARGE COMMERCIAL-TYPE CORPORATION FARMS, PEONS AND PLUTOCRACY?

The dawn of the day is here when heavy farm machinery and power must supplant small tools and power. It will be done either by corporation farming or special loan provisions coupled with education and supervision so that groups may own and operate large machinery units to do the heavy work of brushing, breaking, and processing for family-type farms. The FSA group service loans with supervision give the only answer as related to the low-income family type farm group.

IV. MAJOR REHABILITATION BENEFITS TO BORROWERS

A. Loans and collections: There have been a total of 7,000 RR loans made in district I. The total advances were $5,050,000 and the total collections were $4,000,000 as of November 30, 1945.

B. Production increase and quality improvement:

1. Six thousand of the 7,000 borrowers have increased the volume and improved the quality of their products. Ten percent of them have used better sires, 50 percent better poultry, and 75 percent better seed for field crops and gardens.

2. One thousand borrowers made substantial progress in 1945 in feed production. Five hundred and seventy-one made satisfactory progress in grain production, 499 in hay production, and 79 in special protein production. Five thousand of the total 7,000 borrowers have improved their feed production.

3. Four thousand five hundred borrowers improved their soil management by using more and better fertilizers, planting winter cover crops, and summer legumes, terracing, and draining.

4. A uniform package of vegetable insecticides has been bought by contract. Forty percent of the borrowers have participated during the last 4 years.

C. Better farm and home equipment: Six thousand borrowers have used better farm and home equipment as a direct result of supervised FSA credit.

D. Year-round balanced supply of quality food:

Ninety percent of families have made commendable improvement in production and conservation of food. Greatest improvement has been made in increased production of milk, eggs, and meat and in canning vegetables. Emphasis is being placed on production of year-round vegetables to eat fresh and on balanced fruit production.

With increased production has come improved preparation of food, however, the preparation of food containing maximum food value remains a major phase of the program.

E. Health: Forty percent of FSA families have been benefited by prepaid medical care program including hospitalization. Twenty-five percent of families have been led to improve the sanitation of water supplies and an equal number to improve sanitation of toilets.

Statement of Hon. Claudius Dickson, President of the Red River Valley Improvement Association and Chairman of the Caddo Levee Board to the Rivers and Harbors Commission

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Mr. Chairman and gentlemen, in 1925 the people of our valley organized the Red River Valley Improvement Association. The association is just what its name indicates—the grouping of many of our citizens for the purpose of improving conditions in the States of Oklahoma, Texas, Arkansas, and Louisiana bordering on Red River.

One of our major problems, affecting practically every part of our valley and much territory adjacent to this valley, is adequate cheap transportation. We are advocating and supporting the plan for canal navigation to Shreveport because we recognize this method of supplying navigation as the most practical, and realize that the problems entering into the navigation of Red River proper from Shreveport south can be avoided by using the proposed canal system.

Our association has made a careful study of every phase of our proposal, and as a representative of the association, I request that consideration be given to the evidence we propose to submit to your honorable Commission, and hope you will believe me when I say that we have made a sincere effort to present figures and facts without exaggeration.

In assembling facts we have been guided by skilled engineers, rather than by professional promoters, and we were told by General Tyler at the beginning of our hearings that he did not want a proposal built on sand or idle dreams, but on solid rock in the form of facts and figures developed by exhaustive engineering research by trained engineers such as Mr. Pyburn, Mr. Odom, and their associates, and by such traffic experts as Mr. Wilson and others associated with him.

Our entire valley, one of the most fertile in America, has a vital interest in navigation to Shreveport. We are prepared to take full advantage of this navigation, should we get it, and by "we" I do not refer to Shreveport, Louisiana, but the hundreds of miles of bordering territory that will be directly benefited by this major improvement.

Our people have asked little from the Government, and we feel that we have taken our part in every major movement, both in war and in peace. We do not believe we are asking for a donation, but merely for an opportunity to develop one of America's greatest valleys and one that has tremendous possibilities for agricultural and industrial growth.

We are confident that when the canal waterway to Shreveport is completed we will have many private and semi-private barge lines using this waterway. The evidence we propose to place before you at this time does not cover the activity we are practically sure of having and does not allow for any benefits other than those we know we can have and that we are prepared to develop.

While the development of the proposed canal system will be a wonderful help to Shreveport and the territory adjacent to northwest Louisiana, it will be a tremendous benefit to the vast area from Alexandria north, including Natchitoches, and other cities and towns on Red River. We know you recognize this project as interstate in character, though it is, of course, intrastate insofar as the present navigation proposal is concerned. We believe that the people of Texas will derive as much benefit as will the people of Louisiana and that the people of Arkansas and Oklahoma will be benefited proportionately, though necessarily to a smaller extent unless, and until, navigation is developed westward and northward from Shreveport.

Our group appearing before you today is small in number but representative, I believe, of our section. We know you gentlemen can, and will, pass on the merits of our proposal. We know you are extremely well qualified to judge and weigh the evidence we will present. I have purposely avoided any attempt to discuss professional facts and come before you today at the request of many thousands of our citizens in the four States represented in the hopes that you will know that we are enthusiastically behind navigation to Shreveport, that we stand ready to support the development of our area in every way possible, and that we are so thoroughly sold on the possibilities of our section that we guarantee the development of a major inland port when you gentlemen give us the opportunity by developing canal navigation to Shreveport.

Thank you very much for allowing me the privilege of appearing before you.

Veterans' Problems

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein some very important and significant resolutions recently adopted by the Massachusetts Department of the American Veterans of World War II—Amvets.

The membership of this militant servicemen's organization in Massachusetts is composed largely of founders and charter members of Amvets and has exhibited vigorous, far-sighted interest in the problems of the veteran. It is noteworthy that they make no extravagant demands upon the Treasury, that they present their views in an able, temperate manner.

I hope that Members of the House will carefully read these timely and well-considered resolutions:

AMERICAN VETERANS OF WORLD WAR II ADOPT RESOLUTIONS AT FIRST CONVENTION—RESOLUTIONS SUBMITTED BY THE RESOLUTIONS COMMITTEE OF THE AMERICAN VETERANS OF WORLD WAR II—AMVETS—DEPARTMENT OF MASSACHUSETTS, TO THE FIRST CONVENTION OF THE DEPARTMENT OF MASSACHUSETTS, HELD AT THE COPLEY SQUARE HOTEL, BOSTON, MASS., ON DECEMBER 1 AND 2, 1945, AND PASSED BY THE DELEGATES AT THAT CONVENTION ON DECEMBER 2, 1945

We, the American Voters of World War II, Amvets, of the Department of Massachusetts in convention assembled have declared in the preamble of our constitution that we, "fully realizing our responsibility to our community, State, and Nation, associate ourselves for the following purposes: To uphold and defend the Constitution of the United States of America; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of perpetual peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy and Americanism; to perpetuate the friendships and associations of the great war of liberation; and to dedicate ourselves to the cause of mutual assistance, this by the grace of God."

We must always bear in mind that in all we do, or say, or think, the public will feel that we speak not alone for ourselves but for those who died that we might live and for those who are still in service, whether here or abroad. Hence, we must give careful consideration to what we do, or say, or think, for upon us rests a heavy burden. But in discharging that burden we must not be afraid to express ourselves definitely and unequivocally upon the large issues which face us, provided, however, that we are sincere and honest and base our conclusions upon a full knowledge of all the facts. If we do that we shall merit the attention and respect of all America. Hence, let us speak fearlessly but with dignity and sincerity.

We owe it to the dead to see to it that the ideals for which they fought and died shall be perpetuated and fully realized. We cannot and must not betray them. We solemnly declare that we will speak for them for that purpose.

We owe it to the disabled veterans who fought and suffered and yet by the grace of God do live. We cannot and must not deny them our undying devotion. We will speak for them.

We owe it to those still in the armed forces who cannot yet speak their minds fully and freely. We cannot and must not let them down. We will speak for them.

But in speaking for them and ourselves we must never forget that we are American citizens first. We fought to preserve a whole Nation. Now we must work for all America. Our duties as American citizens are paramount. We must act and speak for the common welfare and for the good of all.

Yet it must be remembered that the common welfare of our society depends on the welfare of the individual, that injury to him is injury to all; that the denial of the rights of the individual eventually lead to a denial of the rights of all. Hence we declare that the welfare of 14,000,000 veterans is inextricably bound up with the welfare of all America.

What do we want? We make no extravagant demands. We do not want or ask for hero worship. We do not want or ask for charity, for alms, for gifts, or philanthropy in any form.

We are here to see that we as veterans receive what we are justly and honorably entitled to.

Are we entitled to a better world to live in?

Are we entitled to live as free American citizens in a free and democratic society?

Are we entitled to a place in our community without regard to race, color, creed, or station in life?

Are we entitled to a decent job with fair wages?

Are we entitled to equal opportunities of employment, of business and other endeavors?

Are we entitled to a decent education, proper living conditions, proper housing, proper food, proper medical care?

Are we entitled to live in a world of peace, of mutual understanding and appreciation and trust?

Are we entitled to live in a world without fear of want, suspicion, hatred, and discrimination?

Are disabled veterans entitled to the best medical care and the best rehabilitation?

Are the dead to be forgotten?

Have we asked for too much?

We have faith in America. They will not forget us. For if the dead and the living of us are betrayed by the society which we sought to save, then civilization, too, will have been betrayed. That must not and will not happen, so help me God.

With those principles and ideals before us we approach our task.

(1) MILITARY TRAINING AND UNIFIED COMMAND

Whereas we recognize the need of preparedness for the adequate defense of our country but believe that we do not have sufficient facts at this time upon which to form a fair opinion and that that problem is part of a greater over-all national program which also involves our participation in the United Nations Organization: Therefore be it

Resolved, That the whole question of universal military training and unified command be deferred until the rights, duties, and obligations of this country and the other great powers under the United Nations Organization are clearly defined, and that in the meantime—

(1) voluntary enlistments be stimulated by adequate pay, attractive living conditions, pensions and opportunities for vocational and other training; and

(2) the President appoint a national defense commission, adequately financed and directed to formulate a comprehensive plan giving

(a) the number of men required as a standing army;

(b) proposed commitments to the United Nations Organization and our rights and duties thereunder;

(c) whether the necessary armed forces can be obtained by voluntary enlistments;

(d) the cost of the various plans of universal military training;

(e) a proposed reorganization of the armed forces to make it more efficient, scientific, democratic, and humane;

(f) recommendations for the cooperation of industry and labor for defense purposes, stock piling of strategic materials, conservation of national resources, scientific research, and any other subjects which affect the national defense.

(3) Such a commission shall be composed of persons known for their integrity and ability, special knowledge, and experience with large affairs, and chosen from military, diplomatic, legislative, industrial, labor, veteran, scientific, educational, and religious organizations and other walks of life.

(2) COURTS MARTIAL

Whereas it is the opinion of veterans, both enlisted men and officers, and many other competent authorities that the system of courts martial as practiced in our armed services is archaic, harsh, arbitrary, discriminatory, and not keeping with democratic principles and that the sentences imposed in many cases are harsh and constitute cruel and usual punishment contrary to the Constitution of the United States: Therefore be it

Resolved, That the system of courts martial be recognized on the following principles:

1. That military courts be composed of men trained in the law.

2. That the judges be appointed by the President and be accountable only to him and the Congress.

3. That at least one judge of the court be a civilian and one an enlisted man.

4. That prosecuting and defense counsel be trained in the law.

5. That defense counsel be members of a separate department of the Government.

6. That the defense counsel be appointed to represent the accused immediately upon the accusation in the event the alleged crime is serious.

7. That a Federal court of appeals be established to review, approve or disapprove all felony convictions; and be it further

Resolved, That a soldier's history in civilian life be taken into consideration in imposing sentence; and be it further

Resolved, That sentences be made more humane, uniform, and more definitely defined as to maximum punishments; and be it further

Resolved, That cases in which sentences have already been imposed be reexamined by competent counsel.

(3) VETERANS' ADMINISTRATION

Whereas, as a matter of practice, veterans of World War II are not being given their fair share of positions in the Veterans' Administration and other governmental agencies, whether Federal, State, or city: Therefore be it

Resolved, That the Veterans' Administration and the other governmental agencies be requested to place veterans of World War II on a par with all other veterans in the matter of appointments to positions in the Veterans' Administration and other governmental agencies.

(4) COST OF LIVING

Whereas the returning veteran has found the cost of living entirely too high for his means; and

Whereas there exists surpluses in many commodities: Therefore be it

Resolved, That the Federal Government, the respective States of the United States, and the municipalities immediately establish plans to reduce the cost of living, to rigorously enforce the rules and regulations of the OPA to cut out black marketing, and to distribute the surplus commodities to the public at a fair and reasonable price.

(5) HOUSING

Whereas the returning veteran and the public have not been able to find proper or adequate housing; and

Whereas there exists a real shortage of housing on a large scale which, if permitted to continue, will endanger the morale and health of the veteran and the public and lower our standard of living: Therefore be it

Resolved, That the Federal Government, the respective States of the Union, and municipalities immediately establish concrete plans to remedy that situation, and, in furtherance of these plans, to promote Government and community large-scale, low-cost housing projects, to encourage private building, and to reduce the cost of building private homes and maintaining them; and be it further

Resolved, That the President and the governors of the respective States call an emergency conference of Federal, State, and city housing officials, representatives of labor, the building industry,, landlords, veterans, and other persons interested to formulate those plans and to report the same within 1 month; and be it further

Resolved, That in the meantime all heavy construction, except for industrial purposes, be suspended until the housing problem is met or solved; and be it further

Resolved, That the various communities make an immediate inventory of all houses which are abandoned, unoccupied, vacant, or closed, and then to determine whether those houses can be repaired or remodeled

into decent apartments for returning veterans and the public.

(6) SURPLUS PROPERTIES

Whereas the returning veterans have not been accorded fair or proper treatment in the disposal of surplus properties of the Federal Government and in fact have been unable, in most instances, to obtain the said surplus properties at all or within a reasonable time; and

Whereas dealers have been able to obtain said surplus properties in preference to and to the exclusion of veterans contrary to the intent of Congress; Therefore, be it

Resolved, That each department of the Federal Government which disposes of surplus properties be required to accord preferential treatment to veterans in the disposition of said properties in accordance with the intent of Congress and to see to it that such properties are available for sale to veterans and are definitely produced within a reasonable time after a veteran applies for the same.

(7) MEDICAL HEALTH

Whereas President Truman has sent a message to Congress outlining a five-point health plan aimed at providing the American people with the right to adequate medical care and the opportunity to achieve and enjoy good health; and

Whereas the five points of the plan provide for:

1. Increased Federal aid for constructing needed hospital and other facilities.
2. Expansion of public health, maternal, and child-health services.
3. Increased education and research for the medical profession.
4. Compulsory health insurance; Therefore be it

Resolved, That we support President Truman's health plan and request the Congress to act upon it as quickly as possible.

A Great and Rich Valley

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of W. Harry Johnson before the Board of Engineers for Rivers and Harbors on the Red River lateral canal, Washington, D. C., January 14, 1946:

General Crawford and members of the Board of Engineers for Rivers and Harbors, neglect of some of Louisiana's rivers and small streams—in particular the Red River—and the failure to recognize their economic value, has cost the citizens of that State many millions of dollars, and set industrial development back one-third of a century.

There was a time when the Red River, traversing the rich valley from north Caddo Parish to its confluence with the great Mississippi, was one of the most important and valuable transportation arteries in the Nation.

In the days when cotton was king, when the rich lands along the Red River yielded hundreds of thousands of bales of the fleecy staple every year, the river provided the only means for transporting this valuable cargo to market, as well as returning into the areas from which these shipments were made the products of manufacturers and processors from every part of the United States.

In an earnest endeavor to present my argument to this Board I find it expedient to indulge briefly in a few personalities.

Because of my life-long residence in the district under discussion and my great interest in the matter, I shall beg the kind indulgence of the board toward my injection of a few references of a more or less personal nature.

If it were not for the fact that at one time the Red River was navigable as far north as Shreveport and some distance beyond, this witness would not have appeared before your board today. Among the earliest pioneers of north Louisiana were my forebears on my father's as well as my mother's side, and their migration to the State of Louisiana was due to the well-developed river transportation in that section of the South during the first half of the nineteenth century.

James Blair Gilmer, my maternal great-grandfather, first landed in this year 1840 at a point on the upper Red River which was subsequently called Gilmers Landing. He used this landing as transportation headquarters in operating a line of steamboats to and from New Orleans. The town he settled was called Collinsburg and was located in the hills of Bossier Parish, a few miles from Gilmers Landing.

My paternal grandfather, Col. Benjamin May Johnson, settled at Shreveport in 1850, and he used steamboat transportation exclusively in handling his extensive commerce from New Orleans to Shreveport, La., and Jefferson, Tex., in both of which busy townships he operated large mercantile establishments.

In the early 1900's Shreveport was still benefiting from low river-freight rates, and as a result was recognized as a rate-breaking point and a distribution center of considerable importance. Due to this fact, this witness organized a transfer, warehousing, and distribution business in the growing city of Shreveport in the year 1907.

However, due to governmental neglect of the maintenance of this important waterway, the traffic on Red River gradually diminished year by year, the channel becoming too shallow, except at flood stage, to accommodate river steamboats, and in 1924 your witness was forced to transfer a part of his business from Shreveport to Monroe, La., where he established a similar business, with warehouses and other facilities on the banks of the Ouachita River.

Soon after the establishment of this enterprise at Monroe, Mr. Fred Stovall, and associates of that city began the operation of a regular barge-line service between Monroe and New Orleans, La.

This was made feasible by the building of locks on the Ouachita River by the Federal Government, which furnish Monroe and the Ouachita Valley with a 6½- to 9-foot channel depth, which was adequate for steamboat and barge transportation.

It was through my connection with Mr. Stovall's barge-line service that I became interested in river transportation, but we soon realized that the operation of wooden barges with prohibitive marine insurance rates, added to the excessive cost of operating steamboats to tow these barges, rendered this business unprofitable and for these reasons this company was dissolved.

However, during the entire time that Mr. Stovall and myself were operating the original barge line, we realized that the long-range picture was favorable in the matter of tonnage, for we were handling 100-percent barge capacity from Monroe to New Orleans, and 90-percent capacity upstream from New Orleans to Monroe, with a 20-percent differential in barge-line rates under rail rates.

Later Mr. Stovall, myself, and associates formed the Commercial Transportation Co., a barge service, using Diesel towboats and 800-ton steel barge equipment.

The saving on marine insurance, using steel instead of wooden barges, liquidated the original cost of the steel barges in 4½ years, and the use of Diesel-powered towboats, instead of the obsolete coal-burning steamboats, liquidated the original cost of the Diesel towboats in 4 years.

With this new Diesel and steel equipment, with its low operating cost, this company paid substantial dividends until it was sold at a good profit to a competing firm.

If the proposed lateral canal project, with a channel depth of 9 feet, becomes a reality, within a reasonable length of time I will, without hesitation, be willing to organize a corporation with adequate financial resources to assure the utilization of this canal facility to its fullest possibilities, thereby assuring this area low-cost water-borne transportation between the great port of New Orleans and Shreveport or wherever the terminus might be at the northern end.

I am, furthermore, positive that this service can be rendered and can be made to pay a reasonable profit at much lower rates than now prevail through existing transportation facilities.

Our people see in the Red River lateral canal project how such streams as Bayou Pierre, Bayou Rapides, and Bayou Boeuf, and other similar streams can be utilized to form a lateral canal which will be of benefit beyond estimation to the citizens of Louisiana and the Nation.

Such a project as is proposed in this program is a definite necessity to this section of the United States.

Industrialists have learned that Louisiana has much to offer to those seeking locations where climate makes possible all-year-round operations, and where labor, both skilled and unskilled, is plentiful.

There is an additional angle to this proposed canal project which I hope this board will also seriously consider.

Let us suppose that this canal was in existence at the time of Pearl Harbor.

The heavy concentration of war industries and the utilization of the vast oil and gas reserves in the Arkansas-Louisiana-Texas area would have been far more extensive and of even greater benefit to the Nation in the recent national emergency had this additional water transportation been available for the movement of the products of war industry, so vital to the Nation's defense. And it should not be forgotten that there are still, in this area, great industrial manufacturing facilities which can be quickly converted to ordnance production in any future national emergency.

Any weighing of the benefits expected from this canal project, must, in my opinion, take into consideration its possible and probable wartime advantages.

Observation of the large industrial producing areas of both this country and Europe will show beyond question that the full economic strength of any area or country can only be realized when transportation of every kind is available. The idea that the availability of only one means of transportation is adequate for full economic development is not only antiquated but can be dangerous.

And in conclusion, while it may appear that my entire argument has been to prove the necessity for river and canal transportation between the two largest cities in the State of Louisiana—New Orleans, which is one of the Nation's greatest ports—and Shreveport, which is the recognized center of the vast Arkansas-Louisiana-Texas area—I by no means desire to convey the impression that this is my only concern.

As a resident and large landowner in Caddo Parish, lack of flood control of Red River has quite recently been brought forcibly to my

attention, for the 1945 high water in this valley inundated 3,600 acres of my 4,000-acre plantation, which is located 8 miles north of Shreveport, causing heavy financial losses to me as well as to other planters in that section.

My argument and contention is that it is going to be absolutely necessary that the Federal Government work out a satisfactory drainage program and flood control, along the line of the development of this proposed lateral canal; and, if this is accomplished in the near future, instead of killing the proverbial two birds with one stone, you will be killing three birds with one stone, for, the completion of this great undertaking will bring about at once, flood control, adequate drainage, and economical water transportation through the development of the proposed lateral canal project.

Strike Legislation

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Sun, San Bernardino, Calif., for January 22, 1946:

STRIKE LEGISLATION

Legislation for some measure of control of the industrial situation by the United States Government is not likely to be what Mr. Truman has requested and thinks it ought to be. Current announcement by Representative LANDIS indicates the situation is such as to discourage Mr. Truman, whatever he is able to do about it.

What the President has asked the people of the United States to stimulate the Members of Congress to put into law was something similar to the Railway Labor Act. That legislation provides the railways and their employees before a strike is called and during which a fact-finding board will go into the situation to make a report to the President.

That impressed the occupant of the White House as a solution of the existing situation, but it was greeted by both industry and labor with no cheers at all. His appeal to the people, via radio, that they put the heat on their representatives while they were home for the Yuletide holidays seems to have been not what he hoped.

In any event, what the President apparently is going to get is not what he wanted, although it is not quite impossible that he may be able to get some change in the set-up.

What Congressman LANDIS says he has enough votes in the committee to get out on the floor of the House of Representatives is a measure President Truman has regarded as wholly without teeth. The legislation Mr. LANDIS says apparently suits Congress does not contain any provision for a cooling-off period nor does it compel either industry or labor to accept the results a fact-finding board the law will set up after they have been reached.

Mr. Truman is likely to regard that summary of the proposed legislation as merely an opportunity for the members of the fact-finding boards to get an expense account. It is not unlikely industry and labor will take the same attitude. When Congress gets around to getting the bill out of committee and on the floor and then votes upon it, we shall see what we shall see.

Whatever occurs, recalling a bit of United States history might give us all a better perspective of what is going on. The listener-in on casual conversations gets the notion that most of our people think nothing like this has ever happened before in this democracy. That is profoundly in error.

The wave of strikes now spreading over the Nation does not impress anybody who can recall that situation much more serious than the strike wave which followed the end of World War I. For one thing, while we may not feel we have been spared very much in the way of industrial turmoil, we have not had up to this time a coal strike or a rail strike. Those were both on the industrial program following the First World War. That was in 1919.

The mine workers that year demanded a 60-percent wage increase and a 6-hour day. When the demands were rejected, a bituminous coal strike of about 435,000 miners went into effect for 6 weeks. The Government got two injunctions against the strike, but the miners ignored them. Then a court order was issued directing the end of the strike and the order was obeyed. But the miners did not go back to work because it was the American tradition then, as it is now—that men cannot be forced to work against their will.

Finally, the miners accepted President Wilson's proposal of a small wage increase followed by a wage investigation. Several months later the investigating commission recommended wage increases averaging 27 percent over the prestrike levels. Both sides accepted the finding.

That same year, 1919, 250,000 railway shopmen went on a strike asking wage increases of 17 cents per hour to meet the rise of living costs. After much discussion and a lot of wildcat strikes, the full 17 cents per hour increase was allowed.

There was also a great steel strike in 1919 involving 365,000 workers. There were strikes among building trades, among textile workers, among silk workers, and clothing workers. In fact, the total number of men involved in strikes and lockouts in 1919 was estimated by the Department of Labor as 4,113,000.

The facts set forth above are worth remembering. The Government still stands and ours is still the greatest industrial Nation on earth. Whatever happens, we go forward, and that is a good point to remember.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following article from the New York Times of February 3, 1946, entitled "Explicit Word Awaited on Our Foreign Policy":

EXPLICIT WORD AWAITED ON OUR FOREIGN POLICY—PEOPLE OF THIS AND OTHER NATIONS HOPE WE WILL LAY DOWN A CLEAR, STRONG COURSE ON WORLD ISSUES—OCCUPATION ROW AN EXAMPLE

(By W. H. Lawrence)

WASHINGTON, February 2.—There was abundant evidence this week that the people of the United States and of many nations around the world needed and would welcome a new and explicit definition of long-range American foreign policy.

They wanted something which would go beyond a general declaration that we favored peace, prosperity, progress, and freedom for the world. They wanted to know our definite aims and interests in nearly every country around the globe, and they wanted to know, as well, the principles which we considered inviolable by ourselves, by our friends, and by our enemies.

The need for such a clearcut statement was probably greatest in relation to our aims in Germany and Japan and the reasons for retaining sizable occupation forces in those countries and surrounding areas for a considerable period of time. American objectives hadn't been made sufficiently clear to win the support either of the people in the United States or of the occupying troops abroad—for the ceaseless cry which went up from both sides of the Atlantic and the Pacific was "bring the boys home."

ECHO OF WORLD WAR I

And to those who did know and understand the postwar aims of American forces in Germany and Japan this continual and effective agitation was tragic, for it seemed to presage a repetition of what happened after World War I when we pulled out of Europe before we had accomplished our job.

Within the administration itself there seemed to be urgent need for such an explicit definition of foreign policy which would stand the test not alone of months but of years. There was confusion and bickering and considerable evidence of snap judgments on vital issues—decisions made, reversed and revised without any reference to an over-all plan of advancing the long-term interests of the United States abroad.

Consciously or unconsciously, President Truman, at his latest press conference, revived talk about his strained relations with Secretary of State James F. Byrnes. It was not so much what the President said but the manner in which he said it that led the Washington Post to headline its report, "Truman flares up to stress he is boss of foreign policy," with a black-face note: "South Carolina papers please copy." (Secretary Byrnes, of course, is from South Carolina.)

There was also the matter of the secret agreement made at Yalta nearly a year ago in which the late President Roosevelt and former Prime Minister Churchill agreed to hand over to Russia the Kurile Islands group then occupied by Japan, with which Russia was not at war at that time.

That agreement was so secret that Mr. Byrnes, who was present as a Presidential adviser but not yet as Secretary of State, said he did not learn of it until after the Japanese surrendered last August. Mr. Truman, who was Vice President at the time, but who did not go to Yalta, said he did not learn of it until just before the Potsdam Conference last July.

The Yalta agreement on the Kuriles also gave new strength to those in Washington who would have the United States annex former Japanese-owned or mandated islands in the Pacific conquered by American forces in this war and whose continued occupation and fortification is considered essential to the future security needs of this country.

POLICY ON ISLANDS

At least tentatively, the administration policy has been that such islands as are considered vital will be placed under exclusive United States trusteeship in accord with the strategic area clauses of the United Nations Charter, and the others will be turned over to the UNO trusteeship council for appointment of multi-nation trustees.

When that proposed course of action was outlined by President Truman, speaking extemporaneously, about 2 weeks ago, it immediately aroused considerable opposition on Capitol Hill.

Whatever may be the merits of annexation versus individual trusteeship of Pacific bases which we desire to hold, the debate on the issue has made it undiplomatically clear that we propose to decide the island issue on a unilateral basis, and that if one of the other permanent members on the UNO Security Council sought to use its veto power to block an American proposal relating to one of the islands, we would withdraw the proposition from UNO consideration and continue to occupy the island by right of possession.

Those who recognized the need for a new and explicit definition of United States foreign policy are concerned not so much with individual and immediate problems such as have been discussed above but more with the long-term objectives of our relations with other countries throughout the world.

NO RUSSIAN POLICY?

What, for example, is our Russian policy? Of course, it basically is that we want peace and friendship, and it is founded on the presumption that the peoples of the Soviet Union basically desire peace and friendship with us. But, assuming the continuance of peace and friendship, have we no other objectives?

Do we have economic interests in either expanding Soviet purchases in the United States, or American purchases in Russia? Do we have cultural interests? What other interests have we in Russia or the Russians in us?

It is argued that in drafting such a Russian policy it would be well to draft simultaneously a policy for the states immediately covered in the Russian security belt—such as Finland, Poland, Rumania, Bulgaria, etc.

It is contended that if we were thus to reduce to specific terms the guide posts for American policy and conduct, and that if, in response to such a declaration from us, the Russians were to make similar propositions, the two states and others with similar interests could try to iron out differences and prevent disagreements before they arise in acute form.

SHORT-WAVE BROADCASTS

Currently, the State Department is considering a recommendation from W. Averell Harriman, retiring United States Ambassador to Moscow, that this Government should undertake short-wave broadcasts in Russian to give the peoples of the Soviet Union a complete and accurate picture of the United States.

A decision on such a question obviously should be made only within the framework of our over-all Russian policy. Simple though it may seem, it is in fact very difficult to answer because the Russian Government's attitude is that the people of the Soviet Union should have only such information as their Government wishes them to have.

Because our concepts of free speech and a free press differ, it probably would not make any difference to the Russians if we were to cite as justification the fact that they make similar broadcasts about Russia beamed to the United States in English.

Clarkson College

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD an address delivered by Mr. Charles E. Wilson, president of General Electric Co., at a dinner meeting of 275 of the alumni of Clarkson College of Technology, of Potsdam, N. Y., in the Hotel Roosevelt, New York City, on the night of Saturday, January 19.

Mr. Wilson is a member of the board of trustees of Clarkson College, an engineering institution which recently celebrated its fiftieth anniversary by conferring honorary degrees on Herbert Hoover, former President of the United States; former Ambassador Joseph E. Davies; and other distinguished citizens.

Clarkson is a splendid example of the American system of free education. During its 50-year span it has been supported entirely by the gifts of enlightened private citizens, by the tuition fees of its students, and from sound investments made by its administrators. It has been a free college, graduating 2,000 fine men into the stream of American technical and business life, because it has depended on itself and not on the bounties of the Government.

A former colleague, Hon. Bertrand H. Snell, remembered by so many of us, was for 25 years president of the board of trustees of Clarkson College and is still a very active member of the board.

It was very fitting that the president of one of our greatest engineering and scientific concerns should talk to the Clarkson alumni, which is composed of men who are forging new scientific frontiers. It is worthy of note that many Clarkson men were chosen to work on the development of the atomic bomb.

Mr. Wilson's constructive and temperate address follows:

Just about a year ago things were very different with us. So much has happened to the United States of America in 12 months, so much that will be written in bold letters down the years by historians, that it seems almost inconceivable. Three years of World War had shocked and hammered us into the greatest fighting and producing machine that the world has ever seen—or ever will see, for that matter, because by the very nature of things that kind of war will never again be waged. In spite of our armadas of thousands and thousands of planes, in spite of a fleet grown to such proportions that the mighty British Navy became little more than one of its associated task forces, in spite of radar, and jet propulsion, and rocket bombs, and bazookas, and a thousand other refinements and progressions in the art of destruction, this was a conventional war, conceived and directed along traditional lines, with the marshaling of defense and attack and the measuring of force by force, steel against steel, and man against man. It was a tremendous, deafening, catastrophic, tragic spectacle—but differing only in degree from those which preceded it in human history.

A year ago we were very tired of war, tired of our mounting dead, tired of the everlasting effort required to hold up our end, physically tired of the vast expenditures of courage and determination, tired of frustration and deprivation. And the end, if you will remember, did not seem so very near. In Europe our armies were battered and bruised from the Battle of the Bulge, and at home our confidence was shaken. In the Pacific we were heartbreakingly far from our goal. If we had one great holiday wish, as a Nation, it was to be rid forever of this conflict in which we were engulfed—rid of it victoriously, to be sure—but rid of it nonetheless.

Then, in a few short months, the miracle had happened and we had our wish. We have it now, this peace for which we fought so hard. We are standing on the threshold of the golden age, the rude blueprints for which we used to inspect and redraft furtively during the battle, in order to keep up our spirits and remind ourselves that things were going to be better, just over the hill. This is our peace—how do you like it?

There is only one thing that brings such a group as this together, or any group of alumni from an institute of higher learning, and it is not pure nostalgia or simple gregariousness. You are here because you are a product of the organized itch for knowledge, richly endowed by generations of tough-minded men who were not content with the status quo, either in the world at large or within themselves. You are here not simply because you went to school and want to recall some of the gifts and experiences which resulted—but because of the conviction that others must follow you, now and next year and next decade, and the traffic along this highroad must never cease to move forward. Particularly in your case, it seems to me, you are here because of the future which is unfolding, and not merely to commemorate the past with social pleasantries. And tonight—how do you like as much of that future as you can see?

All of us have earned our honorary degrees as doctors of hindsight, or almost all of us. There is still a frighteningly large group who have even "flunked" that course and who have not revised their political or economic or sociological thinking by so much as a footnote. They are useless and unpleasant citizens, but not dangerous. Let them lie.

As for the rest of us, we should not discount hindsight too much, especially if it is of the honest, amateur kind. We know now that many of the paths we followed in business, in practical politics, and in education, were wrong in many respects, but they had this virtue, that they did carry us forward. Technical and scientific men were perhaps the least offenders and the greatest ground gainers. They have gone farther and straighter than most because they were dealing with nature in the raw and not so much with nature in the so-called refined, or human, state. But even the men of science have had a nasty jolt. Their assiduous researches have led them straight to the secret of atomic energy, and their achievement has at least temporarily scared their fellow beings and many of their colleagues into a jelly of apprehension. If the world were to vote today to turn back the clock to before Hiroshima, I am not at all sure but what those in favor would be in the majority.

And yet that is a very foolish thing. Dr. Gallup can measure human forces but he cannot stay or undo them. We long ago drew the lines and put in motion the forces which led us surely and inevitably to the atom bomb. Now we must live with it and meet the new challenge which it offers before it destroys us. Just as long ago some of our nonscientists drew the lines and put in motion the forces which today have threatened to paralyze and demoralize our whole economic system. If a million men walk the picket lines in America, and their savings, and industry's resources, rust and rot and disappear, that too is another kind of atomic bomb which threatens the existence of all of us. And I am sure that if America could turn back the clock somehow to full employment and industrial peace by the process of taking a vote, it would do so overwhelmingly.

And in doing so it would no more rub out the inevitable than it would in voting away the atom bomb. Industrial strife is here. We must live with it, too, for these unpleasant and tragic hours, and learn to meet its challenge before it destroys us.

That is why this group is important, and all the others like it. Our only hope today, as always, lies with men who are not ashamed to learn, men who put methods ahead of

goals, men who will scrutinize and analyze the past as critically and honestly as a scientist or engineer, and then apply what they have learned to the problem confronting them. If there is one thing above all others that distinguishes a man of learning—and it makes no difference whether his school is formal or informal in character—it is tolerance. A man may have a mind as open and wide as the horizon itself, or he may have a horizon as narrow and confined as his mind. With intellectual tolerance comes good will. These are old-fashioned words for old-fashioned concepts, and what a mighty need we have for them today.

The other day a fairly reasonable man of my acquaintance was criticizing the press for the part which he, at least, believed it to be playing in aggravating our present management-labor troubles. This was not petulant or childish criticism. He, too, believed that the only solution to these troubles would come from the earnest efforts of men of good will and intellect on both sides of the question, and, therefore, he blamed the newspapers for reporting—and thereby magnifying by the very application of editorial technique—the hostile, angry, belligerent statements that were made. He credited the press as the catalyst which was producing the great amount of heat and modicum of light that seemed to aggravate labor-management relations.

I agree with his conclusions as to what is happening, but not as to the responsibility of the press. Newspapers for the most part do a fair job of reflecting factual situations. It is true that by their effective reporting and efficient dissemination of news they make certain that more and more people read the hasty words of angry men, but the initial responsibility is not theirs. They are simply a conduit for both the venom and the nectar which issues from mortal man—and venom makes better reading. My point simply is that good will is not in the ascendant, on the industrial front, and it must be if we are ever to learn the answers.

Anyone who throws the first stone at such a juncture runs a grave risk of being beaten to death in the next edition, but I am going to venture the observation, as gracefully as I can, that labor has won most of the honors to date for bad manners in public. The managers of industry may have been guilty of many faults; they have been well and frequently cataloged; but this tendency to hurl bad names and harsh accusations is not generally one of them. I do not mean to be heard as saying that all of the good will is on management's side, but they are usually too conservative to produce flashy repartee.

Union spokesmen, on the other hand, do not seem to be so hampered. I wish they were. I wish they were just as cautious and painstaking and colorless in their public utterances as corporation executives usually are. I wish that for their sake, and for all of our sakes, because angry men—especially earnest and honest angry men—make themselves too easy prey for the calculating and vicious manipulators of violence who have tried to wreck the United States since its birth, and who are with us today.

You are all aware, I am sure, that I come here tonight out of days and weeks and even months of wrestling with the immediate problems of the labor relations of the General Electric Co. They are largely those of the whole electrical industry, and even more. As every newsboy knows, they are also the problems of all industry. The ugly word "strike" with all that it comprehends in the way of violence and waste is very much with us now, and until events cast it out of the news we cannot go forward and do the things we have to do as a nation to put the war behind us. We have exchanged one tragic set of circumstances for another. In war we knew where we were going and what we had to do. We had our opponent well measured, and we were united in our fight to lay him low. Now we have lost that unity and that strength, and we seem to be futilely lashing out in all directions and only getting tangled deeper in the web as the days go by. There is no clear-cut enemy in this industrial conflict, and the real tragedy is that so much of the time we seem to be slashing away at those who are really on our side, hurting them and hurting us and wasting the precious days that should be spent in growth. We are going to harvest wounds and scars that will be worn for a long time, no matter what happens. Any party that wins a clear-cut victory in industrial strife does so at its own expense. Any new power that is built on selfishness must maintain itself by violence, and it faces a day of reckoning that is sure and complete in its consequences.

There has to be another solution, and it is the road to that solution that I am more interested in exploring. At the same time it is hard to keep your mind on long-range solutions which require the continued application of the intellect along scientific lines when you find yourself in the middle of a fight.

The citizen who suddenly finds himself in jail can be excused if he shows more interest in getting out than in criticizing theories of jurisprudence or searching new legal techniques.

I have no intention of arguing the case of my own company, or even of management generally, on this occasion. If you are interested you can find the statement of our position in the daily newspapers. I will only say now, because I do think it has a bearing on my real subject, that the position we have taken, the policies we have announced, the offers we have made, have been honest and deliberate, rather than tactical. A large corporation is a very complex mechanism, for all of its human and mechanical talent, and one on the outside has no conception of the difficulties involved in coming up with a simple answer, particularly a statistical answer. I confess that today it is almost impossible to know from day to day how many plants we have or where they are located, how many employees we have, what their average wage is, whether or not they belong to a union, how much equipment we are producing and what is happening to it, what are the costs of that production, what are the selling prices. The answers are in the machine, true enough, but it takes time to get them out—and often it takes so much time that they are no longer the right answers. I have watched this process particularly in recent months as the machinery of reconversion gathered speed, and as the clouds of labor trouble gathered, and I have some idea of just how much perspiration and how many hours of effort are poured into the process of finding a simple answer, applying the factors of change and judgment, and then staking perhaps millions of dollars of investors' and workers' money on the published result.

The next thing that happens is that you find your offer refused, or your answer thrown back in your teeth almost in a matter of minutes, by some unofficial spokesman or commentator who blithely announces that you are misrepresenting facts, misleading the public, and apparently can't do simple arithmetic. I wonder at this omniscient power of these lightning calculators. I wonder where they buy their crystal balls. And I wonder, somewhat bitterly I am afraid, why responsible people in high places in public life are so eager to adopt such answers and act upon them. Mere repetition and volume seem to weigh unduly in the scales of credibility. There is a terrible tragedy in the making for the American people, a tragedy of inflation, unemployment, and domestic chaos which can only have international repercussions, unless we can bring to bear on this problem some of the common sense and intellectual zeal of which we are capable, and do it soon. The greatest tragedy of all is that it could be prevented. It seems to me that the great irony of our present situation is that management and labor are fighting their fight on entirely different levels; they are not even talking about the same things. It is as if a great debate were going on with one side taking the affirmative of one question and the other taking the negative of an entirely different question, one that was decided long ago by history and is now academic. It doesn't make sense. The pressure machinery of organized labor, and it is an admirably organized machinery, is being directed against an opposition that no longer exists, which died in the days of the great depression. It is a technique of attack that takes no cognizance of the controlling factors of material costs, labor costs, manufacturing facilities, price controls, supply and demand, selling costs, and the one inevitable and inexorable fact that we first have to produce and sell our goods before we can collect our price from the customer.

Every hour that we stand still in industry we discourage the investment in our businesses of the risk capital that every business needs. Not only does business need it, but the investors themselves need it, who include the postman, the policeman, the stenographer, the housewife and every family that has a bank account or owns an insurance policy. The need is mutual and crying. For at least a half dozen years the best brains of our economy have been planning peacetime reconversion, since before the beginning of the war itself. Private enterprise, awake at last to its real responsibilities and obligations to the future, rolled up its sleeves and expended millions of dollars and millions of hours on a vast blueprint for tomorrow, designed to bring us greater prosperity than we had ever known, designed for full employment, designed for better living, designed for intelligent marketing, designed for fine working conditions and a true recognition of the social responsibilities of everyone—and that blueprint tonight is not only on the shelf but the clock is ticking away the possible hours during which it can be used. The great manufacturing plants of America look more and more like deserted villages. The most alert marketing machinery ever devised has nothing to market. And the workers of America, given the opportunity to share to the fullest extent in this dream which lies beneath their hands, are committed to idleness, to living on their wartime savings, to building up pockets of resentment and distrust.

This is what I mean by saying that management and labor are not talking about the same things. It is not in industry's power to grant most of the demands that are made on it today without turning around and adding this new cost to the price paid by the consumer, and we don't want to do that because it means adding to the inflationary spiral and is an endless process.

There is one other possibility, one that we foresaw before the close of the war and incorporated into our plans. We knew that if we could make our people more productive, through their own efforts and through the introduction of better methods and new facilities, it would be possible to pass on the fruits of greater production. We were aware of the tremendous potential markets ahead of us. We thought we had some fresh thinking on marketing and distribution which would eliminate waste and reduce selling costs. We knew, as every manufacturing man knows,

that multiplying our volume for any product once we had set up to make it and taken care of initial costs could mean a greater return than before even on smaller profit margins. But it seems perfectly plain to me that these are things that have to be demonstrated. Business cannot be expected to mortgage these unrealized sales and pay over labor's increased wages in advance of their being made. That practice brought the city of Chicago close to bankruptcy some years ago, when it paid the salaries of city employees with warrants that had not been collected in taxes and would not be for a long time to come—and when taxpayers found out about it they quit paying taxes. That is just what could happen to our market.

It is tantamount to giving up the enterprise system, because obviously bankrupt business can only continue to operate by some form of government subsidy, and subsidy means control, and control means introducing a whole host of factors that are foreign to the way we do business. The distinguished characteristic of private enterprise is that it pays its way, makes a profit, and stands on its own feet. Do we want to give that up as a way of life and go along with Professor Laski and a state-planned economy?

I don't think so. Moreover, I don't think that the rank and file of labor think so, either. I don't even think that most labor leaders think so, and that is what makes their position completely unrealistic. They are using the techniques of a generation ago to accomplish the objectives of a generation ago without realizing that those objectives have already been achieved. Labor has won its fight against managerial selfishness and doesn't know it.

It was not my purpose to recite much of the facts of our present controversy. It is impossible to settle that controversy here, and from here on we will have to deal with it on a day-to-day basis, hoping and praying that in the process of settlement none of us will be forced to do irreparable harm to our economic system. But this seemed to be a good opportunity to remind you, or tell you if you did not know, of the high-caliber socially conscious, intelligent job of planning the postwar years that was done by many men, companies, and agencies. To me it is proof that we must persistently employ the same intellectual techniques to find our way permanently out of industrial strife. Although we find ourselves in jail, and in need of an immediate bail bond, let us buckle down to this task of thinking our way out, and of making it impossible for us ever again to be in such a situation. At a time when our leadership is needed so desperately by the rest of the world it is a national tragedy to find our great economic machine threatened with complete demoralization because of the inertia or ignorance of many, and the helplessness of many more.

We spoke earlier of the senselessness of trying to vote away an atomic bomb or an industrial crisis. It is too late for that. But if we are convinced, as I am sure that all reasonable men must be, of the wisdom of the democratic process; of the time-tested value of negotiation, mediation, and judicial arbitration as established by law; of contract obligations that can be enforced on both parties to a dispute and not just one; of equal protection under the laws and obedience to civil authority as established by the Constitution—then let us seek these characteristic American remedies through intelligent legislation and quit drifting down the road to tragedy.

To such an objective we can apply our learning and our good will. To such a purpose we can recover and rededicate our great strength and national unity. And when we achieve it we can stop being ashamed and once more take pride in a job well done.

Coordination of the Armed Services

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. Struve Hensel, Assistant Secretary of the Navy, before the Town Hall Club at the Biltmore Hotel, Los Angeles, Calif., January 28, 1946:

The proper organization of our national security establishment—or even of the armed forces' part of that establishment—is an unfortunately complex subject. Complete understanding of all facets of national security is most difficult to acquire. Detailed knowledge of the armed services alone is equally elusive. Yet everyone is expected to have an opinion. The admission that one is not yet clear is regarded suspiciously or as an admission of utter stupidity. We are expected to be for or against something.

Consequently, unnecessary heat is engendered and the investigation has shifted from the plane of critical analysis to one of debate. Slogans and appealing phrases are invented. If you respect the accomplishments of the Army, you are expected to regard their representatives as omniscient. If the attainments of the Navy appeal to your imagination, you are expected to espouse their plan for comprehensive security. Yet few of the speakers have made any detailed study of the administrative problems involved in assuring national security. As a result, a subject which is difficult enough has become further confused.

In addition to arguments as to which service won this war and will win all future wars, we are involved in discussions of auxiliary, although equally complicated, subjects, such as consolidated purchasing, joint intelligence, combined communications and transport. Your attitude toward the many plans for solving these problems is expected to color your approach to the larger problem. Yet if consolidated purchasing or combined communications be deemed advisable, the establishment of a single secretary is not necessary for that accomplishment. Consolidated purchasing and combined communications could be made equally effective with two departments, three departments, or one department. The solution of those problems does not affect in any substantial way the over-all or top executive organization of the armed services.

Likewise, there are passed from mouth to mouth various word tags which decidedly cloud the issue. We talk of unification, unity of command, and merger. As abstract terms, those words offer little assistance in our struggle for understanding. Their meanings are never explained or tied into day to day operations—those activities which occupy an executive when he reaches his desk in the morning. The Army feels that its plan alone deserves the label of unification and merger. You are urged to believe that the more detailed and comprehensive Navy plan for integration of all elements of national security is the essence of disunity. Nothing could be further from the truth.

The fact is that no responsible person has seriously suggested a merger of the three armed services. If this is understood, our discussion is immeasurably simplified. A real merger would involve the fusing of all three services into one single tridextrous service, headed by a military commander completely familiar with the science of making war in every medium and with every weapon. The true meaning of unification is much the same. To achieve that end we would have to plan a homogeneous single service like the single river formed by the junction of three streams.

Such combination has not been suggested by anyone. The Army Air Forces would resist violently any attempt to merge their identity with another service. That is what they are now struggling to escape—amalgamation with the ground forces. Many Navy supporters fear that the Army proposal involves an absorption of the Navy by the Army command. If the supporters of the Army plan ever admitted that such was their intention, that plan would be as dead as the proverbial salt mackerel.

No; everyone from the President down starts with insistence on the autonomy and separateness of the three services. The President, in his message to Congress, spoke of three coordinated branches—land, sea, and air. The Navy plan suggests three coordinated departments of the same identity. The Army speaks continually of three autonomous services. The Army Air Forces describes its aims as autonomous coequality with the Navy and the ground forces. No matter how you approach the proposed charts of organization, the fundamental structure is three separate services coordinated in some fashion.

There is the field of dispute. How can these three services be best coordinated? Those who prefer the Army plan, that is, splitting the War Department into two parts—ground and air—and reducing all three services to the position of divisions headed by a single secretary usually assisted by a supreme military commander, claim they are proposing a merger and effecting unification. Anyone preferring a different method of coordination is labeled antimerger or antiunification. That is not accurate. Those who propose to elevate the Army Air Forces to the status of a Cabinet department and to coordinate the three departments through a series of permanent coordinating councils are just as entitled to the label of merger and unification.

The fundamental question is clearly—which plan of organization is most likely to produce coordination and unity? If our problem is approached from that angle, our study can be greatly simplified.

Furthermore, our search for the most suitable mechanics of coordination is not assisted by assertions of the need for efficiency, economy, and preparedness. Everyone desires the achievement of those goals. Effective coordination will obviously be the most likely way to attain such results. We are thus led back to the basic question—how can our three services be best coordinated?

Long wrangles as to which of the defects and inefficiencies revealed in this war were the most serious are somewhat more educating but again not too helpful. There is general agreement as to the identity of most deficiencies. They should all be cured.

The only dispute in this connection is with respect to the relative seriousness of the various defects. Some think that the gaps between the armed services caused the greatest loss and waste. Others, like myself, regard more seriously the gaps which appeared between our military services and our foreign affairs and between our military needs and our productive sources. In my opinion, much more money was wasted in our early struggle to establish a satisfactory system of matériel priorities and to harness the industrial machine to the war effort than was ever wasted in duplicating or competitive procurement between the services. I believe that the gap between both armed services

and the State Department, abetted by mistakes of individuals inside the services, was more responsible for Pearl Harbor than any lack of cooperation between the services. But that entire argument should fade in our realization that comprehensive coordination—perhaps more extensive than just the armed services—is the best remedy. Again, we are back to our search for the best method of coordinating the armed services.

Extravagant claims have been made for the Army plan of coordination. Just how the desired coordination will be accomplished by the simple device of appointing a single secretary and a single military commander to rule over the three services, each reduced to the position of branches in a single department and headed by assistant secretaries instead of Cabinet secretaries is hard for me to envision. I have never seen any detailed explanation as to how such a single secretary and single military commander will gather up the three service threads, keep them separate and yet knit them together. When that part of the discussion is reached, there is a leap across the chasm and coordination is just asserted. It is never demonstrated. Sometimes we are told that a single secretary is a principle, and the details will be easy once the principle is accepted.

Frankly, I am skeptical. I want to know the grubby details. How will this theory of single-man control work as a practical matter? If there is real substance in the idea, a detailed blueprint should not be too difficult.

My skepticism of single-man control starts with my experience in the Navy Department. That agency, although much smaller than the proposed new superdepartment, is already too big for detailed one-man control. The history of Secretary Forrestal's administration is a record of delegation of authority and a search for a satisfactory system of coordinating and reviewing committees. My own experience in the field of Navy procurement has been parallel. Even that limited field is too large for one man to manage or control in detail.

The experience of large industry seems to me to be the same. One-man control in our superindustries is breaking down under expanding delegations of responsibility and committee coordination. I realize that large organizations are usually headed by a single man with the title of "president." Yet the corporate president is responsible to a superior group, a board of directors. In practice as well as theory, the board of directors is the body responsible for coordination of the enterprise. The decision of certain important matters is by law reserved solely for that board and a wise president refers much more to the board than is required by law. The corporate president also uses committees for coordinating operations. We find corporations directed more and more by executive committees, finance committees, loan committees, operating committees, production committees, sales committees, and many others. The theory of single-man control has little place in our publicly owned corporations.

The same is true of large labor organizations.

What evidence is there that single-man control will be successful?

The administrative complexities of a superdepartment are too many to be directed in detail by one man. And the attainment of effective coordination will require an attention to detail. If the single secretary is not to deal with detail, he is not the subject of our search. We must look elsewhere for coordination. Huge complex departments with their tentacles in countless fields of endeavor cannot be loosely held together by one tack at the top. They must be riveted fast—or, better yet, knit together—from the bottom up. The ivory-tower approach limited to the pronouncement of broad policies may appeal on paper but it does not work in practice.

And when one man tries to deal with all details, there is always trouble. You probably recall General Marshall's defense of his failure to appreciate the significance of General Short's message that he had adopted protective measures against sabotage rather than against attack at Pearl Harbor. General Marshall stated that so many messages crossed his desk each day that he could not be expected to give detailed attention to each one. How could he have watched the Navy and the Marine Corps as well? Likewise, the unfortunate order to destroy the Japanese cyclotrons was missed by the War Department in a welter of detail. A single man can be stretched only so far.

Believing as I do that the present Departments are now of such size that they strain the capacities of our best men to the utmost, I cannot imagine the superhuman, able to run a department of three armed services and at the same time to advise the President on matters of general political policy. And the President has made it clear that such latter duty is just as important as the job of administering a department.

The usual answer given to these worries is not an explanation of how the single secretary would effect coordination. It is rather the assertion that the President performs an even bigger job. The President is a single man, it is said, running a whole country. The large staff in the Executive Office of the President, the Bureau of the Budget, the office of the assistant President, known as the Director of War Mobilization and Reconversion, the various departments and independent agencies, and the many special committees are never mentioned.

The President does not by himself even try to effectuate detailed coordination of our various governmental departments or to master the details of routine departmental operations. The President is expected to devote himself to broad matters of policy—not coordination. For his decisions he is forced to rely on huge staffs and many groups. Many matters have to be delegated. Even then the job of being President of this country is a back-breaker. There is no real analogy between the supremacy of our President over the entire executive branch of our Government and the suggested coordination of three separate armed services by a single man.

A single secretary trying to cover the three fields would be forced to delegate coordination to lower levels. No man could discharge his general Cabinet duties and personally coordinate three entirely different armed services. Even the assistant secretaries, each in charge of a single service, would have to delegate downward the coordination and direction of procurement, personnel, and operations. Such delegation would in each case be to men of lesser rank and in all probability of lesser ability. Under secretaries and assistant secretaries would be given duties at least as difficult as those now performed by Cabinet officials. The duties now performed by the Under Secretary and Assistant Secretaries of the Navy would be passed down to men without titles and without equivalent dignity. It is a certainty that less capable men would be attracted to those lesser jobs. The quality of the decisions would undoubtedly be correspondingly depressed. Can we possibly afford that risk?

We should be realists. It is difficult enough to attract able men to the Government service. The President has frequently spoken of the problem. Government compensation will never be made competitive with the compensation obtained in commercial and professional careers. Position and dignity are our greatest governmental magnets. We should grade our jobs up and not down. Top-flight men will seldom be attracted by second-grade positions. And effective coordination depends much more on the quality of the men performing the essential tasks than on the symmetry or neatness of any organization chart. I do not like to think of the result if the supersecretary is selected more for his political sagacity than for his administrative ability.

The single-man theory of coordination likewise tends to weaken civilian control. I shall not argue the importance of civilian control. It is a fundamental principle of our Government, revered by the military and the civilians alike. If, as the Navy suggested, three departments are created, 3 secretaries, 3 under secretaries, and at least 6 assistant secretaries, a total of 12 civilians, would occupy the top positions. Under the Army proposal we would have one secretary, one under secretary, and three assistant secretaries, a total of only 5. The controlling civilians are thus cut in half. The work to be done will not be lessened. It must gravitate into the hands of the military. There is no answer to that argument.

The evolution of the War Department's proposals over the last year demonstrates the inevitable movement of control to the military. It also contains a tacit admission from the stanchest supporters of one-man control that one man cannot deal with every question. When General McNarney in 1944 presented the first War Department plan, he envisioned a single department headed by a secretary and an under secretary with three assistant secretaries, each in charge of one of the armed services. The top military men were the three military commanders of each separate service. Civilians, although reduced in number, were to be at the top of the new department. A few months later there was added the concept of a single military commander superior to the three assistant secretaries.

When General Collins in October 1945 presented the final Army plan, all budgetary matters and the planning of the basic military program, including procurement and production as well as operational matters, were assigned not to the single secretary, but to a purely military committee—the Joint Chiefs of Staff—which would report directly to the President, with the secretary permitted only to comment and not to command. Matters of basic policy are to be controlled by the military, acting in the main through a group—the Joint Chiefs of Staff. Civilian control and single-man control fade together.

Furthermore, there is no guaranty that superior men will always be appointed as the supersecretary. Incapable men will at times succeed to the position. The dangers of mistake and, in fact, of sweeping comprehensive mistakes, are, therefore, increased. The chances of correction through the influence of other men at the Cabinet level or by congressional committees will be gone.

In a single department important differences of opinion will be resolved or compromised at lower levels and seldom disclosed to the Congress or the people. Today those differences of opinion—and in those differences lie vitality—are resolved at the Cabinet level and in the Congress, before the eyes and ears of the American people. In all deference, I submit that, while I agree with the President that there need be no fear for our liberties as long as the American people "continue fulfilling their duties of citizenship," the American people cannot fulfill those duties if they are not aware of the issues to be resolved. The extent to which even the President will be made aware of differences in thought is even problematical.

The advocates of the single-man theory offer one advantage to counterbalance those many deficiencies. It is repeatedly asserted that the one man will guarantee a decision. Coordination will be ordered from above. Differences will be firmly decided. Delays, as sometimes occur when differing points of

view are sought to be reconciled, will be impossible. The single top man will decide.

That is not only an insufficient counterweight, but also a theory which will not stand a practical test. It was Fabius, a single Roman general, who made delay so famous that his name was adopted into our language. Fabian is now a synonym for delay. He had many successors.

There is something more important than prompt decision. What we need above all is intelligent decision—and intelligent decision requires knowledge and familiarity. Otherwise, decision is little better than a guess. No one man will ever possess the requisite knowledge to make all decisions intelligently. He will be required to toss a coin or to delegate downward. The quality of decision is bound to suffer.

In this war, coordination was brought out, as a matter of natural evolution, through committees and councils. The domestic economy was linked to the military program by the War Production Board. The Chairman of that Board sat with the President's Cabinet. The job was graded up and extremely capable men were attracted. Foreign affairs were coordinated with military strength through the State-War-Navy Coordinating Committee, evolved late in the war. Our triphibious, global military operations were combined by the Joint Chiefs of Staff, assisted by many subordinate committees. In the continuation and perfection of that system lies, in my opinion, our sole hope for effective coordination. The fact that other essential committees such as a research committee, a joint intelligence group, a procurement assignment board, and other committees were not created is no reflection upon the system. It merely demonstrates that we had not reached our goal. If the requirement of unanimity for decision in the Joint Chiefs of Staff was a mistake, that can easily be changed. To the extent that the committee system was tried during this war, it was substantially successful. I would prefer to perfect the system we were evolving when the war ended rather than to espouse a radical change which has little promise of affecting coordination.

Furthermore, the committee system of coordination has been made workable in the only country which for a long time has faced global complexities. That is England—a country distinguished for governmental know-how. In the British Cabinet, there are 20 members and the three armed services are separately represented at the highest level. The theory of single-man control in the Prime Minister or in a few superior Cabinet officers was discarded long ago. Coordination of the entire British administration is effected by a comprehensive series of committees with permanent secretariats, which tie together the various governmental activities like those in no other nation. There is no reason why we cannot achieve the same success.

The committee control theory has another advantage. It can be used to coordinate the military effort with the domestic economy and foreign affairs. The single-man theory is limited to the military services. That defect is always admitted. It is explained that the single-man control of the armed services is intended only as a start. Later, it is said, we can seek to coordinate the various other segments of national security. Is it really wise to start building even a foundation until there is some sketch or outline of the entire structure? Would we not be far wiser to plan our entire national security establishment rather than to trust to luck in having its comprehensive form dictated by an organization of the three armed services determined without regard to the proper over-all pattern? I prefer seeking first at least a general idea of a comprehensive national security establishment. There is much more to war than combat.

This is probably my last discussion of this problem while I am an official in the Navy Department. I have no ambitions or desires other than as an American citizen to assure our country of a sound security establishment. I do not seek a military or a political career. I want to see our Navy preserved, not for the Navy's sake, but for our country's sake. I believe, as I think you do, that sea power is one of our major weapons. I likewise believe in the efficacy of the slugging ground forces and the versatility of the Army Air Forces. I am certain that the three services must be preserved in vigorous integrity and that the activities of all must be effectively coordinated. In all deference to the policies of my Commander in Chief and with his permission to express my contrary personal views, I have tried to set before you my reasons for believing that a single secretary heading a single department will not achieve such desired coordination. In my brief description of a system of controlling committees, I have outlined briefly a system which I believe will achieve real coordination of our entire security establishment. I submit that plan also as a pattern for the needed coordination of our entire governmental structure.

Our Latterday Deification of Change

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which recently appeared in the New Orleans Item and which I hope will be read by the Members of this Congress, for I think it so well values the unfortunate un-American trends that are growing in this country:

OUR LATTERDAY DEIFICATION OF CHANGE

An old school of shallow philosophy is coming of late into fuller flower in the discussion of our economic, political and governmental affairs. It is placing its curse on "resistance to change." Anybody who resists any change that these philosophers desire, no matter how foolish or fantastic, is immediately classed as backward, stupid, and selfish—sometimes indeed as disloyal to the Nation and a traitor to the human race.

Ways that are old are damned on that account. Some of these philosophers, in fact, seem to believe that the ancient but once-popular idea that 2 and 2 make 4 should be rooted out because it conflicts with their economical mathematics Everything that is old must be discarded for any new thing that they propose. We deny all such tosh for the nonsense that it is—whether it springs from the itch of self-interest or the vaporing of ignorance.

Every intelligent person knows, and should be happy to admit, that all human progress is the result of change—changes in our ways of thinking and doing, growing out of new knowledge in the realms of physics, economics, and politics. But everybody who has observed or read a little also knows that mankind has suffered untold woes by breaking too enthusiastically, without due consideration, from old ways, to new notions that have failed.

We have a brilliant example of this in our own country these past 12 years. Mr. Roosevelt did a number of new things, especially in his first term, that needed doing. We have these yet. But he also did many new things and adopted new methods, that have failed egregiously. Our national graveyard is cluttered with their costly tombstones bearing countless alphabetic names which were so numerous that none of us can remember for what they stood. These have imposed frightful costs on the country without any offsets in benefits. Their results have accumulated in the horrible mess in which we now find ourselves. Yet self-seeking politicoes and unbalanced idealists still clamor for irrational, unquestioning public acceptance of still more crackpotty notions of their own.

Out of their ranks rise the philosophers who make a god of change—their change—and condemn all their intelligent fellow-citizens who ask for proof of their wisdom, and decline to swallow it until this is produced. Yet all of us know that it is intelligent, rational skepticism that keeps society from flying apart under the cross-pulls and whirls that would result if every new notion, however fantastic, were swallowed without question.

Some of the philosophers of the sancity of change have been drawing an illusory parallel between the late British elections and our American conditions. The British turn toward socialism, they say, makes a similar turn necessary and inevitable over here. "It has energized the forces of conflict here; it has encouraged labor and alarmed our conservatives," they add, and so forth.

But, through ignorance or dishonesty, they don't add that the British majority was impelled by a desire for the superior advantages enjoyed by the American working people and middle classes. The knowledge of this was brought home to them by 4 years of close personal association with millions of Americans in England and on the battle fronts. Their own observation of the vast superiority of the food, clothing, housing, equipment, and pay, of these millions of American boys raised their gorge.

They discovered for the first time, cheek by jowl, from the talk of their American companions-in-arms, these better wages and working conditions, the greater comforts, conveniences, and even luxuries, enjoyed by the plain people of our country, by comparison with wretched conditions in their own. These boons that the British majority sought were brought long ago to our people by our system of democratic free enterprise—which our philosophers of sacred change are trying to destroy.

Perhaps the British were right in turning toward socialism. We don't know. Their setup has been different from ours. Socialism carried to its limit means complete dominance of a very few over all the rest. It leads to unchecked domination of government by politicians. This our people will never accept, knowing what they do. The philosophers of change must hide the meaning of their design.

But that idea is probably not so obnoxious to the English as to us because the politicians entrusted with the management of British affairs have traditionally been more competent, by and large, than our own politicoes. You have an example of this in the huddle of these now in Washington. There they present a sorry show of unwillingness or incapacity to do anything worthy of the name to save this country from deeper descent into a chasm from which only intelligent and courageous action can save it.

Roosevelt, with smug artistry, showed his political trailers how to smear public men who would not swallow his medicine without gagging. Among their other imitations of the master, they are now reviving the famous "fireside chats." We had one last week. But the master is gone and the fireside had already lost its fascination before he went.

So don't be dismayed by the foolish fantasies and fictions of the philosophers of change. It is Britain's desire for the greater blessings which our people enjoy that has turned the majority of them to a trial of socialism. But our absurd philosophers of change still say:

"Let us turn to socialism too. Let us abandon the system of free enterprise which has brought and is still bringing us the good things which the English covet. Let us abandon the way that has made us the wealthiest and most powerful nation on earth—and kept us free all the while—in order to accept a system that has never been tested long anywhere, and has never brought any people any of those blessings so far as it has gone."

All such counsel is goofy. Regardless of the epithets of selfish or self-deluded philosophers of change, let us stand with those who still trust such aged commonplaces as the Ten Commandments, the Golden Rule, and the idea that two and two make four.

Caste System Irritates GI's

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lester Allen from the Boston Sunday Post of February 3, 1946:

CASTE SYSTEM IRRITATES GI'S—"BRASS HAT" PREROGATIVES OVER RANK AND FILE OF MEN IN SERVICES TENDS TO DISCOURAGE VOLUNTEERS

(By Lester Allen)

The caste system of the Army and Navy, which the average enlisted man sees as the most undemocratic offshoot of a democratic nation, is the chief factor in slowing down voluntary enlistments in the security forces of the country, and the most important consideration to a Congress now weighing universal military training against a voluntary recruiting system.

Both the Army and Navy are considering the abolition of certain phases of the caste system, but the "brass hats" are merely considering, not acting. The prerequisites and prerogatives of officers are their dearest and most cherished possessions, and, always keeping the need for "discipline" in the forefront, officers will defend the inequities to the utmost.

While in actual practice there are grave social inequalities in civilian life insofar as economic status is concerned it is also true that within his means every American is a king, and has been encouraged to think of himself as an individual, equal to all other individuals before the law.

No one in the United States would change that even if they could. In fact, it is a matter of constant concern to foster the growth of liberty and independence and individual security. But, with the war and the induction of millions of men and women into the armed forces, a grievous curtailment of individual liberty was imposed upon citizens in an age group which is inclined to be impatient of restraints upon the freedom acquired after the age of 18 to 21.

While these millions are sacrificing equally with the officers in the fighting of a war, they have experienced serious abridgments of their individual rights through the soulless exercise of carrying out orders and commands.

Reduced to the simplest possible terms the gripes of enlisted personnel in the armed forces can be summed up. The regimentation is irksome and necessary, but too frequently the "brass" goes far beyond the articles of war in indulging the whims of command. Throughout their military and naval service enlisted personnel is at the mercy of the whims of brass hats.

They are told when they may leave camps, posts, ships, and shore stations; where they may and may not go; what they can buy and what they can't buy; whom they can and cannot associate with, and when they must return, regardless of the exigencies which may crop up in the course of liberty or leave or furlough.

OFFICERS GRAB QUARTERS

The living quarters for officers are ever so much better than those for enlisted men, wherever they may be. There are instances of soldiers being "ranked" out of foxholes, innumerable cases of officers grabbing quarters which enlisted men have repaired for their own use in war zones. Everywhere the enlisted man goes the officer takes the best living quarters, regardless of the rights of the situation.

In the matter of food the enlisted man always comes off second best, even in those rare cases where an enlisted mess happens to be superior to that of the officers. In this latter case the officers declare themselves in, and take the pick of the food.

Nowhere is there any provision for the enlisted man to buy a drink stronger than beer. Overseas officers received a liquor ration, and, it is all too rare to find even a junior officer who is generous enough to see to it that enlisted men receive a small share.

An officer can get soused to the eyes and it is regarded merely as deplorable but a minor peccadillo. But the enlisted man who steps out of line and takes a little too much liquor is snapped up by MP's or shore patrols if away from his post, or punished by court martial if on his post. There is tolerance for the officer who drinks too much, and very little but regulations for the enlisted man who drinks too much, although both probably have disgraced the uniform.

The special privileges given to officers are particularly irksome to the enlisted man. Officers can go where they choose, to off-limits places of amusement, to the best seats at post theatres, and their post exchanges or canteens are stocked only with the best merchandise while, too frequently, the enlisted man finds only gimcrack stuff at his exchange.

The enlisted man cannot cast sheep's eyes on commissioned nurses or WACS or WAVES or SPARS. They are staked off to be escorted only by officers. And automotive equipment is never available to the enlisted man for other than assigned duty. If the enlisted man ventures to use such equipment for personal use, it is a serious offense. But officers joyride all over the place.

MADE MENIALS FOR OFFICERS

The enlisted man is frequently made a hewer of wood and drawer of water for officers. He doesn't like being a "dog-robber" or a waiter in an officers' mess or a menial for brass in any shape or manner. And he doesn't like to see officers in the field loading their combat equipment into jeeps or on the back of some enlisted man. But it is done.

Similarly punishment for offenses is unfair. A commanding officer may hand out up to a week at hard labor at his own discretion for an enlisted man's offense, and court-martial offenses bring much longer periods of confinement and loss of pay. For an identical offense an officer will at most be reprimanded to quarters to meditate his sins or fined.

The salute is one of the most abused of the officer privileges. Most sensible officers forego the salute except when actually on duty, but there are "saluting demons" who throw their rank around 24 hours a day and make themselves a mortal nuisance to all enlisted men.

Honors given to men in the fighting forces are the most unevenly distributed of all. It's the enlisted man who takes the lumps and the officers who get most of the honors. The ratio of decorated officers in the Navy to decorated enlisted men is 13 to 1. In the Army it is 3½ to 1. It is an old GI gripe that no one ever sees the GI when he is heroic, but when an officer is heroic it seems that everyone all the way up to the commanding general is looking that way. In brief, the reports going back to the place where the medals are awarded are made by officers—and they give themselves the gravy.

And, when officers and men are finally separated from the service, the officers draw terminal pay for accumulated leave up to 12 days. But the enlisted man who hasn't had his quota of leave is just out of luck.

You will never find an officer commissioned in the field who has served in the ranks who will not tell you that it was a shock to move from among the enlisted men into the privileged world of the officer class. And all the officers so commissioned have been secretly resentful that the comrades among whom they served were treated so shabbily. And, when the brass tells them it is not dignified or that it is bad for discipline to fraternize with the men, these new officers have a hard time holding back their bitter criticism.

This class distinction between officers and men has grown in the interests of discipline and efficiency. In the Revolutionary War and in the Civil War foreign officers who observed American troops had the same curt criticism of American soldiers. They said that they were "insubordinate." From their viewpoint this may have seemed true, but from that of Americans the insubordination was more the exercise of individual freedom.

It is true that a certain amount of class distinction is necessary to discipline. Even the Red Army, where it was assumed that the caste system was a relic of the decadent aristocracy, had to set up formal distinctions between officers and men in order to achieve fighting efficiency and strict discipline.

All too frequently officers conceal an unfitness for command by the exercise of a loud voice and a brusque manner. All too often officers of the regular forces look with ill-concealed contempt upon those who are not graduates of the service schools. There are castes within castes.

VOLUNTEERS HOLD BACK

In the present situation the fighting forces are faced with a manpower problem. Either universal service must be imposed upon the country, or a regular reinforcement must come from volunteers. The latter will not happen as long as the relationship between officers and men remains as it is now.

Too many enlisted men have found to their great chagrin that the enlisted man has no rights other than those his officers are pleased to allow him, and these rights vary under different commanders. There is something to be said for adding to the fitness reports of officers scheduled for promotion an approximation of how the enlisted men regard the officer. The average GI knows better than the brass whether his immediate commanding officer knows how to do his job.

They either love him or loathe him. Except for the lowliest junior officer, the enlisted man learns early that when his commanding officer says he will lead him into battle what he actually means is that he will follow him.

Revision of the caste system is the first requisite for maintaining a volunteer fighting force—and the Army, Navy, and Marine Corps know this. What they are doing now is holding together a conscript force in which every gripe has its beginning in the caste system.

Terminal-Leave Pay for Enlisted Men

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, I am once again taking this means to appeal to the House and especially the House Military Affairs Committee to act favorably on my bill H. R. 4893, a bill to grant to enlisted personnel of the armed forces the same benefits of accumulated leave as apply to officers now.

The thousands of letters which I have received from enlisted men is ample proof of the desire on their part that this inequality be done away with. As a former enlisted man of the First World War, I am interested that the enlisted men of this war be given full terminal-leave pay on a 30-day-a-year basis and that it be made retroactive to the beginning of the Selective Service Act. In this way this inequality which has existed too long in this respect will be done away with and justice given to all.

If the Government can afford the higher ranking, higher paid officers, terminal leave with pay, then they can also afford to give this benefit to the enlisted men. It is true that this would cost the Government plenty to rectify this wrong, but as long as the officers have been given this compensation, and the Government has been and continues to afford this expenditure, then we can afford to pay the enlisted men, who have suffered the many differences in rank all during service.

I believe that terminal-leave pay to enlisted men should be passed in the form of my bill, and soon. I believe I express the wholehearted concern and approval of all enlisted men and their families in this measure and I am hopeful that the Military Affairs Committee will report out my proposal in the very near future.

Mr. Speaker, under unanimous consent granted me by the House, I am including with my remarks a few of the many letters I have received on this subject:

HELENA, MONT., *January 14, 1946.*

DEAR MIKE: Recently I read in the local paper about your interest in enlisted men being given the same consideration as officers in regard to terminal leave. While I was overseas we often remarked about the unfairness of this furlough deal. Returning home on the ship several of us decided to write our Congressmen to get some action on this matter. After all, Mike, it is a known fact that enlisted men overseas have it a lot tougher than officers, and in more than one way. So, therefore, I feel that enlisted men should be shown the same consideration as officers.

I have heard a great deal of comment on this issue since I have been home, and after your article was in the paper MIKE MANSFIELD was a pretty popular man in the ex-GI's books.

I think you are doing the veterans a big favor in pushing this bill, and you have everything to gain and nothing to lose by giving this issue your wholehearted support.

I sure appreciated your call before you returned to Washington, D. C. I have been home nearly 3 months now, and believe me, Mike, it is a grand feeling. My wife and baby are fine and my business is better than ever, so I feel mighty fortunate.

In closing, Mike, I want to thank you for all the interest you are showing in the affairs of the veterans, and I assure you it won't be forgotten.

Sincerely yours,

FRAN PURCELL.

BILLINGS, MONT., *January 14, 1946.*

Hon. MIKE MANSFIELD,
Representative from Montana,
Washington, D. C.

DEAR SIR: Please allow two former enlisted men to compliment you on the stand you take in regard to terminal leave for both officers and enlisted men. We heartily agree with you. It seems a shame to bring the officer-enlisted man system from the Army on into civilian life.

At this same time, we would like to mention an additional few ills of the present discharge set-up. First, the housing set-up. There are numerous ex-servicemen looking around for some place to stay and all the time the Government has a good stock of portable houses and trailers. Supposedly the vets have preference to buy GI material for business use and yet it isn't possible for them to obtain an immediate necessity. The only reason given as to why these houses aren't released at least to the general public is that there is no price set on them yet. Then there would still be the idea that a vet's priority doesn't extend to cover anything that he can't use in his actual work.

Then there is a new gripe from fellows in the service on the discharge of aviation cadets regardless of the number of points they have. This most certainly isn't fair to fellows who have actually done some fighting.

We realize that no possible system could cover all complaints, but these few seem so apparent and so far-reaching that it is well forth mentioning. With the particular stand that you have taken on the terminal-leave issue, we are sure that you will give some thought to these difficulties.

Respectfully,

C. R. OEHLERKING,
F. J. NELSON.

WHITEFISH, MONT., *January 16, 1946.*

The Honorable MIKE MANSFIELD,
Representative in Congress,
Washington, D. C.

DEAR SIR: I read with a good deal of interest a short news article in the Spokesman Review concerning your decision to work for terminal leave for enlisted men.

The language in which your argument was stated had hardly the forcefulness that has been in mine this last month or so since getting out of the Navy, but is much better nonetheless since mine could not be used in the polite company of the drawing room.

I wish to thank you sincerely for championing this cause. I thought that about the time the services were ready to discharge men, that rank privilege, caste, etc., would be forgotten and we should all go out under the same conditions—as free and equal citizens of the United States of America. It seems, however, that the "powers that be" wish to carry these undemocratic principles to the bitter end and beyond.

It shouldn't be necessary to add to your argument. it is sufficient in itself for fair-minded men, but there are other facts which might be added:

1. Officers were already getting considerable more pay for doing their jobs, which in a great many cases were no more difficult than jobs many enlisted men were called upon to do, and it seems hardly justifiable to further enhance their superior position by the exclusion of enlisted men from the rightful benefits of terminal leave.

2. Enlisted men gave up more as a whole than the average officer, not because in civilian life they had more (many of them did), but because in their service life they had so much less.

3. Excluding the question of officers—a condition is created by this system, in which one enlisted man, stationed in the States or regularly back in the States, collects all of his leaves, while another who spends most of his service time on some forlorn island or on the sea or some such place where conditions were at their worst and the real winning of the war, as far as the serviceman was concerned, was taking place, loses most of his. To sum up this argument briefly—it's an all-or-nothing-at-all policy.

May I repeat my thanks again for your interest, and good luck in your crusade.

Sincerely,

GEORGE D. ABENDSCHEIN.

BILLINGS, MONT., *January 14, 1946.*

Hon. MIKE MANSFIELD,
Member of Congress,
Washington, D. C.

DEAR MR. MANSFIELD: In the Gazette this morning an AP dispatch from Washington says that you are going to introduce legislation for the purpose of having enlisted personnel of the military services given the same benefits as officers, under terminal leave.

I am very glad to learn you are doing this because I do not think there is any one thing that has caused more bitterness among enlisted men than the fact that officers who are not only much more highly paid, but frequently of inferior ability, are receiving pay for their unused furlough time, while enlisted men, receiving one-fifth as much pay, are discharged without getting any reimbursement for the leave-time to which they are entitled. I know of a number of cases in this vicinity where family men were drafted into the service from well-paid positions, while college students with no family obligations, were enabled to obtain commissions because of ROTC enrollment. When these enlisted men return from the service, most of them have to begin to work immediately in order to support their families, frequently taking any work they can obtain, while the officer has the advantage of his terminal leave for time to locate suitable employment. In any event, the practice is grossly unfair, and I have been surprised that Congress would permit it. I have heard several expressions of appreciation of your efforts in behalf of the enlisted men, with respect to the proposed legislation.

With kind personal regards and best wishes, I am,

Sincerely yours,

GUY C. DERRY.

Hon. MIKE MANSFIELD,
Congress of the United States,
Washington, D. C.

DEAR SIR: I wish to call your attention to the bill now before the Congress of the United States dealing with the payment of full pay and allowances to enlisted men of the Army of the United States for accrued furlough time.

In view of the fact that officer personnel of the Army of the United States are authorized full pay and allowances for unused accrued furlough time up to 120 days; in view of the fact that many of the enlisted men have been deprived of practically all of their allowed furlough time; in view of the fact that, comparatively speaking, their earnings have been small during the richest period of our country's history, I urge that this bill be given your wholehearted support.

Many enlisted men of the Army, particularly those with families, with dependents; those with obligations at the time of their entrance into the Army, will return to civilian life with little savings. They have

given much these past few years. They have accepted their lot, which did not include vacations with pay, days off, and holidays. Surely they are entitled to this consideration which is only a matter of paying what is their due.

Again I urge—Support this bill.

Chas. Kestle, Mrs. Carl McCallum, Mrs. Geo. Williams, Mrs. J. Jones, Mrs. Pat O'Brien, Mrs. Ed. Penny, Mrs. Jack Darlow, Mrs. Robert Quick, Mrs. Thomas Eva, Mrs. Alfred Lowry, Mrs. Elizabeth Sullivan, Mrs. Alice Johnson, Mrs. George Gill, Mrs. John Weber, Mrs. Millie Holman, Mrs. Josiah James, Mrs. M. Driscoll, Mrs. M. Harne, Mrs. John Williams, Mrs. Geo. H. Symons, Mrs. Gladys Martin, Mrs. Thos. Sanders, Mrs. E. N. Bartlett, Mrs. Sylvan Galahan, Geo. A. Fitzpatrick, Mrs. M. Penhall, Mrs. Charles L. Day, Mrs. J. H. Barrenstein, Mrs. John Weldon, J. A. Weldon, Mrs. George Burns, Mrs. Pat Dennehy, Mr. Dave Sullivan, Mrs. Dave Sullivan, Mrs. Marshall Hager, Mrs. Wm. Powers, Mrs. Ruth Gould, Mrs. Geo. Labranche, Mrs. M. S. Gemoljez, Mrs. H. Hughes, Mrs. Agnes R. Murphy.

Hon. MIKE MANSFIELD,
Congress of the United States,
Washington, D. C.

SIR: I wish to call your attention to the bill now before the Congress of the United States dealing with the payment of full pay and allowances to enlisted men of the Army of the United States for accrued furlough time.

In view of the fact that officer personnel of the Army of the United States is authorized full pay and allowances or unused accrued furlough time up to 120 days; in view of the fact that many of the enlisted men have been deprived of practically all of their allowed furlough time; in view of the fact that comparatively speaking, their earnings have been small during the richest period in our country's history, I urge that this bill be given your wholehearted support.

Many enlisted men of the Army, particularly those with families, with dependents; those with obligations at the time of their entrance into the Army, will return to civilian life with little savings. They have given much these past few years. They have accepted their lot, which did not include vacations with pay, days off and holidays. Surely they are entitled to this consideration which is only a matter of paying what is their due.

Again I urge—Support this bill.

MRS. EDNA YOUNG.
LOUIS YOUNG.

FORT GEORGE WRIGHT, WASH.,
January 14, 1946.

Representative MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR SIR: This letter is to thank you for your efforts concerning terminal leave pay for enlisted men of the armed forces. Those of us who have served in this capacity greatly appreciate the fact an effort is being made to give us accumulated leave pay as officers now receive.

While I have not had the fortune of meeting you personally, I know of the fine job you did at the University of Montana. I am a native of that State and attended the State Normal College, graduating in 1942. I had the pleasure of meeting your brother when he was stationed at Baxter Hospital.

Thanks again for remembering us. Hoping I have an opportunity to meet you sometime, and if I can be of help to you in the future I will be glad to do so.

Respectfully yours,
RAYMOND E. SCHULTZ,
Staff Sergeant, Army Air Corps.

PULLMAN, WASH., *January 15, 1946.*

Representative MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: In the Spokane Sunday Chronicle (January 12) I saw an account of your proposal for legislation to grant enlisted men terminal leave or pay for accumulated leave the same as officers. I am completely in favor of such action as is any enlisted man or former enlisted man to whom I ever talked.

This terminal leave business is just a final slap in the face to the enlisted men who have watched and envied the special privileges that officers enjoy under the military system.

Up until July 29, 1945, I had had 7 days leave in 3½ years naval service. This 7 days I had to go to the chaplain to obtain. However, on July 29, 1945, I arrived back from 2 years continuous duty in the Pacific (I was then a chief radio technician in charge of radio and radar maintenance aboard a small aircraft carrier) and received a 30-day leave. The war ended fortunately while I was home.

Some men have not been so fortunate as that. Men that arrived in the States after the war ended and rated leave but also were eligible for discharge did not get the leave with pay entitled them but waited until they could be shipped to a separation center. You can suspect they weren't very happy about losing 2 or 3 months accumulated leave while an officer in the identical situation got all of his accumulated leave at home in the form of terminal leave—with pay.

I have been out of the Navy since October and your legislation on this matter if successful may not help me unless it is retroactive, but it will surely help what few "all the war" enlisted men who have yet to get out of the service and who have a lot of accumulated leave to their credit.

I am not one to see the national debt further enlarged but it seems to me that to make your proposed legislation retroactive would do justice to all and wouldn't increase the present huge national debt very materially.

I am sending a copy of this letter to Senator WHERRY from my home State, Nebraska. I wish you every success with your proposed legislation which may rectify at least one injustice to the enlisted man.

Very truly yours,
JACK F. CARTER,
Graduate student under the GI bill of rights at the State College of Washington.

Roosevelt Answers Pearl Harbor Accusers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in Look magazine of February 5, 1946, entitled "Roosevelt Answers Pearl Harbor Accusers," by Roscoe Drummond:

ROOSEVELT ANSWERS PEARL HARBOR ACCUSERS

(By Roscoe Drummond, Washington correspondent, Christian Science Monitor)

(EDITOR'S NOTE.—How would President Roosevelt have answered the charge that he was responsible for Pearl Harbor? To answer this question, the author interviewed a great many men who knew Roosevelt intimately during the war. From their opinions, he wrote this imaginary speech, which they believe the President might have made at the hearing if he were yet alive.)

Members of the Joint Committee on the Investigation of the Pearl Harbor Attack, gentlemen: My name is Franklin Delano Roosevelt. My occupation (at present, although it will not always be, I hasten to assure you) is President of the United States.

You are aware, I know, that even before its inception I favored and supported a congressional investigation which would honestly and fearlessly and constructively expose all of the reasons why Japan's infamous attack on Pearl Harbor was, momentarily, so tragically devastating. And I'm sure you now see, gentlemen, why we had to postpone this inquiry until the war's end. Not only would earlier investigation have revealed to the enemy that we had cracked Japan's most secret codes, but it would have diverted time, and energy and attention of men like General Marshall, Admiral King, and others of our great military commanders who had to spend every waking hour to win this fight for survival.

Why have I asked to appear before your committee, when the facts have already been spread fully upon the record? The reason is that, thus far, the record has been so overlaid with distorted argument, with partisan demagoguery by those who are willing to smear America if thereby they could smear Franklin Roosevelt, and with plain or garden-variety lies by the isolationist press, which never learns anything and never forgets anything.

This is the technique of the dead dictator, Adolf Hitler. His theory was never to use a small falsehood—always the big lie.

That is the logic of these baseless and horrible fabrications, horrible not to me (I am used to it), but horrible to the overwhelming majority of Americans whose Government never has picked a fight with anybody—but will not be trodden upon.

What are the facts? Did the President of the United States, did any responsible official of the United States, military or civilian, have advance intelligence that Japan would attack Pearl Harbor? The testimony has demonstrated that we regrettably did not. The overwhelming consensus of military judgment and military information was that Japan was preparing to extend its aggressions to Southeast Asia and to the South Pacific. Maj. Gen. Sherman Miles, then Chief of G-2, gave it as the military's highest estimate that Thailand was the most likely target.

At no time did I possess any information nor did I receive any information except from my own Chiefs of Staff.

These are the high lights—in question and answer form—of the points Mr. Roosevelt probably would stress in his Pearl Harbor hearing speech:

QUESTION

Did I, as your President, keep vital security knowledge from our commanders in the Pacific?

ANSWER

I could not withhold information I did not possess, and the Army and Navy were in possession of all intelligence information before it came to the White House. I had no source of information not available to them.

General Marshall thought, Admiral Stark thought, and I thought that Japan would attack to the South (that she didn't was Japan's greatest military blunder); and in your testimony is an affidavit from Gen. Douglas MacArthur (who is today doing his work with magnificent skill in Tokyo) that he received "ample information" from Washington for alerting his Philippine command "on a war basis."

If it could be conceived that the President of the United States would withhold information, the absence of which would jeopardize the United States, he would hardly have alerted what his military advisers considered the Nation's most exposed outpost.

QUESTION

Did I calculatedly taunt Japan by retaining the United States Pacific Fleet at Pearl Harbor?

ANSWER

I accept the responsibility of retaining our Pacific Fleet in American waters at America's major Pacific base, and I am willing to be judged by the verdict of history on the rightness and wisdom of that decision. Secretary Hull, Under Secretary Sumner Welles, Ambassador Grew, and I were united on the validity of this action. My military advisers were not in agreement. General Marshall has testified that he supported the decision. Admiral J. O. Richardson has testified that he opposed it.

The highest diplomatic as well as military factors were involved. The Japs wanted us to move out of the Pacific entirely. Secretary Hull has testified that to have withdrawn the fleet would have been construed by Tokyo war lords as a cowardly, backward step, openly inviting them to attack sooner and enabling them to spread their conquests farther.

I held that view then. I hold it today. And Admiral Richardson (an honorable officer and a good one) has told you that in his judgment the presence of the fleet at Pearl Harbor did not hasten the attack.

In this imaginary but typical speech, the late President answers the charge that he fumbled the peace and planned to force war on the Japs.

QUESTION

Or did I so fumble our peace efforts that Japan decided this was the best time to strike?

ANSWER

The fact is that we strove for peace unceasingly, and to such consistent effect that Japan's militarist government had to resort to attack to drive us into war. We presented no ultimatum; we committed no hostile act. As Secretary Hull has said, we offered to Kurusu and Nomura a program of just and equitable terms, which any peaceful nation "would have been delighted to accept."

To have done less would have been to abdicate our hopes of peace; to have conceded more would have been to abdicate American principles, and to collaborate with the Axis in inviting Japan to sweep its conquests throughout southeast Asia and the East Indies and to make a juncture of forces with Nazi Germany in the Middle East.

My memoranda show that as late as November 27, when Nomura and Kurusu came to the White House with Secretary Hull, I stated to them: "It is clear that the majority of the American people are anxious to maintain peaceful relations with Japan. I am one of those who still harbor much hope that Japanese-United States relations will be settled peacefully."

And Secretary Hull told them with full candor and clarity: "While we here are putting our best efforts into attempting to bring about peaceful settlements of the Japanese-United States differences, neither your Premier, nor your Foreign Minister, nor any other influential person utters a single word or moves one finger to facilitate these talks of ours. On the contrary, they insist upon promoting the establishment of a new order through might."

To the moment when Japan broke negotiations, our attitude was one of frankness, patience, and flexibility—a flexibility which sought every avenue of peace except collaborating in Japanese conquest.

The record shows that I rejected a proposal from Prime Minister Churchill to join in a parallel warning which might have been construed as a warlike act. The reason was that the United States was using its negotiations to resolve its differences with Japan in order to keep the peace, even though, as we now know, Japan was using its negotiations in preparation to break the peace.

I strove for peace in a final appeal on December 6 to the Japanese Emperor himself—an apeal so reasonable and just that the Japanese militarists did not dare to deliver it to him until the attack had been consummated.

I strove for peace to every point short of condoning and collaborating in aggression. That was the only final alternative. I leave it with those who would have had their President do differently to defend that alternative.

QUESTION

Can it be said, then, that the President of the United States planned to force war on Japan?

ANSWER

Yes, without truth and without honor, it can be said—and it has been said over and over again by the isolationist newspapers and magazines and isolationist politicians.

It can be said—by apologists of Japanese aggression. It can be said by those who would have had the United States (in the negotiations with Kurusu and Nomura) sign a diplomatic "Munich"—a "Pacific Munich" which would have given Japan America's blessing upon its spreading conquests and ultimate juncture with Hitler, who then jointly would stand astride a conquered Europe and a conquered Asia.

But a free America could not have lived in a world half slave, and I do not regret having rejected terms so repugnant. I do not believe the American people regret it either.

QUESTION

And can it be said that I let war come while our defenses were still pitifully inadequate?

ANSWER

The most ridiculous and the most understandable of all these falsifications is the charge that my administration failed to prepare for the war which was coming. I doubt whether even Goebbels would have tried that one. For even he would have known that Americans would not forget that many narrow-visioned, partisan, isolationist leaders in the Congress and outside the Congress tried to thwart and block nearly every attempt which I made to warn our people and to arm this Nation.

I proposed—and the little-preparedness minority fought—the Lend-Lease Act which galvanized our great industries to a new level of war production, and helped to hold the Axis at bay while we got ready.

I proposed—and the little-preparedness minority fought as fantastic and unnecessary—the 50,000 airplane program which was the very foundation of the great American air armada which crippled Germany and crushed Japan.

I proposed—and the little-preparedness minority came within one perilous vote of dismantling—3 months before Pearl Harbor—the Selective Service Army which, under the brilliant leadership of Generals Marshall, Eisenhower, and MacArthur, defeated our enemies on land as our Navy defeated them at sea.

To those who say, "Remember Pearl Harbar," I also say "Remember Guam," and the little-preparedness group which refused to heed the plea of this administration to improve its fortifications in 1939.

CONCLUSION

The other evening, I attended the Gridiron Club dinner; and in one of its penetrating skits it portrayed the Emperor of Japan in an imaginary conversation with Col. Robert McCormick, who, oddly enough, was explaining to him the virtues of American democracy.

"So sorry, please, about Pearl Harbor," the Emperor began in mock humility.

"What did you have to do with Pearl Harbor?" exclaimed the publisher. "Are you a New Dealer?"

"Japan willed the war"

No American, I say, President or plain citizen, let war come. It came not because of anything the American Government did or did not do. It came because Japan willed it, conceived it and actually began it while the American Government was striving to avoid it.

Why, then, gentlemen, have these criminal and callous fabrications been conjured up and repeated over and over again? Why has this legitimate and potentially valuable investigation been so sedulously distorted by the isolationist press?

These have not been careless lies nor casual lies. They have been deliberate and calculated and purposeful. Their disseminators know what they are up to. They have their designs and their schemes, and I do not believe for an instant that the American people will fall for them when the distortions and innuendoes are shorn from the record of the Pearl Harbor inquiry.

Their purpose is to dupe and deceive the American people into believing that it was their Government—not our enemies—which was responsible for the war; that we were to blame, not Tojo and Hitler and their kind; that if America had only conceded a little aggression here, and collaborated in a little conquest there, America could have continued then—and could continue today—in an isolationist sleep-walking dream.

"They Were Wrong Then—"

I wish to point out to you, and I wish to point out to the Nation, that these distortions come from those who, when the war clouds were gathering, chose to call them a mirage; who either misread the meaning of the spreading tentacles of the Axis or were not displeased by them; and who thought—or prtended to think—that this war need never concern an "isolated" America.

They were wrong then, and they are wrong today; and they have such a vested interest in their wrongness that they are apparently ready to go to the length of accusing their own Government of provoking war.

Because the fruits of victory can never be easily nor promptly realized, they hope that they can create a new isolationist miasma out of temporary disillusior and total falsehood. They succeeded in smearing the great Wilson with the lie that he led us into war in 1917.

This time their lie is that Franklin Roosevelt planned and plotted war for the American people—Pearl Harbor and all. That lie will not succeed.

Even if it should take my life, I am grateful that I have been called by the Nation to serve this fourth term as President, if only to answer these accusations against the American people and to share in placing the United States at the pinnacle of world leadership.

For myself, I ask no one's good opinion. I will leave that to history. But I do petition of the American people their faith, and their fervor, for America and her destiny today, tomorrow, and forever.

The Case Bill

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks, I am including a telegram from Mr. Thomas Kennedy, secretary-treasurer of the United Mine Workers of

America. This telegram is in opposition to the so-called Case bill.

Mr. Kennedy is former lieutenant governor of Pennsylvania and is a man of the highest integrity and sound judgment. His opinion on this matter is one which would be well taken to heart.

The telegram follows:

WASHINGTON, D. C., *January 31, 1946.*

Hon. AUGUSTINE B. KELLEY,
House Office Building,
Washington, D. C.:

The Case bill, H. R. 5262, before the House is putrid. It is an insult to labor, which it seeks to enslave by extra legal processes. It should be defeated and placed in the Smithsonian Institute with other relics of the Dark Ages. The United Mine Workers of America respectfully urges defeat of this obnoxious measure.

THOMAS KENNEDY,
Secretary-Treasurer, United
Mine Workers of America.

The FEPC Bill

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. GOSSETT. Mr. Speaker, for the benefit of Members of Congress who may still have open minds on the subject, and for the further information of the American people, I want to place in the RECORD a speech delivered by me over more than 100 stations of the National Broadcasting Co. The speech was delivered in the city of Washington from the studios of WRC at 10:45 p. m. last Friday night.

When the American people know all the facts they are the fairest jury in the world. When they understand the provisions of H. R. 2232 they will be overwhelmingly opposed to it.

The speech follows:

I am unalterably opposed to pending bills for the creation of a Fair Employment Practice Commission. The arguments to be made here are not addressed to bigots who oppose such legislation because of religious and racial prejudice, nor to radicals who favor such legislation hoping to destroy American democracy. However, many social, political, and religious organizations, from the best of motives, and not because of bigotry or radicalism, have urged Congress to pass legislation to create a permanent FEPC. Few of these people have the slightest idea of what the pending bills would do to them. In Christian charity they oppose intolerance and discrimination. They assume the label "fair employment practices commission" to mean just that. In this they are sadly mistaken.

Let's examine briefly the background and provisions of pending bills. Acting under pressure from ill-advised minority groups, the President in May 1943 set up as a temporary war agency a small commission known as the Fair Employment Practice Committee.

I wish I had time to discuss the record of this committee, how it confused segregation with discrimination, how it created strife, how it interfered with the purely personal affairs of the people. It even caused strikes. The transportation system in the great city of Philadelphia was paralyzed during critical war days when FEPC tried to promote Negro workmen over white workmen. Trouble occurred in a big Baltimore plant when FEPC ordered both blacks and whites to use the same washrooms instead of separate facilities as had been their practice. In Texas the Dallas News advertised for a colored man to work in a pressroom. FEPC promptly ordered this paper to delete from its advertising any reference to race, color or creed, holding the same to be discriminatory.

If this small committee with few employees, with limited authority and with limited funds caused so much trouble in wartime, what will it do if given increased powers, statutory authority, unlimited personnel, and unlimited funds during times of peace. But let's get back to the history and vices of pending bills.

Both Democratic and Republican Parties wrote the FEPC into their 1944 platforms. Each party thought it must get the Negro vote in New York, Pennsylvania, Ohio, Illinois, and Michigan in order to get the entire electoral votes of these big industrial States and thus win the election.

Shortly after the convening of the Seventy-ninth Congress the House Labor Committee reported out H. R. 2232, the so-called FEPC bill. The President gave this legislation his blessing. Nevertheless, if a secret vote were taken in the Congress, less than 25 percent of the Members would vote for this bill. However, through political pressure, and for political reasons, on a record vote in the Congress this legislation would doubtless pass. Therefore, it is high time the American people understand the danger to them which lurks in this situation.

This bill is 16 pages long. We will just summarize a few of its main provisions. It would set up a permanent Fair Employment Practices Commission of five men with overlapping 5-year terms at annual salaries of $10,000 each. The Commission is authorized to establish such regional, district, and local offices as it may desire and to employ as many people as it thinks necessary. The bill declares that discrimination in matters of employment and in related matters is promoting domestic and industrial strife. The bill then proposes to remove all this alleged discrimination, based, it says, upon race, creed, color, national origin, or ancestry. The bill gives authority to the Commission, which the Commission can delegate to any agent, to pass judgment upon both public and private employment, to decide what is discrimination, and who are qualified employees. It's broad enough to cover the butcher, the baker, the candlestick maker, the county clerk, the school teacher, the farmer—everyone, if you please.

Again, the bill provides that the Commission shall have the right to make, and I quote, "such regulations as it deems necessary to carry out the provisions of the act." Thus, a new board is given authority to enlarge its powers and to write its own regulations. No bureau was ever known to resist such temptation. Finally, the bill provides that, quoting, "any person who shall willfully resist, prevent, impede, or interfere with any member of the Commission or any of its referees, agents, or agencies, in the performance of duties pursuant to this act, shall be punished by a fine of not more than $5,000 or by imprisonment for not more than 1 year, or both."

Thus FEPC agents become roving czars. Their agents can enter anyone's place of business, examine his books and records, file a complaint against him, compel him to produce evidence against himself, find him guilty, and assess punishment upon him. This roving czar becomes grand jury, petit jury, prosecutor, and judge, all rolled into one. At no time in the history of English-speaking jurisprudence has any individual been clothed with such arbitrary power. For all practical purposes there is no appeal from a judgment of conviction. This Caesar of tolerance need not possess any of the qualifications of a Federal judge, but has vastly more authority.

The smaller the employer, the fewer the employees, the more onerous and oppressive this legislation would become. The employees of a small shopkeeper are his constant associates, the relationship is intimate and personal. Such a person should have the right to select individuals because of his personal likes and dislikes. He should be permitted to hire all Irishmen, all Poles, all Englishmen, all Jews, all Negroes, all Protestants, all Catholics, or all Menonites if he wishes.

If the proposed bill should become law, then, to be consistent, we should abolish all social, fraternal, and religious organizations based in whole or in part upon race, color, creed, or ancestry.

Let me summarize a few serious objections to the bill:

First, it would make permanent the most needless, meddlesome, and dangerous of all the wartime agencies. With its unlimited powers over employment, with its authority to write regulations having the force of law, within a short time this agency would doubtless grow into the largest and most expensive bureau of the Government. If the law were enforced ruthlessly and with vengeance, as it might well be since many enforcers would be aggrieved members of allegedly oppressed minorities, it would require a million employees backed up by a secret Gestapo.

Second, the bill would completely change our philosophy of government. It would make racial and religious tolerance a matter of law instead of a matter of morals. It would make certain Federal agents self-anointed keepers of the individual's conscience.

We should remember that tolerance and brotherly love are taught in the home, church, and school. These virtues grow in our hearts, but cannot be imposed upon us by the State. Men may be led, but cannot be driven, into Christianity.

Third, such a law would create disrespect for all law. We talk of educating the Nazis out of racial prejudice, but we would force our own people out of it. On the deep-seated prejudice of foreign enemies we will use education, but on the mild, diversified prejudices of our home folks we will use force. The strong arm of the law cannot remove discrimination based upon either race, color, creed, national origin, or ancestry. To pass any law which cannot be enforced or that will not be enforced, is to bring all law into ill repute. To make suspected lawbreakers out of great masses of our best citizens is to undermine the very foundation of good government.

Four, the proposed law would impair, if not destroy, many of our most cherished liberties. It would impair freedom of speech, of press, and of worship. It would restrict freedom of contract and freedom from unreasonable searches and seizure. It would, in fact, deprive persons of both liberty and property without due process of law and in violence to all our concepts of justice.

Five, the proposed law would increase rather than decrease racial and religious prejudices and discriminations. It would set apart, emphasize, and magnify the differences and distinctions between our many races and creeds. It would defeat and destroy the very objectives claimed for it by many idealistic proponents. In this case certainly the medicine would be far worse than the disease. An honest title to this bill would be "An act to create an unfair employment practices commission."

For the sake of American democracy, therefore, for the good of minorities as well as majorities, write your Congressman to join in throwing this bill into the legislative ash-can where all such proposals should sleep in perpetuity.

Proposals for Expansion of World Trade and Employment

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 5 (legislative day of Friday, January 18), 1946

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a document entitled "Proposals for Expansion of World Trade and Employment." These proposals were developed by a technical staff of the United States Government in preparation for an international conference on trade and employment.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FOREWORD BY THE SECRETARY OF STATE

The proposals contained in this pamphlet have been developed by experts drawn from several agencies of the United States Government, working together under the general chairmanship of William L. Clayton, Assistant Secretary of State, and are published, for consideration by the people of the United States and by the peoples and the governments of other countries, in preparation for an international conference on trade and employment.

It is important that such a conference based on these or similar proposals, should meet as soon as possible. Nations are now determining the policies which they will apply to trade in the postwar world. It is urgently necessary that these policies should be agreed upon, in order that the world may not separate into economic blocs.

The Government of the United States, therefore, believes that such a conference should meet, under the sponsorship of the United Nations, not later than the summer of 1946. The representatives of the United States in the appropriate organs of the United Nations will urge that this be done.

The success of such a conference depends on adequate preparation. This preparation should go forward immediately. The present publication and the careful work that lies behind it represent a determined effort to come to grips with the problems that will confront such a conference and so to prepare the way for its success.

JAMES F. BYRNES,

DEPARTMENT OF STATE,
Washington, November 1, 1945.

MR. SECRETARY: I hand you herewith "Proposals for Consideration by an International Conference on Trade and Employment," together with a statement of their purpose.

These proposals have been developed over many months by a group of experts drawn from all the interested departments and agencies of the Government. They are intended to suggest a way in which the United States and other countries may concert their policy and action in the field of international trade so that the enormous productive powers which lie all about us may be released to operate fully for the general benefit. They are not regarded as final and perfect, but as a working basis for discussion and, I hope, for international action in the near future.

It is important that international agreement on the range of questions covered by these proposals be reached soon. All countries are faced by serious commercial problems and are taking action on them every day. Unless they act together, they will act at cross purposes and may well do serious damage to each other. But if they do act together, there is every possibility that the peoples of the world may enjoy, in our lifetime, a higher degree of prosperity and welfare than they have ever had before. Powers of production are now the greatest the world has known. To bring them into play requires agreement on principles of exchange and distribution which will permit trade, production, employment, and consumption all to expand together.

I therefore recommend that these proposals be published as a basis of discussion and I would hope that such discussion might lead to an international conference on trade and employment, to meet under the sponsorship of the United Nations, not later than the summer of 1946.

Respectfully,

WILLIAM L. CLAYTON,
Assistant Secretary of State.

EXPANSION OF WORLD TRADE AND EMPLOYMENT—ANALYSIS OF THE PROPOSALS

The main prize of the victory of the United Nations is a limited and temporary power to establish the kind of world we want to live in.

That power is limited by what exists and by what can be agreed on. Human institutions are conservative; only within limits can they be moved by conscious choice. But after a great war some power of choice exists; it is important that the United Nations use it wisely.

The fundamental choice is whether countries will struggle against each other for wealth and power or work together for security and mutual advantage. That choice was made in principle at San Francisco and has since been ratified by the overwhelming majority of the governments concerned. The business of the immediate future is to give that decision the necessary body of common institutions and so to support those institutions that the experiment may succeed.

Success requires that the United Nations work together in every field of common interest, in particular the economic. The experience of cooperation in the task of earning a living promotes both the habit and the techniques of common effort and helps make permanent the mutual confidence on which the peace depends. The United Nations have therefore created not only an Economic and Social Council but special bodies to help them work together on many practical matters. Already there exist, or are in process of creation, agencies to deal with emergency relief, with currency, with international investment, with civil aviation, with labor, and with food and agriculture.

The United Nations should also endeavor to harmonize their policies with respect to international trade and employment. An International Trade Organization is still to be created. To this end, it is now proposed that an International Conference on Trade and Employment should be called by the United Nations, to meet not later than the summer of 1946.

The common interests of countries in world trade are obvious. Science and technology have enormously increased the productive powers of man. Limits upon human welfare are imposed today, not by the ultimate poverty of nature's resources, but by failure to use human powers to the full. Among the factors which obstruct our march toward the goal of freedom from want are excessive restrictions on exchange and distribution. Progress requires release from these restrictions.

Every country has its arrangements for the organization of production and distribution within its borders. To make the best use of these arrangements, countries must exchange their products. World trade is not only the device through which useful goods produced in one country are made available to consumers in another; it is also the means through which the needs of people in one country are translated into orders and therefore into jobs in another. Trade connects employment, production, and consumption, and facilities all, three. Its increase means more jobs, more wealth produced, more goods to be enjoyed.

Countries should therefore join in an effort to release trade from the various restrictions which have kept it small. If they succeed in this, they will have made a major contribution to the welfare of their peoples and to the success of their common efforts in other fields.

International trade is kept small by four things:

(1) Restrictions imposed by governments;

(2) Restrictions imposed by private combines and cartels;

(3) Fear of disorder in the markets for certain primary commodities;

(4) Irregularity, and the fear of irregularity, in production and employment.

The proposals which are herewith published deal with each of these problems.

I. RELEASE FROM RESTRICTIONS IMPOSED BY GOVERNMENTS

Governments have restricted the freedom of traders by many measures and for many reasons. They will continue to do so. No government is ready to embrace "free trade" in any absolute sense. Nevertheless, much can usefully be done by international agreement toward reduction of governmental barriers to trade.

These barriers take many forms. A transaction between a willing buyer in one country and a willing seller in another may be prevented because the tariff of the buyer's country creates an added cost too great to be borne; or because the paper work required for export or import is so burdensome that the deal is not worth while; or because the seller cannot get an export license; or because the buyer cannot acquire the seller's currency to make a payment; or because importation is restricted by the buyer's country to a quota which has been exhausted; or because it is forbidden altogether. Or the seller may discover that the tariff of the buyer's country discriminates against him in favor of sellers located elsewhere.

All these restrictions and the red tape connected with them have undoubtedly prevented many business transactions, cut down the total of world trade, and reduced to that extent the benefits which trade might bring to all the parties concerned.

Barriers of this sort are imposed because they serve or seem to serve some purpose other than the expansion of world trade. Within limits they cannot be forbidden. But when they grow too high, and especially when they discriminate between countries or interrupt previous business connections, they create bad feeling and destroy prosperity. The objective of international action should be to reduce them all and to state fair rules within which those that remain should be confined.

This has often been attempted between two countries at a time or among several countries with respect to a single problem. These attempts have not been adequate because the many barriers are interdependent. Every country has its own kind of restriction, adapted to its own situation, and can hardly be expected to throw off its peculiar armor unless the other kinds of armor, employed by other countries, are thrown off at the same time. What is needed is a broad and yet detailed agreement, among many nations, dealing at one time with many different sorts of governmental restrictions upon trade, reducing all of them at once on a balanced and equitable basis, and stating rules and principles within which the restrictions permitted to remain should be administered. To prepare such an agreement should be one

of the main tasks of the international conference on trade and employment.

The proposals now published afford a basis on which agreement might be reached. Rules are suggested to limit quotas and embargoes to carefully defined cases and to avoid discrimination in their application. Provision is made for the substantial reduction of tariffs and the elimination of tariff preferences. Subsidies, especially subsidies on exports, would be brought under supervision. Local taxes on imported products would be limited to rates no higher than those levied on like products produced at home. Agencies of governments conducting foreign trade would be asked to give fair treatment to the commerce of friendly states, to make their purchases and sales on economic grounds, and to avoid using a monopoly of imports to afford excessive protection to domestic producers. On these and other points the proposals try to state fair principles acceptable to all and of benefit to all.

The proof of any principle is in its application. Therefore, effective preparation for the conference must include detailed negotiations on trade barriers to commerce as soon as possible. These negotiations should get down to cases, seeking to reduce tariffs, to eliminate preferences, and to lighten or remove other barriers to trade, whatever they may be.

In the United States, such negotiations are conducted under the Reciprocal Trade Agreements Act, which was renewed by Congress in June 1945 with an increase of the authority conferred upon the President. The use of that authority is one of the most important contributions which the United States can make to the success of the conference.

Accordingly, this country should undertake negotiations under the Trade Agreements Act with several other governments as soon as a mutually satisfactory basis can be found, the required notices published, the statutory public hearings held, and their results considered. These negotiations cannot practicably be conducted with all countries at the same time, but the effort should be to get forward with the work, commencing before the general conference convenes and continuing until every friendly country has participated in the enterprise.

Together, if they will, the countries of the world now have it in their power to free their trade from excessive governmental barriers. When that happens and to the extent that it happens, more ships will sail with fuller cargoes, more men will be employed, more goods will be produced, and more people will have better things to eat and wear and otherwise consume.

II. RELEASE FROM RESTRICTIONS IMPOSED BY PRIVATE COMBINES AND CARTELS

Trade may also be restricted by business interests in order to obtain the unfair advantage of monopoly.

In many lines this has not happened, but in others, as experience discloses, firms have banded together to restrain competition by fixing common selling prices, by dividing the world into exclusive markets, by curtailing production, by suppressing technology and invention, by excluding their rivals from particular fields, and by boycotting outsiders. These practices destroy fair competition and fair trade, damage new businesses and small businesses, and levy an unjust toll upon consumers. Upon occasion, they may be even more destructive of world trade than are restrictions imposed by governments.

Goods can surmount a tariff if they pay the duty; they can enter despite a quota if they are within it. But when a private agreement divides the markets of the world among the members of a cartel, none of those goods can move between the zones while the contract is in force. Clearly, if trade is to increase as a result of the lightening of government restrictions, the governments concerned must make sure that it is not restrained by private combinations.

The proposals therefore contemplate that countries will act, individually and cooperatively, to curb those restrictive business practices in international trade which interfere with the objectives of increased production and trade, access on equal terms to markets and raw materials, and high levels of employment and real income.

To this end, it is suggested that a special agency be established within the International Trade Organization to receive complaints concerning restrictive practices of international combines and cartels, to obtain and examine the facts which are relevant to such cases, and to advise the Organization as to the remedies that may be required.

Enforcement against private violators necessarily rests with member governments. It will be the function of the Organization to recommend to these governments that they take action under their own laws and procedures. In the United States, enforcement would continue to be by judicial proceedings under the antitrust laws.

III. RELEASE FROM FEAR OF DISORDER IN THE MARKETS FOR PRIMARY COMMODITIES

After a great war there is danger of violent and rapid movement in the markets for primary commodities. The production of some things has been increased enormously to meet a war demand or to replace sources of production cut off by enemy action. Some time after the end of the fighting, the war demand subsides, goods held by the armies are returned to normal channels, and old sources of production come back into the markets and add to supplies. There is suddenly too much of some commodities and the prices react accordingly. Many countries learned after the last war that such changes can be devastating.

If the proposals so far discussed can be put into effect, a great advance will have been made toward increasing trade and business activity. The resulting expansion of incomes and consumption should go a long way toward enlarging the demand for primany commodities. The best cure for any surplus is more money in the pockets of consumers. And general prosperity will make it easier for people caught by a particular failure of demand to shift to other lines where opportunities are better.

Such shifts are occurring all the time in any progressive society. Public policy should not seek to prevent them, for they are a necessary part of the process by which the economy meets the changing needs of the people. But if the changes come too fast they may bring serious distress to many small producers and to their communities. It is important that the needed changes be made gradually.

When excess supplies threaten, the first effort obviously should be to increase consumption. But if study discloses that that cannot be done rapidly enough to be effective, other measures may be needed. And since action by one country is quite likely to affect producers and consumers in another, there should be consultation between governments.

Consultation may result in a proposal for an intergovernmental commodity agreement. Such agreements are not intended to freeze existing patterns of production, but rather to provide a program of adjustment and a period of time within which the essential changes can be made without undue hardship.

During the transition, it may be necessary to restrict production or exports, to fix prices, or to allocate shares of markets among producing countries. Controls of this sort should not be applied in any case unless the need is real and serious, affecting many people, and not curable by the normal process of competition. And when they are set up they should be strictly temporary, lasting no longer than required to carry out the necessary shifts. Their purpose is not to protect vested interests, but to prevent widespread distress during the course of necessary change.

Intergovernmental restrictions on production or on exports might be used—like international cartels—to take unfair advantage of consumers. Therefore the proposals recommend adherence to the rule that consuming countries be entitled to participate along with producers in the original consideration of such agreements and be entitled also to an equal voice in their administration. Furthermore, there should be full publicity about each scheme and all its operations, in order that the world may make sure that it is managed in the general interest.

IV. RELEASE FROM FEAR OF IRREGULARITY IN PRODUCTION AND EMPLOYMENT

Every country will seek so to manage its own affairs that its business life will be free from violent depressions. The object of international action should be to insure that these national efforts reinforce each other and do not cancel out.

The industrial activity of every country is affected by the size and the regularity of its orders from abroad. When industry in any country slows down and its purchases of foreign materials are cut, the effects are felt in every corner of the globe. Full and regular production at home, with increased participation in world trade, is the greatest boon which any people can confer upon producers throughout the world

It is important, however, that nations should not seek to obtain full employment for themselves by exporting unemployment to their neighbors. To seek employment by prohibiting imports or by subsidizing exports would be harmful and self-defeating. The business of the conference, therefore, should be to establish general agreement that each country will seek, on its own account, to maintain full and regular production, that it will not do so by using measures which would damage other countries or prevent the expansion of world trade, and that all countries will cooperate in exchanging information and participate in consultations with respect to antidepression policies.

V. AN INTERNATIONAL TRADE ORGANIZATION

Arrangements on this scale clearly require, for their successful operation, both an international forum where they may be discussed and improved and an international staff to assist in their administration.

The proposals therefore suggest that an International trade organization be created, to stand beside the existing international agencies dealing with currency, investment, agriculture, labor, and civil aviation. It should have a constitution much like those of the other agencies set up by the United Nations, with enough internal specialization to enable it to perform the tasks assigned to it in dealing with trade barriers, restrictive business practices, and international commodity arrangements. Detailed suggestions on this matter are contained in the proposals.

The organization should be designed as the central international agency to deal with trade. It should be brought into relation with the Economic and Social Council in the manner provided in the Charter of the United Nations.

The proposals reflect awareness that we live in a world of many countries with a variety of economic systems. They seek to make it possible for those systems to meet in the market place without conflict, thus to contribute each to the other's prosperity and welfare. In no case do they impinge upon sovereign independence, but they do recognize that measures adopted by any country may have effects abroad and they suggest for general adoption fair rules of mutual tolerance.

The purpose is to make real the principle of equal access to the markets and the raw materials of the world, so that the varied

gifts of many peoples may exert themselves more fully for the common good. The larger purpose is to contribute to the effective partnership of the United Nations, to the growth of international confidence and solidarity, and thus to the preservation of the peace.

The American Indian and Government

EXTENSION OF REMARKS
OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The American Indian and Government," prepared by Byron Brophy, long in the Indian Service in this country. Mr. President, I am advised by the Public Printer that the printing of the article by Mr. Brophy will take one-half page in excess of the two pages allowed under the rule without an estimate, and that the cost will be approximately $130.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AMERICAN INDIAN AND GOVERNMENT

(By Byron Brophy)

"Lo, the poor Indian! whose untutored mind
Sees God in clouds, or hears him in the wind;
His soul proud science never taught to stray
Far as the solar walk, or milky way;
Yet simple nature to his hope has given,
Behind the cloud-topped hill, an humbler heaven;
Some safer world in depths of woods embraced,
Some happier island in the watery waste,
Where slaves once more their native land behold,
No friends torment, no Christians thirst for gold.
To be content his natural desire;
He asks no angel's wing, no seraph's fire;
But thinks, admitted to that equal sky,
His faithful dog shall bear him company."
—*Alexander Pope in An Essay on Man.*

The tragic and important role played by the American Indian in the rapidly moving drama of American expansion and development has been told by Clark Wissler in a previous chapter. In the light of his discussion, we shall attempt to consider some of the problems of the Indians of today. We shall not attempt consideration of those problems that are common to all minority groups, including the Indians, but shall concentrate upon a few of the problems that are outcomes of Government control and that apply only to Indians. These relate to what Dr. Wissler refers to as "so unique a legal and social status" enjoyed by the Indians. They evolved in the process of our national expansion by necessity and have continued as an expression of our complete misunderstanding of problems related to the Indian.

Illustrative of the problems that are outcomes of unique Government control are unanswered and basic questions such as: What is an Indian? Who is an Indian? In a democracy such as ours, and under our Constitution, how can we justify one being a full-fledged citizen and at the same time a ward of the Government? How can Indian Bureau domination of every aspect of Indian life be reconciled with the basic principles of the Bill of Rights and the Constitution, rations and wardship be reconciled with full citizenship? Why do we conduct a Federal system of schools for Indians when public-school education is the responsibility of the State and the right of everyone without regard to race? How do we justify our failure to satisfy the provisions of Indian treaties, and when will these commitments be carried out? How do we justify race legislation for the control of Indian citizens? These are only a few of the problems with which the Indians of today are struggling without too much success.

Since our first contact with the American Indian, our primary concerns have been the acquisition of his possessions and the development of effective devices for his control. Our dominating purpose, conscious or otherwise, and carried out without much real regard for his rights or best interests, has been that of compelling him to submit to our will. This is almost as true today as at any time in our history. The only difference today is a difference of attitude and the means we use to accomplish our purposes.

Our national attitudes and the devices we developed to impose our will upon the Indian have evolved with changing circumstances and needs. Today we are governed in our determinations by misguided sentimental emotionalism quite opposite from the hatreds developed during the period of frontier wars. The resulting paternalism of today is almost as vicious and destructive in its results as was the cruelty and ruthlessness that prevailed during the frontier days. Our great need today is for a sound and consistent program for the assimilation of the descendants of a people whom we conquered. Correction of past mistakes can only come by the elimination of the force philosophy which has always predominated and the substitution of a philosophy of self-determination as provided for in our Constitution.

In order to understand the significance of the various devices and institutions that our Government has devised for the control of Indians, it is necessary to consider them in perspective. Government institutions arise in response to needs but do not always terminate with the termination of the needs that established them. Frequently they crystallize and become a part of the traditional structure. They survive long after the need for them has passed. This is exactly what has happened in our evolving relationships with Indians, as can readily be seen by a brief review of the develcpment of Government control of Indians. The evolution of Government control of Indians roughly divides into four periods.[1]

1. Period of control by community diplomacy with Indians, 1607–1778.
2. Period of control by treaties, 1778–1871.
3. Period of control through segregation and pauperization on reservations, 1871–87.
4. Period of control by legislation:

(a) Americanize the Indian: Destruction of tribal organization and seizure of Indian lands under provisions of the General Allotment Act, 1887–1934.

(b) "Indianize" the Indian: Government efforts at tribal reorganization under the provisions of the Reorganization Act, 1934–44.

Period of control by community diplomacy, 1607–1778: Our earliest relations with Indians were probably the fairest and most satisfactory we have had, because the philosophy of force which dominated all our future relations was less expedient when we were not strong and when we were ever threatened by the potential interference of foreign nations who fully recognized the value of Indian favor and cooperation. Just as soon as these threats were removed and other methods became more expedient for the accomplishment of our purposes, we resorted to them. We should note, however, that the Quakers developed this method very effectively and have never departed from it. During this period each settlement or community dealt with the neighboring Indians by whatever means seemed best to it. The results were dependent upon the wisdom of the leadership on both sides. The record registers many mistakes.

Period of control by treaties, 1778–1871: During this period, we recognized, by implication at least, the sovereign rights of tribes and periodically made treaties with them. The first treaty between the United States and an Indian tribe was made with the Delaware Indians on September 17, in the year 1778. No treaties have been made with Indian tribes since the passage of the act of March 3, 1871, which was based on the theory that the Federal Government cannot recognize an independent nation or sovereignty existing within the borders of its own territory. With the termination of the practice of making treaties as a means of control, we passed to the stage of development in which we are at the present time. Control of the Indian is provided for by special legislation for Indians which in reality is race legislation.

The status of treaties with the Indians is indicated in a Supreme Court decision which in substance held that a treaty with Indians is of no greater force than an act of Congress and that Congress has the right to abrogate the provisions of an Indian treaty. There are approximately 370 Indian treaties on the statute books.

Most treaties were forced upon the Indians by one means or another and were made for the purpose of obtaining some advantage, such as land acquisition, right-of-way, or additional control. In return, they usually made certain provisions for the Indians. Many of these provisions have never been satisfied, and this fact constitutes a retarding influence of major proportions in Indian development. A good example is the claims of the Sioux Nations, which run into millions. Hope springs eternal, however, even among Indians. Each generation plans on acquiring its long-standing claim, and the total effects include bitterness, disappointment, the conviction of persecution, and the loss of a stimulus to struggle.

Settlement of the Indian claims based upon treaties is an urgent need, the satisfaction of which would probably do more to accelerate Indian development than would most of the legislation we could devise. When the treaties are wiped from the books and further claims are impossible, it will be a great day for the Indians. It will then be possible to proceed along intelligent lines without coming into conflict at every turn with some provision of an almost forgotten treaty. Settlement of the treaties finally and irrevocably is an important aspect of the Indian problem, for we cannot expect much faith from the descendants of those from whom we took so much and to whom to date we have returned so little.

As we grew stronger nationally and the threat of foreign nations was removed, there was less compelling reason for recognizing the sovereignty of Indian tribes, and, as we have indicated, the practice was discontinued. Legislation was substituted as a means of control, but it had to be supplemented by armed force until the Indians were thoroughly subdued. New demands resulting from the continuously increasing opposition of the Indians necessitated the creation of new devices for their control. We immediately devised two which have proved their effectiveness. We created the Indian Bureau and the Indian reservation. They are still in effect.

The Indian Bureau was created in 1824, as an arm of the War Department to supplement the efforts of the Department to con-

[1] Lloyd E. Blanch and William Iverson, Education of Children on Federal Reservations, the Advisory Committee on Education, Staff Study No. 17 (1939), U. S. Government Printing Office, Washington, D. C.

trol the Indian. It remained in the War Department for 25 years, during which time the philosophy of force was so firmly established that it is still operative in spite of all the efforts of innumerable reformers.

From its birth "its mission largely was to treat with the Indians for cession of lands and recommend to the War Department 'chastisement of the hostiles' when the Indians did not comport themselves agreeable to the Bureau. The public of today cannot know the injustices which have come down to the Indians directly from this Department of Government the past 160 years."[1]

The present Commissioner of Indian Affairs, before he became the head of the Bureau, said: "Our Indian Bureau is paternalistic and bureaucratic, and pretends to do through paid employees all and everything which human beings normally do for themselves. Coupled with this paternalism is the Indian Bureau's policy of monopolizing the Indian Service and of duplicating, through pigmy services of its own, the work of the Department of Agriculture, the Bureau of Reclamation, the work of the State agricultural, educational, health, and welfare departments, and even the work of the courts. Mr. Collier has not reduced these services but rather has increased them. The Indian Bureau has had between eight and nine thousand employees, requiring approximately $30,000,000 annually from appropriations and tribal funds."[2] From all sources it has been estimated as high as $60,000,000 in 1 year.

Lyman K. Wilbur while Secretary of the Interior said that the "Bureau of Indian Affairs should work itself out of a job." Mr. Moore's statement quoted above indicates how the self-liquidation of the Indian Bureau should be accomplished. However, it is very doubtful that it will be done until Congress sets a time limit for the Bureau to turn its services into normal channels provided for all citizens. This is what should and eventually will be done.

The cost of the services rendered to Indians by the Bureau of Indian Affairs is constantly increasing. According to Senate Report No. 310, the money spent during Commissioner Collier's administration would have permitted a per capita payment of $2,500 to 200,000 Indians, which is probably considerably more than are actually under Bureau supervision. The same report points out that the $500,000,000 spent would have settled every claim the Indians now have against the Federal Government through treaties.

To free the Indian people from its shackles, the Indian Bureau must be relegated to the scrap heap with all the other devices of control developed to conquer and subject the Indian people. Its period of usefulness has long since passed and, together with the Indian treaties, the Indian Bureau should be liquidated as rapidly as possible. A period of 10 years should be adequate as a maximum time limit allowed for the transfer of all special services such as education, health, agriculture, forestry, irrigation, law and order, land conservation, and so on.

When Franklin K. Lane was Secretary of the Interior he made the following very significant statement relative to the results of the controls we have placed upon the Indians:

That the Indian is confused in mind as to his status and very much at sea as to our ultimate purpose toward him is not surprising. For 100 years he has been spun around like a blindfolded child in a game of blindman's buff. Treated as an enemy at first, overcome, driven from his land, negotiated with most formally as an independent nation, given by treaty a distinct boundary which was never to be changed "while water runs and grass grows," he later found himself pushed beyond that boundary line, negotiated with again, and then set down on a reservation, half captive, half protege.

Period of control by reservations, segregation, and pauperization, 1871–87: Necessity is the mother of invention. The resistance of the Indians to ever-increasing pressure that was being put upon them necessitated the development of effective controls, and between 1871 and 1887 Government policy turned to the segregation of Indians on reservations. Reservations had been established previous to this time, but they were not an important consideration. It would be difficult to conceive anything more destructive to the moral fiber of a self-sufficient people than to round them up like so many cattle and confine them to limited areas from which they could in no way extract a livelihood. As a further means of control the system of rationing them was established. We thus converted by force a formerly self-sufficient people into unwilling wards of the Government.

By 1887 most of the tribes had been separated from their vast areas of land and assigned to particular and restricted reservations. The reservations chosen for them were for the most part in sections of the country then considered unfit for white habitation. The lands taken from the Indians were then opened to homestead entry by the Federal Government.

Most of our Indians are still living on reservations, and rationing is still not too uncommon. These institutions are contrary to every principle of Americanism and have long outlived their purpose. They should pass into history as soon as possible. They are an instrument of the Indian Bureau, and with their abolishment there would be little excuse for continuing the bureau.

An Indian reservation, even today, is a little kingdom or Federal State, ruled over by a representative of the Bureau called the superintendent. With his staff of employees, he attempts to duplicate practically every service normally carried out by the State, and some others. In addition to operating schools, police force, health department, social welfare, agriculture, irrigation, land conservation, and other normal functions of the State, he rules on matters of the most intimate nature, such as authorizing an Indian to spend his own money, stock his ranch, send his children to school, make improvements to his property, and so on. The Sioux call him Ateyapi, or father. He is more than that, however, for he has the power to give or to take. He has jobs and rations and many other gratuities at his disposal. He can truly be an autocrat, if he so desires. Fortunately, however, most superintendents are devoted to the cause of their wards and would be a blessing to them if the policies of the Indian Bureau made it possible. The writer has known many of these men intimately and has the highest regard for their ability, sincerity, and integrity. Their sterling characters, however, are no justification for a system which is totally contrary to every principle of Government we avow. The system is fundamentally wrong, a grave injustice to Indians living under it, and obnoxious to all thinking Americans.

Reservations, segregation, rationing, and wardship all spell inevitable pauperization and degradation. They are devices of control and white domination, the need for which has long since passed. They now constitute major factors in the retardation of the Indian establishing his place and making his rightful contribution to the "democratic way of life." Elementary justice demands that the Indian be freed from these shackles and granted the full rights of citizenship which were granted to him by Congress in 1924. Then, and then only, can he determine his own destiny in this Republic under the same laws that apply to all of us.

Period of control by legislation: Destruction of tribal organization and seizure of Indian lands under the provisions of the Allotment Act, 1887–1934. An outstanding example of the fallacy and menace of class or race legislation, no matter how well intended, is found in the General Allotment Act of February 8, 1887. In a democracy, there should be no class or race legislation, and the truth of the statement is clearly demonstrated in the unexpected results of the Allotment Act. Although well intended by its advocates, it was a severe blow to Indian welfare and particularly to tribal organization. The weakness in such legislation is that it does not provide for self-determination in carrying out its provisions, for synchronizing its departure from common pattern with general practice, or for adequate assistance.

The act provided that eventually every Indian would be given a share of his reservation to be held in trust for a period of 25 years, during which time it would not be taxed and could not be sold. After that time he would be given fee patent and would be declared competent to manage his own affairs. It is estimated that Indians were separated from some 86,000,000 acres, or more than 60 percent of their holdings, in 1887, as a result of the Allotment Act.

Part of the difficulty lay in the restrictions on the sale of the lands. Heirs could not settle their estates except through subdivision, and that became very complicated. Another outcome was the practice of leasing land to whites; and the results of this practice still constitute a major problem with Indians. With good administration, sound supporting education, and provision for flexibility, the results would have been better. However, the matter of how Indians hold their lands should be a matter for Indians rather than Congress to decide. Congress would not dream of legislating similarly for any other minority group. Indians would be better off if all legislation specifically directed at "Indians" could be stopped.

Government attempts at tribal reorganization under the provisions of the Reorganization Act, June 18, 1934,[4] 1934–44: The Indian Reorganization Act is another example of control by race legislation. While the Allotment Act attempted to Americanize the Indians too quickly, the Reorganization Act goes to the other extreme and attempts to "re-Indianize" the Indians. Its general acceptance would establish a bigger and better Indian Bureau permanently. It would give permanent status to Indian reservations and provide for establishing new reservations as needed. It gives the Secretary of the Interior and, through him, the Commission of Indian Affairs, the final say in all matters pertaining to those operating under the act.

A report of the Senate Committee on Indian Affairs (No. 1031), June 22, 1944, declares that "the Wheeler-Howard Act has been a perfect failure from the standpoint of Indian welfare and should be repealed." This report in effect states that the act, among other effects, results in:

1. Perpetuating a system of indefinite land titles which insures perpetual Government supervision and control.

2. Complete incompatibility of Indian land policies with the American system of land tenure.

3. Placing more than a half million acres of land under Indian Bureau supervision, much of which will be unused.

4. Providing for complete regimentation of Indians through the system of loans.

5. Strengthening and perpetuating the reservation system, which is obnoxious to all thinking Americans.

The Reorganization Act has the merit of encouraging organization of Indian tribes

[1] Extension of remarks of the Honorable E. H. Moore, Senate of the United States, February 25, 1944.

[2] Ibid.

[4] 48 Stat. 981.

for consideration and action on their own affairs. If it then gave them responsibility for the administration of their reservations, it would be good. There is no such provision, however. The superintendent and his staff remain totally independent of the people they serve. Such a fundamental institution as the schools for their children are entirely independent of the Indian people. They have no voice in the determination of the curricula, employment of teaching personnel, formulation of policies, or any aspects of education. Even in those matters over which they are supposed to have some voice, they are subject to the pressures which the powerful Indian Bureau representative in the person of the reservation superintendent can apply as the need may arise. Reservation superintendents are sometimes very active and effective in controlling those who are elected to the Indian councils. Democratic processes are not always possible under the present system of administration of reservations. Elimination of the Indian Bureau and its representatives is the only way it could be made possible, and the act does not provide for that.

The Reorganization Act provides for granting Federal charters to Indian tribes that accept the provisions of the act. The charter is one of the major weaknesses in the act. If it were a State charter, similar to those granted cities and towns in the State, it would eliminate a host of confusions which now exist. It also provides for a constitution decided on by the people but approved by the Secretary of the Interior. The net result is that the constitutions are the work of the bureau. They have even been standardized by the legal department, which sends them out, and the reservation superintendent has the responsibility of getting the tribe to approve what is written.

Educational controls. The Indian Bureau attempts to duplicate practically every public service, and education is no exception. An extensive system of schools is administered by the Bureau, with little if any reference to the Indian people they are supposed to serve. This is a serious problem to thoughtful Indians. Every change of administration means radical changes representing someone's pet theories about how to solve the Indian problem. The pendulum swings from one extreme to another. At one time vocational education is the cure-all for every evil, then the swing is to agriculture, Indian arts and crafts, home economics, or something else. Continuity and stability is of short shrift. Change is the outstanding characteristic: change of personnel, change of policy, change of curriculum.

However, these are not the most important weaknesses of Indian education, for it would be possible to overcome any or all of them. The great weakness of Indian education is the complete lack of Indian participation in its administration. It is an imposed education, completely lacking in those close community relationships through which evolved the great American system of community schools which are the very backbone of our Nation. Another great weakness of the Indian educational system is that the schools are almost entirely for Indians only. In segregation, the Indian people are expected to acquire the elements of a culture with which their only contact may be their teachers or employees of the Indian Service. Progress has been slow, and it is not surprising.

Indian attitude toward education can be judged from the fact that as early as 1840 the Cherokee National Council passed legislation for the establishment of a system of common schools for the Cherokee Nation, and in 1841 the Council of the Choctaws passed similar legislation. The Five Civilized Tribes also operated their own schools in the early days without Federal assistance, and until 1850 most of the Indian schools were supported from Indian funds. Some of our great universities, too, such as the University of Michigan and Dartmouth, were assisted by Indian grants conditional upon them keeping their doors open to Indians. Most of the treaties contained meager provisions for some sort of education, which also indicates recognition on the part of the Indian of the need for education.

The first education for Indians was provided for by missionaries. By 1860 the first Indian reservation school was established at Yakima, Wash., and 1871 an appropriation of $100,000 became available. The nonreservation boarding school became an important part of the program after 1878. Use of the public schools for Indians began in 1890 and has been increasing gradually ever since. Approximately 50 percent of the Indian children enrolled in schools are now in public schools. For those who are not in public schools or private schools, the Government, with some help from tribal funds, operates so-called community day schools, reservation boarding schools, and nonreservation boarding schools. Contracts are made with mission, private, and State schools, and assistance is provided for higher education.

Since the first annual appropriation of $10,000 in 1819 for Indian education, the annual appropriations have increased to more than $10,000,000 for the education of approximately 65,000 Indian students. Beginning with the Rhodes-Scattergood administration and following the Merriam Report, vast improvements have been made. The most essential step, which has not been taken, is to make the Indian educational system an integral part of our national public schools system, returning control of the schools to the people they serve and eliminating segregation wherever practical.

The report of the Institute of Government Research in 1928 stated: "The fundamental requirement is that the task of the Indian Service be recognized as primarily educational, in the broadest sense of that word." The survey staff found the provisions for the care of the children in the Indian schools grossly inadequate, roundly criticized boarding schools of all types, and commended the growing practice of putting Indian children in public schools where practical. This report resulted in vast improvements in the educational system for Indians.

The report of the National Advisory Committee on Education in 1931 stated that the educational policy of the Federal Government could be regarded as little more than tragic failure and that the policy had, in a large degree, pauperized the Indian and left him about as helpless in the face of a strange economic civilization as he had been before. The report also recommended delegation of the management of Indian affairs to local officials wherever possible.

Education of all children of all races is a constitutional responsibility accepted by most States. Indian children should be educated in the public schools, not as Indians, but as American children. The responsibility of the Federal Government should be to see that schools are provided as needed on bases equivalent to the standards set for white communities. Education is one function of the State that should not be assumed by the Indian Bureau or the Federal Government. The whole so-called Indian problem is essentially an educational one, and the most fundamental need is amalgamation with the public schools, coupled with the recognition that education of an Indian child involves the same considerations required for the education of any child; that the content, methods, techniques of such education must all be adapted to individual abilities, interests, and needs.

Our forefathers wisely recognized the importance of the location of educational control and provided for a system of schools that have truly been the people's schools. Federal control of education, even for a minority group, is extremely dangerous, as has been demonstrated by recent European developments in that respect. Control of education for Indians today is by the Bureau of Indian Affairs, which has vested interests and does not necessarily express the wishes of either the Indian or the general public. The control of Indian education should be returned to the community and the State, and Indian education should become American education, adapted to the needs of Indian children. We would not deny Indians the right to send their children to private or special schools, but that should be their own decision and at their own expense.

In closing, the words of Walt Whitman seem pertinent: "Political democracy as it exists and works in America, with all its threatening evils, supplies a training school for making first-class men. It is life's gymnasium, not of good only, but of all." Or, in the words of Aristotle: "If liberty and equality, as thought by some, are chiefly to be found in democracy, they will be best attained when all persons alike share in the government to the utmost." American democracy must be the same for all, even for the Indian. We destroy it when we try to withhold any part of it, even the bad. It works only on the basis of all or none. In simple justice, then, we should give the Indian his full chance in this great laboratory under the same rules that we demand for ourselves.

FEPC Is Not the Remedy

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. HOFFMAN. Mr. Speaker, any discrimination in employment should be met by education rather than legislation.

If legislation be insisted upon, it should be interpreted and applied by court and jury—not by a legislative agency.

The issue was discussed by me over WGN on Sunday, February 3, 1946, and the following is the argument offered:

Tonight's question, "Should Congress pass the FEPC bill?", will be answered in the negative when its inherent defects are studied.

Under the guise of preventing discrimination in employment because of race, creed, color, national origin, or ancestry, the bill would create another Federal agency with power to appoint officers and employees without limitation.

The bill authorizes that agency to prevent what it considered to be unfair employment practices by employers engaged in interstate commerce and by the agencies of the United States, its territories and possessions.

Its agent would have the right to examine and to copy the private and business records of any individual or corporation being investigated—an arbitrary search and seizure power expressly forbidden by the Federal Constitution.

Every member of the commission would have the power to require any individual to go from any place within the United States or its possessions to any other place within the United States or its possessions; appear before anyone designated, to testify and produce any and all evidence demanded.

The agency's decisions on questions of fact, when supported by any substantial evidence, would be final, could not be reviewed by any court.

If, in its opinion, there had been discrimination, either in hiring or discharging

an employee, the agency is given authority to force the employer to hire the applicant and to pay back wages from the time employment was first sought. And that without a trial by jury or a court review of the facts.

The grants of power just enumerated and the possibility of their abuse are sufficient to condemn the proposed legislation.

But let us ignore methods and procedure and get to the real issues, which are:

(a) Is there discrimination in employment because of race, creed, color, national origin, or ancestry; and, if so, (b) against whom is it practiced? (c) Is legislation or education the remedy?

For practical purposes, because there is so little of it, we may eliminate discrimination in employment because of national origin or ancestry. Neither Irish, Italians, Poles, Swedes, Norwegians, the Dutch, nor any one of a half dozen other nationals make complaint.

While there is an overabundance of propaganda charging discrimination against Jews, it is without substantial foundation. There is no foundation for the charge of discrimination against them in employment.

Jews as a race are not laborers. They are craftsmen, traders, merchants, manufacturers, employers, and there is no discrimination against them as professional men, and in politics they hold a greater percentage of worth-while key positions in the Federal Government than does any other race.

One need but to call the roll of the top-flight lawyers, judges, scientists, publishers, merchants, bankers, producers in the movie industry, and in broadcasting, to realize the falsity of any charge that there is discrimination against Jews.

Nor is there discrimination in employment because of creed.

Quarrels growing out of divergent religious beliefs have been personal—no more frequent nor prolonged than those which arise between individuals differing over everyday tastes or conduct.

There has been no civil strife because of religious differences.

We come then to discrimination in employment because of race or color, which is the only grain of wheat in this widespread, persistent flood of propaganda chaff which has engulfed our Nation, distracted its attention from matters of more immediate, vital importance.

The avowed purpose of the present FEPC is the abolition of discrimination against Negroes—I prefer to call them colored people—in employment. But the real purpose of some of those supporting it is to force an intermingling and intermarrying of the races.

FEPC legislation is an attempt to, by law, force those who create and maintain employment to give those jobs to the first applicants, regardless of race, creed, color or national origin, if the applicants, in the opinion of the agency, be of equal ability.

While that policy, if enforced, would, speaking broadly, make all jobs available to all individuals regardless of the causes heretofore enumerated, it would deprive the employer—the man who created the job, the man who pays for the service rendered—of the right to select the individual he thought most capable of performing the service needed; a right which it is only fair he should have.

An employee is needed in a grocery store, a beauty shop; in a factory, a hospital, in a printing shop publishing religious literature.

Four individuals apply for the job—one white, one colored, one a Mexican, one a Jap. They are of equal ability. One is first on the scene and one, in the opinion of the FEPC, should be hired.

The employer is aware that, for reasons over which he has no control, the people whom he serves do not wish the services of the colored individual, or of a member of a particular race or nationality. He does not hire the applicant the FEPC may later think was entitled to the job.

Months afterward, if the FEPC finds that, in its opinion—and I stress the word "opinion"—there was discrimination, then the employer must discharge the man he hired; give the job to the individual chosen by the FEPC; pay him wages from the day he first applied.

In short, FEPC, not the employer, does the hiring and the firing.

If white and colored workers of equal ability apply for jobs in a foundry, or in any occupation where the work is to be performed under extreme temperatures, every employer with any knowledge of the business and any experience will give preference to the colored applicants—foundry workers—for they know that they can withstand the heat far better than can the whites. There, the discrimination is against the white.

Examples which show that a legalized FEPC will bring discontent, disappointment, and perhaps civil strife, are innumerable. A few should suffice.

All major religious groups—Catholic, Jewish, and Protestant—publish literature designed to spread the religious beliefs of each. They need linotype operators, proofreaders, reporters, editors.

Under the FEPC, the publisher of a Catholic periodical would be compelled to employ a Jew or a Protestant; the Jew would be forced to hire a Catholic or a Protestant; and the Protestant would be required to hire a Jew or a Catholic, and each of the three would be forced, if the FEPC so ordered, to employ an atheist or an infidel.

Do you think that procedure would promote harmony or discrimination?

Must the Jewish, the Protestant, the Catholic institution caring for children employ, as a nurse or a governess, the applicant of a different creed?

Must it employ an atheist, who proclaims that Moses was a fraud; that the Tablets of Stone never existed; that the Ten Commandments are a myth?

Or must it employ a Communist, who adheres to the party declaration that there is no God; that religion is a fraud; that priests and ministers are hypocrites, just because FEPC so orders?

From the day when Moses led the children of Israel out of Pharaoh's bondage right down to the present moment, groups of people have preferred each other's society; have preferred to give employment to members of their own group, of their own faith, of their own nationality; and experience has demonstrated that those preferences cannot be eradicated by law.

Sound, honest thinkers must divorce the question of social equality, segregation, and intermarriage from this controversy, for this legislation on its face makes no pretense of dealing with either, and each can only be solved by time and education, for all three are social—not economic—problems.

The noble experiment—prohibition, demonstrated that education, not legislation, is the remedy for social ills.

That the end of discrimination in employment is not the purpose of the proponents of this legislation is apparent when their inconsistency is laid bare.

They refuse to accept amendments which would prohibit discrimination because of sex, membership, or nonmembership in any labor or fraternal organization.

Under their bill, a black, yellow, or brown individual, be he Jew, Catholic, Protestant, atheist, or infidel, if he be a member of a union, is given employment while, though he be white, a Jew, Catholic, or Protestant, but not a member of a union, he may seek employment in vain.

Even his Government will in many cases issue an order denying him a job—yes, a job created by his own tax dollar—because he is not a union man.

His color, his creed, his nationality, will not bar him, but his failure to sign on the dotted line presented by the organizer of a minority group deprives him of the means of earning a livelihood for himself and his family.

While they cry out against discrimination in employment because of race, creed, color, or national origin, they refuse to legislate against discrimination against the overwhelming majority of American workingmen and women.

If proponents of legislation to end discrimination in employment are sincere, let them be consistent; include in their proposals an end to discrimination because of sex and membership or nonmembership in any labor organization; let them join with us who believe in constitutional processes, in our judicial system, where, before a court learned in the law and a jury of his fellowmen, all may seek and find equal justice under law.

Once more, waive the defects and the inadequacy of the proposed legislation and get back to fundamental principles.

At present, there is a deplorable lack of confidence in the fairness, the integrity, the efficiency, of administrative agencies. The courts still retain much of the confidence of the people.

The possibilities for the exercise of tyranny, fraud, blackmail, and corruption under the interpretation and administration of this bill, or any other legislation of its nature, are apparent.

The creation of an executive agency to interpret and administer the FEPC would be but another transfer of a portion of the power of the judicial to the executive branch of the Government; another step toward dictatorship.

The bill legalizes an executive agency, which, created to prevent discrimination, has disregarded every principle of equality, of opportunity in employment; has itself practiced the rankest discrimination in giving employment. We have no reason to believe that changing it from an executive to a legislative agency would bring reformation. Legislative approval would but tend to inflate its ego, increase its arbitrariness; give it ground to claim its practices met with congressional approval.

Entrusting the interpretation and administration of any legislation which it is deemed wise to adopt to the judicial branch of our Government is imperative if we are to retain our constitutional rights and processes.

It took the Anglo-Saxon race hundreds of years to obtain, establish, and to a large degree perfect our judicial system, which still, through court and jury, is the most efficient method of administering justice between individuals ever created, in spite of more or less successful attempts to impair it.

To prevent discrimination in employment because of race, creed, sex, color, lack of color, national origin, ancestry, membership or nonmembership in any labor or fraternal organization; to insure equal justice under law, I have introduced H. R. 5216, which provides that there shall be no discrimination in employment against or in favor of any individual because of such individual's race, creed, sex, color, national origin, ancestry, membership or nonmembership in any labor or fraternal organization; and which turns over the interpretation and the administration of that law to an impartial judge learned in the law; to a fact-finding jury impartially chosen through the operation of long-established judicial processes.

This is tonight's question: Should the Congress make legal and permanent the present FEPC; adopt all but five of its personnel and, by so doing, endorse its methods and procedure, when the record shows that it is one of the most discriminatory agencies ever created? When its own record shows that, while created to prevent discrimination, it has given 59 percent of its jobs, spent 54

percent of its money, to Negroes, who number 9⅘ percent of the population?

That is the question, and my answer is an emphatic "No."

Discrimination will not, it cannot, be ended by an agency which itself practices the rankest kind of discrimination.

Education, rather than legislation, is the remedy. If, however, we are to have legislation, the law should be interpreted and administered by the judicial department of our Government, as other laws are interpreted and administered.

Since that discussion, there came to my desk an analysis of the bill, which is printed herewith and marked "exhibit A"; and a statement issued by the New York Commission Against Discrimination as it appears in the Labor Relations Reporter of January 21, 1946 (17 LRR 679), which is printed herewith, marked "exhibit B":

EXHIBIT A

WHAT THE SO-CALLED FAIR EMPLOYMENT PRACTICE BILL MEANS TO YOU—HOUSE BILL 2232

This so-called fair employment practice bill is now awaiting congressional consideration and enactment.

The title of this bill is "To prohibit discrimination in employment because of race, creed, color, national origin or ancestry."

No fair-minded person can quarrel with the elimination of discriminatory practices. There are several ways, however, of accomplishing this objective. The best way is by the process of education, which has already achieved results. The desired objectives can be defeated by improper legislation.

With this in mind every Member of Congress, every employer, and every labor leader should examine the provisions of this bill.

Consider the following words and phrases quoted verbatim in terms of how the national economy might be affected. Note the wording is subtle—the implications are hidden—but authority is written into this measure which can and may destroy the fundamental principles of a successful, private free enterprise.

1. "In the matter of employment, and in matters relating thereto" and "in the matter of compensation with respect to, or in other terms or conditions of employment."

This bill provides for control of your hiring by outsiders—persons not in your employ. It aims not only to tell you whom you may employ—it controls all phases relating to employment, including promotions, wages, hours, retirements, vacations, lay-offs, discharges, and in-plant employee activities.

2. "Against properly qualified persons."

At first thought it may seem proper enough to prohibit discrimination against persons properly qualified. But according to these terms a single outside Government agency or agent can determine for every business or employer in the United States who is properly qualified for employment and advancement in his business. In this bill, properly qualified means properly qualified in the opinion of the Government agent assigned to investigate alleged acts of discrimination. It means qualified by such theories as that outsider determines for your business; not necessarily related to the tests and standards developed through experience and practice by the one whose enterprise is at stake. Your judgment as an employer to select a group of individuals and build an organization which will work together as a team is outlawed when it conflicts with the judgment of an outside agent.

An employer would have to police every line of applicants at his doorway, both to insure that the hiring of the first to come did not result in discrimination and also to prevent the strife and disorder which could be caused by such a law.

3. "The term 'employer' means a person having in his employ six or more individuals or any other person acting in the interest of such an employer directly or indirectly."

By this language, the test is not whether you as an employer of six or more persons, authorized an act made unlawful by the bill.

The above provision makes you liable for back-pay awards, and subject to expensive legal proceedings if the alleged act was done by a person who was acting even indirectly in your interest. These words have been held to include trade associations, civic organizations, counsel, superintendents, foremen, or anyone placed in a position to represent you.

4. "The Commission is empowered (1) to prevent unfair-employment practices by employers affecting commerce; (2) to prevent unfair-employment practices by employers who are parties to contracts with the United States or any Territory or possession thereof, or with any agency or instrumentality of any of the foregoing, and by employers performing, pursuant to subcontract or otherwise, any work required for the performance of any such contract."

Under this section an employer of six or more persons comes under the law if the work of his employees in any way affects interstate commerce. The Supreme Court has held that elevator operators in a building having tenants doing business in interstate commerce come under such language. Moreover, if an employer sells to the Government, or if he is a subcontractor, that is, if he supplies material or services, no matter how remotely, if ultimately the user is the Government or a governmental agency he comes under this law. Anyone who contracts with a governmental agency or instrumentality, will come under this law.

Note: Government agencies and instrumentalities have been held by the courts to include even national banks.

5. "The right to work without discrimination because of race, creed, color, national origin or ancestry is declared to be an immunity of all citizens of the United States, which shall not be abridged by any State or instrumentality or creature of the United States or of any State."

The Constitution of the United States protects recognized privileges and immunities of citizens and under the fourteenth amendment no State may abridge such privileges and immunities. This bill would by the above language, amend the Constitution by applying a strained definition of the word "immunity." It would thus extend the bill to the States and also to creatures of States—that is, to cities, towns, and villages, public schools and State schools and colleges. By invoking the fourteenth amendment through such construction of the word "immunity" freedom of contract guaranteed by a State constitution or law would also be destroyed.

6. "It shall be an unfair employment practice for the purposes of this act for any labor union to deny full membership rights and privileges to any individual * * * to expel from membership * * * to discriminate against any member, employer, or individual seeking employment because of race, creed, color, national origin or ancestry."

This in effect puts governmental agencies in control of labor union membership.

7. "The Commission shall have power * * * to cooperate with or utilize regional, State, local, and other agencies, and to utilize voluntary and uncompensated services * * * to make such technical studies as are appropriate * * * and to make results of such studies available to interested Government and nongovernmental agencies."

In what other law have secret and confidential data and official files involving the rights of the individual citizen been turned over, by specific statutory command, to private, nongovernmental agencies? Who are these mysterious nongovernmental agencies—left undefined and anonymous in the law—and who are these volunteers, clothed with statutory authority to render uncompensated services? The so-called voluntary and uncompensated services might be irresponsible, self-serving, or subversive organizations.

8. "Whenever it is alleged that any person has engaged in any such unfair employment practice, the Commission, or any referee, agent, or agency designated by the Commission for such purposes, shall have power to issue and cause to be served upon such person a complaint stating the charges in that respect and containing a notice of hearing before the Commission or a member thereof, or before a designated referee, agent, or agency at a place therein fixed not less than 10 days after the serving of said complaint."

Before you can prove that you did not discriminate "against properly qualified persons," the following train of events are, by the above language, placed in motion against you:

(1) You would be investigated, prosecuted, and judged by an agency of the Commission, which may be a volunteer and uncompensated agency. This is not a court trial by judge and jury.

(2) You must answer the charges in 10 days and appear in any place designated by the Commission.

(3) The Commission or any agent or agencies thereof would have power to examine or copy your records, or that of any person under such investigation, may issue subpenas for the appearance of witnesses, administer oaths, etc., to effect the investigation.

(4) The Commission may require witnesses to appear and produce evidence from any place in the United States or its possessions at any place designated by the Commission for the hearing.

(5) In case of contumacy (that is, a refusal of a witness to respond to a subpena) the Federal district court in the concerned district would have jurisdiction of the person refusing to respond and could order his appearance before the Commission; a refusal of a court order could be punished by contempt.

(6) The Commission would have power to issue its own rules and regulations.

(7) Anyone resisting the administration of the provisions of the act, as administered by the Commission, and its designated agents, is subject to a $5,000 fine, or imprisonment for 1 year, or both.

(8) If after such an investigation and hearing, the Commission finds you guilty of discrimination, you will be required not only to cease and desist, but to take such affirmative action as will carry out the broad policies of the bill, including reinstatement or hiring with or without back pay as the Commission determines.

9. "Orders of the Commission shall be subject to judicial enforcement and judicial review in the same manner, to the same extent, and subject to the same provisions of law, as in the case of orders of the National Labor Relations Board."

It has been held in many cases under the Wagner Act that this means the Commission will have final power to weigh the evidence, making binding determinations of fact and draw inferences from the facts. In the Commonwealth Edison case, a circuit court of appeals sustained the Labor Relations Board because as the judge said, "We cannot say that the record is wholly barren of evidence to support the charge that they were discriminated against on account of union activities," and this holding was not reversed by the Supreme Court on appeal. In other words, the court can only review the legal questions and not the facts.

Bear in mind that every time an employer hires or discharges anyone, or anyone is elected to or dismissed from membership in

a labor union, a potential crime is committed. If there are 100 applicants for a job, it is possible for charges of discrimination to be brought by the 99 unsuccessful applicants. In this event, the employer must conclusively demonstrate to the satisfaction of the Commission or its agent that the applicant selected was clearly the best qualified for the job. If this is not possible, or if an honest mistake was made, it becomes necessary to prove that there was no intent to discriminate at the time, which it will be conceded is a practical impossibility. Furthermore, if the Commission, having read the employer's mind in retrospect, determine that he did, in fact, have discriminatory thoughts, there is no recourse from its decision, since, where there is any evidence to sustain the findings of the Commission the courts would be powerless to set aside its decision.

When an employer is forced to hire a particular applicant, and the employer and applicants not hired believe that someone else was entitled to the job according to sound standards of personnel administration, ill feeling will be engendered that could only cause racial antagonism and strife.

In cases where hearings are extended over long periods of time and large awards of back pay are ordered, many small businesses could be bankrupt.

EXHIBIT B

NEW YORK LAW AGAINST DISCRIMINATION

The following is a statement recently issued by the New York Commission Against Discrimination as it appeared in the Labor Relations Reporter of January 21, 1946 (17 LRR 679):

"Pursuant to section 131, subdivision 3, of the Law Against Discrimination, it shall be an unlawful employment practice for any employer or employment agency to make any of the following inquiries or requirements in connection with prospective employment:

"1. Place of birth of applicant.

"2. Place of birth of parent, spouse, or other close relatives.

"3. Requirement to produce birth or baptismal certificate or naturalization papers.

"4. Residence address of parents, spouse, or other close relatives.

"5. Wife's or mother's maiden name.

"6. Are you a native-born citizen?

"7. Are you a naturalized citizen?

"8. When did you acquire citizenship?

"9. What is the citizenship of spouse or parent?

"10. Religious affiliation of applicant.

"11. What church do you attend?

"12. Name of parish.

"13. Name of pastor.

"14. Denomination of applicant.

"15. Do you observe religious holidays? If so, what days?

"16. Lineage of applicant.

"17. Racial ancestry of applicant.

"18. Descent of applicant.

"19. Nationality of applicant.

"20. Complexion of applicant.

"21. Organizations of which applicant is a member, unless the question is so qualified as to except therefrom organizations of a religious, racial, or foreign national character.

"22. Schools of a particular religious denomination attended by applicant.

"23. Previous military experience of applicant, unless limited to the armed forces of the United States.

"24. Use of a space on application form opposite title "appearance" by either the applicant or the interviewer.

"25. A requirement by an employer for a photograph.

"These inquiries and/or requirements may, however, be made subsequent to employment provided the information or data thus obtained is not used as a basis for discrimination.

"The following inquiries and/or requirements on applications for employment have been held by the State commission against discrimination to be proper and lawful—oh, yeah!

"1. Are you a citizen of the United States?

"2. Is your spouse or parent a citizen of the United States?

"3. Public or private schooling of applicant.

4. Do you have the ability to use a foreign language?

"5. Do you regularly attend a house of worship?

"6. Do you have any military experience?

"7. A requirement by a privately operated foreign language school that persons applying for teaching positions have been born and received their education in a country wherein the language they intend teaching is the native tongue, and inquiries by the school seeking to elicit that information."

Bevin Gives Vishinsky the "Lie Direct"

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. RANKIN. Mr. Speaker, the "confusion of tongues" in UNO seems to have reached the limit on yesterday in the bitter debate between Vice Foreign Commissar Andrei Vishinsky, of Soviet Russia, and Ernest Bevin, Foreign Secretary of the British Empire, in which Mr. Bevin gave Vishinsky the "lie direct."

Under permission granted me to extend my remarks in the RECORD I am inserting excerpts from both of their speeches as they appeared in today's New York Times.

(The matter referred to follows:)

EXCERPTS FROM RUSSIAN VICE FOREIGN COMMISSAR ANDREI VISHINSKY'S SPEECH TO THE UNITED NATIONS SECURITY COUNCIL

I would like to deal now with the declaration made by Mr. Bevin at the last meeting of the Security Council. One of the main features of the declaration made by Mr. Bevin was the careless way with which he dealt with facts.

This is why I should like to remind you again of these facts and of the interpretation given to these facts by Mr. Bevin, regarding the matter brought to the attention of the Security Council by the Soviet delegation according to the instructions of the Soviet Government.

I would like to remind you that Mr. Bevin said the question was raised whenever there was a discussion regarding the situation in Rumania, Bulgaria, or Poland. Mr. Bevin added that the Greek question was used as a counterattack against Great Britain whenever other countries in Europe were under discussion. The proof of the biased way in which Mr. Bevin has stated the situation may be obtained from the facts I will submit now.

I would like to remind the Council of the situation in Greece as it was at the time of the conference in Berlin. On the 20th of July, this Big Three met under the chairmanship of Mr. Truman and everyone listened to the declarations made by Mr. Molotov regarding the meeting of the Foreign Affairs Ministers dealing with several questions, including the question of Greece.

MOLOTOV'S ATTITUDE CITED

The declaration read in substance that Mr. Byrnes suggested a tripartite agreement in order to insure that representatives of the free press of the United Kingdom, United States of America, and the Soviet Union could go to Italy, Greece, Rumania, and Bulgaria, and freely travel in the countries and make complete reports on the facts. This report obtained the consent of Mr. Eden but Mr. Molotov did not see at that time the necessity of sending representatives of the press in Rumania and Bulgaria.

Regarding the question of Greece, the point of view of the Soviet Government was expressed in that document in the following terms:

I would like to remind you that in this memorandum submitted on the 21st of July, there was not a word said against Great Britain. We have only pointed out that the situation in Greece was very tense; that, in fact, it was a reign of terror, and this terror was promoted by that Government of Greece which was in power at the time. There was a serious menace of war against Albania and Bulgaria.

Now, I would like to remind you of all the facts which were listed in the document of the 21st of July. I would only insist on the two main points—that is, the two proposals made by the Soviet Government. The first was to reestablish diplomatic relations with Bulgaria, Rumania, Finland, and Hungary, as any delay in such direction would not be justified. The second was a recommendation to the Regent of Greece to take such steps as might insure the formation of a truly democratic government, and this in compliance with the terms of the agreement signed on the 12th of February, 1945, between the representatives of all parties of Greece—the Corsica agreement.

This document, which was then submitted, is now called by Mr. Bevin a tool of counterattack against Great Britain. When we made these recommendations we only had in mind to reestablish a really democratic government in Greece, and we hoped to obtain the support of Great Britain, and now Mr. Bevin says this was a counterattack against him. This may correspond to the funny ideas Mr. Bevin seems to have about what is an attack and what is a counterattack.

Mr. Bevin said in his speech that when the question of Poland, Rumania, or Bulgaria is discussed Mr. Molotov takes out of the deck of cards a king and says, "This is a wise gesture—that is my trick." And Mr. Bevin added, "And then we pull out the ace."

I would like to follow Mr. Bevin and to suggest in my turn that if international conferences be compared with a game of cards or if foreign politics are, indeed, a game of cards, if Mr. Bevin insists on such comparison, I should then follow him and say that the ace Mr. Bevin pulls out is not absolutely like a normal ace. * * *

Mr. Bevin said that the danger to peace in the world is the nonstop propaganda of Moscow against the British Commonwealth, the attack against the British Government. He said there was no friendship between those two countries and this, in his view, is a threat to peace in the world. I must say that it is the opinion of the Soviet delegation that nothing worse could have been said. * * *

Does he think that his declaration, that is, that his "propaganda" is a threat to peace—and I say right now that this declaration has no ground whatever—does he think it is in harmony with what he said about the friendship between our two nations? When we of the Soviet delegation—all of us—heard those words spoken here in the Security Council by the British delegate, we felt the cold breath of an unhappy past and we could not help thinking of the dark shadows who

in the past have worked not for good but for evil relations between our two countries.

I quote Mr. Sophianopoulos (former Greek Foreign Minister John Sophianopoulos): "And now I avail myself of the opportunity to observe that as I have said to British officials in London we cannot speak about the possibility of free and genuine elections unless a wide amnesty is granted. This was not granted by the most inefficient law which the government issued, aimed at 'decongestion of prisons.' Secondly, terrorism by responsible organizations and by state organs must cease. This terrorism was manifested in recent events at Kalamai. Thirdly, the state machine must be purged of all the Fascists and reactionary elements which remain at their posts, although they are remnants both of the dictatorship and enemy occupation."

Now I will ask Mr. Bevin, what will he say as to all these declarations that I have mentioned—declarations made by British political leaders, voicing their anxiety as to the situation which is fraught with grave consequences both for the Greek people and for the maintenance of peace and security: Is that also Moscow? Is that also a counterpart of Moscow? * * *

In his declaration Mr. Bevin mentioned the respective armed forces held in Bulgaria, in Yugoslavia, trying there to demonstrate that the balance of power presented no danger of aggression or aggressive action on the part of Greece. May I say that the figures given by Mr. Bevin were somewhat exaggerated, but the danger does not lie in the fact that the Greek armed forces are small or large; the danger is not linked with the proportion of troops in every country; it is linked with a situation where adventurers who have already possessed themselves of arms get beyond the control of the forces of order.

This is the case in Greece. With regard to this statement made on the military situation in that country this may lead to illusions which will certainly be exploited by the X or the adventurers from the nationalist elements in Greece. I would again like to quote Mr. Cocks when he said that the "irresponsible rightist elements in Greece are encouraged because they think they will get the support of Great Britain in anything they try." This is a dangerous situation and that is why the presence of British troops in Greece is working against democratic elements of the country even, and I may say that those democratic elements are paralyzed by the presence of British troops, whereas the reactionary elements become more active every day.

This is a regrettable situation, and we are compelled to say, as the Latin saying does, "Because Plato is my friend, I treasure his dear name." We do not want to have a foreign intervention; we do not want to have a situation where foreign troops intervene.

That is why the Soviet delegation insists on the immediate withdrawal of the British troops from Greece.

EXCERPTS FROM BRITISH FOREIGN SECRETARY ERNEST BEVIN'S SPEECH TO THE SECURITY COUNCIL

I presume it is necessary for me to take up point by point the complaints made by Mr. Vishinsky.

His first point against me was that in my statement last Friday I said that, whenever questions were raised relative to Rumania, Bulgaria, or other countries in which Soviet Russia was predominant, the question of Greece was immediately raised. The best evidence is the written documents. The United States on July 12, 1945, submitted a memorandum on the Yalta Declaration on liberated Europe, and that dealt mainly with Rumania and Bulgaria. At that time, France, Great Britain, and the United States had agreed to the holding of free unfettered elections in Greece, and the United States suggested that such a course was necessary for the countries I have mentioned.

That brought the memorandum which Mr. Vishinsky introduced about Greece at that conference: But it is rather striking that, notwithstanding his discussions, these are the words of Marshal Stalin. He replied that he had complete confidence in British policy in Greece.

It is rather interesting that Mr. Vishinsky should raise this particular point now, because on each occasion, as I said the last time we met here, the Soviet Government has either not pursued the matter or has expressed confidence in our country.

In London during the Council of Foreign Ministers, the United States Government made a statement that they did not regard Rumania and Bulgaria as democratic Governments, and immediately Mr. Molotov brought in Greece, although, I might say, Mr. Chairman, that with my usual practice I was taking no part in the discussion; I was leaving it to the protagonists. This is what I said: "Whenever a difficulty arose in that Council, Greece was always brought up. Greece was not even discussed between Mr. Byrnes and Mr. Molotov."

Far be it from me to belittle what anybody did in the war, especially in the extremity and difficulty Greece was going through.

GREECE AS ONLY ALLY

I think I ought to make an observation as to why Britain is so attached to Greece. It is not power politics, it is not economic interest; but the world should be reminded that outside the British Commonwealth, from 1940 to 1941, Greece was our only fighting ally withstanding the onslaught of the enemy. I leave the world to guess what everybody else was doing, but Britain was alone, and Greece not only placed her country, but he armies and her effort at the disposal of the Allied cause when it looked absolutely forlorn, and we are not going to forget her now.

I am not unfriendly to Russia; I just want equal treatment with them, that is all.

On the historical propaganda side your case, if I may say so, falls completely to the ground. It is perfectly true—and I acknowledge it—that when there was interference with the trade unions at one period I resisted. You built the Soviet Union, and if anybody attacks it, you fight—and quite right. I built in this country one of the largest unions in the world, which has a great record for raising the standard of life of our people, and at the period that it was attacked, it was my creation, and I fought—and quite right. That is the only time I have ever had any dispute. I do not say with the Government of the Soviet Union, but with the policy it has put over. To sum up: I accuse nobody. I think I have dealt with that matter.

What is the basic charge against Great Britain in which the honor of my country and the Commonwealth is involved? I repeat, in which the honor of my country and the Commonwealth is involved.

It is that we have deliberately put troops into Greece, supported certain elements in Greece, with the object or the likelihood of disturbing and endangering international peace.

Now, does Mr. Vishinsky believe that? If he does, then I ought not to be sitting at this table.

Does he believe the British Government, after all these years of war and bloodshed, to be engaged on a policy of using its troops to disturb or endanger the peace of the world in any way at all, or anywhere?

If that is true, you ought to tell me to leave this table because I am not fit to be with you, because you are established to maintain world peace and I am branded, at the first meeting, as being the one person in the world disturbing and endangering world peace.

It is said that we are suppressing the EAM [National Liberation Front] or, as they are said to be, the majority of the people. I do not know which political party in Greece has the majority and I defy anybody to tell me until we have had the elections. I am told by the Royalists that if the elections take place now they will win. I am told by the EAM that they will win. Well, as an old campaigner, I never decide who has won until they come to ballot, and I think that is a very wise precaution.

I do not mind confessing to this audience I thought we were beaten in the last election, but I woke up to discover we had won, and with the mystery of a free election it is not until the boxes are opened and the votes are counted that you do know, provided the thing is conducted fairly. On that basis it is the policy of the British Government to try and get a stable government out of that election and to carry out what we have told the Greek Government: As soon as they have got that over and they have got their government, they should by that time have the police organized and such army as they need—within a very short time, anyway—and we want to withdraw. I have repeated this to the Soviet Government over and over again and they have always accepted it, so I could not understand why this was put on the agenda here.

In the document that was submitted by the United States Government, a free press and free access was asked for all the satellite countries of eastern Europe, and, in Mr. Vishinsky's own words, you will note that was declined, but there has never been a refusal to the press even when they have been against us and against the Greek Government in Greece. It has been open to the world the whole time.

That is why you get so much information, and bad information at times.

We are endeavoring to build this up on a basis of freedom: As I said the other day, by trial and error endeavoring to assist governments, whoever they may be, so that Greece may come back into her own.

Now I did make a mention of propaganda. I am sure Mr. Vishinsky will not deny that the reference to Greece continuously is very unsettling and he is setting one section of the community against the other. But he says, as I understand it, the British troops are there protecting the right.

I give the lie direct to that.

We have protected all the people whenever the Greek Government has called upon us to do it or whenever we have discovered a danger to public order.

My information about any terror—which I do not admit—is that there were over the whole country, from December 20 to January 13, 122 incidents perpetrated by the Left, 41 by the Right and 58 persons unknown. * * *

I do not believe in wars of nerves by propaganda or press, and that is why I ask, in my closing words, that all our influence should be used in Greece as elsewhere to direct the attention of the inhabitants to economic rehabilitation and reconstruction. That is the great task for us.

I do not feel I am on the defense. The conscience of the British Government is clean and clear. It cannot submit to the condemnation of the Soviet Government, either by inference or implication. Neither will the British people. I think to the tune of nearly 100 percent in this country, they would resent it, and I believe I speak for the whole British Commonwealth when I say it.

We have been hauled before the tribunal of the world without a single word to us, and charged with what I would regard as against humanity the most diabolical crime that any nation could be charged with—of endangering the peace of the world.

Congress Double-Crossed?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Bristol (Pa.) Courier of January 31, 1946:

CONGRESS DOUBLE-CROSSED

It begins to look as though the White House pulled a fast one on Congress when the administration talked the legislative branch of government into passing for President Truman the plan which was refused President Roosevelt—the reorganization bill.

President Roosevelt asked it in the name of efficiency. He said in effect that the Federal employees would work harder if he were given the right to hire and fire without question; if the tenure provisions of civil service were made dependent on the will of the Chief Executive and his political associates.

President Truman sought the same powers in the name of economy. The steam was generated by the revelations of Senator BYRD, Virginia Democrat, that the Federal pay roll was at least 300,000 too high for war and 2,500,000 too high for peace.

Implied by the President's request for the reorganization bill was a promise to demobilize the civilian army, so much of which got a free ride on the war effort.

It has been obvious for months that upward of $5,000,000,000 of Federal costs could be saved by dropping Federal employees no longer needed—and that amount of saving would put even the Truman budget into balance.

But the bill has been passed, and the President has signed it into law, and nothing has happened.

Once the bill was in his hands, the President said what he had been careful not to say earlier—that at the very best he couldn't see a chance to reduce the pay rolls more than 25 percent.

His recent Budget message went even further. Somewhat defiantly he told Congress that it would be impossible to economize in the pay roll without cutting off Federal services.

Moreover, he continues to demand new and extravagant measures of Federal activity under which the pay roll could be boosted many times—to 10,000,000 Federal employees or more.

There is little in all this to cause surprise. Congress made the best of a bad bargain when it passed the authority over to the White House instead of trying to use it itself—Congress can control the pay roll only at long range, and can do it efficiently only with White House cooperation.

Doubtless the Congressmen who voted the President the powers he asked took it for granted that the public would thenceforth know that the President had assumed the responsibility for making the economies so urgently needed.

The fact is that the President shows no trace whatever of any true intention to economize. His new budget is 4 times higher than the expenditures of the years just prior to the war, 7 times higher than any rate of taxation in prewar years, and 10 times more than the expenditures of the Republican administration of the twenties—when the debts of the First World War were being repaid.

The "savings" which gave the President much publicity in the early months of his administration consisted of wiping out projected war expenditures. But even this procedure had a catch to it. The excess of appropriations, in many cases, went to the Treasury, and now the President seeks to interpret this surplus as "cash" and use it further to inflate the Nation's buying power.

Federal employment has risen since the close of the war, and the end is not in sight.

What is happening is sufficiently obvious. Democratic Chairman Hannegan has let the cat out of the bag again and again.

President Truman, who learned his politics in the machine school in Missouri, sees only one way to perpetuate his party's power at Washington—and to get himself reelected. That method is job patronage.

In a close election, the votes which 2,500,000 politically chosen Federal employees can control would mean victory to the Democratic Party.

If three out of five of the employees were dropped, as the outstanding Democratic expert in this field says should be done, the Hannegan-Truman chances of holding the Democratic majority in the two Houses of Congress this fall would vanish.

Senator BYRD himself has said he has taken his political life in his hands by insisting that bureaucrats be fired for the twofold reasons that they no longer have work to do and that the cost of supporting them in Federal jobs is driving the Nation toward bankruptcy.

What is this patronage raid costing the American taxpayers? That is not hard to figure.

BYRD's surveys show that at least $5,000,000,000 a year could be saved by dropping unneeded Federal employees.

On the basis of 140,000,000 population in the United States, that is $35.72 a year for each.

Would you like to have your tax bill cut $35.72, starting at once? If you are the wage earner for an average family of five, would you care to keep the $178.60 a year of your money which the Democratic high command is wasting in purely political job patronage?

Those are the figures—check them for yourself.

And the waste, from present indications, will mount steadily until the taxpayers of this Nation make their resentment felt.

Conditions in the Rice Industry

EXTENSION OF REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HCUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter written by Members of Congress from rice-producing States to Secretary of Agriculture Anderson deploring the unfortunate and desperate situation in which the rice industry of America finds itself and asking his assistance in immediately relieving this situation by the allocation of sufficient rice to take care of domestic consumption in this country:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 30, 1946.

Hon. CLINTON P. ANDERSON,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.

MY DEAR MR. ANDERSON: We are writing to you because of the serious and desperate circumstances under which the rice industry of the United States finds itself in its inability to reasonably supply its normal domestic trade because of the Government's set-aside order on rice.

The best-informed rice-industry sources estimate that as of January 1, 1946, there were available for distribution from all sources of the United States about 8,000,000 pockets of rice broken down as follows:

	Pockets
3 Southern States	6,000,000
California	2,100,000
Total	8,100,000
Recoverable by FMA of approximately 1,500,000 pockets owed in arrears by the mills under the 40-percent set-aside order effective until Dec. 31	1,500,000
Leaving a balance of	6,600,000
Product of proposed 50-percent set-aside in the South	3,000,000
Product of proposed 70-percent set-aside in California	1,500,000
Total	4,500,000
Leaving a balance of	2,100,000
Fit for industrial users only	600,000
Balance	1,500,000
Unshipped against Cuban commitment	1,500,000
Leaving a balance for civilian consumption January through July 1946	0

The above tabulation reflects that there will be practically no rice available for civilian consumption over a 7-month period, or until the next crop, against a normal consumption rate of about 600,000 bags monthly, exclusive of rice suitable only for industrial users.

Information that we have indicates that there is now on hand an infinitesimal supply of rice with wholesalers throughout the country and that the domestic trade can be supplied only after recoverables in arrears of approximately 1,500,000 pockets are made by the mills to the PMA under the 40 percent set-aside order effective until December 31 of last year.

We must all recognize that the only assured market the rice industry will have after postwar readjustments are effected will be the domestic market and we are greatly concerned and fear the recurrence of what happened following World War I when due precisely to circumstances as we have now, a great deal of rice was channeled to offshore areas and the domestic rate of consumption showed a sharp decline which required a number of years to build up to its present figure of approximately 6 pounds per capita. The rice industry has spent millions of dollars in the past in advertising the use of rice. This set-aside order completely destroys this movement and will do much in reducing the per capita consumption in this country.

From the above tabulation it is also shown that of the approximately 8,000,000 bags of available stock as of January 1, 1946, some 5,500,000 pockets are earmarked, or set aside, for the Production and Marketing Administration. Of that total quantity, about 40 percent will go to the Territories in the way of commercial exports and 60 percent is intended for relief in the Philippine Islands and other Asiatic areas.

It is not the contention of the rice industry that our Government should not make every effort to relieve hunger and suffering in the Philippine Islands and other Asiatic areas. It does contend, however, that even though there is a world shortage of rice, it is an established fact that very substantial

quantities of rice are available in some of the surplus producing areas in the Orient and that the equivalent of the relatively large percentage of our remaining stocks could be obtained from these areas, thus not jeopardizing the future of an industry which even under most favorable circumstances is very precarious.

It is contended that although substantial quantities of rice have been found available in the Orient since VJ-day the total quantity is still far short of urgent necessities. That is the feature of the whole situation which the industry feels requires the most careful consideration. In the year 1919–20 the same critical deficit situation throughout the Orient was claimed, particularly by the British Government, who had actually in effect established an embargo on exports from Burma. As a result of that situation the price of rice advanced from 7 cents to as high as 13 cents per pound. In the late spring of 1920, like a bolt from the blue, this embargo was removed and the whole world was flooded with oriental rice under British marketing.

It is the belief of the rice industry that in making rather generous allocations for the Philippine Islands and the UNRRA the Department of Agriculture representatives on the Combined Food Board overestimated the available quantity of American rice, as of January 1, and that if the industry is not to suffer very serious harm from an entire lack of rice in the domestic market over the next 6 or 7 months, the whole picture should be reviewed and at least a reasonable minimum assured for the domestic market before it is allocated for relief in any direction.

We Members of Congress representing the rice-producing and consuming areas of the United States feel very strongly about this and are respectfully requesting that a complete review of this problem be made.

We understand that England has entered into an agreement whereby she is to get free from the Siam Government the equivalent of 1,500,000 tons of rice, twice the normal yearly production of this country. We are in doubt as to when she will get this but there is no question of the fact that she has pocketed this supply. Furthermore we are told that Brazil has negotiated the sale of her excess rice to England. Isn't it very clear what is the inevitable result of these negotiations. England will capture the world rice market and the United States will be left with her surpluses with a reduced domestic consumption caused by this short-sighted allocation program.

We are also informed that because of the very strict grading regulations and requirements of the Government the best rice has been channeled away from the domestic trade leaving inferior rice for domestic consumption. This is, in our opinion, inexcusable.

We have delegated our colleagues, Congressmen DOMENGEAUX and LARCADE, of Louisiana; MILLS and NORRELL, of Arkansas; and JOHNSON of California to discuss and take up this matter with you.

We feel that American industry and the American public should be taken care of first.

With all good wishes, we are

Sincerely yours,

HENRY D. LARCADE, Jr., Member of Congress, Seventh District, Louisiana; JAMES DOMENGEAUX, Member of Congress, Third District, Louisiana; PAUL H. MALONEY, Member of Congress, Second District, Louisiana; WILBUR D. MILLS, Member of Congress, Second District, Arkansas; OVERTON BROOKS, Member of Congress, Fourth District, Louisiana; BROOKS HAYS, Member of Congress, Fifth District, Arkansas; A. LEONARD ALLEN, Member of Congress, Eighth District, Louisiana; C. E. MCKENZIE, Member of Congress, Fifth District, Louisiana; F. EDW. HÉBERT, Member of Congress, First District, Louisiana; J. J. MANSFIELD, Member of Congress, Ninth District, Texas; JAMES P. RICHARDS, Member of Congress, Fifth District, South Carolina; J. M. COMBS, Member of Congress, Second District, Texas; W. F. NORRELL, Member of Congress, Fifth District, Arkansas; MILTON H. WEST, Member of Congress, Fifteenth District, Texas; LEROY JOHNSON, Member of Congress, Third District, California; ALBERT THOMAS, Member of Congress, Eighth District, Texas; E. C. GATHINGS, Member of Congress, First District, Arkansas; TOM PICKETT, Member of Congress, Seventh District Texas; BERTRAND W. GEARHART, Member of Congress, Ninth District, California; JIMMY MORRISON, Member of Congress, Sixth District, Louisiana; CLARENCE F. LEA, Member of Congress, First District, California; EUGENE WORLEY, Member of Congress, Eighteenth District, Texas; A. J. ELLIOTT, Member of Congress, Tenth District, California; ALLEN J. ELLENDER, United States Senator, Louisiana; JOHN H. OVERTON, United States Senator, Louisiana; J. W. FULBRIGHT, United States Senator, Arkansas; W. LEE O'DANIEL, United States Senator, Texas; JOHN L. MCCLELLAN, United States Senator, Arkansas; WM. F. KNOWLAND, United States Senator, California.

St. Lawrence-Great Lakes Seaway

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that on January 16, 1946, my colleague, Representative WILLIAM A. PITTENGER, of Minnesota, under his extension of remarks included a copy of a letter from Governor Lausche, of Ohio, to Gov. James H. Davis, of Louisiana, of date November 19, 1945, on the subject of the St. Lawrence-Great Lakes seaway.

Mr. Speaker, in order that the position of my governor on this subject may be known, and in order to keep the record straight, I ask unanimous consent that the letter of Gov. James H. Davis of date November 19, 1945, addressed to Governor Lausche, of Ohio, be also printed in the RECORD, which is as follows:

NOVEMBER 19, 1945.

Hon. FRANK J. LAUSCHE,
Governor of Ohio,
Columbus, Ohio.

DEAR GOVERNOR LAUSCHE: Down here we feel that it would not be economical for the Federal Government to undertake the St. Lawrence-Great Lakes seaway and power project, which, according to the best available information, would cost the taxpayers of the United States upwards of a billion dollars. The Great Lakes region is prosperous and enjoys low freight rates. Other sections of our country are not so fortunate.

We feel that the proposed agreement with Canada was framed with less consideration to the affairs of all the people than should have been given, and that such a project with a foreign country should be considered as a treaty by the elected United States Senate, and are so advising our Senators.

We would be glad to have you join us in this effort, and with kindest regards and best wishes, I am

Yours very truly,

JIMMIE H. DAVIS,
Governor of Louisiana.

Mr. Speaker, it is needless to say, of course, that I agree with the position of the Governor of Louisiana.

If I Were King

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Samuel B. Pettengill, a former Member of this House:

IF I WERE KING

(By Samuel B. Pettengill)

A great author once wrote a story: "If I Were King." I suppose every decent-minded person wishes, at times, that he were a king, not to feed his vanity with the trappings of thrones, but to use his power to benefit his fellowmen.

If two choices were offered me; one to be the richest man in the world so I could turn my vast estates into public parks (as Caesar did in his last will in Shakespeare's play) or endow churches or colleges, or finance laboratories to seek the cure for some dread plague, I would turn it down if the other choice granted me were the power to get all of my fellow Americans to truly understand the priceless heritage they have in the American Constitution.

I say this soberly and after years of reflection. If this were in my power to do, I know my name would go down in history as a greater benefactor than any, and perhaps all the rich men who have ever endowed public charities. Such an understanding would enable common men everywhere to themselves build their own fortunes. It would lead to a country invincible abroad and happy at home.

Only one thing would I value more, that being my own understanding and ability to teach the laws of God for men, individually and socially. Part of these laws are, indeed, in the Constitution.

The Bible and the Constitution. "And the floods came and the winds blew and beat upon that house and it fell not, for it was founded upon a rock." The storm-tossed stars and stripes is, with one possible exception, the oldest flag that streams anywhere against the wind. It flies over the only undefeated great nation in the entire history of the world.

The American people do have a deep reverence for the Constitution in the same way as they revere the memory of brave but unknown men who long ago died for freedom at Valley Forge or the Alamo.

It has, however, been a long time since Madison, Hamilton, and Jay wrote the Federalist Papers to explain every word and sentence in the Constitution—a long time since the Fourth of July meant much to American youth beside the noise of firecrackers.

We need new Madisons, new Websters, new Calhouns. We need a new Benjamin Hill, who, in the postbellum days of the old South, said, "The Constitution is my only client, and its preservation is the only fee I ask."

Recognizing, as Jefferson did, that "laws and institutions must go hand in hand with the progress of the human mind," I still believe, as our fathers hoped, that the basic truths of the Constitution constituted "a new order for the ages"; or as in the Latin words, "Novus ordo seclorum" which they inscribed on America's Great Seal, as you will see it pictured on the back of the dollar bill in your pocket. It was intended to be "for the ages." I believe most of the social and political ills of our time, including depressions and unemployment, are due to the fact that we have veered from the course our fathers charted.

The cavernous bureaus of Government today are spinning intricate and sticky spider webs of countless laws, rules and regulations which entangle the bees from the human hive; the taxes they levy for their support discourage thrift and growth, and in addition the favors of government have become a vast prize, immorally fought for by huge pressure groups which are carrying on a fierce civil war of mutual exploitation.

This is a far cry from the free government our fathers designed where young men might climb the ladder to success by their own efforts, where ambition had its open field, and honest work its earned reward.

I will never believe that millions of men will work as hard to support the wives and children of unknown men in other towns, cities and States, as they will to build a rooftree for their own wives and for their children. (This is the fundamental fallacy of socialism.) We have not yet reached that point, but when the Federal Government takes away in taxes from 20 percent to 50 or 75 percent of what a man earns and gives it to the support of people he never saw, we are fast approaching a stagnant and discouraged America, which can only be revived by the hypodermic of war and death.

Our fathers faced the great issue of individualism or collectivism. They designed the Constitution to safeguard the individual. The State was to serve him and give him his chance; it was not to make him serve it and deprive him of his chance. They did not intend men to make their living like robber bands, preying upon each other with the ballot as their weapon of pillage. They intended, as God said to men in Genesis, "In the sweat of thy brow thou shalt eat bread."

"I am not," said Jefferson, "the friend of an energetic government. It is bound to become oppressive."

Due to popular ignorance of the true meaning and worth of the Constitution, which enshrined the individual and the family at the hearthstone as the very handiwork of the Creator, the materialism of a godless communism is eating its way, like termites in the timbers of a house, into every nook and corner of the American edifice.

It is not the Constitution which has failed us; we have failed it. We have been the unfaithful stewards of the trust our fathers, dying, committed to our care.

With the actual record of great achievement under the Constitution in releasing the energies of free men in the greatest march of progress in the history of mankind, it is amazing indeed that so many Americans in their ignorance are embracing the reactionary philosophies of the Europe our forefathers thought they had left behind them forever, and whose governments now build barbed wire stockades at their frontiers to prevent the escape of desperate men seeking freedom from their cruelties.

Yes, if it were in my power, I would call back from their graves, the brooding spirits of Washington, Franklin, Madison, and Jefferson. I would:

"Wake the dead,
Bid the old heroes rise from their graves and scourge with their tongues
Until this vain and rotting age, revitalized, shall rush
To emulate their deeds, or learn to blush."

I would try, too, "if I were king," to wake the teachers, pastors, editors, lawyers, and the youth of today, so that Americans yet unborn may proudly say, "freedom has still a continent to dwell on."

A Republican Platform

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. HOFFMAN. Mr. Speaker, Republicans desirous of winning election and restoring constitutional government will do well to read the address of Dwight H. Green, Governor of Illinois, delivered December 7, last. That address reads as follows:

It is a high honor and privilege for me, as Governor, to welcome to Illinois this meeting of the Republican National Committee. We earnestly trust that this meeting may make a real contribution to the welfare of the party and our country.

Although I appear here as Governor of Illinois, I speak as a Republican—a loyal worker in the party which from the time it nominated Abraham Lincoln for President has been the defender of our national unity and strength, and the champion of liberty and opportunity for the American people.

As a Republican I realize the importance, the truly crucial importance, of this meeting, which must make the basic preparations for the congressional campaign of 1946. It is time for all Republicans to give thought to a concrete statement of our fundamental principles and the major issues of the day. I am glad to know that our Republican Members of Congress are submitting to this meeting a set of resolutions upon which they have been working together for some time. I most earnestly hope that this session of your committee will adopt a sound declaration of principles upon which we shall stand in the 1946 campaign and by which we will stand come what may.

To that end may I offer some suggestions which represent my own deep convictions and, I am convinced, the feelings of many Republicans in Illinois and the Middle West. In doing so I face the facts squarely. The Republican Party has lost the last four Presidential elections. It has not won control of either House of Congress for 14 years.

This is a record of failure which we should not attempt to gloss over. Those who minimize our defeats by reference to numerous State and local victories are deluding themselves. The Republican Party was founded to elect, not sheriffs, but Presidents. It was born as a national party, has always been a national party, and, if it cannot win national elections, has lost its main reason for existence.

The time has come, therefore, when we must seek out the causes which produced our record of failure. They are not at all obscure. Our party has failed nationally, chiefly because it has not been true to the faith that is in us.

Thus we believe in private enterprise, but we have offered only feeble protests as private enterprise has been hemmed in and restricted by Federal taxation, regulation, and regimentation until it cries for help.

We seldom have had the courage to tell people who want something for nothing from the United States Treasury that we cannot give it to them.

We believe in balanced budgets, but we have not been sufficiently vigorous in opposing Federal squanderings that make a balanced budget impossible, and a rise in the national debt inevitable. We have said we are against inflation, but we have tolerated inflationary policies to appease various pressure groups.

We believe it is the duty of the National Government to enact and enforce a sound labor policy which protects the rights of labor, capital, and the public, the last being the innnocent victim of many labor disputes. Yet in the past we have failed to propose a concrete program to accomplish that purpose.

We know that our country is today by long odds the strongest of all nations, more than a match for any combination that might be brought against us, but we have too often given lip service to a foreign policy founded upon fear. We have been told that we must not raise our voice against the rape of Java by the British and Dutch for fear of offending some voters; and we have been told we must not even protest against the shameful betrayal of Poland for fear of offending Russia's following over here. We say we don't want Communist votes—and whether we do or not, we can never expect to get them—but we act as if they were about to fall into one lap if only we behave with circumspection.

It is true that the New Deal opposition has employed just such tactics of double talk and deceit with notable success. It does not follow, however, that we can profit by imitation. Indeed, we know—or should know by now—that we can't. If the moral wrong of playing both ends against the middle doesn't deter us, we ought to be restrained by the knowledge that we cannot hope to equal our opponents in making false promises. We are amateurs; they are past masters at that game.

By this time the country knows that the New Dealers cannot be trusted. They promised Palestine to the Arabs and to the Jews at the same time. They gave Poland to the Poles and to the Russians. They told us that lend-lease would keep the Nation out of war when they knew it wouldn't. They told the fathers and mothers of America that their sons would not be called upon to fight on foreign soil. They promised peace when they knew war was upon us.

The country knows all this and much more like it. The people are tired of double talk. No party can be all things to all men. Let us Republicans be true to ourselves and our honest beliefs. I predict that if we do that, we shall gain 10 votes for every one we lose.

The cornerstone of our program must be the vigorous protection of the people of America from future attack. This is the first duty of our Government.

We do not agree that the American people were to blame for Pearl Harbor. We are determined that there shall never be another Pearl Harbor. We demand that the superiority of our Army and Navy and their air arms in numbers and in the scientific weapons of modern warfare shall be rigidly maintained.

Therefore, we are gravely worried at the failure of the Truman administration to take effective steps to insure the holding of the vital air and sea bases for American defense, which we have established during the war at such great cost of American money and American blood. While the Truman administration has dallied with these vital matters, our allies are engaged in a mad scramble to regain their lost possessions, to extend their frontiers, and to establish unilateral spheres of influence.

We demand that our Government take prompt and unequivocal action to insure the permanent retention of these bases under complete American control.

We favor the fullest cooperation with other nations to insure peace, but we insist that the makers of our foreign policy cling to our American ideals of justice and liberty. We must never condone the suppression of liberty in Poland, in the Baltic States, in the Balkans, or in any nation in Europe, Asia, or elsewhere. It must be our vigorous policy to use the leverage afforded by the discussion of forgiveness of lend-lease, or of requests for new loans, and every other peaceful means, to speed the liberation of the people of these nations.

Just as vigorously we must support in our dealings with all nations concerned the right of free Jewish immigration into Palestine. May we not hope that American influence, properly used, can achieve that long-cherished goal of world Jewry with the due protection of the rights of all?

The Republicans of the Middle West will never approve the administration's indifference of the extension of human slavery, whether the victims be the peoples of the nations we ha e defeated in war or the unfortunate natives of Malaya and southeastern Asia.

We believe that Christian principles and the future peace of the world alike demand that the American treatment of the Filipinos must be the model for the future policy of all nations toward the peoples of the Orient.

In short, we propose a complete about-face from the weak and vacillating Truman New Deal diplomacy which has suffered the most humiliating defeat in American history. With the greatest military force in the world, it has lost every skirmish on the diplomatic front. The "four freedoms" and the Atlantic Charter have not only been disregarded, but specifically violated. American diplomacy under Truman, instead of standing as a fortress for the freedom of peoples and the integrity of national existence of small nations, has become the abject servant of British, French, and Communist imperialism. Truman-Democratic-New Deal diplomacy is losing the peace 6 months after American armies and navies won the war. Power politics again rules the world, and the Truman administration has stood helplessly by. We warn that appeasement now can be as dangerous as at Munich, especially when it means compromise with the conscience of America.

Just as firmly we must demand a return to a sound basis in our national economy. We believe the time has come to bring national expenditures down to the tax receipts of our National Government. We must live within our income, and that basic thinking should govern our consideration of loans or gifts to other nations.

We insist upon rigid honesty throughout the national administration, and that there be prompt end to the use of public power for personal gain. Particularly, we urge Congress immediately to enact legislation requiring full publicity to all deals for disposal of surplus war goods or alien property.

We face the fact that the present and future prosperity of America depends on the prompt reconversion of American business to a sound peacetime economy. Increased production of sorely needed materials, tools, and consumer goods is our paramount need today. Without increased production we cannot check the current trend of inflation nor achieve the full employment which is our hope to avoid the equally serious perils of deflation.

We believe that such increased production can be accomplished only by the fullest cooperation of American industry, American agriculture, and American labor under the profit motives of our system of free enterprise. We believe that system has demonstrated its superiority to ny system in the world both in the miracle of our production for war, and in the long-range record of American industrial expansion which has produced for the American people the highest standard of living the world has even known.

We charge that our production has now bogged down mainly because the Truman New Deal Administration has failed to clear away obstacles to reconversion created by appressive Federal tax policies and a maze of Federal bureaucratic regulation. Particularly it has failed to protect the interests and preserve the opportunities of small business in our economic life.

We believe that the regimentation of American business, American agriculture, and American labor must be speedily terminated; that special war controls should be ended as quickly as possible, and that powers of Congress and the State governments, delegated to the President in the war emergency, should be speedily restored to Congress and the States. Freedom from regimentation is the objective of a liberty-loving people; governmental controls should be limited to the prevention of abuses and dishonesty, and the correction of gross inequalities.

We believe that the increased production so vital to our national prosperity can be achieved only under conditions that insure prosperity for both capital and labor. We deplore the tremendous loss in production and the serious delay in reconversion resulting from a wave of labor disuptes which has swept the Nation. The issues in these disputes are almost hopelessly complicated by the efforts of the New Deal tinkerers with our national economy to lead us in opposite directions at the same time.

The basis of practically every labor dispute today is the natural desire of the workers to receive under peacetime conditions a "take home" pay at least equal to the amount they received while working overtime hours during the war emergency. They are supported by those who argue that the levels of workers' incomes must be maintained to provide the buying power required to support the full-employment program for our country. However desirable this may be, from the employer's point of view, it means an increase in his unit cost of production and if he proposes to meet this cost by increased prices he runs into the ukase of another group of New Dealers which says that you can't increase prices. In this situation, the American businessman is chanting the familiar words of a late leader of the Democratic Party who could not stomach the New Deal: "You can't have it both ways." The President of the United States has been unable to show us how we can have it both ways, and I do not believe it can be accomplished by law or by the creation of any additional bureaus or so-called fact-finding bodies.

We endorse collective bargaining. The right to bargain implies the right to refuse terms offered—the right of labor to strike and the right of management to shut down if satisfactory agreements on wages and conditions cannot be reached. Strikes and shutdowns are expensive to the public, but they are more expensive to the employers and employees involved. We believe that most of our labor conflicts could be settled promptly if management and labor were free to negotiate in their own interests. I see no effective solution to this problem until free and unfettered collective bargaining is restored. I trust that the position you take here on labor will be clear and forthright, and that we shall not promise what we cannot perform.

We reaffirm our belief in the Bill of Rights as written in our Federal and State constitutions, and dedicate ourselves to their full enforcement everywhere in our land, regardless of race, creed, or color.

We believe that social security must be placed upon an actuarially sound fiscal basis; that the Truman administration must stop using Social Security funds for the current expenses of the Federal Government, and that the Social Security collections should not be used as an indirect means of raising taxes to be spent by extravagant governmental agencies.

Most important of all, the Republican Party must pledge to the American people the fulfillment of our Nation's obligation to provide a sound and happy future for the veterans of this war. That obligation transcends any supposed obligation to our allies or to the world. It is first in the hearts of the fathers and mothers, the wives and sweethearts, and the sisters and brothers of 11,000,000 fighting men and women. Together they constitute a majority of the American people.

First they ask the speedy return to civilian life of every American at home and abroad whose service is not absolutely essential to our national interests. And the test of the essentialness of any military service must lie in the simple question: Is what that man is doing so necessary that it justifies keeping him from his home, his family and his future?

Our obligation to our veterans is to provide for the disabled every possible care and comfort, and for the able-bodied, full opportunity for normal happiness in their home communities. That depends, above all, on employment with a future and a comfortable home in healthful and wholesome surroundings.

Our veterans are coming home to the greatest housing shortage in the history of America, produced by New Deal policies both before and during the war. Only makeshift arrangements will solve their immediate needs. But it will take real cooperation of American Government and private enterprise to get the American building industry back in high gear, and to relieve the tremendous shortage of American homes. It will take similar teamwork to insure the continued employment of our veterans.

Finally, we believe the time has come to speak out for America; that the efforts of our Government should be turned to benefit Americans; that the greatest service we can do for mankind is to keep America strong.

I believe that the people of America today will listen to straight thinking and plain speaking. I am convinced that here and now is the opportunity for the Republican Party to put our country on the road to prosperity and sound progress.

Detroit Free Press Opposes Case Bill

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Detroit Free Press of Friday, February 1, in which this independent Republican newspaper with a large circulation throughout the State of Michigan editorially expresses its strong opposition to the proposed Case bill.

I also wish to include an article by Thomas L. Stokes, which appeared in the same issue of the Detroit Free Press, expressing views in opposition to the Case bill.

The editorial and article follow:

ADDING FUEL TO FLAME—ANTILABOR BILLS

There can be no action without reaction. The reactionary labor bills now being pro-

posed in Congress are the logical reaction to irresponsible labor leadership.

That is the biggest danger to the whole union movement.

Emotionalism is taking the place of sound principle.

Evidence of this is the action of the House Rules Committee in connection with the Case bill. The author is Representative FRANCIS CASE, arch-conservative Republican from South Dakota. His measure is backed by a coalition of die-hard southern Bourbons and northern Republicans of the same economic stripe.

It is a catch-all proposition, encompassing most of the extreme suggestions for the curtailment of union rights, such as the repeal of the anti-injunction law.

The Rules Committee stipulated, subject to the vote of the House, that only the Case proposal may be considered as a substitute for President Truman's fact-finding plan.

Because the Truman proposition is no good and will not work is no reason why another unworkable law should be offered as a substitute.

This newspaper fails to understand why this one bill should be considered. It is mad emotionalism of such a nature which leads to anarchy.

No hearings have ever been held on the Case bill. Although it has been kicking around Congress for a long time it was so hastily presented to the Rules Committee Wednesday that it had not as yet even been submitted in printed form.

To take away from the organized workers their long-fought-for gains would please many employers and conservative citizens who are of the basic opinion that no labor union is any good.

The violence of irresponsible labor leaders has given that doctrine considerable popularity. Exasperation at union leaders seeking personal power or the exploitation of cock-eyed economic theories, has brought about that large element of opinion.

But, anybody who has any notion that one extreme can remedy another has little knowledge of human nature and the American system of government.

The Case proposals will not work any more than will the skimmed-milk suggestions of Truman.

All such reactionary measures can achieve is the clamping on of a lid which will make the later explosion all the greater. Its only result will be to give the radical element in labor arguments by which they can add fuel to the flames.

Above all the wild hates, fears, and emotionalism, two facts stand out:

1. The House and Senate together will not agree to any such extreme measures.

2. President Truman would veto such legislation if it were ever presented to him.

It has already been demonstrated at Ford and Chrysler that when labor and management are represented by men of good will and sound common sense, grounds of agreement can be found.

This development would lead to the hope that the flamboyant exaggerations and wild accusations of such labor leaders as Walter Reuther are not typical of the new and growing elements of statesmanship in the labor movement.

The UAW-CIO is only 10 years old. Yet it has matured tremendously since the wild days of the sit-down strikes. If considered in the broad philosophy outlined by Henry Ford II at that recent meeting of the Society of Automotive Engineers, the union will continue to make progress toward sound leadership.

The major factors in letting the radical elements gain free rein and bring about real chaos is just such legislation as is now being proposed under the Case bill.

When honest men of sincere purpose meet there are no barriers to sound understanding. They may disagree in the region of opinion, but deep down underneath they know there is a region of truth. They seek with open minds to explore it—knowing that what is good for America is in the end good for them.

BEHIND THE CASE BILL

(By Thomas L. Stokes)

WASHINGTON.—Something was written here a few days ago about accumulating evidence tending to show a concerted effort by big interests to move in at this time and try to break the power of labor unions and the Truman administration.

Various significant developments were cited. One was the refusal a few days apart of General Motors and United States Steel to accept compromise wage findings by a presidentially appointed wage board, in the motors case, and by the President himself in the steel case.

There was reference also to the coalition of Republicans and southern Democrats in Congress which fought progressive measures in the domestic field all during the war and have intensified their fight since.

Now, another chapter begins to unfold here, openly and brazenly, under management of that coalition. A few simple facts will tell the story, although you'll have to hang on close, for this particular conspiracy involves tricky parliamentary procedure.

After some deliberation, the House Labor Committee finally reported a much-modified version of President Truman's proposal for fact-finding boards. This measure then went to the Rules Committee, which is supposed to be a procedural committee to arrange for consideration of bills by the House, but which long ago arrogated to itself powers far beyond this.

It can virtually nullify the work of regular legislative committees. This committee is controlled by southern Democrats and Republicans.

After a couple of days of public hearings about this bill, which went, as usual, beyond procedure into merits, Representative CASE (Republican, South Dakota) turned up before the Rules Committee Tuesday afternoon with a brand-new bill he had just introduced. It never had been considered by any legislative committee. He didn't even have printed copies—only a few typewritten copies. He asked that the committee grant a rule to make this bill in order as a substitute for the Labor Committee bill on the floor.

Chairman SABATH (Democrat, Illinois), an administration supporter, heard about the bill for the first time only the night before. He wasn't in on the secret. But Republican and southern Democratic Members were thoroughly familiar with it, revealing the plot. Mr. CASE admitted he had help in writing the bill. It was obvious he was the front.

The next day, according to plan, the Republican-southern Democratic coalition on the committee voted a rule for the Labor Committee bill which authorized the Case bill to be offered as the only substitute.

Even for the Rules Committee it is unprecedented to permit the offering as a substitute of a new bill never considered by a legislative committee.

The Case bill, creating a mediation board to settle labor disputes, has a beautiful preamble about being fair to both industry and labor. Yet it carries provisions to abrogate fundamental rights of labor.

These include, for some purposes, repeal of the Norris-LaGuardia anti-injunction law. This law was put on the books 14 years ago, after a long battle, to protect labor from sweeping court injunctions such as that by which Attorney General Daugherty broke the railway maintenance workers' strike in the Harding administration.

The Case bill is recognized as an anti-labor bill by anybody familiar with labor law history.

Recognized as its real sponsors are Representatives SMITH, Democrat, Virginia; COX, Democrat, Georgia, and HALLECK, Republican, Indiana, all veterans on the Rules Committee and active figures in the coalition. When you have watched Congress for many years and have found out the motives of Members, it is easy to smell out one like this and what the real purpose is.

Messrs. SMITH and COX are known for their antagonism to labor and Mr. HALLECK is one of the Republican House leaders.

They have done a job here, make no mistake about that. The facts speak for themselves, both in the brazen way they used the Rules Committee and in the objectives of the bill itself.

This is the story behind this story.

Livestock Food

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was unanimously adopted by the members of the Midwest Feed Manufacturers Association on January 11, 1946:

Members of the Midwest Feed Manufacturers Association are aware of the simple truth that its industry has been acknowledged as an essential and useful class of manufacturers. The scientific conversion of by-products and grains into useful and profitable products for feeders has become an established and significant manufacturing process. The remarkably economical production of food in the last five years has served as final proof.

With this record in the near past, and with the urgent need for food continuing, members of this association fear that any unsound practice in buying, preparing, or selling these feeds will bring quick disaster in the midst of a great opportunity to serve even a greater good.

No practice in history so sharply injures the Nation's agricultural economy and so endangers livestock feeders, poultry feeders, and the feed industry as the practice of widespread and deplorable bartering and tie-in trading that now robs the feed from those who need it most.

Livestock feeders of straight proteins, hog raisers and poultrymen all face a disaster in those areas where trading is not or cannot be practiced. It is for these people that we plead for action: Therefore be it firmly

Resolved, That members and guests of this association gathered here condemn this practice as being wasteful, uneconomic and inspired in many cases by greed; be it further

Resolved, That legislative or administrative action correcting this practice be fostered and endorsed by this association, and that those joining in this resolution be made publicly known to the industry and its allied trades.

Loan to England

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include the following editorial appearing in the St. Mary's Daily Press of January 31, 1946:

LOAN TO ENGLAND

President Truman yesterday urged Congress to approve an approximate $4,000,000,000 loan to Great Britain on the assumption that such a loan will spur production in this country and world-wide prosperity.

Mr. Truman will have to do a lot of talking to convince Congress and the American people this loan should go through.

We might ask what became of the money we loaned England to get her "out of hock" after the last war.

It is pretty well known we got little of that back, and in addition Uncle Sam was dubbed "Uncle Shylock" for demanding even interest payments on that financial obligation.

Right at this moment we have hundreds of thousands of discharged GI's looking for places to live.

If Congress is going to be so generous with money, why not loan $4,000,000,000 to these servicemen so they can build their own homes.

Give them the money at low interest rates. In this way the money will be kept in the United States, and you can rest assured most of it will be paid back to the Treasury—something we are not assured of if the loan goes abroad.

The able Paul Mallon in his column today says that the United States has no assurance that any part of an approved loan to England will be spent in this country, which rips wide open Mr. Truman's argument that such a financial transaction will be of business benefit to America.

Perhaps England needs this loan, but the Lord knows other nations and other people need it just as badly.

This loan business means something personal to every American taxpayer, for if the loan is not repaid, granted that it might be approved, it will have to come out of their pockets.

As it is now, the loan agreement calls for no interest payments the first 5 years it is in effect, and then no interest if England's trade balance is not favorable.

It is a type of loan no American bank would pass on favorably, yet the United States Government is asked to O. K. it with the faint hope it may bring us more business gains.

Veterans' Preference in Purchase of Surplus Government Property

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. WORLEY. Mr. Speaker, under leave granted to extend my remarks, I insert herewith a letter from Mr. George Schaeffer, of Happy, Tex., veteran of two world wars, outlining in humorous vein all of the red tape and difficulty he and his son, a veteran of this war, had in securing a much sought after jeep. It seems that under the present system of so-called veterans' preference, a veteran would have to have a sense of humor to comply with all of the red tape, and so forth, to get a jeep.

It is imperative that the surplus property disposal agencies immediately cut all this red tape and give these veterans the quick action Congress intended for them to have.

The letter follows:

HAPPY, TEX., *December 17, 1945.*

Congressman EUGENE WORLEY,

Washington, D. C.

DEAR GENE: Guess I might as well head my letter "We got our jeep" as we really got it. The enclosed missive from the Amarillo News by Henry Fox partially explains some of the problems encountered by the returning veterans. I had served in World War I and took a fool notion that it would be a grand idea to add another war to my record so I enlisted in World War II. After a little over 3 years in this one, one-half of which was spent overseas, I was returned home for discharge. Had always taken a liking to these jeeps and made up my mind to own one someday so when I got home I started to investigate and found out all I had to do was to put in my application with my county agent. As you can tell by my writing I am a farmer and wait my turn. I got home about 1st of July last and put in my application with my county agent in August. Some time in September I got a letter from SWPC saying I had been put on their list as wanting surplus war property and they would remember me. Along in September I got a letter stating they would sell various surplus property at different places during the first 10 days in October and to be at one of these places at that time. So I took out for Fort Sill as it was the nearest place designated. On arriving there I was informed that all jeeps were frozen by order of the Government and all pick-ups were sold but there were still some weapons carriers left over. As you no doubt know these weapons carriers are a sort of cross between a pickup and a truck. They carry about the same load as a pickup and use as much gas as the largest truck, so in order not to be disappointed I decided to try and purchase a weapons carrier. The men in charge at the office assured me that all I had to do was to pick out the vehicle in line I wished to purchase and they would give me the price on it. So I went out and looked over the line of several hundred vehicles. Incidentally, a couple of Kraut prisoners who were servicing said vehicles tried to run me out of there as they said I had no business there but I quickly gave those lousy bums to understand that this was the good old United States of America and that they didn't have a thing to say about what I was doing. I took down a list of about a dozen different vehicles in the line and returned to the office to find out the price on them. After checking them over on his list the man told me there was just one vehicle in my whole list that was for sale as he hadn't received a price on the others in his catalog. He gave me the item number on this vehicle and also the price as it stood so I returned to the lot to investigate this vehicle. Well it was a weapons carrier all right or rather what was left of it. Some of the motor was there but no battery and no tires and the price was $434.30 so as I was there in the family car and no way to haul it back I passed up the bargain and came on back home.

Shortly after this time my son who had also been in the service received his discharge and as he had decided to go into the farming business with me I told him of the wonderful opportunity of securing Government equipment. He also had great dreams of a jeep on the farm so he also put in his application with our county agent's office and about a month later got his O. K. Some time later we both got a notice that all such things had been transferred from the SWPC to the RFC and about 10 days later I got a notice that the RFC was holding a jeep for me at Camp Polk, La., and my son that they were holding one for him at Camp Bowie, Tex. As we figured out we could do with one jeep between us and the one at Camp Bowie was only 250 miles from home and the one at Camp Polk was perhaps 500 or 600 miles we decided to try the nearest so we got in the old family car and headed for Camp Bowie to pick up our jeep. On the way there we blew out a tire and gave $14 for an old third-grade tire to finish the trip but it lasted just the next day and went out also. We then stopped at a county seat town and managed to talk the ration board out of a new tire to get home on, which I think was a great feat in itself. Well, we arrived at Brownwood and saw the jeep, which was just what we wanted. We were informed after inspecting it that we must go to Fort Worth and trade with the RFC, and so out we started for Fort Worth. On the way we blew out another tire, but arrived in Fort Worth on Friday night and reported to RFC Saturday morning only to see a sign on the door that it was closed until Monday morning. So we got busy on the telephone and eventually located someone who agreed to come down and fix us up. He took our certified check for $695 and gave us a slip of paper releasing said jeep to us, so out we started to Camp Bowie once more to claim our jeep. Got there Saturday afternoon and everyone was off duty for the week end, but eventually we located the officer in charge.

Being a very agreeable sort of a guy, he finally agreed that while it seemed very unorthodox to do business on one slip of paper rather than delay us over the week end he would release the jeep to us, so we took it to town to have it registered and start on our journey home. At the tax collector's office they informed us they couldn't stick out their necks and do anything without papers of some sort, so back we went to camp and located the same officer in charge and he fixed us up some sort of typewritten slip on the property and assured us we would have no more trouble. Back to town now and the tax collector's office, which was closed as it was nearly night. Eventually we decided to take the jeep on home without licensing as we decided most of the highway cops were in bed by now. A streak of luck accompanied us as we made it home by Sunday morning without a bit of trouble, and now we are the proud possessors of a jeep. Incidentally, a week later, I got a letter from RFC offering to ship me the same identical jeep as soon as they received a check for the amount. Well, after all, "All's well that ends well." We spent about $150 chasing around after said jeep, as well as the $695 purchase price. No one but former servicemen would have the persistence to see it on through as we did. After all, everyone we came in contact with was helpful and cooperative, so I guess it is the system of ever-changing red tape and not the individual to blame. If it were made any easier, it just wouldn't seem right to the ex-serviceman.

Very truly,

GEO. SCHAEFFER.

P. S.—Incidentally, I might add the jeep was worth all the effort expended in obtaining it. That little machine will do all that a hoss, car, truck, or tractor will do, and do it better. We have herded cattle, pulled posts, dug postholes, pulled tractors to crank them, pulled the truck out of mudholes with it, and a thousand other things. You have no doubt heard the old saying that "it will do anything but climb trees"—well, the old jeep will even do that.

A Letter From an Army Officer

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter which was published in the Chelsea Evening Record, Chelsea, Mass., on Tuesday, January 29, 1946. This letter was written by Second Lt. Fred C. Spracklin, of Chelsea, my congressional district:

Dear Sir: I'm writing this letter to you, the representative of my district, in the hope that you will be able to answer a few questions which are in my mind.

My first reference is to a recent statement made in Guam by Secretary of War Patterson, to the effect that he had not known points ceased to accumulate on September 2, 1945. A subsequent statement on his part, to the effect that he had not heard of a message delivered to a joint session of Congress by ex-Chief of Staff Marshall, setting March as the month in which men with 2 years' service would become eligible for discharge, adds to the confusion. This situation alone leads us to ask ourselves, "Who is facing the demobilization problem?" It seems to me that the executive at the head of the War Department should be the first person to know what is going on in all matters pertaining to servicemen. The demobilization, by all appearances, has taken a back seat in affairs back home. There isn't any doubt in my mind, and I speak for countless other army men as well, that demobilization should rank in importance along with such other postwar problems as reconversion and labor.

Army Education Chief, Lt. Gen. Collins, in another recent statement, made it clear that reductions in future discharge requirements would be slowed up considerably and that these reductions would be based on occupational needs rather than the amount of shipping available. What became of the old and familiar cry, "There is a shortage of ships"?

FIGURES 800,000 NEEDED

General MacArthur estimated some time ago that his occupational force in Japan would not exceed 200,000 troops. Allowing another 200,000 for the remainder of the Pacific theater, we find that 400,000 troops can fill Pacific needs. This figure, coupled with a like figure for Europe brings our total occupational needs to approximately 800,000. Selective Service in 1945 alone, covers this amount, not considering the 50,000 inductees scheduled for coming months and the reenlistments in the Regular Army.

Let us look at the so-called "drastic cuts" made to dat in the discharge requirements. As of October 1, 1945, the point score for officers was seventy-five. The entire month of November passed before a two-point reduction was made, effective December 1. The present score is seventy, just five points below that of October 1. The present 50-point score for enlisted men is still extremely high, considering the amount of service one must have to become eligible. In regard to discharges on service alone, the 4-year and 3-year 6-month requirements for officers and enlisted men, respectively, is an insult to the intelligence of all Army personnel.

If more troops are needed over here, and I very strongly doubt it, it indicates wholesale inefficiency on the part of high Army officials. The island of Luzon is crowded beyond imagination with idle men, men who cannot possibly be efficiently used in the entire Philippine Islands. I speak not from hearsay, but as a result of the time I spent there. Here at base F you have the ideal example of wasted manpower.

I should like to see a congressional investigating committee formed to investigate the disposition of troops in the entire Pacific area. An excellent starting point would be here at base F, New Guinea. Let us get the demobilization problem out of the hands of men who desire to remain in the Army.

In closing I would like to say that the above opinions are shared by everyone who wants to return home as soon as possible. I would appreciate any aid you may be able to effect in this regard.

Thanking you, I remain,
Yours sincerely,
FRED C. SPRACKLIN,
Second Lieutenant, Infantry.

What About the Farmer's Rights?

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. ELLIS. Mr. Speaker, I submit for the consideration of my colleagues today an editorial from the Times-Record, published in Spencer, W. Va., and edited by Mr. Harold G. Everly.

The editor brings to our attention in a forcible manner the position of the farmer in the situation brought about by industrial strife and pleads for equitable treatment for the farmers, a group which fulfilled every call for increased food production, received less return, and did not fuss about it.

The editorial follows:

WHAT ABOUT THE FARMER'S RIGHTS?

We hear plenty these days about the rights of labor and not enough about the rights of the farmer. Let's talk about those for a change.

We've got a way of life in this country. Maybe it isn't perfect, but take a look around the world and see if there's anything any better anywhere. It's so good that millions of Americans have just fought the costliest, bloodiest war in history to keep it.

We won that war—and now because we aren't solving our industrial problems at home we're in grave danger of losing the peace. We wonder what our enemies are thinking right now. They probably can't make heads or tails of it. Neither can we.

Nobody has done more to maintain our way of life than the farmer. Nobody knows better than he what that way of life means. All during the war he worked long hours to keep food and fiber rolling to our men and women in service and to the home folks. He was up early. He finished late. He had to do double duty because his boy or his hired help went off to fight. He drove himself and his machinery and equipment to the breaking point. He gave us the highest production of food we have ever known.

But his job wasn't finished when Japan quit. He is being asked to increase the yield on his farm. Given any kind of break and he'll do it. But he needs the tools of production, just as the industrial worker needs tools to turn out a day's work.

Here's the rub. Where are those tools coming from now that the United Steelworkers of America—CIO—have gone out on strike? That will stop the makers of tractors, reapers, plows, and all the other steel products needed on farms. That will stop the farmer from getting the replacements and additions he desperately needs this spring. And that will stop a lot of deserving people both here and abroad from getting the food and clothing they are counting on.

We ask ourselves why this strike is threatening to hit us in the most vulnerable spot of all—the bread basket. We're told the steelworkers want more money. First they demanded a general wage increase which totaled $225,000,000. Now, they'll compromise on an increase of $166,000,000. The steel companies have offered $135,000,000. We're told by the union that the steel companies can meet its demand out of hidden profits. The steel companies say they have no hidden profits, and a National War Labor Board ruling backs them up. They say they cannot raise wages unless the OPA lets them raise prices for their steel.

We believe everyone ought to have a fair wage—based on his production. But the steelworkers are already among the highest paid in American industry. They received wage increases between January 1941 and August 1945 of 34 percent. That was more than the cost of living index, as prepared by the Department of Labor, went up during the same period.

We also believe that when two groups sign a contract they have entered into a sacred agreement to keep the terms of that contract. The steelworkers have contracts with the steel companies that last until next October. The steelworkers pledged themselves not to strike during the life of the contracts. If our written agreement can be torn up at the whim of one group, what confidence can be placed in the validity of such agreements?

When one group tears up a contract, ties up an essential industry, deprives the farmer of tools of production, undermines that farmer's livelihood, and cuts down needed food crops, then we say there is something wrong—radically wrong.

The farmer has a right to a decent living, and the right to buy the things he needs to make it. His sweat has earned it. His stake in this work stoppage is big. We hope he'll find ways of making his voice felt—where it will do the most good. We hope he will insist on keeping a way of life that he has stood for and worked for and that he wants to pass along as an American heritage to his loved ones.

Iowa Food in War and Peace

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement of R. K. Bliss, Iowa Director of Extension Service. Dr. Bliss points out emphatically the value of Iowa food, not only in winning the war but in sustaining our own people. In peacetime it is shown that Iowa food producers are interested in international as well as national high standards of human nutriment. Without question, Iowa's food production will continue to have an important bearing on our internal and international relationships.

GREAT IMPORTANCE OF IOWA FOOD

Last week a friend of mine bought a few pounds of butter in Iowa and took it back to Chicago with him so that his family could have some real cow butter. Another friend

bought some butter to take back to Milwaukee for his family. And remember this occurred at the end of 1945, the highest milk-producing year in the history of the United States.

There are also shortages of certain kinds of meat. It has been difficult to buy bacon and pork chops, even in Iowa. One of the reasons why the Government moved to stop the packinghouse strike was because butcher shops were becoming bare of meat. Even the much maligned and abused egg may become a welcome table visitor.

The fact is that there is a world shortage of fats, milk, meat, and eggs, the kinds of products that Iowa farmers specialize in producing. The fact is that even though milk production in the United States in 1945 was the largest on record there is a marked butter shortage.

We should also keep in mind that this shortage comes at the close of 9 years of high-crop production in the United States. We have had good crop years since and including 1937. In 4 of the 9 years production was increased about one-third in order to meet war needs. Nevertheless Uncle Sam's pantry shelves are short of food.

What has happened to our food supply? One answer is that we lost and wasted food during the war period. Another answer is that we have sent large amounts of food to our allies and to hungry people in liberated countries. Actually, however, this has taken only about 7 percent of our food, while, according to Government reports, the increase in production has been about 30 percent.

The important and significant thing that has happened is that on the average the people of the United States are consuming more meat, milk, and eggs per person than was consumed before the war. All of us like and prefer to eat animal products. People buy when and if they have the money. When low-income groups have good wages they buy more meat, milk, and eggs. When wages are low or when there is unemployment those affected buy as little meat and milk as possible. The increase in the consumption of these products during the war period was mostly in the low-income group who were earning good wages.

There was another reason, too, that had much to do with better diets and certainly will have a permanent future effect. During the war period the entire country greatly speeded up adult nutritional campaigns to get people to eat foods that were better balanced. The purpose was, of course, to increase the health and vigor of our people as a war measure.

American people have been well fed during the war years—by all odds the best fed in the world. In spite of this fact, however, there are millions of people in this country at the present time who do not have an adequate diet. We had a rude awakening in regard to health during the war period. The Army and Navy wanted strong vigorous men and women, who could stand the rigors of military life. The induction centers in the United States literally turned away millions of young men and women because of unfitness. The reason in all too many cases was physical defects due to malnutrition.

There seems little doubt that if the people of the United States had the kind of foods they want and need and also had the money to buy such foods there would be very little danger of a surplus of fats, meat, milk, and eggs. If our people had what they need and also what they want, there would probably not be enough to go around.

At the present moment there is a world shortage of fats and animal protein foods. These foods are urgently needed now to balance the vegetable diets of European peoples. They are needed to put health, vigor, and hope into the peoples of war-torn countries. They are also needed for the health and well-being of our people at home.

What does this mean to Iowa agriculture? It, of course, means that Iowa farmers produce the products now most needed to improve nutrition, that is, milk, meat, fats, and eggs. Iowa farmers are the largest and most efficient producers of these products. Iowa farmers therefore have the best and most important food products in the world to sell. They have products which people want; products which people need for good nutrition.

Iowa farmers are interested in getting their products overseas to other peoples. They should be interested in the international food and agricultural organization as a means of developing foreign markets. They should be interested both from the standpoint of need and from the standpoint of developing a taste and a desire for animal foods.

Iowa farmers are interested in improving the quality of their products so that people will keep coming back for more. Iowa dairy interests are very much aware of the importance of quality and are organizing on a State-wide basis to improve the quality of milk and its products.

Iowa farmers are deeply interested in full-time employment for all workers at good wages. They are, therefore, vitally concerned with labor-management disputes that put people out of work. Widespread unemployment in the United States is the principal bug-bear Iowa farmers have to fear.

Organized agriculture, general farm organizations and cooperatives, in fact all Iowa should vigorously support better nutrition programs. We should organize and support programs to let people everywhere know what we have for sale. We have the best sales products and also the best sales arguments in the world to support our products. To do this is both humanitarian and good business.

Iowa foods at the present moment are effectively working for peace and good will abroad and for health and vigor at home. Clearly, all Iowa should work for the largest use of these products and then perhaps we wouldn't have to worry later on about post-war surpluses.

Reasoning of a Serviceman

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, since the din of battle has ceased and our boys are having plenty of time and opportunity to give some thought to our domestic and foreign problems, it is most interesting to note the reasoning and reactions of our servicemen.

Many of these men have now reached the age where they are not only capable of thinking for themselves, but they are beginning to assert themselves. Their ideas are becoming crystallized, and they seem to experience little or no difficulty in expressing themselves clearly and to the point on the problems of the day.

They were told that they were fighting to preserve in the world the American conceptions of life and government. Their thinking has been stimulated by the un-American treatment to which they have been subjected. They have seen the wanton waste, and the disregard for statements made by those in authority; they have seen the reckless manner in which those in authority have dealt with truth and with our cherished American ideals. They resent this bitterly. To think that many of their buddies were forced to give their lives, and many more were brought back crippled and maimed for life, and then the survivors come home to find that we are being led down the very path to totalitarianism along which those we fought were blindly led, is enough to provoke their best thinking and arouse their most severe criticism of the present trends in this country.

Mr. Speaker, while these men were in uniform, they were instructed not to write to their Congressmen. But now that they have shed their uniforms and donned civilian clothing, and are once again standing firmly upon American soil, they are glad to point out the fallacies of the propaganda which the New Deal administration has been, and is, broadcasting over this country and abroad. They unhesitatingly go to the core of these troubles by attacking the problems from the premises and reasoning out to logical conclusions.

The following letter from a veteran of both World War I and World War II, just back from the service, plainly expresses his views on some of the controversial issues of the day. He and many others are now writing their Congressmen, and I am happy that their spontaneous expression is being heard all over this country. Their experiences and observations are worthy of our most serious consideration. They saw, first hand, the things we were supposed to be fighting against abroad. Now they see clearly that we are about to fall into the same errors and pitfalls, and it behooves us to take counsel from them, and steer clear of these dangers.

I am happy to quote the following intelligent and well-reasoned letter from a highly respected veteran, of Bartlesville, Okla.:

BARTLESVILLE, OKLA., *January 30, 1946.*

Hon. GEORGE SCHWABE,
Congressman, First Oklahoma District,
Capitol Building, Washington, D. C.

DEAR CONGRESSMAN: First, I wish to congratulate you upon your thorough research into the thoughts, desires, and hopes of the citizens in this district during your recent visit. I feel sure that you now know better than ever the trend of thought here relative to both domestic and foreign affairs.

Second, I wish to commit myself with regard to a few of the more important problems of the day as follows:

Labor: I am most friendly toward labor and labor organizations, believing that organized labor has a definite place in the scheme of our national life. However, I firmly feel that labor must, in some manner, be held responsible for the fulfillment of their commitments under negotiated, executed contracts. Also, the rights of non-striking labor must not be interfered with through the medium of picketing or otherwise.

Economy: A little calculating has more than startled me. Although many agencies have been eliminated and reduced we have over 3,000,000 civilian Government employees. Well, at a reasonable wage, with office rent, office equipment and supplies, together with expense accounts, I believe that the burden of this extravagance nears the $10,000,000,000 mark on an annual basis—

perhaps that figure is conservative. No one of sound thinking expects our budget ever to be balanced, the thought of debt reduction impossible, with current proposals of full employment, extended unemployment benefits, and many other ideas that would multiply our obligations many times the present pledges. Obviously, the only possible chance we have for extended prosperity is for all unnecessary governmental expenditures to be drastically reduced. Such a program of economy would encourage both industry and labor and would release billions of Government debts for industrial spending. Eventually there will be some sort of business reaction or adjustment. How soon no one knows or even how severe. Unless our national economic situation becomes much more substantial before that occurs, I hesitate to even think of the terrific mess we all will be in.

Foreign: We should be more firm and definite in our foreign relations. We seem to be the goat and I feel that a firmer stand on our convictions would result in more respect from others and certainly more self-respect. The loan to Britain should be made only upon a sound, repayment basis. The British Empire produces many raw products we must import. A small percent of the value of such imports, guaranteed as to amount of imports and percent of value, should be applied to the loan. If Britain doesn't want it that way let's turn it down.

In general I feel very much disturbed, as do millions of Americans. I have found it necessary to stop allotment purchase of bonds and shall cash in most of those I have bought. I cannot subscribe to and help finance a system of thoughtless, unnecessary, wasteful spending. Billions of dollars can and should be cut from appropriations without depriving one single citizen of the aid or benefits that properly belong to him under our present security and benefit plans. To continue to help support such extravagance, in my opinion, is unpatriotic to say the least. It certainly is not my patriotic duty to encourage it any further. My conscience is clear—veteran of both World Wars, and I am not asking for one single personal thing when I mention that. My country owes me nothing but a return to something that resembles stability.

It is nice to be able to write to you, as I feel that you do not condone the evident principles of the bureaucrats of socialistic leanings. Sorry to take up so much of your time—this is much longer than I expected it to be. By the way, I am an employee—not an employer; and just as interested as anyone in fair wages for a fair day's work.

Yours very truly,

_____.

P. S.—I voted from Guam 2 years ago.

Housing and America's Future

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 5 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Housing and America's Future," delivered by me over Station WIND and a group of Wisconsin stations, on February 2, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow-Americans, if you and I were to ask the man in the street what he thinks the three biggest domestic problems facing America today are, he would probably answer this way: The biggest problem is strikes. The next biggest problem is the menace of inflation, due to strikes and underproduction. The most important problem after that is the housing shortage, due to the same causes.

These three problems are interconnected in many ways. Obviously, if we can lick this strike problem, if we can get into full production, then we can help defeat the threat of inflation and we can go a long way toward solving the housing crisis.

We 140,000,000 Americans are not afraid of any one or all of these three crises. We are however tremendously concerned about them.

We faced a crisis on December 7, 1941, and we rose to meet it. We united then to face a foreign foe. We used our God-given ingenuity, our brains, and our brawn to make us adequate.

That is what we must do, now—unite, so as to end the frictions which keep us apart, that prevent us from getting into action as we did after Pearl Harbor.

You remember Abraham Lincoln's words, "A house divided against itself cannot stand." Those words ring truer than ever today.

I am confident that we can be adequate to meet this crisis. Nothing can prevent us from being adequate except our own blindness. Let's take the blinders off. Come, let us reason together, and get the solution.

DEFINITION OF THE HOUSING PROBLEM

Now, let us all—you and I—look closely at the third great problem I have mentioned—the problem of housing.

What does this problem consist of? It consists of not only a shortage of actual homes—a 5,000,000-home shortage—it consists also of the generally run-down condition of America's homes and the fact that we still have a long way to go in helping more Americans who want to do so to own their own dwellings.

Our housing is a vital part of our standard of living. We are proud of that standard of living, the highest of any major power on earth, but we want to improve it.

SIGNIFICANCE OF THE HOUSING PROBLEM

Now, lately, you've probably heard a lot of talk from Washington to the effect that bureaucratic "manna" is going to rain down on localities like Chicago and lick this housing crisis. Federal pap is supposed to be the cure-all.

But it definitely will not be the cure-all. Let's debunk some of the synthetic thinking behind this reliance on Federal Government hand-cuts.

The Federal Budget is expected to be unbalanced this year by $4,000,000,000. The national debt is climbing up to $300,000,000,000. Isn't it time, then, that we stop this tendency of running to Washington for funds? If we don't stop this habit, we will be blind and dumb and failing in our obligations to our country and our children.

Mr. Lindsay Warren, the Comptroller General of the United States, recently said a mouthful. He said that a widespread awakening by the American people to the danger of national bankruptcy was imperative.

He said the remedies for the situation were clear:

(a) There must be a drastic reorganization of governmental agencies so as to eliminate waste and inefficiency.

(b) There must be a strenuous effort to balance the National Budget through a sharp reduction in Federal expenditures. This, he commented, would require the wholehearted support by the people of congressional economy moves.

(c) He called for a more conscientious type of public service by those entrusted with the responsibility of spending the people's money.

(d) He urged a reexamination by Congress of its blank-check grants of spending money to certain executive agencies.

(e) He advocated that the States assume a proper share of their responsibilities toward the Union instead of looking to the Federal Government for more and more assistance.

If this be conservatism, then let the radicals make the most of it.

SPECIFIC HOUSING PHONY NOTIONS

Now, let's look at some of the specific phony notions about how the housing crisis will be licked, notions based largely on reliance on Washington pap.

Let's note these truths in answer to the phony notions:

1. Legislation does not build houses: Only honest sweat and toil get production and build houses. Let us not make a fetish out of legislation, particularly legislation with high-sounding titles or glittering phrases.

2. The Federal Government can't solve the housing problem of every local community: When you come down to fundamentals, it is, for example, the city of Chicago and the city of Waukegan and the city of Milwaukee, which have to do the spade work in solving their own housing problems. The Federal Government can, however, take off the brakes so as to enable local communities to get into action.

3. Bureaucratic patchwork isn't going to solve this housing problem: We desperately need temporary housing right now. Every community must seek out all its vacant dwelling space and make that space available and comfortable, particularly to our ex-servicemen.

We don't want our boys who fought in fox holes to live in rat holes as they are being forced to do now.

We need quick constructive action and real long-range planning, too, planning principally by local citizens and builders.

They've got to remember the fact that we are in an atomic age, and aerial age.

Safety through decentralization, speed through air travel, health from already overcrowded cities—these are but a few of the modern factors that must be born in mind.

A NATIONAL HOUSING PROGRAM

Now, my friends, I want to suggest some more further specific points in a national housing program. I have made these points in remarks on the floor of the United States Senate, and I am happy to resubmit them now.

(1) Encourage a revolution in the private construction industry. I said "revolution."

By that I mean we must have new materials, new methods, new plans for home building in this atomic age.

The old ways—slow, costly, obsolete—are not good enough for us today any more than they were good enough during the war.

Abraham Lincoln, that great American whose birthday we will celebrate on February 12, had the right idea when he said, I quote:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty. We must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves and then we shall save our country."

But let us go on with further points in the housing program.

(2) Get rid of monopolies in the building trades.

(3) Get rid of union restrictions in the building trades—the kind of restrictions that require that only so many bricks can be laid in a day and that mass-production methods cannot be used. The country's need is paramount. Good union men see that.

(4) Amend our obsolete municipal building codes so that all of the needless regulations that delay housing construction and make it unnecessarily costly are eliminated.

(5) Prevent landlords from squeezing cash out of desperate renters. But give landlords equitable returns.

(6) Encourage every citizen in every community, together with his local officials, to get underneath this problem and lick it.

This sixth point is the most important point. If the citizen—you and I—do our share, we cannot help but make our country adequate.

We can lick the housing crisis. We can lick the inflation crisis and the strike crisis. This is no time for defeatism or smugness.

It is a time for clear thinking and action—action that will mold our American future.

Let's go, America. It's time for teamwork.

Pauley and Allen

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 5 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Pauley and Allen" by Walter Lippmann published in today's issue of the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAULEY AND ALLEN

If Mr. Edwin. W. Pauley wishes to show that he is fit to hold high office, the best way for him to begin will be to ask the President to withdraw his nomination for Undersecretary of the Navy. That would be a sign that he could learn to understand the elementary principles in the ethical code of a public servant. For having been until recently a collector of campaign contributions as treasurer of the Democratic Party, being still heavily interested personally in oil properties at home and abroad, he ought to know, and indeed the President ought to know, that he is disqualified for any high post in the Navy Department.

For not only is the Navy greatly concerned with our domestic oil supplies, it is also concerned with, and is bound to play an influential role in shaping our policy about, oil supplies in other parts of the world. Where oil is involved the high officials of the Navy Department should be above all suspicion, political or personal, warranted or unwarranted. Mr. Pauley would always be suspected, and every action of the United States Government in critical areas like the Middle East and Indonesia, where oil is so important, would be laid open to suspicion.

Since he has no other experience which makes him indispensable in the Navy Department, it is the plain duty of the Senate to refuse to confirm him if his nomination is not withdrawn.

The fact that it is necessary to argue the point is in itself disquieting. It is like having at this late date to explain to a lawyer why he should not accept fees from both parties in a lawsuit, or to a journalist why he should not be on the pay roll of the National Association of Manufacturers or of the CIO, or to the Secretary of the Treasury why he cannot be a stock broker or an investment banker, or to a judge why he cannot practice law.

But apparently it is necessary to explain it. So for the benefit of Mr. Pauley let it be said that to have been treasurer of a political party and to have collected campaign contributions is not in itself a job he need be ashamed of, or apologize for; nor is being in the oil business. But being treasurer and in the oil business was already, to put it gently, a dubious combination; a sensitive politician or a sensitive businessman would shrink from the mixture. To compound it by seeking a high office in which great national and international decisions have to be made that deal with oil in domestic and international politics is to go completely beyond the limits of public morals. For no matter how honest and conscientious Mr. Pauley may be, he cannot come to these questions with a free, disinterested, and unembarrassed mind. And even if he could, he would not easily convince the American public or foreign governments that he had.

It will also be necessary for the Senate to scrutinize the nomination of Mr. George Allen to the board of the Reconstruction Finance Corporation. The fact that Mr. Allen has the far-flung and complicated private business connections which the Alsop brothers described yesterday in their column would not necessarily disqualify him. But as they indicate, Mr. Allen's expanding career in business has been coinciding with his expanding influence at the White House. His many directorships would be more impressive testimony to his industrial genius if he did not devote so large a part of his genius to running the Truman administration.

The nomination should, therefore, be investigated carefully to find out why he has become a director of so many corporations when he spends so much of his energy governing the United States. Does he in fact produce and sell airplanes, steel, insurance, and no end of other useful goods and services, or does he produce and sell political influence? This is a fair question, and it is the obvious duty of the Senate to see that it is answered.

It is a disagreeable business to have to challenge two men who are as close as are Messrs. Pauley and Allen to the President of the United States. But the alternative is even more disagreeable: it is to admit that after this war, as after the other war, after the Civil War, and indeed after every other war, the standard of public morals must for a time inevitably fall.

We cannot admit this must happen. But it has been happening in Washington, and once the deterioration of standards sets in, things will go from not good enough to bad, and from bad to worse, as they did under Grant and under Harding. In the early phase of the deterioration there are no scandals; they come later, not because anyone in high place planned them, much less wished them, but because the general laxity develops, and a tolerance of dubious connections. The habit of scrupulous vigilance is weakened. Men who are true public servants become discouraged, are pushed aside, resign, will not accept office, and it is then that the seeds of scandal fall upon well-plowed ground.

So this is the time, and here is the occasion for the responsible leaders of the Democratic Party to take a stand, and compel the President to see before it is too late where blind friendliness is taking him.

Republic or Democracy?

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. PATTERSON. Mr. Speaker, I thought all Americans were for a democracy. Hence, I was shocked by the implication of the letter written by Mr. Ernie Adamson, chief counsel of the Committee on Un-American Activities, to a veterans' organization in New York on January 29. Mr. Adamson implies in his letter that because the word "democracy" was omitted from section 4 of article 4 of our Constitution, our forefathers did not intend for this country to be a democracy. Furthermore, the Committee on Un-American Activities does not approve of our country being referred to as a democracy. This incredible statement, with the answer to it by Veterans Against Discrimination, follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON UN-AMERICAN ACTIVITIES,
Washington, January 29, 1946.
VETERANS AGAINST DISCRIMINATION,
New York, N. Y.

GENTLEMEN: Would you please be good enough to send me a list of your officers and your managing committee?

Several of your circulars have been sent to us by citizens of your city and I note that you refer to democracy several times. I wonder if you are sufficiently familiar with the history of the United States to be aware that this country was not organized as a democracy, and that section 4 of article 4 of the Constitution reads in part as follows: "The United States shall guarantee to every State in this Union a republican form of government."

Is it your purpose to ask for an amendment of the Constitution or do you propose to conduct a propaganda campaign against the administration of the provisions of the Constitution?

Yours very truly,
ERNIE ADAMSON,
Chief Counsel.

VETERANS AGAINST DISCRIMINATION,
New York, N. Y., February 1, 1946.

MR. ERNIE ADAMSON,
Chief Counsel, House of Representatives, United States, Committee on Un-American Activities, Washington, D. C.

DEAR SIR: Your letter of January 29 on behalf of the House Committee on Un-American Activities in which you take issue with Veterans Against Discrimination for the use of the word "democracy" is particularly shocking and outrageous in that it is directed to an organization composed of men and women who have just served this country through a bloody struggle for the preservation and extension of democracy.

The only interpretation which can be put on your letter is that the House Committee on Un-American Activities is now publicly on record as opposing the democracy for which Americans have always fought and in which millions of American men and women believe as the fundamental principle of our Government.

Veterans Against Discrimination would like to ask you, Mr. Adamson, whether the Committee on Un-American Activities in-

tends to investigate every organization which believes in America as a democracy? Is it the purpose of the Committee on Un-American Activities to propagandize against democracy? Does the committee propose to change our democratic form of government?

These are the words of our late Commander in Chief, Franklin D. Roosevelt: "Always the heart and soul of our country will be the heart and soul of the common man—the men and women who never have ceased to believe in democracy. * * *"

Men discharged from the United States Army were told by Gen. George C. Marshall: "Start being a leader as soon as you put on civilian clothes. If you see intolerance and hate, speak out against them. Make your individual voices heard, not for selfish things, but for honor and decency among men, for the rights of all people."

This statement by General Marshal' has become the preamble of the constitution of Veterans Against Discrimination. Our active campaigns against the racist policies of the New York Daily News is one phase of our continuing fight for democracy. We will continue to press for the establishment of a permanent Federal Fair Employment Practice Commission and for other legislation which will, through the elimination of discrimination, "promote the general welfare and secure the blessings of liberty."

On behalf of the Veterans Against Discrimination, we emphatically refute the Committee on Un-American Activities' interpretation of democracy and its claim that the United States is not a democracy. Inasmuch as the Committee on Un-American Activities was empowered by Congress only to investigate subversive and un-American activities, it has no right to question the activities of the Veterans Against Discrimination.

Your letter and the insinuations contained in it constitute a flagrant and unforgivable insult to all the millions of American men and women who served to protect our democracy.

Sincerely,

LAWRENCE RIVKIN,
Chairman.
BERNARD MOSS,
Executive Secretary.

Is There a Wheat Shortage?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, the following telegram is added evidence why the Congress should give immediate attention to prices and subsidies:

ST. PAUL, MINN., *February 4, 1946.*
REID F. MURRAY,
Member of Congress,
Washington, D. C.:

There is a wheat problem, but not one that calls for bread rationing or for use of more wheat in flour, which admittedly would be a coarser and darker flour. Based on the United States Department of Agriculture's figures of January 1, 1946, we had 689,000,000 bushels of wheat on hand. A new wheat crop will pour into market after July 1. Present indications are for at least 700,000,000 bushels of winter wheat. There will be a heavy spring wheat acreage. Allowing for a January disappearance of 89,000,000 bushels, we will need up to July 1 no more than 200,000,000 bushels for flour and 50,000,000 bushels for spring wheat seeding and miscellaneous farm use. This would leave 350,000,000 bushels of present stocks for export, carry-over, and livestock feeding. It would be better to stop feeding wheat than to ask flour mills and bakeries and consumers to adapt themselves to a new product with all the changes necessary to make a straight run of flour using 85 percent of the wheat instead of the normal 72 percent. The public and the processors would resist these far-reaching changes. Farmers will move the wheat to town and sell it if they are given parity treatment. Farmers know that Congress is in doubt about extending the OPA price-control law. That makes farmers doubt that it is wise to sell wheat under present ceilings. Farmers know that on July 1 there will be a big increase in wheat prices if Congress does not extend the OPA law for another year. Farmers have the same intelligence as business people, who have been and are withholding merchandise for the much higher prices which they hope will be realized either through dropping of OPA or through making exceptions, as, for example in the steel industry. Farmers also know that with wage levels in the process of rising, eventually such increases will be reflected in a new and higher parity price, which under law will force the OPA to lift present ceilings on all farm prices. From the standpoint of price, the farmer sees about every advantage in not marketing wheat now. He is not going to succumb alone to any patriotic call when he sees the United States Steel Corp. and General Motors Corp. and others getting away with theirs. The farmer feels that all he has to do is wait.

Another point: The farmer is accustomed to carrying an inventory of wheat on his farm. It is his ever-normal granary and his base money supply. Not for patriotism alone does he intend to market this year both his present inventory and also his new crop. He would then be compelled to pay a 2-year or double income tax. In brief, he is not a fool. He intends to be treated as well as other groups in the economy of the Nation, even if he is the most patriotic. He as much as any other person wants to see wheat shipped to the starving people in other parts of the world. But the National Federation of Grain Cooperatives cannot honestly urge its wheat-producing members to market their wheat so long as the wheat farmer is at a disadvantage as regards ceilings and double taxation. If the farmer knew now what wheat ceiling prices would be until July 1, 1947, and if he could be relieved of double taxation from marketing two crops in the same year, and if he could be assured that he would not be subject to a third tax by the repeal of laws protecting his marketing cooperatives as advocated by the National Tax Equality Association, then we would be on sound ground to ring the bell of patriotism and save the starving families abroad. Further, if all these economic disadvantages were corrected, there is still a transportation break-down, not only from lack of box cars, but from disorganization on the railroads. Now the movement of cars just from the Dakotas to Minnesota frequently takes weeks. We want to emphasize that you can get wheat for export, without upsetting the operations of flour mills and bakeries or changing the food habits of consumers, if you act now on these three problems.

First, give us boxcars and transportation facilities that will work and move the wheat.

Second, decide now, one way or the other, on the future of OPA and price ceilings for 1946–47.

Third, protect the farmer against double and triple taxation.

If and when these three needs are met, the National Federation of Grain Cooperatives and the general farm organizations will advise farmers to move their wheat off the farms. People all over the Nation are now questioning the political integrity and economic sense of both the Congress and the administration. This problem of wheat is not in the hands of the millers or the bakers or the farmers. It is in the hands of the Congress and the administration. We have called a meeting of our grain cooperatives in Chicago on February 8 and 9, and have called officials from the United States Department of Agriculture to confer with us. We also are inviting through this wire the chairmen of the House and Senate Committees on Agriculture to be with us in Chicago. Our National Federation of Grain Cooperatives is comprised of the regional grain cooperatives from Ohio to the Pacific Northwest, and from the Canadian border to the Gulf of Mexico. Its annual handle of grain is close to 400,000,000 bushels a year. Most of the farmers who own these cooperatives also are members of the Farm Bureau, the Farmers Union or the Grange. Thus you can rest assured that you can have the solid mobilized support of agriculture to move the wheat that is needed if the Congress and the administration will just move first.

Respectfully submitted.

M. W. THATCHER,
President, National Federation of Grain Cooperatives.

Mr. Speaker, we have seen fact-finding committees appointed though the fact finders cannot offer very valuable conclusions until they know what the price and subsidy set-up is to be in 1946.

The President's Dilemma: The General Motors Case

EXTENSION OF REMARKS
OF
HON. EVAN HOWELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. HOWELL. Mr. Speaker, for weeks we have heard a lot of talk regarding the dilemma of solving the current labor-management strife through fact finding. Because this subject is of major importance and its solution of immediate interest to all of our citizens I am placing in the RECORD an article on the subject by John L. Colmar, chairman of the Young Republican National Federation which appeared in the January issue of the Republican magazine, the national party publication.

In this timely and important article, President Truman's Dilemma—the General Motors Case, the young GOP chief states that while on the surface fact finding looks like a simple and reasonable formula for solving the Nation's labor troubles the fact-finding procedure as put into practice by the present national administration would lead, eventually, to a system of socialism.

Mr. Colmar is especially well qualified to discuss this subject. A brilliant young industrial relations expert he has won the respect of both labor and management for helping avert costly strikes. Because of his splendid performances he

was highly recommended by the Chamber of Commerce, employee, and management groups as a member of the recent management-labor conference.

The Republican magazine is rendering an important national service as well as an outstanding party contribution in publishing this article.

THE PRESIDENT'S DILEMMA: THE GENERAL MOTORS' CASE

(By John Colmar)

The President of the United States, apparently without a full understanding of the ultimate consequences of his action, has given his sanction to a proposal that would revolutionize labor-management relations and open the way for a basic transformation of the free-enterprise system in this country.

Such fundamental changes are foreshadowed in the President's seemingly innocent plan for so-called fact-finding boards to settle labor disputes. First advanced as a panacea to halt the Nation's wave of postwar strikes, this plan was promoted to the rank of a proposed permanent solution for industrial strife when Truman called upon Congress to place it upon the national law books.

This fact-finding procedure, as put into practice by the present national administration with its pro-labor bias, would lead eventually to a system of socialism dominated jointly by Government and labor. Under some future administration more prone to favor management, the procedure might give rise to a Government-sponsored nationalism similar in some respects to the economic system that flourished under Italian fascism.

Despite the possibility of these equally inimical changes in the American system that might result from such a procedure, public opinion polls show substantial support for this fact-finding plan. The American people, like the President, have evidently failed to grasp the dangerous implications of the plan.

THE FORMULA LOOKS SIMPLE

On the surface, fact finding looks like a simple and reasonable formula for solving the Nation's labor troubles. It contemplates a supposedly impartial Government board appointed by the President to collect and study all the facts relating to a wage or other dispute involving a particular company and a union. The board or panel would make its study during a 30-day cooling-off period in which labor would be prohibited from striking. The board would then issue recommendations for settling the dispute based upon its interpretation of the facts.

The board's recommendations would be morally, but not legally, binding upon the disputants, since no penalties are proposed in the legislation as now written. Its findings, however, would have behind them the weight of Government sponsorship and public opinion, both of which would be presumed to look unfavorably on either side rejecting the board's decision.

Such procedure seems perfectly simple and straightforward, especially to a Nation grown accustomed, through nearly 4 years of wartime controls, to having the Government step in as umpire to decide every conflict between national groups. This simplicity is deceptive, however, as the first fact-finding board to swing into action soon discovered.

This board was named by the President to investigate the strike involving the General Motors Corp. and the CIO United Automobile Workers before Congress had time to act on Truman's proposal. It ran head-on into a question which knocked the seeming simplicity of fact finding into a cocked hat. The question was: "What constitutes facts?"

ABILITY TO PAY

The board, following the directions of Truman, decided that General Motors would have to supply enough facts about its financial position, plans for future operations, and anticipated profits for the board to determine the company's ability to pay the 30-percent wage increase demanded by the union. The President, in creating the board, had ruled that such facts were relevant to any solution of the wage controversy between the company and the union.

Walter Reuther, vice president of the UAW and director of its General Motors department, was delighted. He had argued right along that the union was entitled to a 30-percent wage boost, because the company could afford to pay that much and still make substantial profits without increasing the prices of automobiles. He evidently believed that company records would prove the union's case.

General Motors, however, answered by withdrawing from the fact-finding inquiry—risking its popular support to state its position in opposition to the consequences of such a procedure. The Corporation asserted that whether or not its future profits would enable it to pay higher wages had nothing to do with its negotiations with the union. The board's attempt to determine General Motors' ability to pay more wages, it added, was nothing less than an attempt to dictate to the Corporation how it should run its business and what its ultimate profits should be. Such action by a governmental board in peacetime, the Corporation noted, would mark the beginning of the end of the free enterprise system.

Other industrial leaders and such employer groups as the National Association of Manufacturers and the Chamber of Commerce of the United States joined with General Motors in denouncing this aspect of fact finding as the opening wedge for Government or union control of business and ultimately socialism.

The following primary objections were leveled at the fact-finding procedure as laid down by the President and the General Motors panel:

1. By subterfuge and indirection it would, among other things, approach the problem of profit sharing without the thorough and deliberate consideration such a program should have in fairness to both labor and management.

It might well be that, as the Nation broadens the base of its economic democracy through evolutionary processes, some such system under which labor as well as investors receive a share of industrial profits will become general. A few businesses have already tried this plan experimentally. Eric Johnston, president of the Chamber of Commerce of the United States, is now testing such a program on a limited scale in his own plants in the State of Washington.

The problem of profit sharing deserves a frank, honest approach on its own merits, and such trickery as is contemplated by fact finding might destroy what could be a genuine solution.

ARBITRATION IS COMPULSORY

2. Fact finding, under the procedure proposed, would also set up a form of compulsory arbitration—to which the majority of both labor and management are opposed. While the recommended law would establish no penalties to enforce board decisions, it would compel both unions and corporations to take part in fact-finding inquiries. If either refused to cooperate, the boards would have power to subpena "facts."

3. At a time when one of the Nation's major aims is to terminate Government wartime controls and restore freedom of action to both industry and labor, fact finding would reimpose Government domination of labor-management relations and Government dictation of industrial operations. These extralegal governmental boards would have the power, in effect, to tell any company how much earnings it could make by the simple expedient of proposing what percentage of its expected profits should go to labor.

4. If early wartime experiences of the War Labor Board are any criterion, the decisions of the boards, while supposedly impartial would actually favor labor. This would be the almost inevitable result of leaving enforcement to public opinion. Labor, which is affected only indirectly by public pressure, could ignore such rulings with relative impunity—as it did many of those of the WLB. Corporations which depend directly upon public patronage for their products could not so readily disregard or reject such decisions.

FACT FINDING IS WORK

5. Fact finding would be a tremendously complicated and burdensome procedure, unless set up on an industry-wide basis, which is not contemplated as this is being written, panels would eventually have to be created for every major company in the Nation. Any major shift in the profit position of industry would bring a new wave of appeals for fact-finding inquiries to revise wage scales. The resulting machinery would be far more vast and complex than that of the WLB which both labor and industry found too complicated anw slow during the war. The WLB, once a national formula for wage increases had been worked out, only had to determine cases in which inequalities or hardships were claimed to exist among certain groups of workers or in certain plants. Fact-finding boards, on the other hand, would have to decide each case involving a union and a specific company on its individual merits.

The American people have been deceived about two features of the fact-finding proposal. One is that the boards merely wanted to examine the "books" of corporations involved in labor disputes so that they could arrive at intelligent decisions on what wages should be paid.

A corporation's books, of course, would disclose its wage rates, its past profits, and its general financial position. Such facts, however, are no secret and could not be withheld by any company even if it wanted to keep them from a fact-finding board. These figures are available in reports to stockholders and in reports made to such governmental agencies as the Treasury Department and the Securities and Exchange Commission.

What it is really intended that fact-finding boards should obtain from industry, however, is its plans for future operations and estimates of future sales and profits. The President and the General Motors panel conceded this, in effect, by promising that such facts would be kept confidential so as not to reveal trade secrets to competitors. Such forecasts and estimates, of course, are not facts at all.

Walter Gordon Merritt, General Motors attorney, pointed this out in announcing the Corporation's withdrawal from the fact-finding procedure at the panel's first open hearing:

"The question of profits and prices for the future, which are the basis by which the union proposes to measure ability to pay, involves forecasts, assumptions, consumer demand—both foreign and domestic—and uncertain variables as to material and labor costs upon which this fact-finding board could not competently pass," he said. "It involves judgment by those familiar with the business, and that judgment is in the minds of men and not in books and documents.

"Facts and figures as to wage rates and earnings, facts and figures as to probable take-home pay, facts and figures which deal

with the question as to whether wage increases have kept pace with the increased cost of living, facts and figures showing at least equal pay for equal work in this industry and in the areas in which the corporation operates—all this and equally pertinent information will be made available if we are assured that the scope of the board's investigation will be so limited."

WARTIME WAGE BOOMERANG

The second fallacy is that the proposal to have such boards investigate "ability to pay" is nothing new—having been followed in previous wage negotiations and similar information having been gathered by other Government agencies. The President himself practiced this deception in seeking to reassure management it had nothing to fear from fact finding.

"Ability to pay" has been used as a basis for wage settlements only during the war. The principle was first established by the War Labor Board in February 1942 in a case involving the Aluminum Corp. of America. There was little objection to the procedure in wartime, with the Government in virtual control of the Nation's industrial machine. The Government, the only customer of most industries, with fixed prices of both raw materials and finished products, made contracts which determined production schedules and limited profits through renegotiation of contracts, excess-profits taxes, and other means. In this situation there could be little objection to Government also fixing wages. A Government attempt to fix wages, prices, and profits in peacetime is quite another thing, however, although price controls still remain in effect by general consent to prevent postwar inflation until full production is restored.

Labor, in the long run, stands to lose as much as management from the proposed fact-finding procedure. Thus far labor has attacked the plan publicly on the ground that the 30-day cooling-off period would violate its right to strike. Many labor leaders, however, have objected privately to the injection of "ability to pay" as a basis for fixing wages and have assailed Reuther for accepting it.

Before the war, labor generally took the position that an employer's "ability to pay" was not a matter for consideration in wage disputes. Employers who opposed wage increases on the grounds that they would be put to competitive disadvantages or driven to bankruptcy were told by labor negotiators that this was strictly management's business. Labor said to employers, in effect, that wages should be based on merit or need, but not on ability to pay. Labor leaders often told employers that they would not consider wage cuts to keep inefficient managements in business.

Labor leaders opposed to fact finding privately expressed these two major objections to the procedure:

1. If this program became national policy, the moment there was a business recession and profits declined, industry would demand fact-finding inquiries to reduce wages. If the procedure operated impartially, wages would have to be cut. Wages would thus be tied to every fluctuation of the economic cycle—a fact that might increase the severity of business booms and depressions since the relative stability of wages now acts as a deterrent to such fluctuations.

DOES EFFICIENCY PAY?

2. Fact finding would also put the brakes on labor's current drive for national industry-wide wage stabilization—one of the pet ideas of the CIO. With wages to be adjusted by fact-finding boards for individual companies on the basis of their profits, more efficient producers would have higher wages and less efficient manufacturers would be required to pay lower rates. Industry-wide wages would be impossible.

Curiously enough, Alfred P. Sloan, Jr., chairman of General Motors, touched upon the same point in listing his objections to fact finding:

"Who would risk money to develop or expand a business under such circumstances?" he asked. "Where would be the incentive to do a more efficient job? Should General Motors, assuming it is more efficient, be required to pay more for materials, for transportation, for services, or for wages than its competitors?"

Resolutions and Petitions of Minneapolis Retail Grocers' Association

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions and petitions of Minneapolis Retail Grocers' Association, January 16, 1946:

I

Whereas there is an acute shortage of butter and much agitation for higher prices for this product and

Whereas should such higher prices for butter be imposed, many consumers will unjustly blame the retailer for this increase and brand him as a profiteer, the Minneapolis Retail Grocers' Association in meeting assembled on January 16, 1946, do petition Congress, the Department of Agriculture and the Office of Price Administration to take such immediate steps as will insure an adequate supply of butter to consumers at no increase in cost to either consumers or retailers, or any reduction in the present mark-up permitted retail grocers.

II

Whereas retail grocers adjusting themselves to peacetime conditions are confronted with merchandise shortages, manpower problems, transportation difficulties and many other minor but irritating factors and

Whereas the Office of Price Administration continues to keep in effect rules, regulations, policies and practices which are not only impossible for the retailer to observe but also which continuously harass and inconvenience his operation; regulations, rules, policies and practices which in many instances are far afield from the program sanctioned by the Congress of the United States, therefore the Minneapolis Retail Grocers Association in meeting assembled on January 16, 1946, do petition the Office of Price Administration and the Minnesota congressional delegation to see to it that immediate revision of OPA regulations be made, and that these same rules, regulations, policies, and practices of the Office of Price Administration be placed on an equitable and practical basis and that these revised regulations be so written that they are easily understood by the men and women engaged in the retail grocery field.

III

Whereas many products are in short supply and public demand for these products is steadily increasing at this time and

Whereas the eagerness of the public to obtain these products and their willingness to pay excessively high prices for the same would most definitely contribute to bringing about a period of inflation most disastrous to the national welfare, we, members of the Minneapolis Retail Grocers' Association, in meeting assembled on January 16, 1946, do petition Congress to continue price-control regulations until such time as commodities will be in such supply that the need for continued price control shall have become unnecessary.

United States Attorney Edmund Brandon

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article entitled "United States Attorney Edmund Brandon Tireless Worker for Justice," which appeared in the Lynn Telegram-News, Lynn, Mass., on Sunday, February 3, 1946:

UNITED STATES ATTORNEY EDMUND BRANDON TIRELESS WORKER FOR JUSTICE

(By Mary S. King)

Far from his unassuming description that he is "merely a cog in the wheel" of his important Federal Department, United States Attorney Edmund J. Brandon is actually the "hub" around which the intricate and multiferious duties of the United States Attorney's office revolves.

Springing from comparative obscurity to the powerful post of regional administrator for the Federal Securities and Exchange Commission of Massachusetts in 1935, the Cambridge-born executive from then on won the plaudits of press and public for his conscientious battle for justice and righteousness in offices which he since filled.

This week, with his office finally getting into the swing of regular hours and systematic routine, a definite relief from the 24-hour schedule which the office maintained for the war's duration. District Attorney Brandon in an exclusive interview with the Lynn Telegram-News spoke of many things pertaining to the details of his department and current happenings of nationwide interest.

When Mr. Brandon took office in the spring of 1939, having received a "personal appointment" from the late President Franklin Delano Roosevelt, he recalled having talked with the late Fred Tarr, of Gloucester, who at one time held the post. "Fred told me that he never found it necessary to spend more than 1 hour a day in the office. Of course, those were the times when the department had but few definite assignments.

"I smile now, when I think of it, because during the war this office has run on a 24-hour schedule, with the men working 10 to 14 hours a day, and like all bosses I was obliged to work even longer hours."

He expressed relief at being back at the 40-hour-week schedule. "Then, we worked to do what had to be done. Now we're living up to the labor laws ourselves." There are 20 assistants in the district attorney's department and with office employees, round out a personnel of 64, all going at top speed.

SPY CASES

Perhaps the most exciting of wartime assignments was the espionage and counter-espionage investigations, which brought headaches as so many leads had to be tracked down before the guilty parties were finally apprehended.

The office was instrumental in prosecuting the officers and crew of the German ship, *Fraulein Frederic*, who were found guilty of sabotage and given stiff jail and internment camp sentences until finally deported to Germany.

"I am particularly proud of the record we made in the land damage cases, when it was necessary to take over property for the Government as at Hingham and Chicopee, to make room for Westover Field." Mr. Brandon says:

"Our first assignment was to take over the 10 square miles of territory (about the size of Washington, D. C.), in Ludlow and Chicopee, where 320 families had homes. We managed to get the people off the land (not forcible evictions), found them homes and satisfied all. With the exception of a few minor cases against the city of Chicopee, all the land damage cases have been paid."

Mr. Brandon explained that millions of dollars were spent by the Government to take over the areas they needed for Army and Navy as well as civilian occupancy, adhering strictly to the law of eminent domain.

BLACK MARKET

Black-market exploiters came under the jurisdiction of this office and felt the hand of justice fall heavily on their activities.

"I anticipate within the next few months some very important prosecution of income-tax violations of large amounts of persons dealing with black markets. These cases, I expect, will encompass some individuals who were successful in covering their operations by use of currency in place of a checking account, so as to make it difficult and evade prosecution. The Treasury Department by then will have completed their investigations, which are now going on so that these malefactors will not escape. Evidence will be presented to the grand jury, and transgressors will be tried before a trial jury in Federal court," he declared.

He gave a storied account of the mechanics of the office, which is highly revealing. For the past 12 to 14 years, the jurisdiction of the Federal Government has increased, both civilly and criminally to an extent which couldn't be foreseen.

"At one time," says Mr. Brandon, we were concerned principally with offenses against custom and revenue and a few other matters. Today, Federal criminal law reaches right into the community, even to prosecute violators of common misdemeanors.

"For many years, there was a no-man's land in the jurisdiction between the States and Federal Government, but in recent years that gap has been closed."

CARLIN CASE

"Today, in addition to violations of revenue laws, such matters regarding to transportation in interstate commerce, stolen motor vehicles and goods stolen while being transported interstate, are within our jurisdiction.

"Extortion ranks after kidnaping (the Carlin case, he explained, did not come under Federal jurisdiction because sufficient evidence could not be proven) in ransom demands."

Others, he listed, included immigration and naturalization laws, gold reserve act, frauds against the Government, violation of currency laws, income-tax evasions, use of mails in schemes to defraud, violations of stock fraud cases and national bank laws by embezzlements of employees or officers in national banks and members of the Federal Reserve system; prosecution of violators of the wage and hour laws, Mann Act, for which the department has a definite policy, prosecuting relentlessly immoral rings; the increasingly important narcotics laws; violators of OPA and milk laws; disbursing of obscene literature through mails; food, drug, and cosmetic laws, bankruptcy frauds, navigation and railroad laws, servicemen's readjustment act of 1944, violators of selective service, unlawful wearing of the uniform, impersonating a Federal officer; lotteries conducted interstate and many others.

CIVIL BUSINESS

Mr. Brandon added that there is a great deal of civil business which is under his department's orders, and referred to one especially which is pending, but about which he was unable to comment except to say that it took weeks of preparation before an auditor, and before the final outcome is determined, it is anticipated that the Government might be obliged to spend "billions more."

"We act first, then we talk," he stated, explaining his reticence in giving out pertinent information about current investigations.

SOUND ADVICE

The relative merits of arguing a case before a judge and jury were discussed by Mr. Brandon, who said that if the defendant had a good case it was better to appear before a judge, but if a weak one, a jury selection is advisable.

"I have a confirmed faith in the jury system. I believe, by and large, that real justice is done by this form of trial, and I hope the day will never come when it will be abolished," the prosecutor says.

PRAISES LAWYERS

"I came here as a prosecutor after 20 years on the side of the bar, and since being in the prosecutor's chair, it is my experience with bar members all over the State that any State would be proud of the type of men practicing law in Massachusetts today."

SEX COMES UP

The subject of juvenile delinquency was brought with the revealing information that sex offenses among girls between the ages of 17 and 18 had increased 150 percent during 1945.

"I think that conditions existing in wartime attributed a lot to this and I don't share the belief of so many that we have a 'lost generation.'

"Fundamentally, young people, and I refer to those up to 21, are just as good today and in many ways better than in previous years. They are the victims of the times, as a general let-down in morality is always associated with war," the prosecutor stated.

"At the suggestion of the new Attorney General, Thomas C. Clark, we have inaugurated here a new method of dealing with juvenile delinquents. Instead of issuing warrants against them and branding them as delinquents, a boy or girl is placed on a sort of informal probation.

"The assistant talks to the boy or girl in question and impresses upon him the seriousness of the situation and the necessity of conforming to law, his duty to neighbor and society, and upon the promise of the parent or some other person that close who has supervision will be kept over him, no complaint is filed. The understanding is, however, if there is a second violation, the boy is punished for both.

"This is a new approach to the problem and as yet we have not been able to evaluate the results. It has been tried out successfully in Brooklyn, where conditions are quite serious," he concluded.

AT WHITE HOUSE

President Roosevelt was a close personal friend of Mr. Brandon, and the latter and his wife had often been White House guests. He paid this heartfelt tribute to the late Chief Executive:

"I believe that when the true history of the last dozen years or more is written from the light of a dispassionate, nonpartisan historian, people will come to the realization how much Franklin Delano Roosevelt meant in meeting both the postwar and war—the two greatest crises the country has ever encountered—the economic crisis of '33 and the war crisis of '41. He steered us through the first, giving the so-called forgotten man his proper place in our economic system and at the same time preserved our American institutions.

"He saw with a clarity of vision, the inevitability of our being forced into the war and his foresight was responsible for the tremendous miracle of American production that brought about its victorious conclusion."

In March 1935, Mr. Brandon, as regional administrator for the Federal Securities and Exchange Commission, asserted that Boston was the center for high-pressure stock swindling—and as a result, started a Federal drive to stamp out these operations. He was successful, to the extent that all stock swindling was wiped out of the city.

The soaring-stock quotations of today were commented upon by Mr. Brandon. "Of course, nothing can stop runaway inflation, but there are many safeguards today that didn't exist in 1934.

The Federal Reserve Board's action in upping the margin of 100 percent is banishing the possibility of wild orgies of buying as there is no margin trade at all.

"The SEC now has the power to investigate an untoward activity in the stock and the New York and Boston exchanges, and others throughout the country are cooperating in safeguarding the public interests."

BOATING ENTHUSIAST

In his leisure moments, the Attorney General is a devotee of boating and has pioneered in radio telephone from ship to shore and shore to ship, with a winter hobby for building transmitting sets.

His 65-foot auxiliary schooner, "*Half-Tide*," which he loaned to the Coast Guard during the war, is his No. 1 diversion, although he admits to being an "inveterate first-nighter." The second confession was that his wife is the first nighter—"I go with her."

Color photography, especially movies, holds a great deal of interest for him and as a bit of professional advice, he admonished, "Always use a light meter with color to get best results."

CAMBRIDGE NATIVE

Born in Cambridge, Mr. Brandon was graduated from Boston College with a degree of bachelor of arts in 1915 and from Boston University with a degree of bachelor of laws in 1919. He has this unusual distinction of being admitted to the Massachusetts bar in March 1919, and then being graduated from college in June, 3 months later.

Because of the First World War, during which he was a commissioned officer in the United States Navy, he returned to complete his education and was obliged to cover an entire year's course in 6 months.

He has also been admitted to practice before the Supreme Court of the United States, is a member of the Massachusetts Bar Association, Boston Bar Association, Federal Bar Association, of which he is past president, and American Bar Association. He made an outstanding prosecuting record during 1939 of losing only 1 out of 418 criminal cases in Federal court.

District Attorney Brandon is married to the former Dorothy A. McCarthy, of Brighton, and they make their home at 150 Beacon Street. For years he has been a leader in the Massachusetts Council of the Knights of Columbus and held the highest office from 1924 to 1926.

Contempt

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the Congress an editorial from the Washington Post of February 5, 1946, which is a further indictment of the House Committee on Un-American Activities for its attempts to smear the well-known humanitarian organization, the Joint Anti-Fascist Refugee Committee:

CONTEMPT

Generally speaking, contempt of a congressional committee amounts to contempt of Congress. This is altogether proper, of course, for the committee is invested with authority by the legislative body; and this authority must be respected if the essential investigative functions of Congress are to be effectively discharged. Thus there will be an understandable disposition in the House of Representatives, no doubt, to back up its Standing Committee on Un-American Activities which has voted to cite for contempt a Miss Helen Bryan, executive secretary of the Joint Anti-Fascist Refugee Committee, because she failed to comply with an order to produce all the records of her organization.

But this Standing Committee on Un-American Activities is clearly a special case. It has long since become notorious for its abuse of the powers granted to it by the House. It has employed its mandate to investigate un-Americanism, as a general license for the persecution, and vilification of individuals and organizations whose sole offense has been to incur the displeasure of the committee's dominant figure, Representative JOHN RANKIN. Its antics have tended to weaken respect for the investigatory functions of the Congress and even for the Congress itself. Indeed, it has invited and provoked, if it has not justified, contempt as an expression of traditional American independence and self-respect.

Consider Miss Bryan's pending case, for example. Her organization, licensed by the President's War Relief Control Board, is engaged in collecting funds for the relief of refugee victims of fascism in Europe. It is a philanthropic body and undertakes no propaganda activities of any kind. Before making any effort to investigate this organization, the Un-Ameri an Activities Committee sought to have its license revoked by the War Relief Control Board. Then the committee summarily summoned the secretary, ordering her to produce forthwith all books and records—which would have meant, of course, discontinuation of the organization's relief work. Miss Bryan came before the committee but was afforded no chance to answer questions or to explain the difficulty of bringin all her files to Washington. She was not even allowed to consult her counsel during the hearing. The committee voted to cite her for contempt—contempt of an order which was as unnecessary as it was unreasonable. Action before the House has been deferred until the organization's national chairman, Dr. Edward K. Barsky, can appear before the committee tomorrow.

If the House supports this contempt citation, Miss Bryan will have to look to the courts to uphold her civil rights. Perhaps Members of the House will feel bound to support a committee which they themselves have established. But we think that the authority of the House can be better sustained by curbing an arbitrary exercise of it. In truth, Miss Bryan has not been in contempt of Congress; she has only been in contempt of a committee which has itself been contemptuous of its congressional mandate and of the democratic process. And we believe that the House will enhance rather than diminish its dignity by making this committee conform to its established standards.

Of course, the only sure way to curb the Un-American Activities Committee is to abolish it. The House can permit this group to go on acting as its agent only at grave peril to its own prestige. Miss Bryan's case offers a welcome opportunity to administer a rebuke. But what is needed is a major operation.

Atlantic Monthly Attitude Toward Soviet Russia

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article that appeared in the New York Times, entitled "Two Writers Assail Atlantic Monthly":

TWO WRITERS ASSAIL ATLANTIC MONTHLY—CHAMBERLIN AND BUELL CHARGE MAGAZINE HAS NONCRITICAL ATTITUDE TOWARD RUSSIA

The Atlantic Monthly is charged with an overly friendly and non-critical attitude toward Soviet Russia, particularly its activities in Poland, in two open letters addressed to Edward Weeks, editor of the monthly, which were published yesterday in the current issue of the New Leader, liberal labor weekly.

William Henry Chamberlin, in his letter, resigned in protest as a member of the Atlantic's editorial staff, a post he hold for 14 years, citing two recent articles on Poland by Anna Louise Strong and the magazine's seeming unwillingness to print anything critical of Russia.

Raymond Leslie Buell, writer and lecturer, challenged Mr. Weeks' rejection of an article on Poland that he said the editor asked him to write. He also cited Miss Strong's articles and said she is "no longer American by inspiration but is a Russian Communist by adoption."

Both Mr. Chamberlin and Mr. Buell are authors of works on European affairs.

Efforts to reach Mr. Weeks in Boston for comment were unavailing last night.

CHAMBERLIN NOTES "WIDE GULF"

Referring to Miss Strong's articles, Mr. Chamberlin, who is an associate editor of the New Leader, said that "the gulf between an editorial viewpoint which would regard these articles as suitable for publication in an American non-Communist magazine and my own is so wide that I don't think my former assignment of submitting opinions on political and foreign affairs articles could be continued with much advantage to either of us."

Of Miss Strong he said:

"It seems to me that an avowed American Communist sympathizer, a former editor of a Soviet propaganda paper edited in English in Moscow and the widow of a Soviet official is not the most reliable source of information about what happened in Poland under Soviet occupation."

He referred favorably to dispatches by Gladwin Hill in the New York Times and the report of Representative THOMAS GORDON, of Illinois, published in the CONGRESSIONAL RECORD, commenting that Mr. Hill and Mr. GORDON also had been recent visitors to Poland.

"If these (Miss Strong's) articles had represented an isolated exception I would not feel so strongly on the subject," Mr. Chamberlin continued. "But it seems to me that they represent only the most extreme expression of a 'Russia can do no harm' attitude which was not characteristic of the magazine when I became associated with it, but which has been markedly reflected in its contents since 1942."

What was regrettable to him, Mr. Chamberlin wrote, was not a willingness to print occasional favorable articles about Soviet Russia, but "the conscious or unconscious closemindedness that lead to almost automatic rejection of capable and informed contributions which contained some note of criticism."

BUELL ASSAILS INDIFFERENCE

Mr. Buell, saying that he had been impressed by the "indifference of a number of Atlantic articles ignoring the question of human freedom," and that "in the kind of crisis which the world is undergoing the hem-haw policy simply aids the totalitarians," continued:

"The issue is not between feudal capitalism and a Socialist utopia. The issue is between social democracy resting on a respect for human dignity, and totalitarian terrorism of whatever variety. The major issue confronting the world is whether individuals are to be arbitrarily sacrificed for the sake of so-called social engineering, or whether changes are to be made by agreement and humanitarian means."

Mr. Buell wrote that Mr. Weeks' letter of rejection seemed to suggest that what had been wanted was an article agreeing "for the most part" with Miss Strong's contributions

"I am concerned about freedom not only in Poland but in America," he continued. "If erstwhile American liberals are not interested in its fate in Poland, can we count on them to fight for its preservation here? I do not believe so. Totalitarianism may yet win this country and the world, due in part to the new attitude of historic journals like the Atlantic."

The articles by Miss Strong referred to were Getting Democracy in Poland in the October issue and Bor's Uprising in the December issue.

Back Home Thought

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem written by F. J. Lyons, of Conception Junction, Mo.:

Should capital and labor be both allowed to flout
A nation just recovering from a war, almost a rout?

I ask this simple question, because I am of those
Millions who have capital and still labor to day's close:
Must we, who are a composite of both the warring clans,
Stand idly by and suffer from both their ruthless plans?
We too, have sustained the nation in the ordeal she has known,
Produced the food by sweat and labor, as we've reaped and sown,
We have thought of our great Nation as a guide to be
To clean and righteous living, a beacon to eternity
Of every warring country so sore beset by strife
To a new and greatly needed, cleaner, better way of life:
Must our Government stand idly by, and complacently abide
While capital and labor, a minority, daringly deride
Its futile efforts to maintain a sorely needed peace
For which a saddened world languishes, and seeks release?
No, I cannot believe, that we, America, having won a global war
Can be so dead to all our history or drifted so afar.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. VINSON. Mr. Speaker, I have analyzed the various laws, rules, regulations, and other measures adopted for the benefit of war veterans.

I am submitting for the RECORD a digest of such benefits in the hope that it will be a useful and ready reference of practical assistance to the Members and to veterans:

DIGEST OF VETERANS' BENEFITS

ELIGIBILITY

A veteran must have served in the active military or naval service on or after September 16, 1940, and prior to the termination of the present war. He must have been discharged or released under conditions other than dishonorable after active service of 90 days or more or because of an injury or disability incurred in line of duty.

MONEY

1. Mustering-out pay: Service personnel up through the rank of Captain in the Army and Marine Corps and senior lieutenant in the Navy and Coast Guard are entitled to: (a) $300 mustering-out pay if they have performed active service for at least 60 days outside the United States; or (b) $200 mustering-out pay if they have performed active service for at least 60 days no part of which was served outside of the United States; or (c) $100 for any active service less than 60 days.

2. Bonus: Public Law 268 repeals that portion of the law, which provided that any financial benefits received under the act would be deducted from any future bonus authorized.

3. Retirement pay: Service personnel on active duty for more than 30 days and disabled from disease or injury received in the line of duty are entitled to receive the same retirement pay as now provided for regular personnel of the service.

4. Pensions: Discharge or release from service under conditions other than dishonorable is a prerequisite to veteran's benefits. Any veteran having a 10-percent or more disability resulting from disease or injury incurred in or aggravated by war service will, if his application is approved, receive the following amount:

Percent of disability:	*Amount payable per month*
10	$11.50
20	23.00
30	34.50
40	46.00
50	57.50
60	69.00
70	80.50
80	92.00
90	103.50
Total disability	115.00

Eligibility for pensions for non-service-connected disabilities requires honorable discharge and 90 days' wartime service—or if period of service was less than 90 days, have been discharged for disability incurred in service in the line of duty. The disability must be permanently and totally disabling and not due to the veterans' own willful misconduct.

Any single veteran with an annual income of over $1,000, or any married veteran—or with dependent minor children—with an annual income over $2,500, is ineligible for non-service-connected disability pensions. This pension is $50 per month and is increased to $60 upon 10 years of continuous, permanent, total disability or upon reaching the age of 65.

5. Insurance: Service personnel are eligible for the cheapest and best life insurance attainable—the National Service Life Insurance. This is term insurance for 5 years, convertible into ordinary life, 20-payment life, or 30-payment life policies.

Insurance that has lapsed may be reinstated by the veteran, either within 6 months after date of separation from active service, or within 3 months after date of lapse, whichever is later, by payment of only 2 monthly premiums without interest.

6. Readjustment allowances: Unemployed veterans who register with an office of the United States Employment Service are entitled to a readjustment allowance of $20 per week while unemployed. An eligible veteran may receive such payments up to a maximum of 1 year, depending on length of service. Self-employed veterans with net earnings of less than $100 per month may receive an allowance amounting to the difference between net earnings and $100 in any month, up to a maximum of 1 year, also depending on length of service.

7. Loans: Veterans have up to 10 years after official end of the war in which to make application for guaranteed loan at no more than 4 percent interest. These loans are automatically guaranteed if made in accordance with the provisions of the act and if the amount does not exceed the appraisal made by an appraiser of the Veterans' Administration.

Any loan on real estate may be guaranteed up to a maximum guaranty of $4,000 of the loan, with the Government guaranteeing 50 percent of the total loan up to the maximum amount. The business loan guaranty limit remains at $2,000, or 50 percent. Real-estate loans may be amortized over a period up to 25 years, and farm realty loans up to 40 years. Maturity on non-real-estate loans may not exceed 10 years.

Proceeds of a loan may be used to purchase a lot in connection with home construction. Loans may be made for all ordinary farming purchases, and any normal business enterprise, and so that existing indebtedness in default may be refinanced in connection with all types of eligible loans.

8. Income-tax exemptions: Special provisions have been enacted by Congress for the tax benefit of veterans. These benefits include (a) $1,500 of active service pay is excluded from gross income for the taxable year 1943 and until the termination of the present war is proclaimed; (b) mustering-out pay is excluded from gross income for the taxable year of 1944 and later years.

JOBS

1. Employment placement and assistance: The United States Employment Service and the Veterans' Placement Service Board are directed to cooperate in seeing that all veterans, able and willing to work, obtain employment. This assistance includes employment counseling.

2. Employment preference: Preference in job referrals through the United States Employment Service is available to veterans under regulations adopted by the Veterans' Placement Service Board, carrying out the direction of the GI bill of rights that the veteran receive "the maximum job opportunity in the field of gainful employment."

3. Civil-service preferences: Veterans with service-connected disabilities or in receipt of pensions, disability retirement benefits, or compensation from the Federal Government, receive an additional 10 points on their civil-service examination ratings.

A five-point preference is allowed to veterans not disabled.

These preferences will place veterans' names above all other names on the civil-service list except for professional or scientific positions paying over $3,000 a year.

4. Restoration to former Federal job: A veteran who held a permanent, probational, or probational-indefinite civil-service job when called to active service with the armed forces is entitled to mandatory reemployment in his former position, or one of like seniority, status, and pay, provided he has satisfactorily completed his period of service, is still qualified to perform the duties of his position, and applies for restoration within 90 days after separation from active service or discharge from the hospital.

5. Other civil-service benefits: The civil-service rule that not more than two members of a family, living in the same house, may hold a Federal civil-service position does not apply in case of a person entitled to veteran preference.

BUSINESS AND HOME AIDS

1. Small-business aids: Assistance is provided to veterans in establishing small businesses through (a) loans not connected with the GI bill of rights for worth-while manufacturing projects; (b) assistance in obtaining surplus war materials that will be helpful to the planned business venture; and (c) supplying of technical assistance.

2. Material priorities: Priorities for materials are granted by the Civilian Production Administration and the Office of Price Administration to veterans.

3. Purchase of surplus property: Veterans can purchase surplus property to set themselves up and help to maintain themselves in business without buying through regular dealer channels or paying a profit to anyone.

4. Housing priorities: Priorities for the construction or purchase of new houses have been established for veterans in obtaining homes under $10,000.

5. Legal assistance: The American Bar Association has adopted a program of legal assistance to veterans and members of their families.

EDUCATION AND TRAINING

1. Education: Any eligible veteran may receive 1 year of education or of training

plus additional education (up to a maximum of 4 years), for total length of active service. There is no age limit nor is there any need to show that a veteran's education was interrupted by war service.

The time during which a course may be initiated is within 4 years after discharge or the end of the war, whichever is later, and the time limit for completion of the course is 9 years after the end of the war.

Short intensive courses may be undertaken and the additional cost prorated against the period of eligibility to which the veteran is entitled at the rate of $500 per school year. No such short course may cost more than $500. Veterans may apply to take a correspondence course but they are entitled to no subsistence allowance. One-fourth of the elapsed time used in pursuing such a course is charged against the veteran's period of eligibility. Total amount payable for correspondence courses for any veteran is limited to $500.

Monthly subsistence allowance, while in school or training, is $65 for veterans without dependents and $90 for veterans with dependents.

2. Vocational rehabilitation of disabled veterans: The purpose of vocational rehabilitation is to restore the employability which has been lost by virtue of a handicap due to a disability incurred in or aggravated by service.

Vocational training involving more than 4 years of training may be begun by disabled veterans, subject to approval of the Veterans' Administration. The time for completing such training is 9 years after the end of the war.

Disabled veterans in vocational rehabilitation training are entitled to receive monthly subsistence allowance of $65 (without dependents) or $90 (with dependents) plus whatever pension they are entitled to by law. The minimum total amount such veteran may receive is set at $100 per month (without dependents) and $115 (with a dependent), plus $10 for the first child, $7 for each additional child, and $15 for any dependent parent. If the veteran would otherwise receive less than these minimum amounts, his allowance is raised to equal the minimum during the period of training and for 2 months thereafter.

HOSPITALIZATION AND DOMICILIARY CARE

1. Hospitalization: The Veterans' Administration provides hospitalization for any veteran of any war who was discharged under conditions other than dishonorable. Veterans with service-connected disabilities are given preference. Veterans with non-service-connected disabilities are eligible if a hospital bed is available and the veteran makes a sworn statement that he is unable to defray expenses of treatment.

The Veterans' Administration has been authorized and directed to expedite additional hospital construction and to establish all necessary administrative offices to make veterans' benefits more readily available.

2. Artificial limbs and prosthetic appliances: Provision has been made to insure ample funds for the Veterans' Administration to purchase prosthetic appliances for veterans and instruct them in the use of such appliances, including payment of any expense involved in the veterans' traveling to and from the center where the appliance is fitted and training given in its use.

3. Guide or seeing-eye dogs: Guide or seeing-eye dogs may be provided for the aid of blind veterans who are entitled to disability compensation or pensions for a service-connected disability under laws administered by the Veterans' Administration, including payment of any expense involved in the veterans' traveling to and from the center to become adjusted to the dogs.

Blind veterans are also entitled to mechanical or electronic equipment to aid them in overcoming the handicap of blindness.

4. Domiciliary care: A veteran who is so disabled as to be unable to earn a living, and is without adequate means of support, may be admitted for home care to a facility of Veterans' Administration providing such accommodations.

Grain Situation in New Hampshire

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following telegrams which I have received concerning the grain situation in New Hampshire and in New England:

BOSTON, MASS., *January 26, 1946.*

Hon. CHESTER E. MERROW,
Member of Congress:

With the advance of oats to ceiling we are now unable to buy any wheat, corn, barley, or oats proteins, and mill feeds are also unobtainable. A very serious condition faces New England feeders unless steps are taken to meet requirements in this deficit area. From here we see no hope of getting supplies unless ceilings are removed. Action within 10 days is needed or feedstuffs in many places will be exhausted.

BOSTON GRAIN AND FLOUR EXCHANGE,
J. A. BASSETT, *President.*

CONCORD, N. H., *February 1, 1946.*

Hon. CHESTER MERROW,
Member of Congress:

We wish to call your attention to the following resolution for your consideration:

Whereas we are unable to buy wheat, corn, oats, barley, mill feeds, and proteins; and

Whereas our present supplies will be exhausted within 3 weeks, we believe some drastic action must be taken immediately to prevent a catastrophe to the poultry and dairy industry in New Hampshire: Be it therefore

Resolved, That price ceilings as applied to grain and grain products be removed at once. Only by such action do we believe that the above-mentioned catastrophe can be prevented.

NEW HAMPSHIRE FEED DEALERS AND MANUFACTURERS ASSOCIATION,
ROBERT B. FARNUM, *Secretary.*

CONCORD, N. H., *February 2, 1946.*

Hon. CHESTER MERROW,
Member of Congress:

We are depending on you to exert every influence in this national grain crisis to provide enough grain for New Hampshire and New England to meet the USDA dairy and poultry quotas. We are at the end of the grain route and this situation will certainly destroy our poultry industry and do serious harm to our dairying unless you are able to find means of getting grain into this area.

GEORGE M. PUTNAM,
President, New Hampshire Farm Bureau.

CONCORD, N. H., *February 4, 1946.*

Congressman CHESTER MERROW:

For your information following wire dispatched today to Secretary Anderson and copy to President Truman:

"New Hampshire is facing desperately serious feed shortage. Supply of feed on hand for poultry and cattle will last only 2 to 4 weeks and replacements cannot be bought at any price. Am informed similar condition prevails generally over New England. As a means of immediate relief I suggest CCC obtain and allocate to this State and this region sufficient quantity grain and feed ingredients to save our poultry flocks from liquidation and starvation and our dairy herds from serious milk production loss and loss of flesh resulting from feeding hay and roughage alone. This situation is desperate and only quick action will save our poultry and dairy industry."

Do not believe ceiling price adjustments can be obtained quickly enough, even if such adjustment or removal of grain from price control is the answer. Therefore suggest CCC or other appropriate Government agency take immediate action to get grain into hands of distributors of this area at once. Sending this wire to New Hampshire congressional delegation.

ANDREW L. FELKER,
Commissioner of Agriculture.

MacArthur Deserves the Support of Our Government

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert an article from the New York Journal-American of January 25, 1946.

As far as the American people are concerned, our present foreign policy seems to be floundering in secrecy, appeasement, lack of any central responsibility and leadership, undermining and destroying those who display courage and constructive foresight, bolstered by a series of emphatic denials which are invariably followed by a tardy and apologetic admission of the facts when it is too late to do anything about them. As against the frank and forthright attitude of British Foreign Minister Ernest Bevin, we suffer by comparison.

In a recent press conference Secretary of State James F. Byrnes denied reports of friction between General MacArthur and State Department Advisers George Atcheson, Jr., and John Service. Does the State Department seek again to whitewash the charges against men, which were made by Gen. Patrick Hurley? To this day Mr. Byrnes has not seen fit to delve into the charges made by the FBI against John Stewart Service and his associates. Now comes another instance to show that the State Department or its authorized representatives are undermining Gen. Douglas A. MacArthur while he is in the field carrying out Department policies with high distinction and sagacity.

On Thursday January 24, the so-called Japanese-American Committee for Democracy held a meeting at the Manhattan Center in New York City. This meeting was widely advertised in

the Communist press. On January 23, 1 day prior to that meeting, Mr. Howard Rushmore carried a story in the New York Journal-American and the Hearst papers throughout the countries indicating the character of this meeting. The article follows:

RED GROUP LEADS MACARTHUR SMEAR

(By Howard Rushmore)

The smear campaign being directed by the Communist International against Gen. Douglas MacArthur is now firmly rooted in the United States with a new Red group, Japanese-American Committee for Democracy, leading the attack on the Pacific war hero.

Ironically the State Department apparently has enrolled one of its members in this vilification of General MacArthur, for Dr. Hugh Borton, member of the Department, is listed as speaker on a Japanese-American Committee program here tomorrow night.

Dr. Borton will speak at a rally called by the committee at Manhattan Center, 311 West Thirty-fourth Street, in what appears to be the Communists' opening drive to turn public opinion against the Allied supreme commander in Japan.

ROTH WAS INDICTED

On the same platform with Dr. Borton will be Andrew Roth, a former naval intelligence officer and a critic of General MacArthur, who was arrested and indicted last summer on a charge of conspiracy to steal confidential documents from the State Department.

These documents, relating to American policy in the Far East, were in part printed in Amerasia, a pro-Communist publication edited by Philip Jaffee, who made a guilty plea to his part in the conspiracy.

Literature circulated by the Japanese-American committee has featured attacks on General MacArthur as a reactionary and the tie-in * * * will be evidenced at tomorrow's meeting by the reading of a special greeting from the Japanese People's Emancipation League."

CITES MOSCOW TIE-IN

This league operated from Yenan, China, during the war and is one of the many Communist international stooge organizations designed to seize Japan as a Moscow colony.

The message from Tokyo has a sharp attack on the efficiency of General MacArthur's administration and says in part:

"The Japanese militarists have also skillfully started their underground operations. The bureaucrats, who are war criminals, are still in their former positions and the landlords are plotting to keep their old feudalist land system."

Mr. Speaker, despite this timely warning, Dr. Hugh Borton, Acting Chief, Division of Japanese Affairs of the State Department, not only appeared at the meeting, spoke there, but was present with none other than Andrew Roth as the gathering adopted a resolution which read, in part, as follows:

Whereas the United States State Department is carrying out in liberated Europe, in Puerto Rico, in Indonesia, in the Philippines, and in China an imperialistic policy: Be it *Resolved* That we watch for similar action in Japan, and mobilize the people of America to protest.

In other words this State Department representative was openly consorting with one charged with appropriating confidential documents of the Department, while his own Department was the target of Communist attack. This same Andrew Roth made General MacArthur the butt of his remarks. He waxed enthusiastic over recent changes in the State Department "when ex-Ambassador Grew resigned last summer and was replaced by Dean Acheson, John Carter Vincent, and others."

Mr. Speaker, I rise to question the propriety of the appearance of Dr. Hugh Borton, a duly authorized State Department official, at a meeting whose chief function was to attack General MacArthur, now carrying out the directives of this very Department. The incident is a mockery of the assurances given by Mr. Byrnes on the present relations between the State Department and General MacArthur. It is but another example of apparent cooperation between the Communists and certain State Department officials. I wonder what will be the effect on American prestige when the story of this meeting is publicized in Tokyo.

Price Control

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the President has asked that we extend the price-control law for another year. Most of us, I think, are in agreement, but we should try to find some method by which we can save a run-away inflation. In attempting to do this, we must also find a way to open up the gates of opportunity for business. Without this there can be no reconversion. The whole program of price control cannot alone be directed in the interest of the consumers; the machinery which serves the consumers must be given some consideration.

In the attempt to regulate prices—and probably honorably in the interest of the common people—the Office of Price Administration has caused an ever-increasing shortage of materials. They are all too often stopping production. It would seem to me that this agency and its policies can well be reviewed before this Congress grants it a new lease on life. It is entirely right that we should control prices against inflation or spirals, but more than all else we must find at the same time a way to stimulate production.

Under unanimous consent, I include two letters which have come to my attention on the question of price control—one from the Truax-Traer Coal Co., one of the largest coal dealers of the Nation, and the other from the John Leslie Paper Co., of Minnesota:

TRUAX-TRAER COAL CO.,
Minot, N. Dak., January 28, 1946.

HON. CHARLES R. ROBERTSON,
House of Representatives,
Washington, D. C.

DEAR MR. ROBERTSON: Thanks very much for your letter of January 24 with regard to stoker-coal prices in our area.

If OPA informed you that the border cities in Minnesota such as East Grand Forks, Moorhead, and Breckenridge have enjoyed a price differential as against other Minnesota towns on lignite, they are very badly mistaken, as the same prices have prevailed in the entire Red River Valley, including all of Minnesota and South Dakota for at least the last 10 years that I know of.

In establishing the ceiling of $1.70 a ton, OPA recognized that our over-all costs of making stoker lignite is $1.69 and they very generously allowed a profit of 1 cent per ton.

The $1.69 does not take into account the fact that in crushing larger sizes to make stoker nut we lose from 25 to 30 percent of fine coal which is unsalable and when you consider that we have a ready market for the large sizes at $1.90 a ton, it should be easily recognized that $1.70 does not adequately cover our financial sacrifice in making stoker sizes.

OPA was informed that we felt we should have an over-all price of $1.83 on stoker nut which we do not feel unreasonable.

It is true that there are no uniform prices on lignite at the present time, largely because of piecemeal adjustments by OPA. For example, early in 1942 OPA authorized a ceiling price on all sizes of $2.50 per ton f. o. b. mine by off-rail truck mines and at the same time, holding our company to a maximum of $1.63 on lump, $1.44 on furnace, and $1.21 on stoker sizes sold to trucks at our mine. When you consider that our wage scale has always been substantially higher than that paid by truck mines, the unfairness of allowing the latter a $2.50 ceiling and denying the same prices to us should be obvious.

As the matter stands now, there are four different schedules of prices on lignite authorized by OPA in Mercer County alone. For example, the truck mines have a ceiling of $2.50, with still another ceiling granted to the Dakota Collieries Co. at Zap, a third price to the Knife River Coal Mining Co. at Beulah and still a different schedule authorized for our own company at Truax, N. Dak.

Our Burleigh mine at Wilton has still a different schedule of prices fixed by OPA, with our Kincaid and the Baukol-Noonan mine at Noonan being the lowest in the State.

The net result is that because of shortage of production and shipping facilities, dealers are obliged to buy lignite at the present time wherever it is more promptly available and, should they be obliged to buy from a mine carrying a higher freight rate than their normal source of supply, they are not allowed by OPA to add the difference in freight rate to their ceiling prices. They can, however, add to their ceiling prices, the higher f. o. b. mine cost of the lignite if they are obliged to buy from a mine enjoying a higher ceiling than their normal source of supply.

From the foregoing, you will recognize that OPA should make a study of lignite prices and establish a uniform scale on a basis which will encourage the maximum production.

Sincerely yours,
WESLEY E. KELLER, *Vice President.*

THE JOHN LESLIE PAPER CO.,
Minneapolis, Minn., January 29, 1946.

BISMARCK GROCERY CO.,
Bismarck, N. Dak.

GENTLEMEN: We regret there is not a roll of butchers' paper we can ship at the present time, as requested in your letter of January 25, 1946.

We are still holding your letter of October 5, 1945, hoping some of the grocery paper or kraft wrapping or butchers' paper itemized in that letter, would be available for your order, but no such opportunity has developed.

The mills are not interested in shipping kraft and butchers' wrap at the presen OPA prices because of the advances in cost of nearly all the material they used as well as the help employed, in recent months, but with no adjustment in their selling prices.

How long this situation will continue, only OPA knows the answer.

Cordially yours,
THE JOHN LESLIE PAPER CO.,
E. A. CLARE, *Vice President.*

Foreign Policy

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 5 (legislative day of Friday, January 18), 1946

Mr. PEPPER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address on the subject Foreign Policy, delivered by me before the National Citizens Political Action Committee, at the Hotel Commodore, New York City, on January 31 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Even were we not still under the inspiration of the birthday of Franklin D. Roosevelt, we could not consider the foreign policy of the United States nor world affairs without focusing our primary interest upon the principles and the policies of President Roosevelt. There is a remarkable parallelism in the time that President Roosevelt and Adolf Hitler were in power.

They came to power in just over 30 days of the same time; they died within just under 30 days of the same time. Through these two men two great and opposing ideologies clashed in the fiercest conflict the world has ever seen. Eventually Hitler drew nearly all the human race into the holocaust of war.

Behind the faith and the philosophy of Franklin Delano Roosevelt the democracies of the world arrayed themselves in battle to the death in the war which has just ebbed to an end. Roosevelt stood for the dignity and the sovereignty of the people. Hitler for the subservience of the people and the dictatorship of tyrannical power. Roosevelt, though dead, still lives and symbolizes the faith and the aspirations of the mass of the men and women, boys and girls of the world. Hitler is dead, but "the evil men do lives after them while the good is oft interred with their bones." The evil flames lighted by Adolf Hitler are still burning in many parts of the world. From underground sources and secret, even sometimes unknowing, hands they are fed and kept bright and dangerous.

But the principles of Franklin Delano Roosevelt which triumphed in war under the fiercest assault ever hurled against good causes and good men are still in a great battle. The question still is unsettled as to whether those great moving policies of Franklin Delano Roosevelt at home and abroad shall triumph or whether they shall fail.

It is yet to be settled by the Congress and the country as to whether this great Nation, lifted by Roosevelt out of the abyss of depression, shall fall into another as deep or deeper; whether the masses of the people he lifted up to a new life shall fall back again into the stagnation and squalor of the old; whether we shall again have mass unemployment and "one-third of a nation ill-fed, ill-clad, and ill-housed"; and whether business shall see its tower of profits crumble about its head and its throbbing enterprises idle and cold.

The attack that his unrelenting enemies made upon the principles of Roosevelt continues against those same principles as they have been courageously espoused by his successor, upon whom his mantle has fallen. From every sources the attack has come. The old policy of divide and rule has been the enemy's strategy, and with all their multiple resources they have mobilized their propaganda and arrayed their forces to stifle and to strangle everything which symbolizes democracy and well-being for the men, women, and children of America, and they see themselves vaulting to power upon a disillusioned and confused people whose distress they would make the stepping stones of their political triumph.

Both from Hyde Park, from the quiet garden where he keeps his watch over his country, comes ever stronger to the hearts of men the voice of Franklin Delano Roosevelt calling out again to those who love their fellow men to put together their strength, to unite and move forward against those who have set themselves across the path of man—forward and upward.

The foreign policy of Franklin Delano Roosevelt, too, is at issue in this country today. The good-neighbor policy, American leadership in promoting the welfare and preserving the peace of the world, the unity of the Big Three as the cornerstone of world peace, all these things that Roosevelt stood for as the right course for our country in the family of nations are under the fiercest assault. By direction and indirection, from hands that are sinister, as well as from the short-sighted and ignorant, the blows come.

But we who know that Roosevelt was right have before us the vision he gave us of that right, and the pattern he gave us of how to vindicate it. Every American who is able to raise his eyes above the level of own everyday concerns must know that the Roosevelt vision of a happy and prosperous America in a world united in peace as in war, means that both the ignorant and the sinister must be defeated—the ignorant by the victory-in-defeat of their own political reeducation, the sinister by the massed pressure of all Americans of good will. These imperatives are the immediate tasks which face us all, if we wish to live in a world at peace, unfettered by the twin fears of uranium 235 and of national and international selfishness and greed.

For the great President who sponsored and who urged the development of nuclear fission knew that the powers unleashed by the atom as they were a menace to the whole world, must be subject to the control of the whole world as a weapon of war. He knew that that power must be devoted to alleviating the labors of the human race, not to killing it off. He knew that the birth of the atom bomb made it more imperative that the United States should have at home an economic bill of rights which would assure the equitable distribution of our enormous industrial, agricultural, and scientific resources to all the people. He knew that it could only mean misery and destruction unless it was used by a world united for peace through the instrumentality of international cooperation in the use of our new powers, and international friendship through the spread of the principles of democracy and of the rights of the common man whoever and wherever he may be.

That was Franklin Roosevelt's vision. For the solution of the many problems in international affairs which we face today—problems which he knew would arise—President Roosevelt left us this vision and the United Nations Organization, the tool with which to carry out that vision.

Above all, he saw as the cornerstone of world peace the permanent existence of unity among the Big Three—Great Britain, the Soviet Union, and the United States. It is upon this rock as a firm foundation that he based our foreign policy; and it is upon that foundation that those who are now following after him must base every one of their actions. Of course, there are and will be differences among them—but let me remind you what Roosevelt said so prophetically in 1937 about such differences. In his great Chicago speech given in 1937, a speech which was a considered attempt on Roosevelt's part to show the people the dangers of the route they were traveling, he said:

"No nation ever loses its dignity or its good standing by conciliating its differences, and by exercising great patience with, and consideration for, the rights of other nations."

The world—and America—should have learned by now that nothing can be gained by blindly following a policy of national aggrandizement, or by crawling into an isolationist hole and pulling the hole in after us, or by intensifying differences among the great Allies. Two wars have been fought, two bloody and incomprehensibly destructive wars, within our generation. Both these wars were brought about by policies of all-out nationalism and isolationism. We now know that unshakable unity of the Big Three could have prevented those wars.

In the years preceding this war few of us were willing to assume the grave responsibilities of adult nationhood in a world of competing nationalisms. We did not pick up the gauntlet which had been thrown down. But since then we have taken part in the greatest and bloodiest war the world has ever known. Hundreds of thousands of our young men and women, part of the irreplaceable wealth of our Nation's youth, have died that we might once again have a chance to learn to live at peace in a world united, a world which finally shall have learned the lesson that it is mankind that is important. That security from want and fear is more important than national or private gain.

Today we know we must assume those responsibilities. We have already begun to profit by experience. Spurred perhaps by the ever-present catalyst of fear from the menace of the atomic bomb, but also by the lessons we have learned from the agony and the outpourings of the blood of our youth and of the youth of all nations, we have taken our place among the nations of the world in a great international organization for the preservation of peace. Tennyson's vision of a parliament of the world, Woodrow Wilson's great dream of a League of Nations firmly bound together by a desire for peace and progress among the countries of the world, have finally been brought to fruition by Franklin Roosevelt's concrete plan for an international organization of nations based on the cornerstone of Big Three unity.

Yet still we face enemies, still we have battles to win. There still are selfish and unscrupulous men who place their desires for personal power and profit above the welfare of the Nation and the world, blind and stupid men who are worked upon by the unscrupulous, who are their tools, their helots, obeying their divisive, cynical, and disruptive orders to wreck world peace at all costs.

Chief among the weapons of these sinister forces today is the weapon of anti-Sovietism. Not a morning passes but that I read in the newspaper some new and conscienceless attack upon our great ally—that ally, be it remembered, which for nearly 2 years singlehandedly held the line against the engulfing hordes of the Nazi juggernaut. Intemperateness, intolerance, national selfishness, personal hatred, and avarice motivate many, if not all, of these attacks; but behind them all is one overriding emotion: fear. The forces of reaction and their unseeing tools among the people fear above all the strength and the unity of the Russian people who, as President Roosevelt said in September 1941, "completely destroyed the myth of Nazi invincibility."

These forces of reaction must be defeated if there is to be peace in the world. We have absolutely nothing to fear from the Soviet Union as long as the Soviet Union has nothing to fear from us. But while arrogant, immoral, and selfish individuals and organizations within our midst persist in fanning the flames of hatred against our greatest ally, just so long do we stand in dreadful danger of another war—a war, this

time, which may be the last one ever to be fought by the human race, because after it there may well be no more human race.

Equally dangerous right now is the campaign which is being waged by many of these same forces of reaction against the loan of three and three-quarter billion dollars to Great Britain, which President Truman proposed in his message to Congress yesterday. This loan is essential, as the President said, because it will enable Britain "to buy from the world the supplies of food and raw materials which are essential to the life and the work of the British people. At the same time it will keep open a market for those surpluses of the United States which are customarily exported to the United Kingdom." And finally, as President Truman also pointed out, it will enable the United Kingdom to remove the emergency controls, the exchange restrictions, and the trade discriminations which were made necessary by the enormous drain on her resources during the war. From a purely selfish point of view, we should support this loan for we are not going to be lending dollars abroad. We will be sending goods abroad, thus creating employment and prosperity at home. And I tell you this loan will be repaid.

Yet this loan proposal is under savage and vicious attack by various sectors of American opinion. Among the noisiest are two groups—first, those who still cling to the false slogan, America First, who prefer to think of America isolated from the world rather than cooperating with the world. These are our old friends the isolationists. And second, those who see America dominating the world with her new might and cracking the whip at all other nations. These are a new breed sprung up among us—the imperialists. Strangely enough, the isolationists, in their blindness, are unconsciously asking for a weaker and poorer America—not for a stronger and a more prosperous America. I am sure you have noticed that certain Members of the Senate and House oppose both the British loan and a higher minimum wage. These men are still thinking in terms of world scarcity, of the inevitability of poverty nationally and internationally. They still live in a private world in which they feel themselves surrounded on all sides by enemies—enemies in the other nations of the world, enemies in the great mass of the American people who are demanding full production and full employment at high wages for all. These folks have phosidero-doromophobia—the fear of being afraid of being afraid.

These men and organizations of little faith—men and organizations—who would sell America short, are among the powerful forces opposing the loan to Britain and aid to other countries. But even more powerful are those few ugly imperialists, those international monopolists who want to dominate the world. They oppose the loan to Britain because they are afraid that Britain unbankrupted may take away from them some of the markets of the world, may force upon them the unpleasant necessity of competing for markets. They would rather have the world markets in their pockets, unopposed, unprotected, and nakedly open to their own methods of exploitation.

Furthermore, they are against a loan to Britain because the British Government is a labor government, and they fear it nearly as much they fear the Soviet Union, and for the same reason, because they feel that it endangers their own private monopolies and their own private sources of monopoly profits throughout the world. And I may add—they oppose the loan to Britain because it is a precedent for a loan to the Soviet Union.

But we cannot afford to base our foreign policy upon a policy of special favors for the few, upon a policy of economic war against the many in whatever country they live, upon a policy of America against the world. That was the old rule. We must base our foreign policy upon the new rule, the rule of international cooperation which is the only road to permanent peace and prosperity for us here in America as well as for the world.

That road lies open to us. The way is clear, the way of enlightened self-interest, the way of international peace through internal democracy and full employment and through understanding and friendship between the nations of the world. It is the way of Franklin Delano Roosevelt, the way of every American who has the genuine interests of his Nation and his people at heart.

But it is a way which is beset with difficulties. Not only do we who believe in and are fighting for a peaceful America in a world at peace find enemies of peace gnawing at the heart of our own relations with our great allies, Britain and Russia. We find these same enemies assiduously working to promote splits and divisions wherever they have a chance The struggle against fascism is not yet over—let us all remember that. The victory which was so dearly bought on Iwo Jima and the plains of Normandy, before Leningrad and Stalingrad, is not yet a complete victory.

The forces of fascism are still in the saddle in Spain, Portugal, Argentina. They are hiding underground, as today we may be sure they are in hiding in Germany and Japan and must be routed by an aggressive American occupation policy. While we proudly take our seat in the United Nations Organization, and work together with our allies to build a firm structure of international democracy and friendship, we must not permit selfish and antisocial forces to exist and to grow in our own country and we must remove the uncertainty and insecurity before which these forces feed. For our well-being at home we cannot permit these forces to defeat our industrial reconversion program, our promised human reconversion program embodied in the emergency unemployment compensation bill, the full employment bill, the minimum wage bill, and other essential pieces of domestic legislation for the people called for by the President and the country. But these bills are just as important in our foreign policy as they are in our domestic policy, for an America in crisis, an America in depression, means a world in crisis and depression, and the ever-growing dangers of a third world war brought about by international cutthroat competition, aggressions, autarchies, and all-pervading economic struggle for survival.

We must watch every step we take now, both on the national and the international front. Every move we make or do not make will count in the long struggle ahead either for or against world peace and world prosperity. America never makes great decisions to wage war or to create depressions. Only Fascist powers do that. But we can unconsciously create the inevitable prerequisites for war or for depression by accumulating small, seemingly insignificant decisions that make up the total, meaning war or peace, depression or prosperity and full employment.

The loan to Britain is just such a relatively small decision. So is our policy as a nation toward Franco Spain, that last stronghood of European fascism, or toward Argentina, that new stronghold of fascism in the Western Hemisphere. So is our policy as a nation toward the Soviet Union—a policy which is made up of innumerable small problems which must be solved amiably.

And so, finally, the small decisions on full employment, on high wages, on a health program for the Nation, on housing, on taxation, and on the many other domestic issues also have their importance in the great decision for war or peace, depression or prosperity, which will be made for us by the irresistible march of human events. We cannot avoid the responsibility for another war, for it will be totally our responsibility. Nowhere in the world is there today any nation powerful enough to wage war against us, but nowhere in the world today is there a nation which will not, if forced to the wall by the American imperialists, the American isolationists, the American monopolists, try to fight back. And our supreme power in the world will not last.

It is not our great numbers; it is not our resources; it is not our capacity to fight; it is not the atomic bomb which makes America the most powerful nation in the world today. The real predicate of our power is the confidence that the people of the world have in our national integrity, in the affection they have for us in their hearts. It is touching to see from lowly and humble people, as I have in recent months in 20 countries, that confidence and that affection. America to them is not primarily great; it is primarily good. It is not essentially strong; it stands for what is right to them. They do not expect us to be their guardians or their Santa Claus, but they do believe that we will help them save their old people, their women, their children, from starvation, from death and disease. They believe that we will help them repair the tragic devastation of war. They believe that we are clear-headed and farsighted enough to know that it is not only good morality, but good business to help them get their factories and their farms and their enterprises to running again; to help them start the stalled wheels of trade and commerce. They believe that only we are strong enough fearlessly to stand against wrong in the world and that we will. They believe that we can and will take the leadership in building a new world upon the wreckage of the old, and that we shall so apply knowledge and science and skill and that the race of man shall be able to rise above the drudgery and the squalor of the old world to the sunlit expanses of the new. They believe that we can and will keep the world at peace.

They are still trusting and believing in us. They will not change. It will have to be we who shall change if that confidence is lost. If we do not keep our rendezvous with destiny it will be we who will fail the dead and the living. It is not like America to fail, or, if failing once, to fail again the same trust. Even in the wreckage of Europe—yes, amongst the throbbing heartaches of this still war-torn world—louder than the anguished cries of the suffering there is still in the human race hope, and the foundations of that hope are sunken deep in the hearts of the American people. Let that forever be an unshaking and unshakable foundation.

The Dissipation of Our Birthright: Good Government

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. WHITE. Mr. Speaker, we find that thoughtful citizens in very part of this country are becoming fearful of the present trends that may lead to the loss of our greatest heritage: Good government, a heritage that means more to the American people than anything they may have inherited.

I am indebted to a prominent businessman, Mr. G. F. Jewett, of Spokane, Wash., for an informative article entitled "Forms of Government" by the president of the Washington State Bar Association, Mr. Frank E. Holman, which I have condensed and present herewith:

The old school books used to classify the forms of government somewhat as follows:

Absolute monarchy: Where the head of state, be he king or emperor, ruled by divine right and the people had no voice in the affairs of state. Louis XIV epitomized this form of government when he said, "I am the state."

Military dictatorship: Of which the ancient world had many examples. In this class also may be put Napoleon's France and Cromwell's England. Such dictatorships rested upon the power and genius of great military leaders and usually passed with the death of such leaders.

Limited monarchy: Where the people, through a parliament or other deliberative assembly had some voice in the making of law and the conduct of government, but where the monarch still exercised the prerogatives of a personal ruler. This was largely the situation in England from the time of the Stuart Kings to the end of the Georges.

Constitutional monarchy: Where the people, through the parliamentary and judicial processes, attained sufficient ascendancy over the prerogatives of the Crown to subject the will of the Crown and the conduct of the state to the restraints of a written or unwritten constitution and to the provisions of law enacted in accordance therewith. This is the England of the last century and a half.

A republic: Where the executive and all other powers of government are derived from the people and exercised with the consent of the governed but within the framework of constitutional guaranties and judicial precedents. There had never been a large scale venture in this form of government until the American experiment was launched following the American Revolution.

A democracy: Majority rule, where the government is dependent upon the will and desires of an existing majority. The simplest form of this was the old New England town meeting and its government by a particular majority voting as a group. It is not so much a government of law as a government of men, and this distinguishes a democracy from a republic. Law stabilized by constitutional guaranties and precedent under the checks and balances of a republic operates necessarily without regard to the particular and transitory passions or feelings of a particular majority. To weaken or abandon constitution guaranties and adherence to precedent is to substitute for a government of law a government dependent upon the will and immediate desires of a particular existing majority. Perhaps we should note in passing that the United States Army Manual states: "The Government of the United States is not a democracy but a republic"; that the word "democracy" nowhere appears in the Declaration of Independence, in the Constitution of the United States, in Washington's Farewell Address, in Jefferson's Inaugural, nor in Lincoln's Gettysburg Address. As applied to our Federal Government it did not come into general use until Woodrow Wilson's famous pronouncement of World War I, "make the world safe for democracy." Since that time the tendency has grown to substitute the word "democracy" for that of "republic" in referring to our form of government and thereby obscure the fact that our forefathers established and intended to establish a republic and not a democracy whereby a particular majority may by its votes and the sheer force of numbers deprive minorities of fair and equal treatment by the agencies of government. Lincoln in his first inaugural said: "If a majority should deprive a minority of any clearly written constitutional right, it might in a moral point of view justify revolution—certainly would, if such a right were a vital one."

The makers of the Constitution conferred upon us, even as against the Government itself, the right to be let alone, the most comprehensive of rights and the most valued by civilized men.

Strange that this freedom of individual action is rarely to be found in the utterances and declarations of recent times. For example, take the four freedoms of the Atlantic Charter. One might have all the four freedoms and yet have no more freedom than the elephant in the zoo. He enjoys freedom of thought; he is also free to speak or trumpet when he wishes; he has freedom from want because his keeper feeds him every day; and he has freedom from fear because his natural enemies like the lion and the tiger are locked up in separate cages. But what about his freedom of initiative, freedom from arbitrary control? He lacks this, as do all persons under an arbitrary government. It is this freedom of initiative and freedom from arbitrary control by government, freedom to work and live, each man according to his abilities, this freedom of individual liberty, which is the basic freedom of freemen. Without this we are without the kind of government our forefathers established. They knew the basic freedom of freemen was, as Justice Brandeis said, freedom from government control—the right to be let alone in our individual lives. That is why, in establishing a structure of government, the makers of the Constitution consciously set up checks and balances to prevent the Central Government and the Executive from becoming all-powerful and regimenting our lives.

Our forefathers understood clearly and definitely that the so-called examples of democracy in the past had usually degenerated into tyrannies by temporary majorities as obnoxious as the tyrannies of dynasties. They understood that tyranny or absolutism on the part of a majority acting by force of numbers could be quite as unreasonable, self-willed, and vicious, and as destructive of individual freedom and development as the tyranny of ruling houses.

Hence they created a republic, not a democracy, along the lines of the New England town meeting, with which they were fully familiar. They consciously established a government of checks and balances. This was not done for the purpose of rendering the machinery of government complicated nor for the purpose of thwarting the ultimate will of the majority. The American Revolutionists were committed, to be sure, to the doctrine of rule by the majority, but they were not committed to the doctrine that a majority at a particular period and particularly during a period of economic and social unrest is necessarily to be interpreted as holding a final mandate to impose upon the whole of the people fundamental changes in their form of government. They proposed that, so far as current political decisions were concerned, the will of the majority at stated intervals should be tried out by and through legislation, framed and passed by the elected representatives of any such majority, but always within the guaranties and the framework of the Constitution. They intended to combine, and did combine, representative government with constitutional government and declared outright that the Constitution is the fundamental law of the land; that if the elected representatives or the elected executive of any given majority or party attempted by legislation or executive action to transcend or violate the Constitution or any of its provisions or guaranties, the judicial department of the Government should independently determine the fact of the violation and that the executive, be he president or lesser person, should impose upon no part of the people any laws, directives, or orders which violate the fundamental rights of any citizen as protected and guaranteed by the Constitution.

Our forefathers felt that the safest form of government to assure freedom was a representative and constitutional commonwealth. They having established for us such a form of government, we have supposed it would remain with us. We think of government as one of the most natural and ordinary facts of life. But no particular form of government continues of its own accord. It is influenced and changed by the plans of men, sometimes sincere reformers, sometimes demagogs. Consider how quickly fascism developed in Italy and nazism in Germany, and communism in Russia.

Mr. HATTON W. SUMNERS, of the House, has put the matter in unmistakable language on several occasions:

"Representative government is withering before our eyes. * * * Bureaus issue what are called directives. One bureaucrat said recently, 'We do make the law. This order supersedes any laws opposed to it.'

"The executive branch has in effect, through its dictatorial policy of executive decrees, usurped the powers of the legislative and judicial branches. Under the influences of these alien ideologies, there has been created a government of bureaus and bureaucrats who make the law, and enforce the law, and interpret the law."

Senator PAT MCCARRAN last year in an address at the commencement exercises of Georgetown University put the matter thus:

"It is no fallacy, and it is no quibble, to say that a large body of our law today is made, interpreted, and administered by appointive officials. Not only by Executive orders, but by a constant stream of directives issued by various administrative agencies of the Government, rules and regulations are continually being put in force and given effect which have had no sanction by the Congress. Yet, without such sanction, and often without color of support from any constitutional source, these rules and regulations have all the force of law; more than that they are law; and frequently they actually supersede laws passed by the Congress.

"Government by administrative law breeds opportunity for personal arrogance; evades the courts; sneers at the rule of stare decisis; affords no precedents; and fortifies itself by pointing ridicule at Congress and other lawmaking bodies of our Nation."

Senator O'MAHONEY, Senator BYRD, and other Democrats have used as strong or stronger language.

Thus bureaucracy has infiltrated and superseded our constitutional processes. History demonstrates that bureaucracy easily becomes the instrumentality of autocratic government. In a bureaucracy as in an autocracy, the laws and the regulations which govern the lives and fortunes of the citizenry are imposed from above. Instead of developing the law by the legislative and judicial process, the law is originated, made, interpreted, administered, and enforced by the executive and his appointees, and the legislative and judicial branches of government are either bypassed or made over into instrumentalities of the executive will.

We are inclined to forget that the world moved on for many centuries without any understanding of, or any apparent desire for, such a form of government as our fathers thought out, adopted, and handed down to us. In truth and in fact as a form of government, a constitutional and representative commonwealth or republic is historically a recent development and more or less an unproved experiment. Autocracy of every kind is opposed to representative and constitutional government, whether it be the autocracy of king and lords or the autocracy of fascism, nazism, or of the proletariat, or

the autocracy of executive fiat operating through innumerable bureaus of the autocracy of state socialism based on paternalism.

The danger of the future lies not so much in the changes already made, though these are far reaching, as in the lack of understanding on the part of the public of what the founders had in mind in adopting and establishing a constitutional and representative government. It is this lack of understanding and the misapprehension of the underlying theory of government that is the fertile field for the promises and grandiose phrases of the politician and the reformer, and we shall move from one change to another until we shall discover that there has been a complete revolution and find ourselves no longer living under the form of government we thought was ours.

The American people, of course, have the right to abandon constitutional and representative government if they wish, and to substitute therefor bureaucracy or state socialism or communism or any other ism, but they should not be tricked into any such substitution by being fooled with high-sounding phrases of a so-called new world liberalism. As lawyers, by the traditions of our profession and by our oath to support the Constitution, we are under direct and solemn obligation to see that the issue is fairly presented and fully understood by the American people.

This is our great challenge of the immediate future—it is a greater challenge than that foreseen by Webster when he stated:

"If disastrous war should sweep our commerce from the ocean, another generation may renew it; if it exhaust our treasury, future industry may replenish it; if it desolate and lay waste our fields, still under a new cultivation they will grow green again and ripen to future harvest. But who shall reconstruct the fabric of demolished government? Who shall rear again the well proportioned columns of constitutional liberty? Who shall frame together the skillful architecture which unites national sovereignty with state rights, individual security, and public prosperity?"

The Present Crisis

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, there have been many times in the short history of this Nation where it seemed that we are facing a great crisis, and yet through the considered judgment of the great American people these crises have been met and passed. It can probably be well said that we are facing another one today, the question of labor and management, the question of reconversion and the restoration of economic stability of our Nation. If we can only hold the machinery steady, the American people in their wisdom will again meet this crisis as they have the others. It is a time for sane thinking; yes, we must in our sane thinking be very thoughtful of the common man because he makes up the great body and soul of the Nation. But we are needing today leadership as we strive to cure these ills and to meet these issues, and in doing this we will need some uncommon men also.

Under the privilege of unanimous consent, I include herewith two statements, one of which was made many years ago by James Madison, another at a later date made by Abraham Lincoln. It is my earnest request that the Members of Congress read these statements. You have read them before, they are timely, and they should be read again now. The things that disturbed James Madison and Abraham Lincoln were finally mastered to a large degree by the American people and the Congress. The discouraging conditions of this hour will be mastered again if we have faith in ourselves and in the American system.

SIGNPOSTS OF DANGERS AHEAD

"We are free today substantially, but the day will come when our Republic will be an impossibility. It will be an impossibility because wealth will be concentrated in the hands of a few. A republic cannot stand upon bayonets, and when that day comes, when the wealth of the Nation will be in the hands of a few, then we must rely upon the wisdom of the best elements in the country to readjust the laws of the Nation to the changed conditions—intelligence will forever govern ignorance." (James Madison.)

"I see in the near future a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of the war, corporations have been enthroned and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of war. God grant that my suspicions may prove groundless." (Abraham Lincoln.)

The White Shirt Scandal

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, I think everyone knows there is a white-shirt scandal. We men are unable to buy white shirts. The veterans are not able to buy them, nor to buy other necessary civilian clothes upon their discharge from the service.

What does it mean when we read in the newspapers such United Press items as the following:

More than 2,000,000 men's white shirts will go on sale tomorrow, but you—and you—won't get any.

William Beck, wholesale dealer, said tonight that his 2,400,000 shirts will sell for $20.50 per dozen, plus his 3-percent commission for selling them for a Troy, N. Y., company. The shirts originally were made for the Navy, which has all it needs.

"Everybody is bothering me to buy a white shirt," Beck said, "but the catch is the shirts must be sold for export only."

Why are these men's white shirts being sold for export only? The enlisted men cannot wear them. They have to wear the khaki. It is only the officers who can wear the white shirts, and only a few of them. Everyone knows we do not have a need for over 2,000,000 men's white shirts for the few officers of the military organizations of this country who are permitted to wear white shirts. Are we exporting them for the use of foreigners and selling them at $1.71 per shirt? Why not give home folks an opportunity to buy some of these shirts? Who is responsible for this situation, and where are these white shirts going that are sold at the rate of 2,000,000 for export only while we at home do without?

It is interesting to note that the people are growing weary of such an inexcusable attitude on the part of whoever is responsible for such performances. One of my constituents in a recent letter called it "nutty," and I think that is a mild description of such conduct. I quote from him as follows:

The attached (newspaper clipping) is "nutty" to me, and things like this make me wonder why we should support our Government. Why in the hell export the shirts when we can't buy any here, or in this vicinity? If this is true, why can't you and others stop it? The President is the sorriest thing we have had in the White House since Harding, and if this keeps up there are going to be many changes this year and in 1948.

I travel Oklahoma, Kansas, Texas Panhandle, and Illinois, and I can hear rumblings of discontent wherever I go.

Mr. Speaker, another constituent of mine, who is a very intelligent person and head of a large business concern in Tulsa, Okla., has written me as follows:

In the Tulsa World of January 30 was an article with a New York dateline stating that 2,000,000 surplus Navy white shirts would go on sale that day but they could be sold for export only.

I am wondering what kind of monkey business that is? No doubt you know that there is not a regular dress shirt to be had in this part of the country and this has been true for some time. Plenty of sport shirts made of nice material may be had from $4 to as high as you want to go.

Now I happen to have a son who is an officer in the Navy. Only the officers wear white shirts so these are likely those fine quality collarless white shirts that are worn with separate collars and plenty of almost shirtless guys in these United States would like to buy a few of them. I am not thinking entirely of myself but mainly of the millions of servicemen who are getting out of the service and can buy no shirts and who would be very happy to have a white shirt after wearing OD stuff.

No doubt these shirts will go to Britain. They already have our pants literally. Our drawers will be demanded as soon as they get their breath.

I think it is high time such stuff as this is stopped.

Montana's War Finance Record

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent I am inserting in the RECORD a letter written to me by Mr. A. T. Hibbard, chairman, War Finance Committee for Montana, and also the story of Montana's outstand-

ing contributions to the eight war loan drives. This record is one that Montana's citizens can justly be proud of, and, as their Representative, I share that feeling in our accomplishments.

TREASURY DEPARTMENT,
WAR FINANCE COMMITTEE,
Helena, Mont., January 30, 1946.

Hon. MIKE MANSFIELD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN MANSFIELD: We are sending you herewith two copies of the Montana war finance report, which shows the record of Montana in both the Victory loan just completed and in the whole war-finance program.

People of Montana made a record second to none in America, and we know you will be interested in the examination of the several schedules and analyses in this report, and that you will want to keep it also for a permanent reference in connection with this tremendous part in financing the war. We would like to have printed a comprehensive book with the detailed story of the activities in the program, but had no funds to do this, so we worked out this method of preparing the report at nominal expense.

The people of Montana responded tremendously and have made this record, of which we are all very proud. It was possible only through the devoted, intensive, patriotic work of 15,000 men and women in Montana who served throughout the war on the committees all over Montana.

Sincerely,

A. T. HIBBARD,
Chairman, War Finance
Committee for Montana.

Fellow Bond Workers and All Montanans:

When the United States Treasury Department in May 1941 established the Defense Savings Staff to promote aggressively on a Nation-wide scale the sale of savings bonds and other securities to the general public, Montanans purchased $385,000. This was the equivalent of 20,530 $18.75 bonds. During the Seventh War Loan, Montanans purchased 50 times $385,000 when they purchased $19,177,000 in E bonds, equal to 1,022,773 $18.75 bonds. If all issues were included, the Seventh War Loan Sales ($61,511,000) were 88 times more than in May 1941.

If all E bonds purchased from May through December 1941 had been $18.75 bonds, the total number would have been 360,266, or seven for every 10 men, women, and children in the State. This total jumped to the equivalent of 1,463,253 $18.75 bonds in 1942, or three for every man, woman, and child in the State. By 1943 the number would have increased to more than five for every person, to seven in 1944 and more than five in 1945. In other words, E bond sales in Montana were equivalent to 2,562,933 $18.75 bonds in 1943, 3,146,933 in 1944 and 2,550,266 in 1945. Montana's total E bond sales, $189,064,000, broken down to $18.75 bonds, equals 10,084,413, an average of more than 21 bonds for every man, woman, and child in the State. The equivalent of 213,871,320 $18.75 bonds for the Nation (total sales $40,100,874,000) averages 16 per person for the country as a whole. In Chouteau and Daniels counties the average would be approximately 41 $18.75 bonds for every person in those counties.

"Montana is sometimes called the Treasure State, on account of its mineral and agricultural wealth, but its prime asset is its people, who give more than they demand."

That quotation from the Minute Man, national publication of the War Saving Division, of December 15, 1945, is the theme of this all too brief narrative of four crowded years of stupendous accomplishment by the people of Montana and in particular by the army of volunteers who developed the enthusiasm that marshaled Montana's World War II war finance total to $461,666,000. No other State has a better record. No other State received the tribute which Ted R. Gamble, national director, paid the people of Montana and war finance workers in his telegram to State Chairman A. T. Hibbard on December 7, 1945. This telegram is as follows:

WASHINGTON, D. C., *December 7.*

A. T. HIBBARD,
Montana War Finance Committee,
Helena, Mont.:

Congratulations and sincere appreciation for having again set a mile post for the rest of the country to follow. The accomplishment of being the first State in the Nation to reach all of its quotas in the Victory loan making it the eighth consecutive time to have won this award is an inspiration and a challenge to the rest of the Nation. It is a record in which you, your coworkers, and the people of Montana may justly be proud. The Treasury Department salutes you for having written another bright page in the history of war finance. We are especially grateful to you for having exceeded your quotas in this last great drive and want you to know that your work, that of your associates, and the splendid support given by the people of your State is not only helping to bind up the Nation's wounds and care for those who fought the battle but it is also helping the country to establish a firm and solid foundation on which to begin a future of peace.

TED R. GAMBLE,
National Director, War Finance Division.

How did it happen? The explanation is simple. Montana people are proud of their families, their homes, their neighbors, their communities, their counties, their State and their Nation. Montana did the same in World War I, as can be seen by the tables of Liberty Loan sales which are a part of this report. Then, as in World War II, they backed their fighting sons and service daughters to the limit.

Although 1941 might be termed in future history books "As the year of confusion," Montanans molded in that year the foundation for its record in war finance. William H. Bartley, of Great Falls, collector of customs for Montana and Idaho, was called to Washington in April 1941 and given the additional assignment by Treasury Department officials of organizing what was then termed the "defense savings staff for Montana." As deputy administrator, he drafted Fred J. Martin, of Great Falls, then associate director of the Montana Farmer, who assumed his duties on July 1.

A. A. (Bert) Hoerr, of Helena, at that time assistant manager of the Helena branch of the Federal Reserve Bank, was designated first State chairman of the advisory committee, which included a representative group of Montanans. The first meeting was held on July 9. At this meeting it was agreed that county organizations should be established and the members made suggestions relative to county organizations.

In July and August county chairmen were selected. With but one exception those designated accepted the task, and one can see in the roster of county chairmen that the great majority of these stayed on to finish the job. With the cooperation of the Montana Bankers Association a drive was initiated to have every bank qualify as an issuing agent. Montana was the first State in which all banks became issuing agents. The number of post-office and other issuing agencies also was expanded. In addition to county chairmen county committees designated included bankers, postmasters, county AAA officials, school administrators and representatives of business, civic, patriotic, farm, labor, and women's groups.

PREVENT-INFLATION WEEK

A. T. Hibbard, president of the Union Bank & Trust Co., of Helena, and active prior to that time as a member of the State committee, was named State chairman in October 1941, when Hoerr resigned, since he was moving to Seattle. The first intensive step in the State's educational and promotional program was the State-wide observance of Prevent-Inflation Week, November 2-8, 1941. Gov. Sam C. Ford, honorary State chairman, issued a proclamation urging all citizens to give serious thought and consideration to the immediate problem of inflation and how they, individually and collectively, can safeguard present and future home defense and security by participation in the defense savings and other Government programs. He also urged all civic and other clubs, associations, lodges, women's and other organizations, employer, labor, farm, and youth groups to devote at least one program to a thorough discussion on this subject.

State heads of practically every organization and group were named members of a general State committee, and these urged participation of their members. With the help of Boy and Girl Scouts, Camp Fire Girls, and other volunteers in Great Falls, more than 15,000 State and local organizations were contacted by mail. The response was excellent due to the splendid leadership of the State committee, county defense savings chairmen, and their coworkers.

The second meeting of the State advisory committee was held on November 8, 1941, with Gale Johnson, then national director, in attendance. This meeting primarily was devoted to discussion of ways and means of establishing the pay-roll-savings plan. Every employer in Montana was contacted. Labor groups pledged their assistance and a good start had been made by that time.

REMEMBER PEARL HARBOR

But within a few weeks the Nation was shocked and startled by the news of the attack on Pearl Harbor December 7 and our entry into the war. Then these newly formed defense savings committees realized they had a job on their hands. E bond sales shot up from $883,000 in November to $2,616,000 in December, the first month of war. Montana stood sixth in per capita among the 48 States, a place it has consistently held throughout the entire war finance period, even though it ranks nineteenth among the States in per capita income. Treasury analysts in their analysis of E bond sales in December 1941 stated: "Taking sales as a percentage of estimated 1941 income, Montana ranked first." (States which have a higher E bond per capita than Montana with the rank among the States in per capita income in 1941 follow: (1) Oregon, 17; (2) Connecticut, 2; (3) Washington, 14; (4) Michigan, 13; and (5) California, 7. This, of course, does not take into account higher per capita income due to expanded war industries.)

A national meeting, which for earnestness perhaps has no equal in the annals of World War II, was held in Chicago on December 16, 1941. Hibbard, Bartley, and Martin attended. The Defense Savings Staff became the War Savings Staff and defense bonds, war bonds. Plans were outlined for a Nation-wide pledge campaign. Despite 25°-below weather, more than 1,000 men and women from every county in the State attended regional State meetings at Glendive, Billings, Havre, Helena, and Missoula. The call was issued by telegrams to county chairmen, and some committees drove more than 300 miles to attend. For conscientious fervor, these meetings outdid even the historic national one in Chicago. These workers, who dropped everything and came to the meetings at their own expense, pledged themselves to finish the job. The record proves the sincerity of those pledges. They returned to their counties and enlisted the aid of thousands of volunteers to conduct the pledge campaign in January. That voluntary contribution of time, effort, and consistent patriotic devotion has been the reason for Montana's success.

First national, State, and county quotas were fixed in May 1942. The quotas were based on monthly average sales from July 1941 through January 1942. Montana made but 65 percent of a quota based largely on sales in the peak agricultural income period, but the Nation reached only 59 percent. Prairie, along with several other Montana counties, initiated the habit of never failing to reach its quota and reaching it early. However, the continuous monthly quota system, which took no account of varying income periods, particularly in agricultural sections, didn't work out satisfactorily. Campaigns were conducted to buy bomber and fighter planes and other equipment. Intensive campaigns among merchants were organized under the leadership of Leon Singer and Roy Currell, of Great Falls, then cochairman of the Retailers for Victory organization. The great majority of the employers of the State established the systematic pay-roll-savings plan. Life insurance underwriters assisted county committees.

A women's division was organized in August 1942, and Mrs. J. H. Morrow, of Moore, who had been war activities chairman for the Montana Federation of Women's Clubs, and also active in the American Legion Auxiliary, was designated State women's chairman. Women vice chairmen were named in each of the counties by county chairmen. Cooperation, not competition, was the theme, and this worked out splendidly.

FIRST WAR LOAN DRIVE

In the fall months sales mounted, and in December 1942 E, F, and G sales were just short of $5,000,000 in addition to the $18,078,000 of sales in the First War Loan, November 30 to December 23, 1942. The organization which conducted the first drive was sponsored by the Federal Reserve banks. R. E. Towle, manager of the Helena branch, was Montana chairman, with R. B. Richardson, president of the Western Life Insurance Co. of Helena, vice chairman. The State was divided into seven districts, following the group organization of the Montana Bankers Association, with the following chairmen: I, George H. Leick, Havre; II, Axel Nelson, Sidney; III, Theodore Jacobs, Missoula; IV, George N. Lund, Reserve; V, Lee M. Ford, Great Falls; VI, the late J. A. Sanderson, Anaconda; VII, B. M. Harris, Columbus. No county quotas were established and the State quota of $13,000,000 was reached easily. In Montana, as well as throughout the country, subscriptions were limited.

SECOND WAR LOAN

The Second War Loan, April 12 to May 1, 1943, was conducted jointly by the committee in charge of the first and the War Savings staff. The State executive committee included: Towle, chairman; Bartley, vice chairman; Hibbard, Richardson, and Martin, secretary. Results can best be summed up by quoting the Minneapolis Tribune of Sunday, May 2: "Every county in Montana went over its quota Saturday, the first State in the district (Ninth Federal Reserve) to so report." Meagher County with $50.56 topped Daniels' $43.63 for per capita E bond honors. Lincoln reached its quota first, 2 days ahead of Prairie.

Following the Second War Loan a permanent consolidation of the two groups was effected with Hibbard as chairman; Richardson, vice chairman; Bartley, executive director; and Martin, associate director. The latter took leave to enlist in the United States Marine Corps and was succeeded by Arthur Nelson, Helena insurance man and first State chairman of the pay-roll savings committee which was established early in 1941. Tom Moodie, Washington and North Dakota newspaperman, also was named associate director. Moodie resigned right after the Third War Loan to return to the Spokane Chronicle.

THIRD WAR LOAN

"Replace the cruiser *Helena*" was the battle cry in the Third War Loan, September 5 to October 2, 1943. The *Helena*, fightingest ship in the United States Navy, sank in the famous Kula Gulf engagement on July 7, 1943. How well Montana came through is attested by the fact that the Treasure State led the Nation in E-bond per capita with $30.43 as compared to the Nation's $18.95. Preceding the drive, district meetings were held throughout the State. Daniels County was first in E-bond per capita with $68.39. Pondera County made 198 percent of its E quota.

Eugene W. Savage, of Butte, who had successfully organized State civilian-defense activities, was named associate director. Since then, Savage has traveled approximately 50,000 miles throughout the State on war-savings and affiliated activities at no expense to the Government. He is on the staff of the Anaconda Copper Mining Co.

FOURTH WAR LOAN

In the Fourth War Loan, January 18 to February 14, 1944, Chouteau County was first in E per capita with $85.40. Wibaux was high in E percentage with 190 percent. Jack Beauchamp, Helena artist, painted a portrait of Chouteau County Chairman H. F. Miller's daughter as a special award for Chouteau's feat. Martin, then a Marine Corps lieutenant, was assigned to duty at Montana selective-service headquarters in Helena and assisted in the fourth and fifth drives. On November 1, 1944, the date he was released from the Marine Corps, he became executive director and Bartley assumed the post of executive vice chairman.

In the fifth, sixth, and seventh drives Daniels was high with an E per capita of $82.01, $100.88, and $101.27, respectively. The latter two figures were the highest attained by any county in any drive. Daniels likewise was first in E percentage with 197 percent in the fifth, a record of 275 percent in the sixth, and 173 percent in the seventh.

The pattern established in the Third War Loan was followed in succeeding drives except that before the sixth, National Director Ted R. Gamble and Field Director R. W. Coyne came to Montana on October 19, 1944, to attend a State meeting at Helena which was attended by county chairmen and key workers from every county in the State. In the sixth the 30 counties with the highest E percentages sponsored B–29 Superforts. In the seventh, Larry Smith, internationally known NBC radio commentator, made at least three appearances a day during his 2-week visit to the State to assist war-finance committees.

In the seventh drive Montana with 119.8 percent led all States in percentage of E quota. The national E percentage was 99.4 percent. In the sixth the Treasure State was third, sixth in the fifth, fifth in the fourth, and second in the third.

In cooperation with Miss Elizabeth Ireland, State superintendent of public instruction, the schools-at-war program was intensified and schools made a great contribution with Minnie Mae Erickson first, and since October 1945, Helen Chamberlain of the State office in charge. J. A. English, of Anaconda, took over permanently as State theater activity chairman and P. W. Singer, of Helena, as State retail chairman. Oliver H. Campbell, of Manhattan, was appointed State 16-millimeter film chairman prior to the fifth loan and since that time more than 368,367 persons have seen war and war-finance 16-millimeter films. George U. Hill, of Butte, was named chairman of district VI to succeed Sanderson, who died April 17, 1945.

Members of the armed forces also made real contributions to help Montana achieve such a fine record. In each of the drives and during the interim periods regular allocations were received from servicemen all over the world for the credit of Montana. These totaled several million dollars.

In the eighth or Victory drive, October 29 to December 8, 1945, McCone County was first in E per capita with $79.95 and in E percentage with 273.1 percent. North Dakota, which made a brilliant record throughout the war-finance program, topped Montana in E percentage and likewise beat the Treasure State for first to achieve the E quota. North Dakota's E per capita was slightly higher than Montana's. However, Montana was first to reach all quotas since it reached its corporation quota ahead of its neighboring State. Montana corporations, including those which operate in the State but whose main offices are elsewhere, and the State of Montana have been equally as conscientious in their purchases of war-finance securities for the credit of Montana as have been its people. It is most gratifying that their most worth-while assistance helped the State to retain an unblemished record.

The per capita figures indicate the splendid support which has come from the agricultural section of the State, but a study of the total per capita figures will show how effectively the pay-roll savings program has been in the larger industrial counties. This, in large part, has been due to the effectiveness of the systematic pay-roll savings of smelter workers, coal and copper miners, railroad and lumber workers, Federal and State employees, store, bank, and others in every activity. These systematic savings have been carried on in the interim periods as well as during the drives. Cascade County's total sales are more than 12 percent of the grand total for the State and almost 11 percent of the State's E total for the entire period.

EMPHASIS ON E BONDS

The whole war finance program of the Treasury Department was based on the largest possible sale of series E bonds, in order to accomplish the widest possible distribution to the men, women, and children of the country, to give all our people a share in America, to promote thrift and saving, and to provide the most effective weapon against inflation. Emphasis throughout the narrative and in the detail maps, graphs, and tables has been on E bonds because the E bonds, known as the people's bond, were sold in small denominations, which made the E quotas the most difficult to attain. The sale of War Savings series E bonds was limited to $3,750 ($5,000 maturity) to an individual in one calendar year, whereas any individual, corporation, or organization could buy War Savings series F or series G bonds up to $100,000 maturity each year, and there was no limit in the other securities. With this limitation it is easy to understand that to achieve E bond quotas required intensive personal solicitation of all of the people. True enough, there were a few sales in each county of the $3,750 ($5,000 maturity) E bonds, a few more $750 ($1,000 maturity), but the bulk of the sales were for $18.75 ($25), $37.50 ($50), and $75 ($100) issues.

Montana's record would not have been possible without the cooperation of all of the 56 counties on the State's team. In only one drive, the third, did some counties fall down on their E quotas, and in that drive the emphasis was not on E bonds alone but on E, F, and G bond quotas. In the six drives—third through eighth—Montana's percentage of E performance was 136.4 percent and the Nation's 104.3 percent. The Nation fell short in the seventh and third. Montana never failed on any quota in any one of the eight drives. That record is truly an all-Montana one.

It is regrettable that the almost unbelievable effort expended by State, district, county, drive and special chairmen and their coworkers cannot be chronicled in detail. Likewise, it is disconcerting to think that perhaps within a few years the amazing record of pay-roll savings, the schools, the banks, the post offices, women's groups, theaters, merchants, the press, radio, and other groups will be only dim memories. Our hope is that

in each of the counties a historical record will be preserved and this report will be kept by workers as a permanent record.

The only satisfaction or dividend for the intensive effort, the expenditure of personal funds and the vast amount of time given will be the knowledge you had a part in a great accomplishment, one that defies imagination when looked at in retrospect. It is all the more amazing because it was achieved voluntarily, without compulsion or regimentation, and at the lowest selling cost in all history, a fraction of 1 percent.

The State staff will ever cherish the memory of its privilege to have served with you Montanans to do Montana's job and under such national leaders as Harold Graves and Dr. Peter Odegard in the initial stages, and during the drive period under the superb leadership of Ted R. Gamble and Robert W. Coyne. But the splendid national leadership and promotion would have failed if it had not been for volunteer workers throughout the country. You Montana Minute Men set the pace by putting Montana in first place in war finance at the outbreak of World War II and maintaining that record until our fighting men gloriously finished their job. Then, even after the war clouds had disappeared, you stayed on to finish our job in the Victory loan.

War finance will soon be a hazy word. But because of the war-finance effort, the thrift habit was instilled into the overwhelming majority of Montanans and Americans. Inflation is still a threat on the horizon. Our earnest hope is that these pent-up war-bond savings will not be dissipated unwisely. The first appeal to you volunteers in July 1941 was thrift for defense. It's still a timely slogan.

Included with this report are the following:

Roster of county and drive chairmen.

Roster of women vice chairmen.

A comparison by counties of sales of Liberty bonds in each of the five drives in World War I and total sales, as well as the total sales in World War II.

A map showing per capita sales of E bonds by counties.

Tables listing by rank E bond per capita sales by counties from May 1, 1941, to December 31, 1945, the interim period before and between drives, the total for all drives, and the individual drives.

Tables listing total sales in the Nation, Montana, the districts, and counties in each of the drives, for all drives, and the interim period.

A map showing percentages of E bond quotas reached by counties in six drives.

A table, listing by rank, counties on basis of E bond percentages in six drives and for individual drives.

A table listing dates on which counties achieved quotas in seven drives.

A table listing E bond sales by counties, the districts, and Montana in seven war loans.

Sales in the Eighth or Victory Loan compared with quotas by districts and counties and by classes of investors.

Ranking of counties by volume of sales and percentages to State's total for the total sales of all issues and for E bonds.

Montana's total sales in eight war loans compared with quotas by districts and counties and by classes of investors.

Disposal of Surplus Government Property

EXTENSION OF REMARKS
OF
HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 5, 1946

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ORLANDO, FLA., *January 31, 1946.*
Hon. JOE HENDRICKS,
House of Representatives,
Washington, D. C.

DEAR SIR: Have been vitally interested in your statements re surplus-property-disposal methods. Several of us (veterans) down here have been held up on the procurement of property and the general consensus is that the program stinks, and any efforts of legislation and, more likely administration, have been ineffectual. The people have demanded that individuals, especially veterans, be given a better chance to buy. Here is what happens, i. e., a surplus 1½-ton cargo truck.

1. A small, one-day ad is run in the paper, telling prospective buyers they can inspect the equipment.

2. The property is grouped, and often is difficult to find.

3. Inspection takes place. Frequently, no key is in the truck, and buyer cannot start the engine (i. e., Orlando Air Base, January sale).

4. State, Federal, county, and municipal governments may buy the truck ahead of the veteran. (They are in a position to get new equipment ahead of the individual.)

5. Vehicle is priced in the neighborhood of $300 (and all at Orlando had 4 tires—6 required) and are a specialized vehicle not readily adaptable to civilian use, so price is high considering the working value.

6. Veteran may send in a request to buy a vehicle he has not tested, started, or driven at the relatively high price.

7. Frequently conversion, possible repair, and tire purchases make the veteran decide against buying which is apparently what the Army and disposal agency want.

8. Dealers can then come in and buy sometimes 10 trucks for the $800 the veteran would pay for one, and they can't lose. (This is one case, but even if they buy for $400 each, they can outstrip the individual.)

9. After sending in the order, the veteran waits. He has waited for priority, waited for sale, waited for selection. Then he waits for all the Government, large and small, to take their pick. He waits for the bureaucrats to decide to write him. They may or may not since they are shorthanded and are more concerned with office space than the problems at hand.

10. Chances are that he will get nothing, and if he does it will be unsatisfactory for the price asked of him.

It all boils down to: The practice of disposal is unfair and is not carried out in the spirit prescribed by the people.

Difficulties are:

1. Attitude of the Army is liquidation and fear of paper work if individuals buy or the necessary handling of sales, which are not necessary on any scale if the whole lot is sold to one or a few big interests.

2. Disposal agency is about the same, including rudeness and lots of mismanagement as in the above. (Certifying agency is very cooperative.)

3. No regard is given to the value of the amount of money received and paid the Treasury, eventually lightening the tax burden.

4. No regard is given the service to the individual that the sale could give him and other individuals dependent upon the use of the surplus commodities.

5. Pinecastle Air Base contemplates burning of lumber in tent floors and sides which the people here need badly to fill the materials gap in housing.

6. I don't have information on the big stuff, but Orson Welles mentioned it in his program and can probably give you some good ammunition.

Please note that some of the above is second-hand and therefore should be checked, but for everything that is not so bad, there are undoubtedly many worse things. There must be some big pressure groups impeding this program, and should be interesting subjects if brought into the spotlight.

There is a distinctly fascistic trend in the program, and a congressional investigation would be in order, but it must be done quickly if further injustice is to be prevented. Also, if the price of property to the individual were lower and more reasonable there would be less need for giving whole lots of goods to dealers. Even placing unbought goods on consignment with the dealers would be much more fair.

Thanking you and hoping that you will be successful, I am,

Very truly yours,

GILLE V. WOOTEN.

Address by Hon. Sam Jackson Before Tennessee State Bar Association

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address delivered by a former member of this body, the Honorable Sam Jackson, of Indiana, before the Tennessee State Bar Association at Knoxville, Tenn., in last November 1945. I commend this as most excellent reading. This eloquent, gifted lawyer and ex-Senator of the United States, on the occasion of this address was received most enthusiastically and held his audience spellbound.

I have obtained from the Government Printing Office an estimate, which indicates that Mr. Jackson's address will take two and two-thirds pages of the RECORD, or two-thirds of a page more than is allowed under the rule without an estimate. The cost is estimated to be $138.80.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Hon. SAM JACKSON. Senator STEWART, Mr. Toastmaster, and Governor, I am delighted to be here, because I find myself in the midst of a distinguished bar, one which has long been known to Indiana. I am standing within a few miles of the place of the development of perhaps the most significant device mankind has ever known. I shall not take time to mention the tremendous influence of the atomic bomb upon our peace efforts; I shall not try to explain how devastating it might be. But you know the atomic bomb. It

hangs over our heads like a sword of Damocles, but there are 130,000,000 of them, and we have created a device of which the scientists tell us that if there were 43 of them planted in America—and they could be, secretly—and detonated by radio impulses, a third of the population of the United States could be destroyed in the twinkling of an eye.

Now, I am going to discuss with this bar and your delightful ladies here, what I regard to be the most important question facing mankind. It is a simple question, frequently asked but seldom answered analytically. The question presents itself in bold relief in the presence of the device which we have created which can destroy mankind, to say nothing of his civilization. The simple question is one which must be answered before we can decide what to do or what not to do with the atomic bomb. It is a question which every man, Democrat and Republican, can take to his heart, and men of all religious faiths and men of all races around this whirling footstool.

Is man worth saving, after all? That's the question.

Now, that seems like a silly one. You say: Of course he is. But can you prove it? The Holy Writ tells us that man was created, as the psalmist says, in the image of his Creator. Shakespeare refers to him as the paragon of animals. It is told to us that we do not yet know what he may become. Matthew Arnold says that man has always fed upon the boundless hopes, and he has never been willing to take any simpler fare. But can we examine mankind subjectively, as lawyers would examine a fact, and in the light of what we know about him and his recorded history, and can we honestly and conscientiously say that mankind has sufficient value that he is worth being saved at man's hands?

To be rational and consistent, we are either going to have to believe dynamically in the fact that man is worth saving, or we might just as well resolve ourselves to a slow process of disintegration and self-destruction. If man is indeed nothing more than a burnt-out match in the midst of a black and dismal void, then we might just as well call it a day and let it burn into black ashes and let the endless rains of the heavens pour down through the nights and wash him into oblivion. We are going to have to answer that question.

Now, my lawyer friends, suppose that you were today in some cosmic court having jurisdiction throughout the whole of the created realm. Follow me with your imagination in that. In that great and high court having jurisdiction everywhere, mankind, the inhabitant of this footstool, is charged with not being worthy to be saved. Suppose now that you are selected as counsel for him—and indeed you are. Suppose that you and I were to go up there and would not only have to defend all mankind that lies asleep in the soil, but all the millions that now live, against the charge that he isn't worth saving any longer. I wonder then which one of these distinguished justices around here, sometimes alleged to be a lawyer, we would seek out to write our briefs for us? Where would we go to find Demosthenes to come and make our speeches for us in that great court, if that were our client and that the issue?

Most assuredly now remember, our client, collective mankind, will be accused of brutality and stupidity and greed, of littleness, superstition, arrogance, vulgarity, injustice, corruption, degradation, moral disintegration, and, to cap it all, cowardice. The naked charge, as you stand there with your client before that imaginary sunlit marble throne of justice, whatever it is, the naked charge, separate and apart from the specifications that are going to follow, is enough to make you tremble in your boots and leap at the chance to grab the burden of the issue and prove that he is indeed different from what he is charged with being; that he is kind and intelligent and unselfish and magnanimous, tolerant, humble, pure, and brave.

But as we stand there to hear the charge against our client whom we are appointed to defend, there breaks through upon our senses, I am sure, a kind of flush of terror or bewilderment, all of the things that plague Hamlet. Our ears will be full to overflowing with the testimony against us, but now they are filled to overflowing with the charges against us, and we can't hear any more. We have heard all we have capacity to comprehend, and yet there whispers to us from within "the whips and scorns of time, the oppressor's wrong, the proud man's contumely, the pangs of despised love, the law's delay, the insolence of office, and the spurns that patient merit of the unworthy takes."

Well, here we are. We are paid in advance. We have a great cause to sustain. Now, when the proof comes in, we can expect to hear all the facts; but first, to complete the averments, they are going to tell us about Cain and Judas and Ivan the Terrible and Al Capone and Adolf Hitler. They will parade across the pages of that indictment every felon, every zealot, traitor, bigot, drunkard, the thankless child, and the thoughtless parent, the imbecile, the tyrant, and all of the diseased of mind and body. Those are exhibits, or will be, against us. We will be charged by them recounting the Children's Crusade, the fall of Rome, the slaughter of the innocents, the smelling flesh of burning witches, the Huns and Vandals of every generation, screams from dungeons, and the atrocities of all who have stalked through blood to mount a throne. They will all come back to us. Experts who will be willing to testify against us will be giving their opinions. There will be the defamers of humanity, the cynics, the iconoclasts, and the arrogant. We may hear one brilliant poetess who wrote this:

"Detestable race, continue to expunge yourself; die out. Convert again into explosives the bewildered ammonia and the distracted cellulose;
Convert again into putrescent matter drawing flies, the hopeful bodies of the young.
Breathe, crowd, encroach, expand; expunge yourself, die out—
Homo called sapiens, man who calls himself thinking."

And we are going to have to admit, my lawyer friends, that if we are to go to that great day of trial now, upon such an errand of defense, we are going to have to be careful to wash our hands and clean our shoes and put on a clean suit, because otherwise maybe the very tribunals of the sky can smell away up there the sticky stench of the human blood of this war. We are going to have to speak in good voice that day, lest the great tribunals of the sky hear the screams of starving people within reach of plenty.

"Man's inhumanity to man makes countless thousands mourn."

They are going to quote that against us when we are defending humanity in that great court. They are going to quote it against us—word, volume, page, and line—those words by our beloved poet.

But here's the thing: We are beginning to get a little encouragement now right out of that sample that we thought to be a bad exhibit, as so oftentimes happens in the trial of a lawsuit. Did you ever stop to think that the significent part of that quotation is this? Let me give you the quotation again:

"Man's inhumanity to man makes countless thousands mourn."

The significant part of it is that man can mourn and man does mourn, so we look there for encouragement. Out of the salty residue of tears there springs the triple alchemy of remorse, aspiration, and resolution, those transmitting indifference into charity, hate into love, and inertia into action. We will have the attention of that court yet.

What should we say about the war? It might be said by the one who is opposed to us, if there be those there: Why, the war itself proves that man isn't fit to be saved; all nations fighting each other who have had a free and open opportunity to get a view of the cross. They don't deserve it. I shan't repeat the devastation of the war; you know it too well, and some of you whose boys will never come back know it beyond my poor speech to mention. But I say this: That if all the killings of the wars of all the leaders, all against us and all those with us—that count, if it be written and charged and proved by the record (and it may be stipulated), the answer would be: In the United States of America alone there were 140,000,000 whose will stood between us and the shadow of the swastika and the sword of the despicable Jap. And when the great balance is struck up there, we shall ask to be weighed against the horrors and the errors of this war, the majestic will which stood between the tyrant and the rest of humanity. Doesn't that weigh for something? Isn't our willingness to assume and endure the countless hells in order to extirpate or uproot the tyrant's existence, the existence of evil, isn't that enough to offset all the destruction that the tyrant would have wrought? We lay that exhibit before your celestial and heavenly honors for consideration.

Now it seems to me that if there is a man who can't agree that the sacrifice and the will of a great people like ours and that of all of our allies is worthy of consideration to help to strike down the charge that all man is not worth saving, then to my mind that man parts company with me. He is a philosophical Nazi of some kind, and he must find his refuge in the company of men who are content to say that right shall always be on the scaffold and wrong forever on the throne. We don't hold that.

But let's get away from the war a little bit. If your honors please, we have something else to say. We've got some happy things to say about mankind, if you only want to know it. Mankind created music. Well, what does that amount to? I'll tell your honors what it amounts to. I, one man, this counsel who speaks—I sat before a symphony orchestra and I heard a tune being played. It was the beautiful Blue Danube. As I heard the strains of that music, I was afloat on a beautiful vessel on a broad, sweeping blue stream. I could see the sunlight coming down over the hills and tinting this and that, and sometimes I could see the choppy places on the river where the wind had struck, and again it was a glassy brightness. I got into the swift currents around the bend, and I got into the still places on the near side, and I had more pleasure listening to that music, and I had a finer voyage in my imagination in a few minutes than I could ever have had in an actual boat, and I was free from all the muddy and sordid and ugly details of the river itself, and I could fly like an angel in my imagination, because I had a great ride while I heard that music, and it cost me not a penny.

Well, so what? That sirs, was because there was a man by the name of Johann Strauss one time who was willing to work his life out and pour it out and labor in order that through the majesty of his rhythm and harmony and his creative genius, uncounted thousands if not millions of men and women then unborn might enjoy something sweet which he could reach into the great unknown, into the infinite goodness of God, and bring to people who couldn't create

for themselves. He was one of those, one of my clients.

I have been interested in the statesmen who now sit in the Senate for the State of Tennessee. I am very grateful to my friend Bob Kerr for having mentioned Cordell Hull. You will pardon me if I say that I have always been interested in Andrew Jackson. The gentleman over here at my left told me what a great man Jackson was. He said Jackson was a great Democrat. I said he was, anyhow. I tell you what I mean by that. I go somewhere and now and again I'll see a monument to Andrew Jackson. I've read something about him, I think I've dreamed about him a great deal, tried to comprehend something about what there could be in that man to be the epitome and the personification of this experiment in democracy, in free government upon a new continent, which is uniquely his place in the history of mankind. But I look at his features and I look upon the lines of his body and the action displayed, and I realize that by looking at a monument of him I can find out more by looking on his face what he was like than by reading the books, because somebody that was skilled with a chisel worked on stone or in plaster of paris and molded into bronze. Whenever I see one of those monuments, wherever it is, wherever I travel and look at it, I stop a minute, and it seems to me that I am a debtor to that unknown sculptor who gave me not only the blessings of his art but gave me the blessings again of the man himself. An artist I do not know, whose wage I did not pay, brought for me out of the generations past a benediction from a great American, and makes me better because I stand in the presence of the stone, of the bronze. That unknown man is one whom we bring to this great high court as an exhibit saying that mankind is worth being saved, and it doesn't have anything to do with war or bloodshed, either.

Well, let's see. One will have to admit, O Heaven, that man has been a persistent animal. The yellowing scrolls of history disclose the tenacity with which he has survived famine and pestilence and earthquake and fire, working their devastation in their several seasons and their many ways. All the cankerous growths of innate lust feed upon the heart of man to discourage him. He falters and he stumbles and he falls—but he is up again in the morning. That's the kind of man that it is being proposed that we destroy by our foolishness. Throughout the ages he has sloshed along in the morass, and sometimes you can hear his heels pounding a firm staccato upon the rocky high places. Sometimes up and sometimes down, but always something in him turns his face up toward the sunlight and he goes on.

I remember we had a witness that I predicted the opposition would bring to the stand by the name of Edna Saint Vincent Millay, who said, "Expunge yourself." We'll cross-examine her and we'll turn over in the volume of her poems you can find in your library down here, and we'll see what else she wrote. She also wrote how man meets earthquake and storm and flood. Did you on such and such a day write this?

"He heard the sick earth groan,
Rolling its pitchy lake of scalding stone
Upon his house.
Where did he weep?
With his head between his knees,
Where, said the race of man,
Let me freeze.
By nightfall he had built another town."

"Yes," she would say, "I wrote that." Didn't you on such and such a day write this:

"The broken dike, and nothing left
But floating disarray.
Was this the day man dropped and died,
His burden heavier than a quilt of clay?
No. Above his garden, faintly glimmering,
Still there bulked the plow."

Well, some old graybeard is going to be there. I don't mean anybody just gray enough to be living in this generation; I mean somebody that lived way, way back there. He will say: "You have stoned your prophets, Mankind." Yes, the centuries of us have stoned our prophets, but the later generations of our offspring worship at their shrin.. Our Presidents whose only cause has been that of liberty and justice, we have maligned and persecuted with cunning and hate and fury, but the future generations of our children will look upon their faces in Mount Rushmore and call them blessed.

Tom Paine may be there. He may speak up and say our Government isn't what it's cracked up to be. It probably did not meet his standard of perfection. He said, "Your government is all right when you can say this of it: 'My poor are happy; neither ignorance nor disease is to be found among them. My jails are empty of prisoners, my streets of beggars. The aged are not in want, the taxes are not oppressing. The rational world is my friend because I am a friend of its happiness.'"

Well, your honors, we don't measure up to that, quite. But we had a great statesman, your honors, and a great teacher one time who told us, Lord Haldane, that over on this side is the sphere of human progress in which men are controlled by absolute law, so that will has no place in their process; and over here is a sphere in which every man is a libertine, or may be, for there is nothing to control or check his will or his license. But in between there is a realm and a sphere and a domain in which, with a reasonable amount of law and, as TOM STEWART says, a fair and honest purpose, men have been able to work out a process of governing themselves. And we say to your honors, on behalf of mankind, that in this reasonable middle realm that the great law writer tells us about, under the Stars and Stripes of the United States of America, we have gained greater progress in government than any other government known to the God who sits upon the throne of all government. [Applause.]

Somebody will say: Well, Man, you are almost nothing physically. It's true. The astronomer will say that we are of relatively little importance, size, and achievement. He will point out that our sun and moon and all the several companies and constellations of stars and planets, as the layman sees them, taken as a whole composite group, they form but a speck in the universe. Everything we can comprehend as laymen is a speck in the universe. There are universes of universes which bring into play distances of millions of light years in their apartness. They will show that in this cosmos, this universe of universes, the earth on which we live, to which we bear such a relatively small part and proportion, that whole earth, all of us put together and the land we live on, they will say is nothing more than a rotating shadow which is part of an almost dimensionless whole.

Our answer to that is that bigness doesn't depend upon size. The bigness of a man's soul and of his intellect matches the physical bigness of the creation itself. We will answer that day by quoting Ralph Waldo Emerson, who said, in his essay on history, that man is greater than all of the geography of the world.

Let me give you an illustration of what I mean, if we may take time out to relieve the burden of solid argument. Let's imagine a little worm about an inch long, and I'll put him in the most dismal place I can think of just now. I'll put him out on a weed in the midst of the Sargasso Sea, floating out there in the Atlantic. If you can imagine that little worm, with the use only of his own capacities, with the instrumentalities only that lie within his own reach; if that little worm could somehow look away from his watery home and look around and see what's going on in the world; and in time, if he could comprehend the mysteries of the River Nile, if he could see the heights of Tibet where the lamas live, if he could see and hear the chimes of London, if that little tiny worm could see the TVA project, if he could see Niagara Falls and all the grain in the West, and the sun finally setting like a red ball on the blue pillow of the Pacific Ocean—if that worm could do all that, the phenomenon of his feat would be small compared to that which man has wrought in his conquest of the illimitable universe.

Well, it seems to me that we ought to say, too, that man has taken the lightning out of the sky and put it under his heel. He has conquered the sea and the land and the ether and the air, and now the atom. I have often thought—for baseball players like you, Tom, and others I think that are out here that I think play a better game of ball than you ever could play—that the coordination and skill represented in a good home run, and the precision in a successful forward pass, those of you who are going to a football game tomorrow, and seriously, the precision of invented things, things made by man's hands, that they challenge comparison with the perfections of the physical universe made by the Creator.

Now we are going to have some witnesses. We are going to have lots of them who will give testimony on our behalf. Out of the eons of time in the past, and out of all the space around the earth, they are going to come. Time will be no object, as it isn't sometimes in lawyers' arguments in court. We will have eons of time to try this case. The judge won't have to go up Peachtree Creek fishing, either. But here they'll come, seriously. There'll be Moses, with his tablets of stone. We are defending all mankind; aren't we? We are pleading that he be allowed and that he be given wisdom to save mankind to himself, upon the basis that he deserves to live. There will be Moses with his tablets of stone; Martin Luther blazing the way for the Knoxes and the Calvins; Confucius writing the laws of man's intrinsic nature; Joan of Arc out of the fire; Woodrow Wilson who saw the light of heaven shining on his blade; Socrates draining the world's cup of bitterness and giving back a bigger cup of his wisdom; all the great lawyers of the past, and the great jurists; the dreamers, Keats and Shelley; the wooden shoes that you see in the picture of the Angelus; Thomas Jefferson writing copybook maxims about government of, by, and for the people, for Thomas Lincoln's awkward Kentucky boy to state to all the other statesmen who were to succeed him; the forty-niners, Sam Houston; and all of the heroes of this war. We shall have these witnesses and many more.

Against blasphemies we shall set off "Peace on earth, good will to men." Against the felon we shall set off the just judge. Against ignorance we shall set off the universities and schools and the millions of the teachers of the young. Against intolerance and superstitution we shall set off the devout pulpits bearing like Atlases upon their backs the Holy Bible. Against cheapness and vulgarity we shall set off the Red Cross and the unnumbered other organizations building character in men. Against corruption we will set off the myriads of honest men whom the spoils of office cannot buy. Against avarice we shall set off the philanthropist and the philosopher, and that mud-spattered saint, the country doctor. And against selfishness we will bring into court a little Irish woman, that neighborhood angel who always assuages your bereavement with a fresh cherry pie. We shall match Pilate with Paul, the Benedict Arnolds of the world with the George Washingtons of the world; persecution with Easter. The darkness of those Children's Crusades we shall dispel with the altar fires of Asia and the million lighted Christmas trees.

The best to speak for us will be a lowly Jew, with ragged wounds in Him, in His

hands and in His feet and in His body, and the scar of thorns upon His head; and there will be the most persuasive and authoritative voice of all, because with parable and paradox and beatitude He'll tell what mankind is worth.

And O, great judges of this court, we who are lawyers here, we're just a few of us trying to grope around to find out what it's all about. Let's be honest. Not many people within the sound of my voice, particularly not I, not many of us know how to live at all. But why? There's a reason for these things. Archeologists tell us that many more than a million years we have been engaged in this earth in developing tools and weapons. Archeologists tell us—and both points are proved, and we will bring them into court and lay the evidence down as justification for what we lack in humanity—your honors, we have been developing our tools in this race of ours over a million years, and the best we can show of the development of morality and character and ethics is about 5,000 years.

Man didn't have a conscience before 5,000 years ago, the students tell us. He didn't know what a conscience was, so he couldn't have morality. The fact of the matter is, if I may reduce it to a simple table for this purpose, if a thousand years were laid out on this head table as the length of time during which mankind has been developing his tools and weapons, I'd go down to the end of the table to measure off the period of space in which ethics and morality—and that's the field in which lawyers peculiarly work—have existed, and the period would be 7 days, to strike a comparison. If he halted in his development of his scientific and materialistic endeavor, halted tonight, if not another thing were invented nor improved physically and materially for 9,950 centuries, and if during that 9,950 centuries man devoted all of his energy to the development of his moral fiber and his ethics, it would take that long to catch up, in point of time.

Well, it's no wonder, then, we haven't done so much. We begin to see not only that we can deny the fact that man is unworthy, but that in that in which he is unworthy there is historical justification.

That's the part of my message which is long.

This is the part of my message which is short. Who is to lead mankind to catch up the difference between the development of his ethical consciousness and his material achievements? I know the church has tried it a long time, and I pray to God it will never relax its effort. But again I say the peculiar field in which mankind is lacking to prove overwhelmingly to himself and to the most iconoclastic among him, is the field of the plain old-fashioned lawyer. I have yet to find a field, with all due respect to every other profession, Governor Kerr, I have yet to find a field in which ethics, the fine flower of all the sweetness in which we have not worked hard enough, where ethics is more seriously a part of the fiber and the force of a man than in the field of the law. The short part of my message is: this is your responsibility, and you are elected to defend mankind, whether you like it or not. The assignment is yours. [Applause.] In the very nature of things, the great judge of nature has appointed you counsel for mankind who stands today not knowing how he can save himself from his own self-destruction.

So I say to the lawyers of Tennessee and to all of you here: I wonder when this case is going to be set for trial, and what kind of a continuance can we get? No; it isn't a time for continuance. The trial begins today. Let's not be afraid of the issue. Let's not be afraid to take that case. On the other hand, let's just get firm and real about it. Let's get a deep faith, and to show our deep faith let's get a little bit arrogant about it, let's put on some purple robes, too, and let them flutter in the wind, let bands play and let the banners float in the sky. We are going to march out into that great court and we are going to defend humanity. By tomorrow, which is Saturday; by the next day, which is Sunday; by the next day, which is Monday, shall we in that manner march out, in every slight detail of our lives, once we have the glory and the dignity we would put upon our shoulders if we were going to that great court to defend all who have lived and all who live, such a responsibility upon the leaders of a State and a community.

When we go we'll sing a song to march by:

"I am the owner of sphere,
Of the seven stars and the solar year;
Of Caesar's hand and Plato's brain,
Of the Lord Christ's heart and Shakespeare's strain."

—*Ralph Waldo Emerson.*

Why, the very audacity of the manner in which we take our books to court, the very audacity of it will justify all we claim in vindication; and listening, those timid souls we leave behind will some day hear like rolling thunder the acclaiming verdict of eternity, and you shall be the counsel to win that verdict.

Thank you very much. [Applause.]

President KEY. The sixty-fourth annual convention of this association now stands adjourned.

The final session thereupon adjourned at 10:25 p. m.

The American Army

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, February 6 (legislative day of Friday, January 18), 1946

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and worth-while address delivered by the Secretary of War, Robert P. Patterson, before the American Jewish Committee, at the Waldorf Astoria, New York City, February 3.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ten days ago, I returned from a month-long trip through the major overseas areas of Army activities. In Germany, among other things, I visited the grave of General Patton. We were friends. Aside from the friendship, I felt it my duty to pay tribute to the soldier to whom our Nation owes so much for what he did to win the war.

General Patton lies peacefully among comrades who worshipped a universal God in their separate ways. Among the rows upon rows of simple, white crosses, I noticed the familiar Star of David, the symbol of the Jewish faith. You were well represented among those 8,000 dead in the American cemetery in Luxembourg. You are well represented in every military cemetery where American fighting men have been laid to rest after their last battle. There they rest, equal in death as they were equal in our American life and equal in their devotion to their country's cause.

The graves in that cemetery were dug on a January evening, in 1919, in a Munich beer hall, where an obscure organizer, Anton Drexler, enrolled a former German corporal, named Adolf Hitler as member No. 7 in the German Worker's Party. On that evening the forces of brutal intolerance, the forces that professed to believe that one race was created to ride and the others to be ridden, found a spokesman and a chieftain. Under his tyranny and because of our lethargy, our refusal to credit the evidence before our eyes, those forces in less than a generation drenched the world in blood. It was a straight case of cause and effect.

Intolerance has had its day in other times, though never to the same degree and with such frightful consequences as in the time of Hitler. It is for our generation to shape our destiny so as to make it impossible for such sinister leaders to rise to power again.

Your efforts toward a better world have been described as a counteroffensive to bigotry. They, in fact, are more than a counteroffensive. They are a direct campaign for the eternal principles of our country. Tolerance is the basis of our national unity. Tolerance is the foundation stone of our military structure. Tolerance is vital to our Army's success in battle.

A soldier does not fight alone. He is basically a member of a squad, and the men in the squad are mutually dependent upon each other for survival. They train side by side. They go into battle together, each gaining confidence in the presence of the others.

These men know each other. Differences in race and creed do not concern them, much less divide them. Protestant, Catholic, or Jew, each depends for his life on the others. The infantry squad, the basic unit of the Army, is an all-American squad in every sense. The bonds of mutual trust and confidence are stronger there than in any other group. Life and death depend on the strength of those bonds.

The successful commanding officer, if he is to have an outfit that can follow his leadership, picks his squad leaders on merit. Race or creed or social position does not count. Qualification for the job must be the reason for his choice. If his unit is to survive, he must be tolerant. His unit must be tolerant.

I have here in my hand the roster of Company F of the Three Hundred and Sixth Infantry Regiment of New York's Seventy-seventh Division—the Statue of Liberty Division. I commanded that company in the First World War. In 1943 I bade them goodby at Indiantown Gap before they left for the Pacific. Their energy and fitness for the fight were most inspiring. They fought on Guam and Leyte and Ie Shima and Okinawa, and they never failed. I saw them again, 3 weeks ago, in Japan. But the faces were new. Many of the men, all of the officers, whom I had seen at Indiantown Gap had died in battle.

That outfit was typically American. Here is the roster last summer on Okinawa. I am reading the first 10 names as they appear, in order:

First Sgt. Sidney Stein, Tech. Sgt. Michael Dean, Tech. Sgt. Henry Einig, Tech Sgt. Frank Kulaszewski, Staff Sgt. Charles Allen, Staff Sgt. Sidney Baker, Staff Sgt. Frank Bellusci, Staff Sgt. Edward Borisevic, Staff Sgt. Michael Cap, Staff Sgt. James Gormley.

That is the Army of the United States: 10 names, a cross section of our people. Those men fought together with a wholesome respect for each other and a complet confidence in the loyalty of each other.

Of those 10 men, not one had been in the Army prior to Pearl Harbor. Only a few of them were on the company roster when it left for overseas. They had replaced other Steins and Deans and Einigs and Kulaszewskis and Allens who had fallen on the field of battle because we Americans thought that viciousness in a Munich back street, aggression in a Manchurian village, was none of our concern.

In the Army they were of one mind in their devotion to duty. Common loyalty, common responsibility, common purpose produces the common touch among American soldiers.

The Army can be proud that, under the heat and stress of war, it fostered that common touch. Just as firmly as I believe it was the finest fighting machine of all time, I believe that it was the greatest agent, in our history, for the strengthening of national unity and the democratic way of life.

Ten and a half million men, from every part of the country, from every sphere of life, students and farmers and machinists and clerks and salesmen, entered its ranks. They trained and worked and fought together. In a common enterprise they gained a fellowship and understanding that, when the petty irritations of the moment are forgotten, will be recognized at its full value.

In opportunities for promotion, the Army again gave proof of the value of the individual's own worth. Mistakes have been made. Not all achievements were rewarded. The evidence, however, is overwhelming that merit above all else was the key to selection and reward. We put men in positions of authority who appreciated the value of merit, for it explained in thousands of cases their own selection.

Of the 872,000 officers who served in the Army, 531,000 or three out of five, were former enlisted men, men who had started out as privates. They had earned the right to spend 14 to 24 weeks of discipline and training at officers candidate schools, a training that was exceeded only by battle itself as a trial of the stuff in a man, before receiving their commissions.

Of all our officers, only 18,000 or 2 percent, were Regular Army; 2½ percent were National Guardsmen and 23 percent members of the Officers Reserve Corps. Of the rest, not commissioned on the basis of enlisted training, 96,000 or 11 percent, were commissioned directly from civilian life, most of them as doctors, dentists, and chaplains. Let me point out further, that among the generals who led our victorious Army, nearly 300 had come all the way up from rear-rank privates. Of the cadets now at West Point, 44 percent saw service in the ranks in the war.

The officers candidate school system of training officers, taken from the ranks, proved itself in every military field. Its graduates, by their courage and leadership, enriched our military traditions. They won the respect of professional soldiers throughout the world.

I am sure that the democratic influence of service in the ranks is a desirable prerequisite for success in military leadership. The War Department studies of universal military training provide that in case such training is adopted no individual be commissioned in the Regular Army or permitted to enroll in an officer candidate school, ROTC unit, or to enter West Point, without having completed the training in the ranks required under such a program.

The Army is based on democracy and on good faith. We need both in all human relations, now more than ever. The torch of tolerance you bear should light the path toward a more understanding world and therefore a more peaceful world.

That must be the goal of all men if mankind is to survive. As a Nation, we have pledged ourselves with the other United Nations to an international organization. Its purpose is the prevention of war by the just settlement of disputes. The hope of the world rests in it. The prayers of the world go with it. But we cannot have a world united for peace, unless we have a country united for peace. We achieved unity in war. We must maintain unity now. Tolerance is its foundation.

The time will come when some in this country, out of perverseness or for some other reason, will try to mitigate the war guilt of Germany and Japan. The effort will be made to distribute the responsibility among all nations of the world, this Nation included. That will be a hard job, in the face of the record; but I have no doubt that the attempt will be made. When that time comes, I trust that the record of the last 20 years will remain vivid in our minds, that Americans will not be misled into belittling the fight for freedom and decency that was waged and won.

The End of the Ride

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 6 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, in the Progressive of Monday, January 28, 1946, appears an article entitled "The End of the Ride," written by Milton Mayer, a brilliant writer and an assistant professor at Chicago University. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE END OF THE RIDE

(By Milton Mayer)

Once upon a time, back in 1940 and 1941, there were some people who argued that America should keep out of the war as long as possible and, if possible, altogether. They argued, these people, that when we had entered the war and won it, barbarism would lower itself over us like a hood over a man to be hanged. They argued that when we had entered the war and won it, nobody would know what to do to solve the world's ills. They argued that, when we had entered the war and won it, the normal, natural, animal passion of revenge would lose us our culture, kill our souls, push us further down toward the abyss, and disintegrate our civilization.

But they were called unrealistic, these people, and one of the persons who called them unrealistic was Louis Fischer.

On the front page of The Progressive, 5 years later (in the December 31, 1945, issue), Louis Fischer writes:

"Barbarism is lowering itself over us like a hood over a man to be hanged. * * * Nobody knows what to do to solve the world's ills. * * * unless we rise above the normal, natural, animal passion of revenge, our culture will be lost. * * * It will kill our souls and push us farther down toward the abyss. Someone has to stop the disintegration of our civilization. * * *"

And he adds:

"This will be called unrealistic, idealistic, Christian, and soft. Well, we have been realistic, practical, pagan, and stern for decades. Has it worked? Where are we today?"

Let me tell you where we are, Louie. (You don't call people you love "Louis.") We are at the end of the ride you chose to go on. We are at the end of the ride the unrealists of 1940 and 1941 opposed. And the end is the end the unrealists predicted. It is the end predicted for the 1917 ride by R. M. La Follette, Sr., and for the 1941 ride by his sons, BOB, Jr., and Phil. It is the end predicted by some men whom you and I admire and by some, such as Colonel McCormick, whom we do not admire. But the people who wanted to go on the ride called them all defeatists, appeasers, Fascists, and fools.

It is the end of the ride, Louie. It is the end of the ride you went on.

And I am not bringing up this unhappy matter to taunt you. Apart from my loving you as a friend, and revering you as a hero, I admire you more, almost, than any man I know for your judgment. No; I am bringing this up, and I know you believe me, because you and I may survive for the next ride, and I want to persuade you now not to choose to go on it then. I want to persuade you now not to say to me then, when we are attacking Germany and provoking Japan, "But, Milton, what else can we do?"

The ride, Louie, is the one that Randolph Bourne spoke of when he said, "He who mounts the wild elephant goes where the wild elephant goes." The ride, Louie, is the ride the little girl goes on when, in a temper tantrum she tears up her dolly and then, seeing what she's done, cries her eyes out. The ride, Louie, is the ride the sinner goes on in Dante, and the end of the ride is the closed gate of Paradise, with the legend inscribed on it, "Too late, too late, ye cannot enter now."

The year 1946 is a year of heroic confession, Louie, and it does not surprise me that you are one of the first of the heroes. You, who prided yourself on being realistic and practical in 1941, are not ashamed, in 1946, to ask, "Has it worked?" and to answer, "No." You are not ashamed, in 1946, to be unrealistic, idealistic, Christian, and soft. You are not ashamed to have discovered too late, too late, that there is no conversion by the sword, no peace by the flame-thrower, no democracy by the bomb.

When men like Robert Hutchins, not to mention his toady, Mayer, begged us to stay out of war on the ground that we were not morally prepared for victory, you did not know what you know today. Now that you know that a war waged by a people morally unprepared for victory terminates in the normal, natural, animal passion of revenge, I beseech you to hang on to your hard-won knowledge when the bugles blow again. Now that you have discovered that each time we lick Hitler he somehow comes closer, I plead with you to hold your discovery always before you.

The lesson is always the same, Louie, and if you and the other members of the little band who fight always for freedom have learned it for keeps, the war was not wholly lost. If you have learned what an eminent Frenchman learned long ago, when he said that war is not the worst of evils but it is the cause of all the others—then the blood and the treasure were not all spent in vain. If you have learned why Oscar Ameringer, another of that little band fighting always for freedom, asked that his only epitaph be, "He tried to keep his country out of war"—then the war was partly won.

Men like you do not make moral failures, Louie, so your failure must have been intellectual. I have been trying to locate it, and I find you and me, as I explore my memory, at Eddie Kuh's house in 1940 or 1941. You were defending me, as you always do, against the pack. You were saying, as I remember, "Milton here is fighting for the same world as the rest of us. What he doesn't understand is that we have to fight Hitler to preserve the possibility of the world we fight for at home. We have got to fight on both fronts at once."

This was before Pearl Harbor, Louie, when the choice was still ours. True, we were shipping the Japanese all the oil and scrap and gold credits they needed to conquer Asia. But we were also provoking them to attack us by telling them that they, but not England, France, or Holland, had to give up what they'd stolen or else.

You, however, were not waiting for Pearl Harbor, like some of our friends, who said, on December 7, "What would you do now, Mayer?" You took your stand on principle, Louie. You said that Hitlerism threatened democracy, just as Joe Pewism did, and that we had to fight them both at once.

But that night at Eddie Kuh's, Louie, when you apologized for my intellectual failure, I was apologizing for yours. I was arguing that there is no fighting on two fronts at

once when one of the fronts, by its very nature, is in inexorable and uneven conflict with the other. I said then that modern democracy was at the mercy of modern war; you say it now.

But, Louie, I hoped then that you would be right and I would be wrong. You know I am serious now; you knew I was serious then. I did not want to live to say, "I told you so," but I have. I may still be wrong; you and I are both arrogant individuals; I, with much less reason than you, the more arrogant. God knows, I was only guessing then but the facts are with me now and, by your own admission, against you.

So you and I, and all of us who fight always for freedom, are not arrogant now. And neither are we defeatist. We, all of us, have one life to live and one world to build; and, though victory shortens our odds, and the vanquished have a better chance than the victor, we will all fight on for freedom. You and I, and all of us who fight always for freedom, will never be defeatist. But neither will we, if only we can keep your discovery green, mount the wild elephant again and cry our eyes out at the end of the ride.

British Loan Endorsed by Texas Cotton Association

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. PATMAN. Mr. Speaker, I am inserting herewith a letter from the vice president and treasurer of the Texas Cotton Association, and a resolution which was passed by the association concerning the British loan. They are as follows:

THE TEXAS COTTON ASSOCIATION,
Waco, Tex., January 29, 1946.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D. C.

DEAR MR. PATMAN: We respectfully call your attention to enclosed resolutions adopted by the board of directors of this association with respect to the pending loan to Great Britain. We feel that the extension of this loan will be in the general interest of the people of the United States, and we think it will be particularly helpful in reopening the cotton markets of the world to the American cotton grower. As the foremost cotton exporting State, Texas has a direct and special interest in this important matter because our cotton must have access to foreign markets if the industry is to survive and expand.

Aside from and beyond these direct economic benefits which may be expected to flow from the reestablishment of mutually beneficial trade relationships with other nations we have the conviction that lasting peace will be greatly implemented by a more liberal and realistic exchange of goods and services between the peoples of the world. We trust, therefore, that you will actively support legislation approving the British loan.

Yours very respectfully,

L. T. MURRAY,
Vice President and Treasurer.

Whereas it is imperative in the interest of lasting peace that a free exchange of goods and services be reestablished between the nations of the world; and

Whereas there is now an acute shortage of dollars in the hands of former customers of the United States which stands as a serious threat to the revival of reciprocal commercial transactions; and

Whereas the granting of dollar credits offers the only foreseeable hope of rebuilding orderly international trade relationships without which we feel there can be no hope of lasting peace: Therefore be it

Resolved, That the board of directors of the Texas Cotton Association, by these resolutions, earnestly urge Congress to approve the loan to Great Britain of $4,400,000,000 as an essential part of the over-all program for world-wide peace and order; be it further

Resolved, That copies of these resolutions be sent to the President of the United States, the Secretary of the Treasury, the Secretary of State, the Secretary of Commerce, and to the Texas Members of Congress urging them to approve the British loan in the interest of the people of the United States.

Who Shot Patrick Carr?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Judge Daniel J. Gillen, of the municipal court of the city of Boston:

WHO SHOT PATRICK CARR?

(By Daniel J. Gillen, LL. B., associate justice of the municipal court of the city of Boston; formerly assistant district attorney, Suffolk County; formerly member of the General Court of Massachusetts)

It is not too late to clear the name of a man even 175 years after a shadow has been left on his memory—when the shadow was undeserved.

So it is my purpose in these few pages to set forth the facts relative to the Irishman, Patrick Carr, who was a martyr to the cause of American independence in the Boston Massacre. At the time of his death he was 30 years of age and employed by Mr. Field, a leather breechesmaker, in Queen Street, now Court Street, Boston.

Five people died as a result of the shooting by the British soldiers on that fateful night of March 5, 1770—Crispus Attucks, John Caldwell, Samuel Maverick, Samuel Gray, and Patrick Carr—several others were wounded.

History tells us that the British soldiers quartered in Boston ruled with an iron hand previous to the massacre. So fearful were the townspeople that it was customary when they went out at night to arm themselves with walking sticks, clubs, and swords as a means of protection.

The soldiers led brawling, riotous lives; assaulted the citizens; disturbed church services on Sundays; made the quiet streets hideous by night with their drunken shouts. On one occasion they seized five townsmen and impressed them for service on the British frigate *Romney* as she lay at anchor in the harbor. A few days before the massacre the soldiers had a "run in" with some of the inhabitants at the rope walk. This affair turned out to be an anticlimax, and the bitterness between them left animosities at a fever pitch.

On the night of March 5, a group that had gathered in front of the Custom House was ordered away by the guard of soldiers, and while scores looked on from nearby points of vantage, words were exchanged, to be quickly followed by the tragic event that was destined to be a high point in the history of America.

Three murder trials followed and all were held in His Majesty's Superior Court of Judicature.

In the first, Captain Preston of the British Army was found not guilty—obviously because there was a conflict of testimony as to whether or not he gave the order for the soldiers to fire.

In the second, eight soldiers were tried as principals and accessories to the murders of the five victims.

In the third, certain persons who were supposed to have fired on the patriots from the Custom House windows were all found not guilty.

No minutes exist of the first and third trials. But at the second trial a shorthand writer was employed and from his minutes a very full report was made and reprinted in 1807 and 1821.

This was the most famous and historic murder trial in the annals of Boston. The prosecutors were Robert Treat Paine and Samuel Quincy, the defense counsel John Adams and Josiah Quincy assisted by Sampson Salter Blowers.

In passing it is of interest to note that Samuel and Josiah Quincy were brothers and some years later Blowers and Samuel Quincy both became tories and left the country.

Four judges presided and each in turn charged the jury. While the charges of only two of them are in the report, it is apparent their exposition of the law pertinent to the case was in general fair and lucid. Citizens of Suffolk County from Roxbury, Dedham, Milton, Braintree, and Hingham sat on the jury, but none from the town of Boston were on the panel.

All the soldiers were found not guilty of murder but two of them, Montgomery and Killroy, were found guilty of manslaughter and were "burnt in the hand" in open court as punishment.

The evidence indicated that Montgomery fired the shot that killed Crispus Attucks and Killroy the shot that mortally wounded Samuel Gray. Apparently the confused state of the evidence as to which of the remaining six soldiers fired the shots that killed the three other victims brought about the not guilty verdicts.

In general, the testimony was conflicting as to whether or not the actions of the civilians warranted the amount of force used by the soldiers.

The Government contended that the blame for the incident was attributable to the soldiers and that the circumstances were not such as to warrant the shooting of the victims.

The defense was that the group of people close to the guard created a "riot" and the soldiers fired into the "mob" in self-defense.

But the jury by its verdict held that more force was used than was necessary and it would follow that it was thereby legally determined for all time, that there was no "mob" present and no "riot" existed.

Only two historians have to my knowledge ever attempted to give Patrick Carr his proper place in the sun.

John Fiske is authority [1] for the claim that Patrick Carr as well as Maverick and Caldwell were innocent bystanders and in no way concerned in the commotion with the soldiers—that these three were not a part of the crowd close to the guard just before the shooting—and the testimony at the trial bears out these facts.

Esther Forbes in Paul Revere and the World He Lived In,[2] describing the massacre,

---

[1] Address of John Fiske—November 14, 1888, at dedication of monument to the victims of the Boston Massacre—Boston Common.

[2] Paul Revere and the World He Lived In, by Esther Forbes—Houghton Mifflin Co.—pp. 156 and 166.

writes—"but Patrick Carr, 'the Irish teague'—who deserves our grateful memory, lived in torture for several days. Three people emerged from what has always been known as the Boston Massacre (Colonel Dalrymple called it 'a scuffle') with great dignity. The two lawyers (John Adams and Josiah Quincy) who risked friendship, fortune, and good esteem to defend them (the soldiers) and Patrick Carr, 'the Irish teague.'"

Carr's part in the massacre, in my opinion, was imprudently handled by John Adams in his final argument to the jury and herein lies the shadow I seek to remove.

In all, about 80 people testified at the trial, and the only evidence that in any way concerned Patrick Carr or Ireland, his native land, came from the lips of three witnesses. Their testimony is set forth in detail as it appears in the report.

Mrs. Catherine Field.

"Question. Did you know Patrick Carr who was killed by the firing in King Street on the 5th of March last?

"Answer. Yes.

"Question. Was he in your house that evening?

"Answer. Yes.

"Question. Did you hear anything he said when he heard there was an affray with the soldiers?

"Answer. When the bells rung he went upstairs and put his surtout on, and got a hanger and put it betwixt his coat and surtout; my husband coming at the time, gave him a push and felt the sword; he wanted to take it from him, but he was unwilling to let it go; my husband told him he should not take it with him. I do not know what he said but one of the neighbors was in the house and coaxed the sword out of his hand and he went out without it. He said on his deathbed, he saw a parcel of boys and negroes throwing snowballs at the guard. He thought the first or second man from the sentinel box was the man that shot him."

John Mansfield.

"Question. Do you know Patrick Carr?

"Answer. Yes, on the night of the 5th of March when the bells rung he would go out. I persuaded him much to stay at home, he did not mind me but took his sword betwixt his coat and surtout. Mr. Field coming in felt it, and said he should not take it with him; with much coaxing a woman who lived next door got it from him.

"Question. Did you hear any acknowledgement by him on his deathbed?

"Answer. I was often at his bedside; and all that I ever heard him say was, he thought he knew the man that shot him, but he never made it known to me."

Dr. John Jeffries.

"Question. Was you Patrick Carr's surgeon?

"Answer. I was in company with others. I was called that evening about 11 o'clock to him; I was engaged with Mr. Paine and could not go; next morning I went; after dressing his wounds I advised him never to go again into quarrels and riots; he said he was very sorry he did go. Dr. Lloyd who was present turned around to me and said Jeffries, I believe this man will be able to tell us how this affair was, we had better ask him. I asked him how long he had been in King Street when they fired? He said he went from Mr. Field's when the bells rung, when he got to Walker's Corner, he saw many persons coming from Cornhill, who he was told had been quarreling with the soldiers down there, that he went with them as far as the stocks, that he stopped there, but they passed on; while he was standing there he saw many things thrown at the sentry. I asked him if he knew what was thrown? He said he heard the things strike against the guns, and they sounded hard, he believed they were oyster shells and ice; he heard the people huzza every time they heard anything strike that sounded hard; that he then saw some soldiers going down toward the custom house; that he saw the people pelt them as they went along, after they had got down there, he crossed over toward Warden and Vernon's shop in order to see what they would do; that as he was passing he was shot; that he was taken up and carried home to Mr. Field's by some of his friends. I asked him whether he thought the soldiers would fire; he told me he thought the soldiers would have fired long before. I asked him whether he thought the soldiers were abused a great deal after they went there; he said he thought they were. I asked him whether he thought the soldiers would have been hurt if they had not fired; he said he really thought they would, for he heard many voices cry out, kill them. I asked him then, meaning to close all, whether he thought they fired in self defense or on purpose to destroy the people; he said he really thought they did fire to defend themselves; that he did not blame the man, whoever he was, that shot him. This conversation was on Wednesday. He always gave the same answers to the same questions every time I visited.

"Question. Was he apprehensive of his danger?

"Answer. He was told of it. He told me also, he was a native of Ireland, that he had frequently seen mobs and soldiers called upon to quell them: whenever he mentioned that he always called himself a fool that he might have known better, that he had seen soldiers often fire on the people in Ireland, but he had never seen them bear half so much before they fired in his life.

"Question. How long did he live after he received his wound?

"Answer. Ten days.

"Question. When had you the last conversation with him?

"Answer. About 4 o'clock in the afternoon preceding the night on which he died, and he then particularly said, he forgave the man, whoever he was, that shot him, he was satisfied he had no malice but fired to defend himself."

Now let us see how John Adams used this evidence in his final argument.

He said in part, "They (the soldiers) were a lawful assembly, and the people attacking them were by every principle a mob. We have been entertained with a great variety of phrases to avoid calling this sort of people a mob. Some call them shavers, some call them geniuses. The plain English is, gentlemen, most probably a motley rabble of saucy boys, Negroes and mulattoes, Irish teagues, and outlandish jack tars. And why we should scruple to call such a set of people a mob, I cannot conceive unless the name is too respectable for them. The sun is not about to stand still or go out, nor the rivers to dry up because there was a mob in Boston on the 5th of March that attacked a party of soldiers. Such things are not new in the world nor in the British dominions, though they are comparatively rarities and novelties in this town. Carr, a native of Ireland, had often been concerned in such attacks, and, indeed, from the nature of things soldiers quartered in a populous town will always occasion two mobs where they prevent one. They are wretched conservators of the peace * * *. And it is in this manner, this town has been often treated; a Carr from Ireland, and an Attucks from Framingham, happening to be here, shall sally out upon their thoughtless enterprises, at the head of such a rabble of Negroes, etc., as they can collect together and then there are not wanting persons to ascribe all their doings to the good people of the town."

Why should John Adams twist the evidence in the manner he did?

There was no testimony that Carr at any time had been concerned in a riot, anywhere. True, he was credited with saying on his death bed that he had seen riots in Ireland but the evidence went no further. Carr, did not sally out at the head of any mob. He watched the people close to the soldiers from a distant point as did many of the townspeople. Was that a crime?

We find as witnesses at the trial the Appletons, the Fosdicks, the Bridghams, the Burdicks, the Crawfords, the Townsends, the Wendells and others, telling the story of what they saw at the massacre—they were all respected townspeople—not strangers. Some of them were so close to the soldiers that evening they were pricked by their bayonets. But no words critical of their actions came from the lips of Adams.

Why? It may be we can find the answer in the fact that at this time John Adams was one of the Representatives from Boston to the General Court. So at least it was the part of wisdom to lay no blame at the door of Boston voters.

No one will question the courage of John Adams in taking over the defense of the soldiers. But should the good name of anyone be handled lightly in order to free them?

It does not seem possible that this keen, alert barrister, then in his prime, was unable to follow the evidence and fell into error. Rather does it appear that at this trial he was just a lawyer with the job of successfully defending his clients as the paramount task, so a little stretching of the evidence here and there was necessary to fit it to the pattern of the defense theme.

In truth it was not a situation as Adams would have the jury believe where the "town born" all stood on the curbstone passively looking on, while a "mob" of strangers set upon the soldiers and thusly brought disgrace on Boston town.

But this was the defense. There must always be a "defense" in a murder trial. However, the jury in this case was not misled by the defense or the argument in its support.

Nor was there any evidence in the case about "Irish teagues." It is the anglicized spelling of the Irish name Tadhgor or Thaddeus. The dictionary defines "teague" as a mischievous, blundering, faithful Irish servant lad in Sir Robert Howard's The Committee, hence, as a nickname, an Irishman.

If the nickname for every Irishman at that period was "teague," the fact remains that insofar as this trial was concerned it was entirely the creation of John Adams—for the only reference to the Irish or Ireland was contained in the testimony of Dr. Jeffries.

To argue that the mob was made up of Irish teagues, when there was no evidence that any Irishman was in the group close to the soldiers, was certainly going all-out to bolster the defense theme.

Reading the testimony of Dr. Jeffries, one wonders how the doctor had any time to treat the wounds of Patrick Carr, he was so busy asking the dying man questions. No lawyer could have done a better job in eliciting pertinent evidence that would later help the soldiers.

What motive prompted the doctor to become a master of detail? His subsequent actions may provide the reason.

A few years later we find him acting as the surgeon for the British soldiers at the Battle of Bunker Hill. On March 17, 1776, he is one of 1,100 tories leaving Boston with General Gage for Canada. After a sojourn in London we again find him back in Boston, following the war, living off the people.

Would a man with this temerity hesitate to attribute to Carr a death-bed statement false in detail?

We now wonder if the doctor was plotting to be the all purpose witness for the defense even while he was ministering to Carr.

While the charges of the judges insofar as the exposition of the law was concerned were fair, one of them, Justice Oliver, surely stepped beyond the evidence in his narration of facts.

He charged in part—"Dr. Jeffries relates an account which he had from Patrick Carr, one of the deceased, who on his death bed repeatedly told him and confirmed it but a few hours before he died, that he went with a desig. against the soldiers, that the soldiers were pelted as they were going to their post."

Why should the "good" judge tuck this statement in his charge? There was no testimony of this nature—that Carr said he went with a design against the soldiers.

His subsequent conduct may supply a reason for this chicanery. The judge was also one of the tories who left with General Gage. History records that he wrote in his diary as he departed from Boston—"And here I bid adieu to that shore which I never wish to tread again till the greatest of social blessings a firm British Government precedes or accompanies me hither."

Would he have inserted nonexistent evidence in his charge to help the cause along?

Some one may say that Patrick Carr attempted to take a sword with him when he went out to witness the events that transpired that night. But it was common custom for the inhabitants to go out armed. Dr. Young a respected citizen of the town was armed with a sword when he endeavored to act as peacemaker just before the shooting, and the prosecutor in his argument paid tribute to him for his efforts, pointing out that the sword was standard equipment for the inhabitants since the arrival of the soldiers.

The inference that flows from the imprudent remarks of John Adams and Justice Oliver relative to Patrick Carr is that he was part and parcel of the group that came close to the soldiers; but the plain truth is there was no evidence that he in any way was connected with the affair at the Custom House. On the entire record he was a model inhabitant of the town and more than that he died as a good Christian, with no malice in his heart toward the man who shot him.

John Adams served America well. No more gripping story can be told in the early history of the country than the privations he endured on his trip from London to Holland in the dead of winter, to negotiate financial loans for the infant Republic—his beloved America. It will ever remain as a tribute to his loyalty to the land of his birth. He was a liberal and broadminded man; and was one of the original contributors to the fund for the erection of the first Roman Catholic Cathedral in Boston.

His position in history is secure. What I ask for Patrick Carr is the same security; he deserves it.

On the monument on Boston Common erected to the memory of the victims of the massacre are two inscriptions.

The one from the pen of Daniel Webster reads: "From that moment we may date the severance of the British Empire."

The other from the pen of John Adams reads: "On that night the foundation of American Independence was laid."

Did Adams in later life change his opinion of what transpired on March 5, 1770? Never after the trial did he boast of his part in it.

In any event, when he wrote the line that is inscribed on the monument, in effect, he credited Patrick Carr and his compatriots with helping to lay the foundation of American independence and surely no man could ask for greater honor.

The bones of Carr have long since mingled with the soil of Boston in the granary burying ground. And Esther Forbes through a sheer sense of justice has done much to give him his proper place in the annals of Boston and America.

If one read only the final argument of John Adams and the interjection of Justice Oliver and failed to digest the testimony of the trial one might conclude that Patrick Carr was an outlaw, wreaking vengeance on the soldiers. The most striking example of this character of error is the treatment of Patrick Carr by John C. Miller, a historian, who dubs Carr as "a seasoned Irish rioter" without factual support.[3]

In an era when it is too common for pseudo-historians to attempt to deflate heroes, this legal analysis of the actual testimony may serve the purpose of forestalling any future endeavor to picture Carr in any role other than the true one—a martyr to the cause of American independence.

Who shot Patrick Carr? A British soldier, whose identity will ever remain a mystery. The indictment set forth that Hugh White was the soldier who killed Carr but the verdict of the jury on this matter was not guilty—so the identity was never settled.

But Patrick Carr "deserves our grateful memory—he emerges from what has always been known as the Boston Massacre with dignity."

It is not too late to clear the name of a man even 175 years after a shadow has been left on his memory—when the shadow was undeserved.

National Foreign Trade Convention—Final Declaration of Thirty-second Meeting

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 6 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, the well-being of the United States is bound up inextricably with the well-being of the world as a whole. It is therefore important that our foreign economic policies shall be such as to encourage the highest possible degree of world trade and commerce, and thus create higher living standards everywhere.

I ask unanimous consent that there be printed in the Appendix of the RECORD the final declaration of principles adopted by the National Foreign Trade Convention held in New York City, November 12 to 14, 1945, as a declaration designed to carry out such policies.

I have an estimate from the Public Printer that the cost of printing the declaration will be $234.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

FINAL DECLARATION OF THE THIRTY-SECOND NATIONAL FOREIGN TRADE CONVENTION, NEW YORK, NOVEMBER 12, 13, 14, 1945

DECLARATION OF PRINCIPLES

The National Foreign Trade Convention declares itself as adhering to the following principles adopted by the National Foreign Trade Council relating to the conduct of American foreign trade:

I

The purpose of the foreign policy of the United States, in the whole broad field of our international relations, is to assure our security and well-being as a nation and to preserve the integrity of our institutions.

II

The purpose of our foreign economic policy, as a vital factor in these international relations, is to fortify and implement our foreign policy, and to encourage, in the process, the development of an optimum flow of foreign trade.

III

The purpose of our foreign trade itself is to bring benefit to the people of the United States through an increased production, interchange and consumption of useful goods and services.

IV

The well-being of the United States is bound up inextricably with the well-being of the world as a whole. This well-being—in fact the preservation of the very foundations of our civilization—demands an enduring structure of international peace and security. The basis upon which such structure can most surely be built is the achievement everywhere of the higher living standards to which all men aspire.

V

Increased production of useful goods and services is the first requisite to a high level of employment and consumption, upon which a higher living standard depends. The attainment of a higher living standard can come only from hard and unremitting toil by the people themselves who are seeking it.

VI

Living standards in different lands will vary widely with the ability to achieve such increased production through effective utilization of the resources and techniques available. To the extent that adequate resources and techniques are lacking, the people of any land will attain their maximum living standard only if they supplement their own productivity by drawing upon the productivity of others. This recourse to advantageous utilization of the productivity of other lands is the basis and justification for all international trade.

VII

The pursuit of foreign trade policies consistent with these economic realities is in the enlightened self-interest of the United States. An international trading system free of uneconomic restrictions, unhampered by the crippling limitations of bilateral trade or barter, and guaranteeing access on nondiscriminatory terms to raw materials and markets everywhere, provides the most effective means for enabling each nation to achieve an advantageous exchange of its own products for the products of others. Such a multilateral trading system is inherent in the concept of free, competitive enterprise.

VIII

Mutual benefit is the motivating force that underlies all trade. Recognition of this mutuality of benefit demands recognition also of the benefits conferred upon our own economy by both imports and exports. Imports, supplementing our own resources and productivity, enrich our economy with the fruits of the labors of others; exports provide an outlet for the surpluses of our farms and factories, and enable other countries to benefit from our productive efficiency, thus enriching their own economies. Both imports and exports create employment and profits; they are tangible evidence of the availability everywhere of the good bargains which the skills of men can produce.

IX

The only theoretical limit upon the importation of the products of other lands for the use and enjoyment of the American consumer is our ability to pay for these products with our own goods and services. As a practical consideration, however, it is necessary, in our import practice, to safeguard our national defense and to avoid too rapid a displacement of any of our own productive facilities which may be inefficient. The only theoretical limit upon the volume of exports to be sought is our ability to secure payment for them; but we must give ac-

[3] Sam Adams by John C. Miller—p. 189—Little Brown Co.

count, in the transference of these fruits of our productivity to other lands, to the conservation of our own resources and substance.

X

Our status as an international creditor since the First World War has demanded, as the basis for an advantageous exchange of our goods and services for the goods and services of others, an excess of imports over exports. This excess has not been attained, and in the years immediately ahead we cannot hope to attain it, in view of the widespread destruction of productive facilities abroad and the time required for their rehabilitation. Even though our usage of foreign services continues large, and our tourist expenditures increase greatly, this unbalanced condition will continue until, over the longer term, the trend is reversed through a vastly stimulated importation of both raw materials and fabricated products.

XI

America's participation in international trade, on a mutually beneficial basis, necessarily involves more than the exchange of exports for imports. If the productivity of other lands is to be rapidly expanded, thus increasing the benefits we derive from the exchange of our products for theirs, our participation will involve, inevitably, the projection aboard of American capital, techniques, and management.

XII

The projection of capital will have the immediate effect of inducing a further increase in our exports. While this will militate against an early reversal of our export balance, it progressively increases the need for a greater volume of imports to service the newly created obligations. Experience has demonstrated that dependence upon long-term loans and investments as a device to balance a chronic import deficiency is uneconomic, since all too frequently the capital invested is lost. The investment of American capital abroad can be justified only if it facilitates increased production of useful goods and services, and only if we in the United States are able and willing to accept a portion of this increased production for the servicing and repayment of the loans and investments made.

XIII

The motivating force behind all private loans and investments is the creditor's expectation that he will receive an adequate return in his own currency. Loans are made only if there appears to be a reasonable prospect for their immediate servicing and eventual repayment. Equity investments, involving the projection of capital abroad for continuing use and productivity, are also based on the investor's expectation of obtaining a reasonable return over the years.

XIV

These principles, under normal conditions, apply with equal force to Government loans and credits. Deviations from these principles in the period of world reconstruction ahead, whether in the form of loans or outright gifts so labeled, can benefit the United States only if they serve the purposes of national security, or if they constructively promote world order and stability by increasing productivity and opening up the channels of international trade.

XV

An expanding world economy demands, in addition to an abundant flow of goods and services among nations, a free and unrestricted flow of capital and earnings internationally. This can only occur with the elimination of currency blocs, exchange controls, multiple currency practices, barter, and the other artificial restrictions which make the international transfer of funds unduly difficult and costly.

XVI

The foreign economic policy of the United States, as the medium through which the Government exerts an influence on the conduct of American foreign trade, embraces the responsibility for safeguarding and protecting the interests of American enterprise abroad through every political and economic means at the Government's disposal. This responsibility lies in the area of assuring the safety and security of foreign investments against confiscation or discrimination in any form; it lies in the area of seeking the stimulation of American exports through efforts to secure the elimination of barriers against American goods; and it lies in the area of providing conditions which will make possible the receipt of an adequate volume of goods and services in return for our exports of goods and capital.

XVII

Our foreign trade, like our domestic trade, can best be carried on under a system of free, private, competitive enterprise within a framework of Government law and treaty designed to give it encouragement and support. The intervention of the American Government in the regulation of foreign trade—as, for example, in the imposition of tariffs, the conservation of natural resources, and the prevention of abuses arising from American participation in private international agreements—can have its only justification in the service of the national interest, as distinct from any sectional interest or the interest of any individual industry. The actual entry of the Government into foreign-trade activity, including the extension of the loans and credits and participation in international commodity agreements, is admissible only in time of war or other international emergency, or when considerations of national policy in the political or economic sphere outweigh the advantages of private trade and the freedom of the market place.

In seeking fulfillment of the wants and desires of the American people through a more abundant foreign commerce it is inevitable that we shall be confronted in many lands with national economic concepts different from our own. These differences will bring conflicts and difficulties which must be faced, and faced courageously, in the years that lie ahead. It is in the cherished tradition of the American people that we hold to the principles that have made our Nation great, and that as individuals and as a nation we be guided by these principles in solving the problems that lie before us.

There can be no substitute in the pursuit of the ends we have in view for the initiative and resourcefulness of the tens of thousands of individual enterprisers who go out in the world to find the materials and the markets the American people need.

DECLARATION OF POLICY

In fulfillment and implementation of the foregoing principles the National Foreign Trade Convention declares itself as adhering to the following policies, and urges the National Foreign Trade Council, as the authoritative voice of American foreign trade, to seek their general acceptance:

I

Promotion of foreign trade: The convention commends the Congress of the United States and the executive department for the wisdom and statesmanship manifested in the renewal and broadening of the Reciprocal Trade Agreements Act. The convention recommends that the act be vigorously applied in all of its aspects as part of a completely integrated foreign trade and investment program designed to stimulate both imports and exports.

As one means for more effectively and expeditiously removing the barriers standing in the way of an expanded American foreign trade the convention recommends that negotiations under the act be conducted not only with individual nations but with several nations or groups of nations simultaneously.

The convention recommends full utilization by the United States of the Economic and Social Council of the United Nations Organization as a medium for further expediting and promoting the development of international trade among all nations, and as contributing to this end the convention recommends that the National Foreign Trade Council designate a liaison representative at the seat of the United Nations Organization as the spokesman for the interests of the American foreign trader.

II

Impletation of unconditional most-favored-nation principle: The convention endorses, as the keystone of America's international economic relations, the unconditional most-favored-nation principle. To further the acceptance of this principle by foreign countries, the convention again recommends, in addition to reciprocal trade agreements, that the Department of State secure treaties of friendship and commerce so drawn as to give basic protection to American foreign traders and investors, including specifically the right to travel, sojourn, trade, and work within foreign countries. Treaties for the elimination of double taxation are also essential, as is adherence to the International Convention for the Protection of Industrial Property, which insures the recognition and protection of patents, trademarks, and copyrights.

II

Loans and investments abroad: The convention urges that the foreign loans of the American Government and the foreign loans and investments of the American private investor be guided, alike, by consistent application of the principle of mutual benefit. The benefit we derive from these loans and investments depends upon the ability of the recipient countries to service and repay them. The benefit the recipients obtain depends upon the productivity of the new capital. It is important, therefore, that the volume of our new loans and investments abroad be related directly to the capacity of the recipient countries to put the additional capital to productive use.

To be fully productive, capital exported must be correlated with the most advanced methods of putting it to use, and no restrictions should be placed upon the entrance and employment of competent technical and administrative personnel. Furthermore, while the participation of local capital in such enterprises may in some instances be desirable, such participation should never be required by law.

The convention recognizes the manifest interest of the American people in aiding in the world's economic rehabilitation. America's resources, however, are not inexhaustible. Additional exports, induced by a heavy flow of capital abroad, and uncompensated by an adequate import volume, could jeopardize the capacity of our economy to support the unusual demands to which it will be subjected in the period of reconstruction ahead. It is essential, therefore, that the Government make public at the earliest possible moment a comprehensive statement of the policies and practices it intends to pursue in the use it makes abroad of the American taxpayer's money.

The convention calls attention to the fact that, in the extension of financial and material aid to foreign nations and in the negotiation of treaties and trade agreements and the settlement of lend-lease accounts, an unprecedented opportunity exists to secure elimination of unfair and discriminatory treatment of American interests abroad and to further the cause of freedom in international trade.

IV

Freedom of exchange: Freedom of exchange is a prerequisite to the attainment of an abundant flow of goods and services and the free and unrestricted movement of capital and earnings among nations. Of prime importance in working toward this objective is the elimination of currency blocs, exchange controls and all forms of exchange restrictions.

War conditions have required the adoption of measures in many countries which run directly counter to this objective. With the cessation of hostilities, however, the convention believes that every effort should be bent to secure fulfillment of the economic principles set forth in the Atlantic Charter and the master lend-lease agreements.

The convention endorses the statement issued by the National Foreign Trade Council on the restrictions of the sterling area affecting American foreign trade.

V

Government foreign trade service: The convention welcomes the emphasis placed by the Government on the development of an abundant flow of both imports and exports as a vital factor in promoting domestic prosperity. This emphasis is well reflected in the foreign economic policy the Government is pursuing, but the maximum benefit will be achieved only if the policy itself is intelligently administered and coordinated, and only then in proportion to the capacities and abilities of the men, in all departments of the foreign service, who are charged with its execution. The responsibilities involved are onerous and exacting, and it is essential that the right men be attracted to the jobs to be performed in sufficient numbers to provide the world-wide coverage our foreign-trade interests require. This calls for a standard of remuneration in line with that received by men of comparable capacity in private business. The convention recommends that this need be dealt with constructively.

The convention endorses the comprehensive program recently inaugurated by the Department of State, in coordination with the Department of Commerce and other Government departments, for the training of foreign trade representatives for service both at home and abroad. It commends in particular that feature of this program which calls for the periodic return of such personnel, and their temporary assignment to private industry and business. The convention recommends, as a further factor in the adequate promotion of American foreign trade, that our foreign-service representatives be accorded a status comparable with that of similar representatives of foreign countries; and it recommends specifically that senior representatives in the foreign economic field be given rank equal to that of diplomatic representatives at corresponding levels.

VI

Imports: The convention calls for a greatly increased importation of goods and services by the United States, in the interests of enrichment of the domestic economy and in order to validate to the maximum the transference of our own goods and capital abroad. This objective can, the convention believes, be achieved without detriment to the interests of any efficient producer of industrial or agricultural goods, and with a resultant net increase in the employment of American labor in the fields both of production and of distribution.

The convention recommends, as a step contributing constructively to the attainment of this objective, that the Department of Commerce amplify its program for the encouragement and stimulation of imports of foreign products. This program should embrace the development and provision of information relating particularly to those raw materials of which there is a present or prospective scarcity, and to competitive products, both raw and manufactured, which could be imported to the advantage of the American economy. The Department should also investigate all barriers, including restrictive customs administrative law and procedure, which penalize or render difficult the importation of foreign products; and where circumstances warrant, make recommendations for their removal or relaxation. The Department's program should be supplemented by the efforts of our commercial officers abroad who, in addition to seeking foreign outlets for American products, should bring to the notice of industrial and business interests in the United States any information they can develop relating to possibilities for profitable importation of foreign products.

VII

Buying agencies and missions: The convention recommends prompt action looking toward discontinuance of Treasury and other Government procurement for the account of foreign governments and the liquidation of the U. S. Commercial Company and similar purchasing agencies, with a view to returning the trade now carried on by these agencies to private channels. The convention also recommends that the purchasing activities of foreign missions and agencies in the United States which tend to obstruct the channels of American trade and distribution abroad be discontinued at the earliest possible date.

VIII

Removal of domestic controls over foreign trade: The convention recommends the removal of all Government controls over the movement of commodities entering into foreign trade at the earliest possible moment, with due regard to the temporary necessities imposed by the sharp unbalance, in the instance of certain critical commodities, between world supply and demand.

During the temporary period of short supply of goods in this country the convention recommends to American industrial management the provision for export of a fair portion of their output, in order to lay a solid foundation for a permanent foreign trade. In no event, however, should control over exports be exercised, under agreements or commitments for American financial or other aid to foreign countries, which would compel the exportation of any commodity or product in quantities sufficient to jeopardize the American economy.

The convention endorses the policy of removal of Government price controls on import and export commodities coincident with the removal of price controls domestically on the same commodities.

IX

Disposal of Government surplus stocks: The convention recommends that the disposal of surplus Government property located within or outside the United States be carried out with the least possible interference with American interests. As a means to this end, the convention again recommends that advisory committees be created, composed of executives engaged in foreign trade, and that the views of these committees be taken into consideration on questions of policy and procedure. In order to minimize the danger of disruption of foreign markets, the convention recommends that commercial distribution channels be used wherever possible in the disposal of surplus property.

X

Taxation: The convention welcomes the progress made in the negotiation of tax treaties for the elimination of international double taxation and other unfair or discriminatory foreign tax practices, and urges that these efforts be extended to include the elimination of taxes applied in many foreign countries on exchange remittances. The convention endorses the efforts being made to encourage, through domestic legislation, the establishment of American enterprises abroad, and it commends the tax committee of the National Foreign Trade Council for the work it has done in formulating proposals to improve provisions in the Internal Revenue Code concerning the recovery of property deemed lost or destroyed as a result of the war.

XI

International business agreements: The convention endorses the stand taken by the National Foreign Trade Council on international business agreements as reflected in its resolution adopted in January 1945 which calls for the filing of such agreements with an appropriate Government agency under conditions safeguarding their confidential nature and excluding small or routine transactions and agreements made within foreign countries relating solely to internal business under foreign law, and which calls for modification of the antitrust laws to enable American foreign traders to compete on equal terms with other foreign traders—all as elaborated in detail in the council's resolution.

The convention also recommends that the Government act to secure the adoption by international agreement of a universal code of fair practice governing international trade and investment relationships.

XII

Export Trade Act (Webb-Pomerene Act): The convention reaffirms its endorsement of the Webb-Pomerene Act as beneficial to the interests of American foreign trade, in the instance particularly of the hundreds of small businesses which lack the resources or capital to enter the foreign markets as independent entities. The purpose of this act, in seeking to assist and encourage voluntary cooperation among American exporters, should be recognized and revitalized with a view to enabling American trade to cope successfully with combinations of foreign competitors, both private and governmental. The convention recommends that the administration of the act be centralized in one Government agency to eliminate the existing confusion of interpretation, duplication of function, and division of responsibility.

XIII

War losses and reparations: The convention endorses the proposals of the foreign property-holders protective committee of the National Foreign Trade Council with respect to war losses sustained by the United States and its citizens, and reparations for such losses by enemy countries. In conformity with these proposals, the Convention recommends that appraisal be made of the costs and losses attributed to the war in such categories as are jointly agreed to by the United Nations.

Property rights and interests of which the nationals of any United Nation are the beneficial owners, including the assets of corporations the stock of which is owned by the nationals of any other United Nation, wherever such property rights and interests may be situated, should not be utilized for the purpose of reparations, but should be restored to their owners as promptly as possible.

Reparations in kind should be granted only when they will not lessen the responsibility or ability of the enemy country to make compensation for losses to other claimant nations.

Reparation claims already imposed upon any enemy country should be subject to review, and to modification where necessary, in order to insure equal treatment in accordance with the foregoing principles.

XIV

Telecommunication rates and services: Freedom of communications is an essential

factor in the promotion and safeguarding of American foreign trade interests. The convention recommends that American communication companies have the right, equally with the communication companies or administrations of any other country, to establish communications facilities with any country; and that rates and routings in the international field which discriminate against American users of international communications be eliminated.

XV

Merchant marine: Two wars within a generation have found us with a merchant marine inadequate to the needs of our national defense and of our commerce when the foreign ships upon which it so largely depended were withdrawn. The convention reaffirms the stand it has taken for the past 31 years for the development and maintenance of a privately owned and operated merchant marine capable of serving as an auxiliary to the armed forces, and of carrying a substantial part of our foreign trade.

The convention recommends, to the end of avoiding the military risks and excessive costs entailed by emergency construction when war threatens, that the national shipping policy, as defined in the Merchant Marine Act of 1936 be carried out vigorously; that a suitable laid-up fleet should be maintained as a defense resource, and that in disposal of Government-owned tonnage to foreign nations, careful consideration be given to the desirability of retaining our fast superior ships for the future development of our own merchant marine and defense. As to the disposal of any other ships not required for commerce or defense, the Government should seek their outright sale and avoid a policy of charter. It is also urged that disposal to foreign purchasers be made, if practicable, on a basis requiring the scrapping of obsolete tonnage under all flags.

The convention renews its recommendation that American shipping companies should not be prohibited by law or administrative regulation from participation in, or ownership and operation of, overseas air lines, when found to be in the public interest.

XVI

Foreign-trade education: The convention recognizes the increasingly important place of education, not only in the promotion of international trade but also as a factor in international peace. The convention recommends that colleges and universities, including those already having foreign-trade courses, intensify their efforts to meet this new challenge.

The convention commends the work being done in the field of private education by such organizations as the Foreign Service Educational Foundation, and urges that the council continue to encourage all activities designed to foster a more intelligent appreciation of the importance of international trade to the world's well-being.

The convention also recommends continued support of vocational education of foreign students in private industry as sponsored by the International Training Administration. It is important in this regard, however, to distinguish between the education and training of young qualified students who will serve the interests of foreign trade upon their return to their native lands, and, on the other hand, the unwarranted disclosure to representatives of foreign interests of America's industrial techniques, the possession of which is a valuable American asset.

XVII

The Philippines: Because of the unique relationship existing between the United States and the Philippine Islands, the convention feels that exceptional measures are justified to bring about an early restoration of an abundant flow of trade between the two countries, and it therefore cautions against the application of further tariff or other restrictions which would prevent or retard Philippine economic rehabilitation.

The convention recommends that the protection afforded by the War Damage Insurance Act be extended to compensate for losses incurred in consequence of the war.

XVIII

China-America trade relations: The convention commends the Far East Committee of the council for its constructive work in relation to the important problems of trade with China and other countries of the Far East; particularly, as concerns China, in the matter of a commercial treaty, the registration of American firms, and the recodification of Chinese commercial law.

XIX

General: The convention reaffirms the stand it has taken in previous years with respect to the following subjects:

(a) Aviation.
(b) Commercial arbitration.
(c) Documentation.
(d) Foreign trade zones.
(e) Standardization.

Electoral College Is Going To Cause Us Much Trouble Sometime

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include the following article, written by me, which appeared in the March issue of the magazine This Month:

LET'S ELECT THE PRESIDENT DIRECTLY

(By Representative ESTES KEFAUVER)

Every 4 years the American people mistakenly believe they are electing a President. Actually, they have little to say about it.

Instead of voting directly for our Chief Executive, we cast ballots for Charley McCarthys called "electors." In retaining this moth-eaten and undemocratic method, we are playing with fire. It will get us into trouble one of these days.

Under this system, a candidate with the largest popular vote can be kept out of the White House—as he was on three occasions. Jackson in 1824, Tilden in 1876, and Cleveland in 1888 had more votes cast for them by the people than their victorious opponents who won by greater electoral majorities.

The electoral system makes it possible for a man to become President despite the popular vote being almost 3-1 against him. He can lose 36 of the 48 States and still reach the White House. It is even possible for the electors to choose a President for whom no ballot was ever cast.

What is this defiance of democracy in the method of choosing one of the world's most powerful executives? Briefly, it is a way of selecting the United States President indirectly through a cumbersome, needlessly complex electoral college. It is a college without a faculty, curriculum, or campus. It is a political ghost that has made a wraithlike appearance approximately 40 times in the past 150 years. It meets, but never as a body, does a little clerical work, and then disappears. It is high time it disappeared altogether.

Most Americans know only vaguely how it functions, dimly remembering that it was once explained to them by a tired history teacher when they were in knee pants. Even worse, as adult voters, they fail to realize how flimsy and perilous this method really is.

Contrary to common belief, neither Roosevelt nor Dewey received any popular votes for President in November 1944. The only persons voted for them were 531 electors corresponding to the number of Senators and Representatives in Congress.

When the voter entered the voting booth he received a ballot sheet. That sheet listed the electors for the contesting parties, with the name of their party's Presidential candidate usually appearing at the top for purposes of identification. By tradition, and by tradition only, the electors appearing under the name of a given Presidential candidate are pledged to vote for that candidate.

Who are these electors? Appointed by their respective party conventions, they are sometimes distinguished citizens. More often they are loyal party workers or "fatcat" campaign distributors. They are rarely, if ever, known to the voters. Some States don't even list their names on the ballot. Nevertheless, a President is not legally elected until they have had their say.

After election, every 4 years, on the Monday after the second Wednesday in December, these electors meet separately and simultaneously in 48 State capitals and vote for President and Vice President. Their ballots are than sent to Washington. The party getting the greatest number of votes in a given State secures all the State's electoral votes.

On the second Monday in January the President of the Senate, in the presence of both Houses, opens and counts the electoral votes and then announces the names of the Nation's first and second citizens. That, in brief, is the electoral-college system.

To those who claim that the "college" is sanctified because it was handed down to us by the founding fathers, there is a very simple answer.

The electoral college today is a very different affair from what the founding fathers intended. During the Constitutional Convention, numerous proposals were made on how to choose the President. One proposal, that he be elected by Congress, was adopted but later rejected. Another, that he be elected by the governors of the States was turned down.

Finally, the electoral college was devised, possibly because the founding fathers mistrusted the popular will, fearing that the scattered masses could not become sufficiently informed about candidates.

Our eighteenth century elders envisaged the electors as experienced men of superior wisdom and intelligence who would convene and exercise their independent judgment in choosing those best fitted to be President and Vice President.

Almost immediately this idea backfired. One elector thought he would like to vote for whom he pleased. Those who made him an elector angrily exclaimed, "We chose you to act, not to think!"

Another dream of the founding fathers was soon blasted. One of their hopes in concocting the electoral college was that a President should be elected by independent individuals, rather than by political parties.

Ironically, this precaution to prevent political parties actually caused their formation. The independent action of two electors in 1796, scarcely before the ink on the Constitution was dry, resulted in two lists of "party" candidates for electors soon afterwards. Determined to capture the prized Presidency, burgeoning political parties "pledged" electors to their Presidential candidates in advance of their choice as electors. All the political parties had to do then was to put over the electors. This perversion of the original purpose of the electoral college is something for our constitutional diehards to ponder.

But even the founding fathers themselves soon realized the imperfection of the system they had devised. One of its provisions was that President and Vice President were to be chosen on the same ballot, the latter post going to the runner-up in the election. In 1800, Presidential candidates Thomas Jefferson and Aaron Burr each received a similar number of electoral votes. But Jefferson was a Republican and Burr a Federalist. The ensuing deadlock demonstrated the weakness of voting for President and Vice President on the same ballot and risking the election of a President from one party and a Vice President from another. Party and personal feelings ran high. Dictatorial methods were boldly proposed and revolution threatened.

Conservative Alexander Hamilton, also a Federalist—but an enemy of Burr—is credited with patriotically bringing about Jefferson's election in the House of Representatives on the thirty-sixth ballot, although he regarded the red-headed author of the Declaration of Independence as "an atheist in religion and a fanatic in politics." Burr never forgave Hamilton and later killed him in a duel.

The Jefferson-Burr conflict nearly wrecked the youthful Republic and resulted in the passage of the twelfth amendment in 1804. Its main feature was that the electors were to vote separately for President and Vice President. If no Presidential candidate received an electoral majority, the House was to choose from the three instead of the five highest—as the Constitution originally stipulated.

The second and last time an election was thrown in the House was in 1824. Andrew Jackson had 99 electoral votes, John Quincy Adams 84, William Crawford 41, and Henry Clay 37. No candidate had an electoral majority.

Henry Clay was then Speaker of the House and the day before the votes were counted, unproven charges of corruption were hurled at him. The tense situation invited intrigue with whisperings, bargainings, and trading of votes. When Clay supporters made a deal with Adams the latter was elected President on the first ballot. Clay himself was automatically eliminated because he was fourth in the electoral college. Had the previous provision of voting for the five instead of the three highest prevailed, Clay instead of Adams would have become President. Meanwhile, rugged Andy Jackson—the man with the greatest popular vote—was kept from the White House.

Another "minority" President was elected in 1876. Two candidates were running neck and neck. Democrat Tilden had a plurality but not a majority of the electoral votes. Republican Hayes claimed the electoral votes of four doubtful States.

A special commission was established which upheld the Republican's claims to the disputed votes. Result: Hayes was named President by a single electoral vote even though he trailed by 300,000 popular votes. The Democrats cried that the election was stolen and tried to patch up the electoral college law when they came into power a decade later. By that time, however, their concern with the electoral college had begun to fade and no important changes were accomplished.

During the 1944 election, about half the Democratic Roosevelt-hating electors in Texas and other Southern States threatened to cast their votes for the Republican candidate. It would have meant that a Democratic popular vote would have gone to the opposition candidate in the electoral college. Though these threats subsided, the possibility of their recurrence persists.

To allow the electoral college to continue is criminal neglect on our part. Fundamental democracy demands that the President and Vice President, like our Senators and Representatives, be chosen by popular vote.

Proposals to amend the Constitution to achieve this are perpetually if unsuccessfully advanced. Of course, it is not easy to accomplish. An amendment to the Constitution must be ratified by three-fourths of the States. The smaller States, feeling they would lose some influence under a popular election for President, would oppose it. So would the seven poll-tax States where considerably fewer votes are cast than in the free-vote States.

I have suggested a compromise method to eliminate the antiquated, unrealistic, and dangerous electoral college. Last year I proposed a constitutional amendment (H. Res. 121) allowing the people to vote directly for President and Vice President, but allocating to the States Presidential votes as a unit. Though this change should be acceptable, the resolution is gathering dust in the House Committee on the Election of Presidents. My colleagues have evinced scant interest in it.

With 2½ years before the next Presidential election, this is the time for Congress to consider the question and then submit this amendment to the States for ratification

America's noblest statesmen, including Jefferson, Jackson, Wilson, and George W. Norris, have eloquently urged the abolition of the electoral college. After each Presidential election, the college is usually assailed, but nothing is done about it. It was not until 1913 that Americans were allowed to vote directly for their Senators, and it took a seventeenth amendment to do it.

I realize it is not easy to do away with a device—however it mocks democracy—that has persisted a century and a half. But do we need a catastrophe to awaken us before we act to remedy this deformity in our system?

Scientific Training

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the magazine Science for January 18, 1946:

SCIENTIFIC TRAINING

(By Howard A. Meyerhoff, executive secretary, AAAS, Washington, D. C.)

In his recent radio address to the Nation, President Truman gave more attention to the things Congress is not doing than to the things which are getting done. Scientists may take their cue from the President and give thought to one vital question to which altogether too little consideration has been given; namely, the replacement of scientific and engineering personnel lost during the war years.

The question is critical. Many scientists were drafted—commonly late in the war period after the use for their skills was no longer urgent and deferments were canceled. Numerically, the most serious losses were caused by the drafting of 18-year-olds who would have entered the colleges and technological schools. Some of these men may undertake belated training when they are discharged from military service, but many will not. Meanwhile postwar projects lag for lack of men to handle the technological problems involved. Meanwhile, too, the Nation is fast losing to other far-sighted countries the technological preeminence which was a major factor in victory.

Congress cannot be criticized for not attending to this problem, much less solving it, for scientists themselves have done little about it. The American Chemical Society tried, with only a little help from other organizations, to obtain deferment for new recruits in essential scientific fields. One bill was introduced into Congress (H. R. 2827) to achieve this purpose, but it died in committee. Our scientific personnel, both actual and potential, was expendable, but unlike expendable military personnel, no one assumed any responsibility for replacing it.

Now, 5 months after hostilities have ceased, the situation is unchanged. Selective Service, though it may defer students who are partially trained in scientific and technological fields, encounters few 18-year-olds in that category. Universal military service, as proposed, will continue the same indiscriminating policy, if adopted. The shortage of scientists and engineers, though it may be partially offset by returning veterans, will be increased rather than corrected.

During the past few weeks representatives of the engineering societies, the physicists, chemists, and the association have met to consider corrective measures. The drain of trained or partly trained men has been checked but not stopped. It is now imperative to correct the deficit through immediate changes in Selective Service and through specific provisions in the universal military service bill, if the latter is adopted. It may be just as vital to insure replacements of scientific and technological students if universal military service is not adopted.

As a basis of immediate action 12 organizations phrased a resolution which contains a program adaptable to Selective Service and to universal military servie if passed. With some modification it can be effectively utilized if universal military service is rejected. Indeed, the unique importance of science and technology in war and peace has prompted the suggestion by one Senator with whom the program has been discussed that the resolution may be the only program which can effectively prepare us at once for the grim requirements of war and the expanding needs of peace.

Twelve organizations have endorsed the resolution: The American Association for the Advancement of Science, the American Ceramic Society, the American Chemical Society, the American Institute of Electrical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, the American Society of Mechanical Engineers, the Electrochemical Society, the Engineers Council for Professional Development, the Engineers Joint Council, the Engineers Society of Western Pennsylvania, the Institute of Radio Engineers.

They are sure others will recognize its importance and will want to take similar action. It is published herewith for the consideration of scientists and scientific societies that recognize the gravity of the current situation and foresee the still more serious problems of the future.

"Whereas national security and public welfare are dependent upon and vitally affected by the quality of scientific engineering and technological research, both fundamental and applied; and

"Whereas fundamental and applied research are entirely dependent upon ample reserves of trained and experienced manpower; and

"Whereas the ranks of scientists and engineers have been seriously depleted since 1941 by the requirements of military service; and

"Whereas the normal flow of students into the colleges and the engineering, technical, and graduate schools has almost completely ceased during the period from 1941 to 1945; and

"Whereas the alarming deficit in highly trained technical personnel will be further increased if selective service is continued without full recognition of the fact that technical personnel is as vital to national

security and welfare as military personnel: Therefore be it

"*Resolved*, That the imperative and immediate need of replenishing scientific and engineering manpower be called to the attention of the President and the Congress; be it further

"*Resolved*, That the Congress be asked to take prompt legislative steps to insure a flow of scientific and engineering personnel through the colleges and the engineering, technical, and graduate schools adequate to national security and the public welfare; be it further

"*Resolved*, That such legislation as may be required be based upon principles consonant with the democratic methods embodied in selective service and with the tested methods of the institutions of higher learning; that to this end the following provisions be incorporated in such legislation:

"1. Young men who have attained their eighteenth but not their twenty-sixth birthday shall be allocated to the colleges, universities, and technical schools after induction rather than through deferment;

"2. Such men should be chosen by recognized and established selective processes, as far in advance of induction as possible;

"3. The selection of these men should be administered by the appropriate Government agency, which shall determine from year to year the number of young men who may be admitted to the training program, so as to bring the total anticipated output of trained personnel at least to prewar standards;

"4. The young men so selected shall be assigned to accredited colleges and institutions of their own choice;

"5. Such colleges and institutions shall not be obligated to impose on these students any requirements other than those normally imposed upon civilian students; but no provision contained in this plan shall exclude said students from enrolling voluntarily in Reserve officer training programs maintained by the Army and Navy in the institutions in which they enroll;

"6. The duration of the training period shall be identical with that designated in the selective service training program; the academic calendar for training shall not exceed 9 months in any 1 year, the remaining 3 months being available to the Army or Navy for military training;

"7. Financial support for trainees during this period shall not exceed that awarded to trainees under the Servicemen's Readjustment Act (Public Law 346);

"8. Failure on the part of any trainee to meet the scholastic requirements of the institution to which he is assigned shall result in immediate transfer to regular military duty;

"9. Trainees admitted to this program shall be subject to the same obligations for subsequent public service as may later be incorporated in a plan of national scholarships and as applied to a training period of equal length; be it further

"*Resolved*, That the acute shortage of scientific and engineering personnel in the colleges, in Government agencies, and in industry be immediately alleviated by adoption of those provisions of the Vannevar Bush report (Science, the endless frontier) relating to the release of scientists and engineers now in the armed forces; and be it finally

"*Resolved*, That full cooperation of the legislative and executive branches of the Federal Government be solicited, not only in the implementation of this emergency program which is designed to correct the deficit (now estimated at approximately 150,000) of scientific and technical students, but also in assuring a future supply of trained manpower, adequate in numbers and in skill to meet the involved problems of national progress, welfare, and security."

Profit Urge and Common Good Are Compatible

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent having been granted me so to do, I am pleased to insert the following editorial appearing in the Los Angeles Daily News under date of January 31, 1946:

A BACKWARD LOOK AT 1946

Why all this tendency to isolate big industry and big unions from the community? Whose fault is it? Why should such a socially defeating trend prevail?

According to his prejudices, each reader will supply his own answers. But the fact remains that back of the undeclared civil war now raging in industrial circles lies a fundamental cleavage, a cleavage not merely between unions and management but between these two groups and the community.

In a system of free enterprise—in a complex, interrelated economy—in which every man jack of us has a stake in both the national income and the national product, why have we split off into warring factions?

Some future historian, looking back upon our industrial strife in 1946, will probably record that, emerging from a victorious war, we fought one another then because we had not yet mastered the mechanisms of social democracy.

"Chronic confusion prevailed in those days," this imaginary historian would no doubt recount, "because rival groups were more interested in intensifying enmity between one another than in working together for the common good.

"Before the end of World War II," he might write, "the American people had an opportunity to reconcile these rivalries. In 1944, and again in 1945, there was introduced in Congress a measure designed to aid business expansion and to promote full production and employment. It was known as the full employment bill.

"Additionally, on September 6, 1945, President Harry Truman recommended to Congress enactment of other measures which, together with the full employment bill, were designed to form an integrated, all-out attack on the major problems of reconversion. The minimum wage bill, the Wagner-Murray-Dingell health bill, the permanent fair employment practice committee bill, the Wagner-Ellender housing bill—all were blueprinted to help conquer unemployment and gear the Nation's economy to postwar progress.

"But Congressmen were afraid. They viewed each measure as radical or subversive. They did not understand that the economic complexities of 1946 could not be dealt with by piecemeal, unrelated measures. They were by long conditioning accustomed to dealing with emergencies only after emergencies arose. And so the bills were emasculated in their final form, and confusion and strikes were mighty and prevailed.

"Thus, because Government had no overall policy," his account would continue, "individual and group self-interest was unrestrained. Measures designed to encourage business were used by big management as weapons against its rivals, big unions.

"Measures designed to strengthen labor were used by some union leaders against their rivals, management, big and little. Measures, such as court injunctions, designed to protect life and property and insure the public safety, were used by law-enforcement authorities, acting at the behest of shortsighted business leaders, to intimidate those who protested and picketed.

"Finally, after a long cessation of production, the situation went from bad to worse. The conflict was shifted to the political realm, where it finally was resolved in the fall elections of 1946 when the voters swept into office a Congress which swiftly enacted an improved, strengthened version of the original reconversion measures. American democracy had reached another high tide.

"These measures gave the entire Nation confidence in its economic future. New business enterprise developed because these bills had underwritten new business opportunities. Labor settled down because they gave workingmen security against unemployment. Many former radical labor leaders disappeared from the national scene. Wages, generally, increased while prices came down because the volume of production was unprecedented, inasmuch as consumer power was stepped up and the incentive of workers to produce was stimulated.

"America became a land of abundance, with 60,000,000 jobs, diminishing hours of labor, an entire new recreational industry undreamed of in 1946, and a greatly increased standard of living. The poor got richer but the rich did not become poorer. They only became less powerful.

"Those who remembered 'the undeclared civil war of 1946' wondered, in retrospect, why people had not seen earlier that there was a way of reconciling the profit urge with the common good."—R. E. G. H.

Legislation Needed

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted, I submit herewith an editorial appearing in the Evening Star of Washington, D. C., in its issue of February 4, 1946, upon the pending Case bill having to do with strikes and labor legislation:

LEGISLATION NEEDED

The House is expected to enact new labor legislation this week, and the chances are that it will adopt the Case bill, possibly with some amendments.

For several days this bill has been the target of those extravagant critics who habitually oppose any attempt to impose any restraint on even the most vicious types of union activity. For the most part, their criticisms are not worthy of serious attention. There are other critics, however, and there is force to some of their objections.

One substantial criticism is that the bill has not received any committee consideration. Ordinarily, and especially if the House vote was to be the last word on the matter, this would be enough to justify rejection of the bill. But that is not the case. If the House should pass the bill it is certain to receive careful committee consideration in the Senate, assuming that it is not pigeonholed there, and this should provide ample opportunity to make desirable changes. Furthermore, there is no occasion for extended consideration of some of the abuses at which this bill is aimed.

For one thing, it would require both labor and management to live up to contracts to which they have subscribed. Only the most extreme partisans will contend that there is anything unfair about that. The bill is also designed to curb resort to force and violence in support of strikes. This provision is aimed at the so-called mass picket lines, a flagrantly lawless device through which strikers set up a blockade around a struck plant and forcibly deny entrance to others who have a legal right to enter. This is a practice that comes close to anarchy, and there is no rational ground on which it can be defended. Other provisions would deny supervisory employees the status of employees within the meaning of the Wagner Act, and would ban certain types of secondary strikes and boycotts.

On the affirmative side, the bill sets up a mediation board which would attempt to reconcile disputants, but which has no power of decision. It also forbids strikes for a maximum of 35 days, once the board has intervened in a dispute.

It may well be that these provisions can be improved, and there is also room for doubt as to the wisdom of some of the means provided for implementing various sections of the bill. But there will be ample opportunity to deal with these matters before the bill can possibly become law. If it is the desire of Congress to contribute anything toward bringing order and balance into this country's chaotic industrial picture, the important thing is to get some effective legislation—and that means legislation which probably will be opposed by spokesmen for both labor and industry—started through the mill. If the Case bill passes the House, that purpose, at least, will have been served.

The Privileges and Responsibilities of an American Citizen

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. DAVIS. Mr. Speaker, recently I heard a young lady who was born in England and who lived there until 1936 make a perfectly marvelous speech upon the privileges and responsibilities of an American citizen.

She came to this country upon the death of her parents and has been living with her aunt and uncle, Mr. and Mrs. D. W. Dean, of Cordova, Tenn. I have read it over and over and feel that it should be placed in the RECORD for the benefit of the entire membership. This young lady is Miss Audrey Caughey and her speech is a challenge to all of us. It follows:

Mr. Chairman, ladies, and gentlemen, my subject this morning is the Privileges and Responsibilities of an American Citizen.

I am not going to express my views alone, but also those of American citizens as I see them; due to the fact that I was born in England I am not yet an American citizen, but I shall be. Now, although not a citizen, I enjoy the privileges of an American, and I appreciate them. I shall present an unbiased view of America, as I see it, and as I think the Americans I know see it.

Let us get an inside view of a typical American household by journeying in our mind's eye to the house of John Doe—American citizen. As we draw near we see a cozy white house, set against a background of beautiful trees and pretty flowers; we see Mrs. Doe at the window watching her children at play. I wonder what she is thinking as she sees them there.

"Here, as I stand at my window, I am able to watch my children play. How lucky we are; every day we read of bombings, evacuations, and of death; yet, here we are—I with my children. I haven't had to send them to a place of safety because here they are safe. Here we don't need to fear every plane overhead as a bearer of death and destruction; the policeman on the corner is for our protection, not to harm, nor to kill us. We don't need to fear that our neighbor, Mr. Jones, is a secret-service agent plotting and working against us. How lucky the children are to be growing up in a land where their only work is their daily chores and not hard, conscripted labor. How lucky to be growing up to have a voice in their government and in a country governed according to a just Constitution. The Germans have no such constitution as ours, no, they have only a creed that 'might is right.' A creed that we see is offering them no protection today.

"I was thinking of myself, too; this home is mine; I am safe in it; it is safe. By law no one can search or can seize it; even the law cannot take it from me without due process. When I go to the market I buy according to our tastes and our budget; according to no dictator's decree.

"I, a woman, am free to vote; that is a duty of a citizen, but is it not also a great privilege?

"I am free to join any organizations of my choice, to travel about as I wish; all this without fear of punishment or of death.

"Yes, I was thanking God; thanking Him for my and my children's heritage; thanking Him that we are American."

As we turn from Mrs. Doe we see her husband sitting before the fire with his pipe and his evening paper.

"Mr. Doe, do you ever think of your privileges and your responsibilities; and what do you think of them?"

"Do I ever think of my privileges? Yes, indeed! Everytime I read my paper I go over them again and again. I was just rereading an old story, that of the French suppression. I couldn't help thinking that it's great to be alive here in this free country. It's great to be able to pick up my evening paper and to know that I'm not reading just lies and propaganda. It's wonderful to be able to admit my religion, the religion of my choice. I am in the insurance business; it means a great deal to me that I work under sanitary conditions, with fair pay, reasonable hours, and a chance for advancement. It's wonderful to have a voice in my government. Just think—I, plain John Doe, help to choose and to change my country's officials.

"After dinner I am going to a meeting—we sent off a petition the other day—our local school is growing and the youngsters need more room; we asked for more material but we sent off that petition without fear.

"There is the telephone—that is something else; here in America we don't need to fear that our phone is being tapped or that our mail is opened before we get it. And taxes—taxes are current news lately. Yes; I have heard a bit of complaining but to me all taxes are a type of rent that our landlord, Uncle Sam, cannot carry on without. Extra taxes are keeping our boys just as safe as possible overseas and those boys are mighty close to our hearts. Yes; it makes me pretty humble to realize all that Uncle Sam is doing for me and for everyone like me."

John Doe has a son overseas. I wonder what he thinks about being an American, and the privileges and responsibilities that being an American entails.

"I'm glad you asked me that because when I'm over here in the thick of it I haven't much time to think about anything except shooting straight—and shooting first. But sometimes, like tonight, lying awake in my fox hole, I have time; I have plenty of time to dope it all out. It is my duty to serve my country when she needs me, but it was more than just duty that called me. I'm over here because I want to protect the kind of decency, the kind of freedom that I grew up in and that I want my children to grow up in.

"President Roosevelt said, 'We are fighting today for progress, for security, and for peace. Not only for ourselves but for all men; not only for this generation but for all generations.' He spoke the common mind.

"I had a good education. I was going to college before I entered the Army. I traveled extensively over our great country, and I saw health and I saw happiness on every hand. I want my children to have the kind of education I had. I want them to be assured of good medical care, food, clothing, and shelter. America is the living guarantee of these securities; as long as America lives then they live, but if she dies, then they die. That is why I am, that is why all of us are over here.

"Every fellow over here remembers—he remembers his girl, the corner drug store, the athletic contests at school. He remembers mom and her apple pies; dad and his pipe in front of the fire; the puppy; the kids next door. Over there America is the past, the present, and the future. None of us wants anything more than to get back home to what he left and, please God, he shall."

In conclusion, I should like to quote, from the DAR Manual, an excerpt by Merrill Gates: "Not for us the reg flag of a false and anarchistic internationalism but the red, white, and blue; for which our fathers, brothers, and sons have died; under which, please God, we will live; but for which, if need be, we will die; faithful to the brotherhood of the whole human race by being first of all faithful to our own home, our own family, our own community, and to the land we love."

An Idaho Soldier Questions the Government's Peacetime Policy

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1946

Mr. WHITE. Mr. Speaker, the distribution of the Nation's armed forces is so far flung and the Government's activities are so vast and varied in the global war we have just fought that there are presented so many opportunities for manipulation and fraud that much of these irregularities and manipulations are beyond the knowledge and reach of the legislative branch of the Government.

While a congressional committee may be investigating profiteering and fraud in one part of the world, the Congress and the committee are unable to know what is being done at other places possibly on the other side of the earth.

The Army is severe with the delinquencies of enlisted men, but we rarely hear of the higher-ups that prove untrue to their trust being brought to book.

It may be that the prodigality of those in charge of our Government policies in the wasteful distribution of the Nation's

assets in all parts of the world has undermined the moral fiber and patriotism of many of our citizens tempted by these wasteful conditions to obtain business advantages by defrauding the Government and the corruption of those entrusted with administering the Government's business and in control of Government installation and supplies. A report of one of our soldiers on existing conditions is submitted herewith:

WITH THE ARMED FORCES,
January 15, 1946.

DEAR SIR: Being just a GI, I doubt whether you will even bother to read this letter, but I'm writing it in hopes that you will.

You are also probably well aware of the subject of this letter: Demobilization.

My first question is: Why the slow-up? I know nothing about the requirements in Europe, but it appears as though that situation is well in hand. I am concerned mostly with conditions in the Pacific. MacArthur stated some time ago that he required only a few thousand men to occupy Japan. Taking this excellent commander at his word, in the belief that he is more aware of the situation over here than anyone in the War Department, or under its command, why is it necessary to occupy these coral reefs all over the Pacific where the populace consists almost entirely of savages? Why do we need the large military force in Honolulu? After all, this island is making a large bid for statehood, and it doesn't appear to me that it requires occupation.

I can't understand why we are kept in the dark about proposed measures along the lines of demobilization. Certainly it shouldn't be a secret, for this being a democratic nation, and not having any aspirations of military conquest, the public is entitled to know what is being done to insure the country's future. I fail to see why they must occupy Allied countries or our island possessions until they present a veritable fortress. The United Nations Organization is supposed to preserve the peace; why not give it a chance and forget the blackjack for a while? Certainly we don't need such an immense army in the Pacific. Our only aggressor is entirely out of the fight, her factories have been dismantled to prevent further manufacture of arms and ammunition, and her people have been bombed, shelled, and beaten into submission, and their main interest is to grow enough food to feed themselves. Surely all of the fight is gone out of that country.

Perhaps your answer to this is to reopen our trade routes; if this is so, then why were our two Liberty ships taken to England, loaded with English troops, and hauled to Indonesia to fight the Dutch? American ships, English soldiers, Dutch colonies, whose trade routes are we protecting? Perhaps we were protecting our trade routes when America took an active part in the Chinese revolution, when plying American boats to her shores loaded with American materials of war, and Chinese troops for the Chinese reoccupation of Manchuria, is it possible that we were protecting Chinese trade routes?

Why don't we stay out of China? Is it necessary that several hundred thousand servicemen stay there to look after American nationals' interests in private industries? The only possible outcome can be for Russia to side the Communists there, and America to continue to side the Nationalists, which would involve us in another war.

Perhaps you wonder where I get all of my information. I hope to say only this: During my service with the Army, I have been fortunate enough to tour the world, and talk to the many peoples that populate it, and it is from their opinions that I have drawn my conclusions.

We have been receiving clippings here from home that were cut out of leading east coast newspapers branding the chairman of the Oahu Serviceman's Committee for Speedier Demobilization as a Communist. We ourselves have been called Communists, Bolshevists, and what have you, merely because we want to get home. Our meetings have been reported to be riotous, and on the stage of mutiny, all of which could not be farther from the truth.

We have every desire to secure the peace for our country, and if we feared that our going home would jeopardize this cause for which so many red-blooded Americans paid the supreme sacrifice we would not be nearly so insistent in our demands.

We are not Bolshevists or Communists, for we have no desire to change our government at all, nor was any such move even mentioned in our meetings. (These meetings have been abolished by our theater commander.)

Our meetings were not riotous or mutinous in character whatsoever, but merely forums to discuss in an intelligent and orderly manner what had been done, and what we could do about it, and along what lines we might lawfully act.

This name calling is to me one of the oldest forms of politics, and one may find it anywhere the defender is backed up to a wall and can't give an intelligent answer. If this person can brand the aggressor with a label, an undesirable name of some sort, the pressure will release and that is just what has happened. Thus, merely because we want to get home, we are branded as a Communist. The War Department, knowing that we have every right in the world to demand an answer, and knowing they can't come out with the answer in back of all this, which is nothing more than blackmailing our families into submitting to a compulsory military training program, sit back and say we are necessary to the occupation policies. I'm not occupying anything, and haven't done anything of value since I came in this Army, nearly 3 years ago. So in order to keep their rank (the generals), they must have a command. If they lose their command they lose their job. In order to keep their command they must have replacements for us. They discharged the bulk of our replacements as surplus back in the States. Thus it appears that if we are to have replacements we must continue the draft. All of this leads to compulsory military training which will insure them of their command for many years to come.

A number of the fellows here have received letters back from their Congressmen in reply to ones they wrote, stating that they are in complete agreement with what they said. If everyone is in such complete agreement then why can't something be done about it?

Having presented my case, I would now like to propose what might be done about it. First of all, why not have a complete investigation; I mean, further, than the heads of the War Department and the immediate chiefs. Why not find out exactly how many men are needed by ascertaining what they are doing? Just how essential is the work they are doing? Just for whose benefit is the work being done?

Our organization, working for the Plant Engineering Agency, a large radio construction concern, is doing nothing now. True, we have some projects that a certain percent of the men are working on. This consists mainly of building radio ranges, radio point-to-point stations, radio direction finders, air-to-ground stations, large transmitter and receiver sites, and radioteletype and weather stations. All of this was contributing somewhat to the war effort during wartime, for it was strictly for use by the Air Transport Command, which played a very essential part in evacuating troops, parachute troops carrying, and the hauling of critical supplies to an area in great need of them. Now, however, the ATC is closing down. They are running less planes, and the ones they have aren't being flown nearly as much. Five months ago, each plane had an average of eight flying hours per day, as compared to 3½ hours today. Yet, our organization is still being built up. We are building more radio stations, laying more control cables, and all of the other aforementioned projects. With the ATC closing down, why do we continue to build? Obviously it is for a commercial concern. The Army Communications Service is a world-wide organization, and it seems to be the present idea to see just how much we can build up for such systems as Pan American Airways, United Air Lines, and other large commercial concerns. No doubt this will be sold at a loss, for the Government always gets the short end of any deal. The labor is much cheaper than these commercial lines could procure, for every man is a specialist in his line, whether it be radioteletype, radio, cable splicer, telephone man, or what have you. It seems that somewhere, someone is taking advantage of this organization for a private purpose. What should be done about it?

Thanking you for allowing me to air my opinions, I remain,

A SOLDIER.

Bias and Hostility of the British Members of Palestine Anglo-American Committee

---

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. CELLER. Mr. Speaker, when the announcement was made of the formation of the Anglo-American Committee on Inquiry on Palestine, the American people were startled and Jews in particular were dismayed. The strongest possible Zionist planks has been put into the major parties' platforms. The Labor Party in England had gone even farther than the Zionists had asked for, namely, that the Arabs be removed to make room for the Jews. Morrison, Bevin, and Attlee supported that platform.

Four hundred members of the American Congress had indicated strong espousal of the Zionist cause. Thirty-two governors expressed in no uncertain language the desirability of the establishment of a Jewish Commonwealth in Palestine to be preceded by unlimited Jewish immigration. Both Governor Dewey and the late President Roosevelt campaigned on this plank and espoused specifically the Zionist cause. Surely, these proclamations and campaign pledges and pronouncements by these candidates must have been the result of mature reflection and discussion. The conclusions were not arrived at arbitrarily.

It seemed, therefore, startling that a committee should be formed, again to go into all these facts that had been rehashed and reaffirmed time and again. The American people had formed definite opinions, all favorable to the Jewish aims and aspirations in Palestine.

When the announcement was made of the appointment of American and English members of the committee, surprise and dismay were converted into suspicion and great doubt as to the objectivity and fair-mindedness of the

personnel of the committee. Those doubts have now been confirmed.

The committee has held hearings in Washington and in London and the six American and six British members are now on their way to the continent to determine what is already known to all, namely, that the displaced Jew wants to make Palestine his permanent home. Yet this committee will waste valuable time in developing facts that will lead to this inevitable conclusion. Thereafter, this group is to fly to Cairo and waste another week's time in digesting and reviewing the testimony taken. The month of March will find them in Palestine taking more testimony. Then, they will visit Damascus, Bagdad, and Beirut. Finally, they will retire to Lucerne in Switzerland to draft their report and make recommendations to the United States Government and the Government of Great Britain.

Thus far, nothing new has been developed by the committee. Not one solitary new fact has been added. The story has been told and retold by both the protagonists and antagonists of Zionism. The whole business is sorely disappointing and, in my humble estimation, will yield no fruitful results. The hearings will drag on, the recommendations of the committee will be made. Meanwhile precious time is lost.

The urgency of saving the remnant of European Jewry presses in on all sides, yet the committee continues to take testimony and to review facts which are already known.

It is quite evident that a sense of responsibility is quite absent from the committee. Furthermore, politics has already played a very insidious part. It is well known that the announcement of the committee was held up 2 weeks to suit the Democratic Party so that such announcement would not jeopardize its victory in the municipal elections in New York City.

It is already forgotten by the members of the committee that Palestine was originally set up by the Balfour Declaration as a national homeland for the Jews and that the Arabs in 1917 were under the domination of the Ottoman Empire, when no Arab could call his soul his own. The Allies at that time gave the Arab his liberty from the Turks and the tiny spot of Palestine no larger than the State of Vermont and about the size of Wales was set aside with the agreement of 52 nations, including our own, to be an eventual Jewish commonwealth. All the leading statesmen of that period and of all periods since have acquiesced to such an arrangement—Clemenceau, Lloyd George, Woodrow Wilson, Orlando, Smuts, Balfour, Harding, Coolidge, Hoover, Roosevelt. All this seems to be forgotten by the members of the committee. Under the mighty promise of the Balfour Declaration, millions of money have been brought into Palestine. The desert has been made to blossom like a rose. Britain, instead of fulfilling the terms of the mandate, looked upon Palestine as something to be owned and possessed by herself in entirety. She has stopped Jewish immigration except for a trickle of 1,500 per month. Land purchases have been prohibited. She has flagrantly violated our treaty made with her in 1924 wherein she specifically agreed that there should be no restrictions on land purchases and immigration on the ground of race or religion. The Jew is now denied entrance into his own home.

First, England sets up the plea of absorptive capacity and when a Lowdermilk, famous soil conservationist, clearly indicates that with proper cultivation of the soil and the harnessing of the waters of the Jordan, hydroelectricity could be developed so as to admit 4,000,000 additional persons, then Britain dusts off the old dodge of Arab peril. Britain organizes the Arab League primarily to offset the influence of the Zionists. The Arabs in that league, you will note, can agree on nothing except the English-inspired hatred of the Jews. Someone has said that if there had been no Zionism, the English would have had to invent it to get the Arabs to agree on anything.

There have already been many inquiries. The Mandates Commission, the Peel Commission, the partition commission, the Eisenhower and the Harrison reports. Everything that had to be made known is already known.

This new committee is another British dodge and stall. Unfortunately, the United States fell for it.

On top of all this disappointment is added the knowledge that the decision of the British members of the committee has already been made. The British members, undoubtedly, view the whole situation with a jaundiced eye. They have been hand picked by the Labor Government. The hope of a nonprejudiced report has gradually faded.

The British members in particular have conducted themselves in the inquiries as if they were policemen reviewing a police line-up. They have evidenced arrogance, superciliousness, and downright impoliteness. The British chairman, Sir John E. Singleton, has gone out of his way to be most deferential and sycophantic to the British titled witnesses who appeared before the committee. Even some of the American members conduct the inquiry as if it were in a criminal court and demand "yes" and "no" answers to questions that could not be answered in that summary fashion. The interrogations by the Britons at times showed their annoyance, pettiness, and impatience. The British members took the position that the "King could do no wrong." The attitude of the British members is evident from the question put to one of the witnesses, "Why do you not realize that if an official actually did what you describe he would be removed by the British Government at once?"

As to the British chairman, Sir John E. Singleton, his interrogation of witnesses did not even indicate a pretense of impartiality. He did everything in his power to discredit at all costs the testimony presented in opposition to the interests of his client—the British Government. Sir John was determined to uphold by every means at his disposal the past record and future policy of the British Government. His biased interest was evident in all his questions. As to the Zionist cause, we can expect no justice from him. Although he is a judge of the King's Bench, his role on the committee has dwindled down to that of prosecutor.

The second British member is Maj. Reginald E. Manningham-Buller. He is a barrister and a member of the right-wing Conservative Party, which party has always been anti-Zionist. How in thunder the British could have appointed such a one to weigh judiciously the Zionist cause is beyond understanding. He, too, is bent upon asking questions that will uphold the British reputation "come hell or high water." His position on the committee is all the more dangerous because his manner shows an attempt to be impartial. His true attitude was indicated in the course of private conversations which he had had in Washington during his stay here.

In one of these conversations he attacked the American Government and people as being hypocritical in their alleged interest in the Jewish problem, asking why, if the Americans were so interested in the homelessness of the Jews of Europe, they did not admit them into the United States in greater numbers. As if the American people and Government had asked that large numbers of Jews be admitted into Great Britain. Mr. Manningham-Buller seemed completely to ignore the fact that, while no international law prescribes the immigration policies to be pursued by Great Britain, the United States, and other countries, Palestine was specifically set aside under international law as a place where Jews might come "as of right."

He continued his attack and asked what right the United States had to tell the British how to go about their business in Palestine. He ignored the fact that Palestine is not a British colony, but that Palestine was only entrusted to England and that the mandate demanded certain obligations of Great Britain, among them the right of unlimited immigration of the Jews to the end that there be established eventually a Jewish homeland. He also ignored the fact that it was the British Government that had invited the United States to join the joint committee to review the Palestine problem. He finally indicated his prejudgment of the entire matter by saying he could not see how any solution could be reached but that he was not worried. The Jews were already starting to arm in Palestine and might soon arrive at the stage where they would kill each other off.

The aforesaid should give you an idea of how biased this British member is. He was selected by Mr. Bevin to conduct an unbiased inquiry.

The third member is Mr. Richard S. Crossman, Laborite member of Parliament. He was elected on a pro-Zionist plank in the platform, although he has already forgotten this. He seems exceedingly conscious of the fact that he represented a government whose record and policies in Palestine were on trial. This attitude colored his entire performance and will undoubtedly be the strongest motivation when it becomes necessary for him to formulate conclusions.

Another member is Lord Morrison, old-time Labor hack, once parliamentary secretary of Ramsay MacDonald. He has been recently made a Labor lord. He was rather stiff and correct in his

manner throughout the open meetings of the committee.

Two other members on the British side are Sir Frederick Leggett and Mr. Wilfred P. Crick, both with former British civil-service connections. Both Lord Morrison and Sir Frederick Leggett are both known to have close associations with Mr. Bevin, Foreign Minister, the same Mr. Bevin who attempted to prejudge the findings of the committee and to tell what the British Government would like the future status of Palestine to be on the same day on which it was announced that the committee was to conduct its inquiry. Sir Frederick Leggett and Mr. Crick belong by background and past associations to that very group of the British civil service which, for decades, has been behind every attempt to persuade the British Government to liquidate the policy of the Jewish national home.

None of the British members of the committee has indicated any sympathy with Jews as such, with Jewish people or with the Jewish people's aims and aspirations in Palestine.

The entire British personnel of the committee was chosen by Mr. Bevin, the man who said that if the Jews persist in getting at the head of the queue, they would be inciting anti-Semitism. His attempt to talk himself out of his position was very much like the more recent attempt of the British Gen. Sir Frederick Morgan, who, after having stated that the rosy-cheeked Jews of Poland in whose persecution he did not believe are engaged in an organized plot which may result in a third world war, has also tried to explain that he was misinterpreted and misunderstood. It is not too difficult to guess that the members of the committee on the English side will hew to Mr. Bevin's line.

To my mind, this committee of inquiry has dwindled down to a travesty. It would have made sense for Great Britain to ask the United States to appoint a committee to inquire into the rights and wrongs of British policy in Palestine. If the British did not like Americans to do that, they might have asked the French or the Chinese or the Dutch or the Swedes to conduct such an inquiry. Or they might have asked, very appropriately, the United Nations to appoint such a committee of inquiry. But what can one expect of a committee, a half of whose membership represents the party to be questioned and who will inevitably regard themselves as advocates for their party rather than as impartial judges and observers.

United Nations Educational, Scientific, and Cultural Organization

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution passed by the council of the American Library Association in regard to the United Nations Educational, Scientific, and Cultural Organization:

Whereas the council of the American Library Association, representing the 15,000 members of the association, having listened with interest to reports about the meeting in London in November resulting in the organization of the United Nations Educational, Scientific, and Cultural Organization, hereby

Resolves, That the Council of the American Library Association meeting in Chicago on December 29, here records its gratification for the organization of the United Nations Educational, Scientific, and Cultural Organization, expresses its hope for fullest support and use of the organization by the government and citizens of the United States, and its conviction of the lasting promise given by this step for better living for the whole world; be it further

Resolved, That this resolution be brought to the attention of the Congressional committee to which legislation will be referred, urging it to approve appropriate legislation.

Shortage of Civilian Clothing for Veterans

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of the commander in chief of the Veterans of Foreign Wars:

VETERANS OF FOREIGN WARS OF THE UNITED STATES,
January 18, 1946.

A plan to alleviate the critical shortage of civilian clothing for veterans was presented today to War Mobilization and Reconversion Director John W. Snyder by Commander in Chief Joseph M. Stack of the Veterans of Foreign Wars.

The plan was prepared after a survey of available surplus materials and manufacturing facilities. It calls for the distribution, through regular retail channels, of 3,000,000 men's suits and 1,000,000 pairs of extra trousers labeled "Exclusively for Veterans."

The VFW survey led to the conclusion that if Director Snyder gives the green light, moderately priced civilian suits will be available to veterans within 6 weeks.

Following is Commander Stack's letter to Director Snyder:

"The critical shortage in men's clothing, particularly suits and extra trousers, poses one of the most difficult problems confronting demobilized service personnel. It is time that something more definite than explanations, apologies, and assurances for future betterment is offered those persons who were called upon to exchange civilian attire for military and naval uniforms during the war.

"The Veterans of Foreign Wars of the United States, composed of more than a million and a quarter men who have served on foreign soil or in hostile waters, after considerable study and conference on the clothing shortage, is convinced there is something definite which our Government, in cooperation with clothing manufacturers, can do to provide prompt relief to demobilized servicemen urgently in need of civilian clothing. We submit the following proposal for your immediate consideration:

"1. Direct and authorize the Smaller War Plants Corporation or its successor to exercise its top priority and lending facilities in the purchase of sufficient Government surplus woolen cloth, cotton and rayon trim, and linings to process not less than 3,000,000 men's suits and 1,000,000 pair of extra trousers.

"2. Enlist the cooperation of Government agencies owning woolen, cotton, and rayon textiles to make available, if not already declared surplus, sufficient yardage to meet the requirements of Smaller War Plants Corporation.

"3. Smaller War Plants Corporation to allocate and sell the surplus cloth, trim and linings to any manufacturer equipped and capable of making men's suits and who will agree to substantially the following conditions:

"(a) Use all of said material for suits and trousers for the exclusive purchase by veterans.

"(b) Process the cloth, trim, and linings into low-cost men's clothing (Schedule K, CPA) to resell at the manufacturers' cut-off price program PR-28 and the retail price designated by OPA (men's suits $33 to $35).

"(c) All garments to be plainly tagged or labeled 'exclusively for veterans.'

"(d) Nation-wide distribution through normal men's clothing retail outlets.

"(e) Manufacturers to obtain agreement from retailers that garments will be sold exclusively to veterans upon presentation of discharge papers and recording of name and serial number of veteran purchaser.

"From available information it seems assured that if this program is approved and authorized, the clothing can be placed in the retail stores and available to veterans within 6 weeks after the yard material has reached the manufacturers. This promise is supported by the following evidence:

"1. Surplus cloth, trim, and linings are available.

"2. Smaller War Plants Corporation has indicated its willingness and ability to carry out its part of the program.

"3. Manufacturers are ready and anxious to put their plants and workmen into production and those who have been surveyed on this type of program are enthusiastic over its success.

"4. Retail stores are mostly barren of men's wear and can be depended upon to cooperate.

"5. Veterans need the clothing.

"It is understood that Smaller War Plants Corporation is to be dissolved and that fact has been taken into consideration. However, the functions and some of the personnel will be taken over by another agency and the program initiated by SWPC could be carried over to its successor.

"Your prompt and favorable consideration of this program is earnestly requested and it is hoped you will immediately order it into effect. Surplus cloth is now being sold without restriction and is being utilized for other than men's clothing or in a price range beyond the ability of the average veteran to pay.

"Respectfully yours,
"JOSEPH M. STACK,
"Commander in Chief."

United States Diplomats Poorly Paid

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the

personnel of the committee. Those doubts have now been confirmed.

The committee has held hearings in Washington and in London and the six American and six British members are now on their way to the continent to determine what is already known to all, namely, that the displaced Jew wants to make Palestine his permanent home. Yet this committee will waste valuable time in developing facts that will lead to this inevitable conclusion. Thereafter, this group is to fly to Cairo and waste another week's time in digesting and reviewing the testimony taken. The month of March will find them in Palestine taking more testimony. Then, they will visit Damascus, Bagdad, and Beirut. Finally, they will retire to Lucerne in Switzerland to draft their report and make recommendations to the United States Government and the Government of Great Britain.

Thus far, nothing new has been developed by the committee. Not one solitary new fact has been added. The story has been told and retold by both the protagonists and antagonists of Zionism. The whole business is sorely disappointing and, in my humble estimation, will yield no fruitful results. The hearings will drag on, the recommendations of the committee will be made. Meanwhile precious time is lost.

The urgency of saving the remnant of European Jewry presses in on all sides, yet the committee continues to take testimony and to review facts which are already known.

It is quite evident that a sense of responsibility is quite absent from the committee. Furthermore, politics has already played a very insidious part. It is well known that the announcement of the committee was held up 2 weeks to suit the Democratic Party so that such announcement would not jeopardize its victory in the municipal elections in New York City.

It is already forgotten by the members of the committee that Palestine was originally set up by the Balfour Declaration as a national homeland for the Jews and that the Arabs in 1917 were under the domination of the Ottoman Empire, when no Arab could call his soul his own. The Allies at that time gave the Arab his liberty from the Turks and the tiny spot of Palestine no larger than the State of Vermont and about the size of Wales was set aside with the agreement of 52 nations, including our own, to be an eventual Jewish commonwealth. All the leading statesmen of that period and of all periods since have acquiesced to such an arrangement—Clemenceau, Lloyd George, Woodrow Wilson, Orlando, Smuts, Balfour, Harding, Coolidge, Hoover, Roosevelt. All this seems to be forgotten by the members of the committee. Under the mighty promise of the Balfour Declaration, millions of money have been brought into Palestine. The desert has been made to blossom like a rose. Britain, instead of fulfilling the terms of the mandate, looked upon Palestine as something to be owned and possessed by herself in entirety. She has stopped Jewish immigration except for a trickle of 1,500 per month. Land purchases have been prohibited. She has flagrantly violated our treaty made with her in 1924 wherein she specifically agreed that there should be no restrictions on land purchases and immigration on the ground of race or religion. The Jew is now denied entrance into his own home.

First, England sets up the plea of absorptive capacity and when a Lowdermilk, famous soil conservationist, clearly indicates that with proper cultivation of the soil and the harnessing of the waters of the Jordan, hydroelectricity could be developed so as to admit 4,000,000 additional persons, then Britain dusts off the old dodge of Arab peril. There have already been many inquiries. The Mandates Commission, the Peel Commission, the partition commission, the Eisenhower and the Harrison reports. Everything that had to be made known is already known.

This new committee is another British dodge and stall. Unfortunately, the United States fell for it.

On top of all this disappointment is added the knowledge that the decision of the British members of the committee has already been made. The British members, undoubtedly, view the whole situation with a jaundiced eye. They have been hand picked by the Labor Government. The hope of a nonprejudiced report has gradually faded.

The British members in particular have conducted themselves in the inquiries as if they were policemen reviewing a police line-up. They have evidenced arrogance, superciliousness, and downright impoliteness. The British chairman, Sir John E. Singleton, has gone out of his way to be most deferential and sycophantic to the British titled witnesses who appeared before the committee. Even some of the American members conduct the inquiry as if it were in a criminal court and demand "yes" and "no" answers to questions that could not be answered in that summary fashion. The interrogations by the Britons at times showed their annoyance, pettiness, and impatience. The British members took the position that the "King could do no wrong." The attitude of the British members is evident from the question put to one of the witnesses, "Why do you not realize that if an official actually did what you describe he would be removed by the British Government at once?"

As to the British chairman, Sir John E. Singleton, his interrogation of witnesses did not even indicate a pretense of impartiality. He did everything in his power to discredit at all costs the testimony presented in opposition to the interests of his client—the British Government. Sir John was determined to uphold by every means at his disposal the past record and future policy of the British Government. His biased interest was evident in all his questions. As to the Zionist cause, we can expect no justice from him. Although he is a judge of the King's Bench, his role on the committee has dwindled down to that of prosecutor.

The second British member is Maj. Reginald E. Manningham-Buller. He is a barrister and a member of the right-wing Conservative Party, which party has always been anti-Zionist. How in thunder the British could have appointed such a one to weigh judiciously the Zionist cause is beyond understanding. He, too, is bent upon asking questions that will uphold the British reputation "come hell or high water." His position on the committee is all the more dangerous because his manner shows an attempt to be impartial. His true attitude was indicated in the course of private conversations which he had had in Washington during his stay here.

In one of these conversations he attacked the American Government and people as being hypocritical in their alleged interest in the Jewish problem, asking why, if the Americans were so interested in the homelessness of the Jews of Europe, they did not admit them into the United States in greater numbers. As if the American people and Government had asked that large numbers of Jews be admitted into Great Britain. Mr. Manningham-Buller seemed completely to ignore the fact that, while no international law prescribes the immigration policies to be pursued by Great Britain, the United States, and other countries, Palestine was specifically set aside under international law as a place where Jews might come "as of right."

He continued his attack and asked what right the United States had to tell the British how to go about their business in Palestine. He ignored the fact that Palestine is not a British colony, but that Palestine was only entrusted to England and that the mandate demanded certain obligations of Great Britain, among them the right of unlimited immigration of the Jews to the end that there be established eventually a Jewish homeland. He also ignored the fact that it was the British Government that had invited the United States to join the joint committee to review the Palestine problem. He finally indicated his prejudgment of the entire matter by saying he could not see how any solution could be reached but that he was not worried. The Jews were already starting to arm in Palestine and might soon arrive at the stage where they would kill each other off.

The aforesaid should give you an idea of how biased this British member is. He was selected by Mr. Bevin to conduct an unbiased inquiry.

The third member is Mr. Richard S. Crossman, Laborite member of Parliament. He was elected on a pro-Zionist plank in the platform, although he has already forgotten this. He seems exceedingly conscious of the fact that he represented a government whose record and policies in Palestine were on trial. This attitude colored his entire performance and will undoubtedly be the strongest motivation when it becomes necessary for him to formulate conclusions.

Another member is Lord Morrison, old-time Labor hack, once parliamentary secretary of Ramsay MacDonald. He has been recently made a Labor lord. He was rather stiff and correct in his

manner throughout the open meetings of the committee.

Two other members on the British side are Sir Frederick Leggett and Mr. Wilfred P. Crick, both with former British civil-service connections. Both Lord Morrison and Sir Frederick Leggett are both known to have close associations with Mr. Bevin, Foreign Minister, the same Mr. Bevin who attempted to prejudge the findings of the committee and to tell what the British Government would like the future status of Palestine to be on the same day on which it was announced that the committee was to conduct its inquiry. Sir Frederick Leggett and Mr. Crick belong by background and past associations to that very group of the British civil service which, for decades, has been behind every attempt to persuade the British Government to liquidate the policy of the Jewish national home.

None of the British members of the committee has indicated any sympathy with Jews as such, with Jewish people or with the Jewish people's aims and aspirations in Palestine.

The entire British personnel of the committee was chosen by Mr. Bevin, the man who said that if the Jews persist in getting at the head of the queue, they would be inciting anti-Semitism. His attempt to talk himself out of his position was very much like the more recent attempt of the British Gen. Sir Frederick Morgan, who, after having stated that the rosy-cheeked Jews of Poland in whose persecution he did not believe are engaged in an organized plot which may result in a third world war, has also tried to explain that he was misinterpreted and misunderstood. It is not too difficult to guess that the members of the committee on the English side will hew to Mr. Bevin's line.

To my mind, this committee of inquiry has dwindled down to a travesty. It would have made sense for Great Britain to ask the United States to appoint a committee to inquire into the rights and wrongs of British policy in Palestine. If the British did not like Americans to do that, they might have asked the French or the Chinese or the Dutch or the Swedes to conduct such an inquiry. Or they might have asked, very appropriately, the United Nations to appoint such a committee of inquiry. But what can one expect of a committee, a half of whose membership represents the party to be questioned and who will inevitably regard themselves as advocates for their party rather than as impartial judges and observers.

United Nations Educational, Scientific, and Cultural Organization

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution passed by the council of the American Library Association in regard to the United Nations Educational, Scientific, and Cultural Organization:

Whereas the council of the American Library Association, representing the 15,000 members of the association, having listened with interest to reports about the meeting in London in November resulting in the organization of the United Nations Educational, Scientific, and Cultural Organization, hereby

Resolves, That the Council of the American Library Association meeting in Chicago on December 29, here records its gratification for the organization of the United Nations Educational, Scientific, and Cultural Organization, expresses its hope for fullest support and use of the organization by the government and citizens of the United States, and its conviction of the lasting promise given by this step for better living for the whole world; be it further

Resolved, That this resolution be brought to the attention of the Congressional committee to which legislation will be referred, urging it to approve appropriate legislation.

Shortage of Civilian Clothing for Veterans

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of the commander in chief of the Veterans of Foreign Wars:

VETERANS OF FOREIGN WARS OF THE UNITED STATES,
January 18, 1946.

A plan to alleviate the critical shortage of civilian clothing for veterans was presented today to War Mobilization and Reconversion Director John W. Snyder by Commander in Chief Joseph M. Stack of the Veterans of Foreign Wars.

The plan was prepared after a survey of available surplus materials and manufacturing facilities. It calls for the distribution, through regular retail channels, of 3,000,000 men's suits and 1,000,000 pairs of extra trousers labeled "Exclusively for Veterans."

The VFW survey led to the conclusion that if Director Snyder gives the green light, moderately priced civilian suits will be available to veterans within 6 weeks.

Following is Commander Stack's letter to Director Snyder:

"The critical shortage in men's clothing, particularly suits and extra trousers, poses one of the most difficult problems confronting demobilized service personnel. It is time that something more definite than explanations, apologies, and assurances for future betterment is offered those persons who were called upon to exchange civilian attire for military and naval uniforms during the war.

"The Veterans of Foreign Wars of the United States, composed of more than a million and a quarter men who have served on foreign soil or in hostile waters, after considerable study and conference on the clothing shortage, is convinced there is something definite which our Government, in cooperation with clothing manufacturers, can do to provide prompt relief to demobilized servicemen urgently in need of civilian clothing. We submit the following proposal for your immediate consideration:

"1. Direct and authorize the Smaller War Plants Corporation or its successor to exercise its top priority and lending facilities in the purchase of sufficient Government surplus woolen cloth, cotton and rayon trim, and linings to process not less than 3,000,000 men's suits and 1,000,000 pair of extra trousers.

"2. Enlist the cooperation of Government agencies owning woolen, cotton, and rayon textiles to make available, if not already declared surplus, sufficient yardage to meet the requirements of Smaller War Plants Corporation.

"3. Smaller War Plants Corporation to allocate and sell the surplus cloth, trim and linings to any manufacturer equipped and capable of making men's suits and who will agree to substantially the following conditions:

"(a) Use all of said material for suits and trousers for the exclusive purchase by veterans.

"(b) Process the cloth, trim, and linings into low-cost men's clothing (Schedule K, CPA) to resell at the manufacturers' cut-off price program PR-28 and the retail price designated by OPA (men's suits $33 to $35).

"(c) All garments to be plainly tagged or labeled 'exclusively for veterans.'

"(d) Nation-wide distribution through normal men's clothing retail outlets.

"(e) Manufacturers to obtain agreement from retailers that garments will be sold exclusively to veterans upon presentation of discharge papers and recording of name and serial number of veteran purchaser.

"From available information it seems assured that if this program is approved and authorized, the clothing can be placed in the retail stores and available to veterans within 6 weeks after the yard material has reached the manufacturers. This promise is supported by the following evidence:

"1. Surplus cloth, trim, and linings are available.

"2. Smaller War Plants Corporation has indicated its willingness and ability to carry out its part of the program.

"3. Manufacturers are ready and anxious to put their plants and workmen into production and those who have been surveyed on this type of program are enthusiastic over its success.

"4. Retail stores are mostly barren of men's wear and can be depended upon to cooperate.

"5. Veterans need the clothing.

"It is understood that Smaller War Plants Corporation is to be dissolved and that fact has been taken into consideration. However, the functions and some of the personnel will be taken over by another agency and the program initiated by SWPC could be carried over to its successor.

"Your prompt and favorable consideration of this program is earnestly requested and it is hoped you will immediately order it into effect. Surplus cloth is now being sold without restriction and is being utilized for other than men's clothing or in a price range beyond the ability of the average veteran to pay.

"Respectfully yours,
"JOSEPH M. STACK,
"Commander in Chief."

United States Diplomats Poorly Paid

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include therein an article from the Manchester Union, Manchester, N. H., of February 5, 1946, entitled "United States Diplomats Poorly Paid," by Wallace R. Deuel:

UNITED STATES DIPLOMATS POORLY PAID—COUNTRY GETS SECOND-CLASS SERVICE BECAUSE OF LOW SALARIES

(By Wallace R. Deuel)

WASHINGTON.—The American people are paying their diplomats too little and too late.

Some of their compensation recently has fallen as much as 6 months in arrears.

As a result of these and other factors, the United States too often is represented abroad by two kinds of men:

"SORRY" REPRESENTATION

Those with private incomes who can afford to work for second-class salaries.

Second-class men who are willing to work for such salaries because they couldn't earn more doing anything else.

But a private income is no guaranty that the man who has it is a fit representative of his country—and a diplomatic service overloaded with rich men is a sorry sort of representation for the American people.

America can no longer afford a second-class diplomatic service, if it ever could.

It's a wonder that able men with no private incomes go into the State Department and the foreign service at all. Yet a large number of such men do. However, they can't do their best work under present salary schedules.

American diplomats abroad are so underpaid that they don't get around much. Therefore they don't learn as much as they should and they don't exercise the influence they should.

PAY OUT LITTLE

As a result, the American people's interests are not adequately looked after in the rest of the world.

This penny-wise and pound-foolish treatment goes for the whole diplomatic service.

The first job of the State Department and the foreign service is to try to prevent America from becoming involved in war. Yet the United States spends on the Department and the service in a year less than it costs to fight a modern war for 8 hours.

The Department and service are costing $77,900,000 a year. Even the last war was costing this country $245,000,000 a day at the end.

From ambassadors and ministers to the clerks and telegraph operators who handle their reports, the personnel of American diplomacy are paid less than they could earn in private employment, less than other governments pay for similar performance and less than they need to do their work properly.

Salaries for ambassadors and ministers were fixed in 1856 and have not been raised since.

BRITISH PAY MORE

The American Ambassador in London is paid $17,500, subject to income tax, and allowances of $12,000, which are tax free.

The British Ambassador in Washington is paid $70,000, all tax free.

The American Ambassador in London is allowed $5,000 a year for entertainment. The British Ambassador in Washington spent $35,000 on entertainment in 1944.

The American Ambassador in Buenos Aires also is allowed $5,000 a year for entertainment. The British Ambassador there gets $13,000 a year for that purpose.

Lower ranking servants of the State Department suffer correspondingly from undercompensation.

Thus a civil servant who supervises 50 employees in an important division in the department, and who is accountable for the paying out of $13,000,000 of public money annually, earns only $3,310 a year.

And State Department and foreign-service personnel are not even paid on time.

Base pay and fixed allowances are up to date. But these are only part of the compensation of diplomatic personnel. The other parts recently have fallen far in arrears.

Reimbursement of personnel for money spent on official travel and overtime payments have fallen 3 to 4 months behind.

Monthly accounts for 1943 of foreign-service officers have not yet been audited and approved.

War bonds that department employees in Washington paid for in August were only delivered last month.

Bonds paid for by diplomats overseas as long ago as July 1, 1945, have not yet been delivered.

If it is true that money makes the mare go, it is no wonder the State Department sometimes acts like the old gray mare.

REA: A Monument to Roosevelt's Faith in the Common Man

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Capital Times, of Madison, Wis., for Thursday, January 31, 1946:

REA: A MONUMENT TO ROOSEVELT'S FAITH IN THE COMMON MAN

It is fitting that the Wisconsin rural electrification co-ops opened their State convention on the day that the city and the Nation were observing the birthday of the man who made REA possible—Franklin D. Roosevelt.

REA is one of the really great monuments to his memory. It epitomizes the new philosophy which was brought into the Government by the New Deal—a philosophy which held that the purpose of government was to give opportunity and assistance to all the people, rather than to make it easy for a few on the top to reap rich profits from the toil and sacrifice of the many.

In his talk yesterday William Sanderson put it this way: "The employment of the cooperative idea was a far cry from the philosophy of pouring Government funds into the top of partially or completely defunct corporations in the hope that some of it would trickle down and ultimately reach the little fellow."

Indeed, it was a "far cry." Unlike the Hoover administration, which sought to cure the depression by insuring the profits of big business, the New Deal recognized that the welfare of the Nation lay in the welfare of its great mass of workers and farmers. And as was the case with the REA, it recognized that this principle worked best if the people were given the chance to help themselves.

They were given Government help in forming their own electric cooperatives. Farmers joined together under the program to do the job of bringing electricity to their farms and homes, so long neglected by the profit-hungry utilities. They built and managed their own generating plants, their own transmission lines and despite the fact they had to fight the utility crowd every inch of the way, they made a success of it.

They are getting the blessings of electricity without paying tribute to an absentee overlord. They are far ahead in paying back their loans to the Government Today, in this State they are expanding and growing to a degree that has driven the power bund to new heights of hysterical denunciation.

With confidence and hope born of their own accomplishments, Wisconsin farmers are gathered here in their annual REA convention to plan for the future. Their spirit and determination is a tribute to the faith of the New Deal in the common man—a tribute which F. D. R. would truly have appreciated.

Feed Situation Is Intolerable

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Preston News, Preston, Md., in reference to the present intolerable feed situation, which has chiefly been caused by the meddling regulatory orders of the OPA. The editorial follows:

FEED SITUATION IS INTOLERABLE

There is no excuse for the shortage of poultry and cattle feed which is seriously affecting the economy of the Eastern Shore.

While proteins are still the major bottleneck, we are now coming to learn that the shortage of wheat is really serious. Surplus wheat has been shipped to foreign countries and there just isn't enough to properly take care of our meat-producing population.

Most of our proteins are produced in the South and West from cottonseed and soybeans. Soybean dealers in the Midwest have suddenly become feed manufacturers because they could not get what they considered a fair price for soya beans and by-products. Some of the corn last year was soft and could be ground into feed to better advantage than it could otherwise be sold. The feed these "new" manufacturers are making is far from a quality product. It is not balanced even though the formula would indicate that it is. The East is getting very little of this feed, as poor as it is. But poor feed is better than no feed.

A leading feed dealer on the Eastern Shore has informed the News & Farmer that in most cases prices are no longer being quoted on the materials used in mixing feed. Suppliers are operating almost entirely on a barter or exchange basis. For example, a dealer in the West might be short of bran, but have a little extra soya. He then announces that he will exchange one car of soya for three cars of bran. Actually, local feed mills can hardly offer anything for exchange, and since many can't buy materials, they are having a pretty tough time supplying local needs.

There is one point that should be brought out plainly, and that is that there is a real shortage of feed ingredients and, consequently, feed. Our animal and poultry population exceeds by far our supply of feed, and this is primarily responsible for the barter and other methods of getting supplies. This, of course, means that the East suffers more than the areas where the supplies are produced; because the mills in the West, Midwest, and Southwest are getting the available supplies by barter and making feed that is consumed in these areas, thus cutting short our supplies in the East where we have nothing to barter. In other words, the primary trouble is the shortage of feed ingredients.

There appears to be a "colored gentleman in the kindling." Perhaps if the price on raw materials were increased some of this material might come out of hiding. But, most certainly an increase in formula materials would mean increased feed to producers, and in this land of freedom and plenty, in this country at peace, there should be no scarcity of anything. Let's get the essentials for making feed on the market.

Regular Veterans' Association Active in Behalf of Servicemen

EXTENSION OF REMARKS
OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. HAGEN. Mr. Speaker, a delegation of officials representing the Regular Veterans' Association called at my office the other day and discussed with me their program.

They also told me of some of their objectives for the coming session of Congress. Because I feel that their efforts are of interest, not only to my colleagues in Congress, but to the general public and servicemen as well, I am incorporating a summary of their resolutions in my remarks.

The committee that called on me was headed by W. M. Floyd, national commander of the Regular Veterans' Association of Dutch Harbor, Alaska; Ellis Bubb, zone councilman, of Maryland; James B. Quinn, zone councilman, of New York; Henry C. Funk, judge advocate, of Maryland; Thomas Howard, zone councilman, of Indiana; Jesse Baxter, national adjutant, of Minnesota; and Ed Langdon, national deputy chief of staff, of Pennsylvania.

It has been my pleasure to become acquainted with these gentlemen because of my honorary membership in the Regular Veterans' Association. I visited a number of the posts of the organization in New England, New York, and Maryland, and I know of the fine job that they are doing in behalf of both the peacetime and the wartime veterans.

The resolutions which they presented to me, and which I am glad to insert into the CONGRESSIONAL RECORD as a public service and for public information, are as follows:

Resolution 1: To provide adjusted service pay for those persons who served in the armed forces of the United States during the present war and for other purposes.

Resolution 2: Recommend that Congress provide for compulsory retirement of all commissioned personnel of the armed forces of the United States at the age of 58 years with the maximum of 34 years of active service.

Resolution 3: Recommend that Congress provide that commissioned personnel requirements of the regular armed forces of the United States be supplied from the following categories of commissioned officers:

1. Commissioned graduates of the Military, Naval, and Coast Guard Academies.

2. Former enlisted men of the Regular Establishments who have received commissions during peace or war service.

3. Reserve and temporary officers commissioned during the emergency of World War II.

Resolution 4: Recommend to Congress that all allowances of enlisted men for quarters and rations be increased.

Resolution 5: Recommend to Congress that the quota of appointments from regular establishments for the Army, Navy, and Coast Guard Academies be increased.

Resolution 6: Recommend that Congress provide that the China Service Ribbon be awarded to the members of the United States Army who served in this war zone in 1937 and 1938.

Resolution 7: Recommend to Congress that where a veteran during a peacetime enlistment contracts pulmonary tuberculosis in the service and in line of duty, and where service connection and pension is granted by reason of such and where the tuberculosis has become or does become an arrested case, then such veteran shall be entitled to a pension of not less than $60 per month.

Resolution 8: Recommend that Congress provide longevity pay for career disabled veterans, which would provide that all enlisted men of the Regular Army, Navy, Marine Corps, and Coast Guard service who are receiving pensions for their disabilities shall have their pensions increased 5 percent for each 5 years of service, up to and including their twenty-fifth year.

Resolution 9: Recommend that Congress provide that all limitation dates before which to make application for various types of benefits for veterans and their dependents be removed.

Resolution 9: Recommend that Congress amend title II of the act entitled "An act to provide for the creation, organization, administration, and maintenance of a Naval Reserve and a Marine Corps Reserve," approved June 25, 1938 (52 Stat. 1175), in order to provide more effectively for the national defense by increasing and equalizing retirement and retainer benefits for enlisted men of the Regular Navy, and thereby encouraging a higher type of young men to make the Regular Navy a career, and for other purposes.

Resolution 11: To extend time within which to make an appeal from decisions of rating agencies of the Veterans' Administration.

Resolution 12: To authorize the Veterans' Administration to grant burial allowances to any and all members of the armed forces who have served honorably during peacetime or in any campaign.

Resolution 13: To provide that so-called misconduct shall be bar to the receipt of compensation of pension to disabled veterans only where the disability was due to felonious or willful misconduct.

Resolution 14: To provide that the Veterans' Administration shall not, in the absence of fraud or clear or unmistakable error, reduce any permanent disability rating.

Resolution 15: To provide full payment of compensation or pension to single veterans while hospitalized.

Resolution 16: To provide that compensation, pension, or retirement pay shall not be reduced during the first 120 days of hospitalization or domiciliary care.

Resolution 17: To provide that pensions for service-connected or non-service-connected disabilities shall be increased by 10 percent upon reaching the age of 40 years and 10 percent for each 10 years thereafter. Where the degree of disability changes after age 40, the disabled veteran shall receive the amount payable for changed disability plus the increase for attained age, but not in excess of the amount payable for total disability.

Resolution 18: To provide for additional amounts for dependents to be payable to veterans receiving compensation or pension.

Resolution 19: To provide compensation or pension for the widows and children and dependent parents of deceased veterans who were permanently and totally disabled from service-connected cause, on the basis that death was due to such disability.

Resolution 20: To provide eligibility for pension, if otherwise entitled thereto, to the widows of any deceased veteran, if married to and living with the veteran for 2 years immediately preceding his death or if she gave birth to a child by the veteran.

Resolution 21: To amend Public 257, Seventy-sixth Congress, August 4, 1939, so as to provide pensions to peacetime veterans of the Regular Army, Navy, Marine Corps, and Coast Guard suffering from arrested tuberculosis contracted while in the service.

Resolution 22: To extend the period of the Philippine Insurrection so as to include active service with the United States military or naval forces engaged in hostilities in the Moro Province, including Mindanao, or in the islands of Samar and Leyte, between July 5, 1902, and December 31, 1913. (Now H. R. 3251.)

Resolution 23: To provide that applicants for enlistments and enrollees disabled prior to rejection for active service to be entitled to hospitalization, pension, and compensation same as if they had actually been mustered into service.

Resolution 24: To provide pensions or compensation to veterans for disability or death incurred during peacetime service equivalent to 100 percent of the compensation payable to veterans and dependents of veterans of the armed forces for service-connected disabilities.

Resolution 25: To provide adequate pensions for dependents of deceased retired Regular officers and enlisted men.

Resolution 26: Recommends that the Federal Government has responsibility for assistance to all honorably discharged members of the Army or Navy and that in absence of employment opportunities or where there is shown inability to work part or full time, pension entitlement shall be granted such former members of the armed forces.

Resolution 27: To increase pensions to widows and dependents of deceased regulars who have died of service-connected disabilities.

Resolution 28: To amend act entitled "An act granting pensions and increases of pensions to certain soldiers, sailors, and nurses of the War With Spain, the Philippine Insurrection, or the China Relief Expedition, and for other purposes," approved May 24, 1938.

Resolution 29: Supports H. R. 1866, Seventy-eighth Congress, to provide monetary benefits for certain enlisted men of the Regular Army, Navy, Marine Corps, and Coast Guard discharged for service-connected disabilities.

Resolution 30: Advocates legislation which would remove discrimination against peacetime veterans in civil-service preference (Public 359, 78th Cong.), by including nondisabled, honorably discharged regulars on a parity with war veterans.

Resolution 31: Recommend a rating of permanent and total for all disabled regular veterans who are found unfit for employment.

Resolution 32: Provide for elimination of regulations which prevent members of United States Soldiers' Home and United States Naval Home from receiving their full pensions while residing in these homes.

Resolution 33: To provide prosthetic and orthopedic appliances needed for any veteran.

Resolution 34: To provide that any member of the armed forces who is honorably separated from service shall be granted hospitalization and domiciliary care by the Veterans' Administration subject to the same restrictions and limitations as are now applicable to war veterans.

Resolution 35: Recommends to extend the Soldiers and Sailors Civil Rights Act of 1940 for the period of 3 years after discharge or after the end of the war.

Resolution 36: To remove the statute of limitations as to claims for emergency officers' retirement benefits.

Resolution 37: To liberalize Public Law 743, Seventy-sixth Congress, act of July 15, 1940, pertaining to emergency officers' retirement benefits.

Resolution 38: Recommends amendment to Public, 140, Seventy-seventh Congress, providing enlisted men not retired or discharged with a total disability as of June 30, 1941, be eligible to the provisions of the act and same be made retroactive for a period of 10 years. To be placed under the act with their consent.

Resolution 39: Amend Public, 140, Seventy-seventh Congress, June 30, 1941, to provide all enlisted personnel surveyed, discharged, or retired under the provisions of prior acts, as well as subsequent to June 30, 1941, be extended the benefits of the act in the same manner and to the degree as men in the Army, whether their service was rendered in the Army, Navy, Marine Corps, or United States Coast Guard, or any combination of service in any of these branches, if they become incapacitated for further active service in line of duty, and not as a result of misconduct.

Resolution 40: To provide for the establishment of a veterans' hospital in southeastern Alaska.

Resolution No. 41: To provide for the establishment of a veterans' hospital in central Alaska.

Resolution 42: To provide hospital care for veterans of the armed forces and their families.

Resolution 43: Urges deportation of undesirable aliens.

Resolution 44: To authorize the Secretaries of War and Navy to furnish headstones or markers for graves of all honorably discharged members of the armed forces.

Resolution 45: Provide for preference to all honorably discharged veterans of the Regular Establishment under law and all rules and regulations promulgated by the United States Civil Service Commission, and a law that will require this Commission to publish all eligible lists and to make appointments from the list, in order of merit, with no eligible passed over without legal and adequate reason therefor.

Resolution 46: Preference to all veterans (discharged under honorable conditions) in employment, public and private, on parity with World War II veterans.

Resolution 47: Recommends Congress to provide for compulsory retirement for all Federal employees under civil-service laws after completion of 30 years' service.

Resolution 48: Recommends that Congress provide for a Board of 21 enlisted Regulars with a voice in the management of the United States Soldiers' Home for enlisted men of the Army who have a financial interest in and support the Home and preference for employment at this Home to veterans of the Regular Army.

Resolution 49: Provide uniform charges throughout the Army, Navy, Marine Corps, and Coast Guard for the hospitalization of dependents of all officers and enlisted men.

Resolution 50: Provide for equalization of charges to all veterans residing in United States Soldiers' Home and United States Naval Home.

Resolution 51: Provide that all former members of the armed forces be granted same monetary allowances when service is honorable.

Resolution 52: To allow extra credit double time on retirement to all enlisted personnel of the Army, Navy, Marine Corps, and Coast Guard for foreign service; to allow extra credit double time on retirement to all warrant officers of the Army, Navy, Marine Corps, and Coast Guard for foreign service.

Resolution 53: To provide for full military rank for members of the Army Nurse Corps, dietitians, physical therapy aides, and for other purposes.

Resolution 54: To provide for full military rank for members of the Navy Nurse Corps, dietitians, and physical therapy aides, and for other purposes.

Resolution 55: To provide for abolition of special temporary enlistment contracts in the United States Coast Guard.

Resolution 56: Urges enactment of legislation providing for retirement of enlisted members of the Regular Army upon completion of 25 years of active service therein.

Resolution 57: To provide for retirement as chief warrant officers upon retirement for disability after 20 years of service or after 30 years of service of those enlisted personnel who served in the armed forces of the United States during World War II and who held commissions during that war and later reverted to their enlisted status.

Resolution 58: To provide that members of the armed forces during World War II shall be advanced, upon retirement, in rank on the retired list to the highest commission, warrant or enlisted grade held during World War II.

Resolution 59: Provide that the same income-tax exemptions be granted retired members as are granted active duty servicemen.

Resolution 60: Recommend that Congress provide for the postwar period through:

1. Maintenance of the Navy at the end of the war in its strength at that time.
2. Maintenance of the largest air force in the world.
3. A permanent standing army of sufficient size to protect the United States.
4. Universal military training before the age of 21.

Resolution 61: To amend section 9 of the Pay Readjustment Act of 1942 (Public Law 607) by providing for the computation of double-time credits awarded between 1898 and 1912 in determining retired pay.

Resolution 62: Provide extension of social-security law to every citizen.

Resolution 63: Provide that a national veterans' shrine be built in the District of Columbia in memorium to all veterans of the armed forces of the United States and that all veterans' organizations which are recognized by the Congress of the United States and the Veterans' Bureau shall have office space without cost, the building to be maintained by the Veterans' Administration.

Resolution 64: To incorporate the Regular Veterans' Association as provided in H. R. 1128, Seventy-ninth Congress.

Resolution 65: To provide that the veterans' organizations who are recognized by the Veterans' Administration be given preference in the purchase of building materials, clothing, and food offered for sale under any Government contracts during or after hostilities.

Resolution 66: That when any enlisted person has completed 30 years as a member of the National Guard, including any service in the Army, Navy or Marine Corps and has performed all the service required by law or regulation during such time, except such part as he has been excused by competent authority from performing, he shall, upon application to the President, be placed upon the retired rolls of the Army at 50 percent of the pay provided for active service for the highest rank held during such period.

Resolution 67: Recommend to Congress military training with provisions as follows:

(a) That men from 18 to 21 be required to take military training for 4 months each year for a period of 3 years, then to be placed in the Reserve Corps and organized into units as recommended by the Army and Navy Departments.

(b) That enabling legislation be enacted by Congress which will assure a minimum of exemptions from military training, the basis of exemptions being an incurable disease or crippled persons.

(c) That these men take with them to their homes their individual field equipment and that small arms and ammunition be stored in convenient areas so that in emergency mobilization and arming could take place in the shortest possible time. Thus we would have in every town and section of the country men armed and ready to repel invaders from the air.

(d) That all men who complete the three periods of training be given frequent refresher courses that will keep them physically fit and in touch with military developments until they attain the age of 36; after that they should be placed in civil-defense units and given such refresher courses as needed to take up the duties of civil defense in all parts of the country, including armed resistance to invading paratroops.

(e) That men thus trained be not mustered out of the service until they have reached the age of 60 years.

(f) That plans for industrial mobilization be made which will enable this country to convert to wartime production in the shortest possible time. In past wars this has taken months. In the next war plans must be in effect which will produce equipment and supplies immediately.

Tribute to Mr. Bowles

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GALLAGHER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to Hon. Chester Bowles from the Valley City (N. Dak.) Times Record of January 31, 1946:

TRIBUTE TO MR. BOWLES

Right now this Nation is going through the economic jitters of reconversion. We know why we fought this war but now we are starting to wonder how we are going to get what we fought for.

If we, as a nation, are going to get anything near what we thought we were, that will take knowledge and planning and courage, and, of course, cooperation between all groups.

As a nation, we have the material, we have the men, we have the know-how. Right in our public life we have men with courage to go up against the buzz saw of politics.

Chester Bowles has that kind of courage. He has put his head into the lion's mouth again. So, by all the standards of pressure-group politics, Mr. Bowles should be a dead duck. He has baited the National Association of Manufacturers in its own lair. He has flouted the carefully organized automobile dealers; he has stood toe to toe and slugged it out with real-estate boards, steel and auto industries, department stores, and textile mills.

Now, Chester Bowles takes on the congressional cotton bloc. Yet what might seem a kiss of death to an ordinary politician, is a breath of life to Mr. Bowles. He is emerging as one of this administration's foremost leaders.

The Chicago Sun explains that in the price battle, often a lonely one, Mr. Bowles serves two causes. First, of course, is the cause of preventing wild inflations and the depression that would surely follow. By the way, even some of the farm-bloc inflations are pulling in their horns and asking to have wartime controls restored. The effect of these controls, now that they are off, is being vividly

illustrated. If Leon Henderson and Chester Bowles could have had the consumer support in the war, which Bowles is getting now, the whole story could have been different.

But the child has to be burned before he fears the fire. So we had to take off price controls on a lot of items to prove the point which so many conservatives denied during the war. The point is that price controls do check inflation, do keep the cost of living somewhere within reason. Mr. Bowles knows and has the courage to act on that knowledge. He knows that this country can shift into a peacetime economy of high employment without first going through the wringer of inflation and then deflation as we did after every other war. This boom-and-bust cycle is not necessary, but Bowles needs public support and personal courage to hold the price line.

However, Chester Bowles also serves a greater cause. He is proving that a man in public life can fearlessly fight for the common interest of all the people in the face of organized power and economic groups.

It has been said over and over that a modern industrial democracy must find the solution of its problems in the general interest of all parts of its economic life. Mr. Bowles has put that saying into practice.

The case for controlled prices during the present emergency rests upon the common interest of all of us, not upon the special needs of privileged groups. Bowles has shown what a man in public life, with the courage to do, can do. Today the public opinion polls show 72 percent of the people are against dropping price control.

The thing to do now is to put this unorganized public opinion to use, use it by putting it into political action for a planned economy of price stability and full employment and abundant production.

TERMINAL ASSOCIATION.

ST. PAUL, MINN.

Resolution of City Council of Lynn, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the City Council of Lynn, Mass.:

Whereas by the provisions of the GI bill, so-called, being Public Law 346, Seventy-eighth Congress, chapter 268, second session, it is provided by section 700 thereof that the Federal Government shall render aid for readjustment of returned World War II veterans and further provides that any person who has served in the military or naval service of the United States at any time after September 16, 1940, and prior to the termination of the present war, and who shall have been discharged or released from active service under conditions other than dishonorable, after active service of 90 days or more, shall be entitled to receive a readjustment allowance as provided therein for each week of unemployment, in an amount and under the conditions set forth therein, not to exceed a total of 52 weeks, and it is further provided in section 800, paragraph D-2 "in determining under subsection (a) of this section the suitability of work, no work shall be deemed suitable for an individual if (A) the position offered is vacant due directly to a strike, lock-out, or other labor dispute, and it now appears that various veterans of World War II who accepted positions after their release or discharge from the armed forces are without employment because of strikes, lock-outs, or other labor disputes, and by reason of such conditions, said veterans are not entitled to the benefits of the readjustment portion of said bill: Wherefore be it

Resolved, That the City Council of the City of Lynn, in meeting assembled, memorializes the Congress of the United States of America that said Public Law 346 be amended and modified so as to provide that any said veteran who is out of employment by reason of strikes, lock-outs, or other labor disputes, shall receive the compensation provided for by said Public Law 346, to the benefits of which any such veteran who has accepted a position or employment and is without the benefit of such position or employment by reason of a strike, lock-out, or other labor dispute, is not now entitled under the present existing law; and be it further

Ordered, That the city clerk, as clerk of the city council, forward a copy of these resolutions to the Congressmen representing the district including the city of Lynn, and the Senators representing the Commonwealth of Massachusetts.

Letter of Sherman Hickle, of Sanger, N. Dak.

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the first great industry in the United States of America was agriculture. It has continued to make a major contribution to the welfare of the people down through the years, producing an abundance for our own domestic requirements and shipping vast quantities abroad.

Times without number, the farmers of the Nation have been the stabilizers in an hour of crisis. If it can be said that an hour of crisis faces the Nation today, then it is highly probable that the farmers again will furnish the stabilizing influence to hold the machinery in line.

Under unanimous consent, I ask permission to include with my remarks a letter directed by Mr. Sherman Hickle, of Sanger, N. Dak., to the Bismarck Tribune of Bismarck, N. Dak. I include this for the Members of Congress and the country at large because I think it contains fundamental doctrines. I should like to remind my colleagues that the writer of this letter has lived in the western section of Dakota, a country that has suffered greatly from periods of drought and other distressing conditions that have invaded that territory from time to time.

Yet, through it all, by his letter you will see that he remains steadfast in his belief in the United States and the thing we call the American system. Many people in the United States today would be the better for having read this letter that comes from a farmer who lives in a marginal country that has suffered such great hardships.

The letter follows:

FAVORS FREE COMPETITION

SANGER, N. DAK., *January 2, 1946*.

EDITOR, TRIBUNE: I live on a farm and this farm is mine. My Government issued a patent to me for this homestead with the name of Theodore Roosevelt, President of the United States, written on it. That document made me the sole owner of this farm; therefore I am the master here.

When I acquired this farm I signed no pledges nor made any promises to my Government, nor to anyone else, that I would operate this farm in any way but my way. By that silent token I am under no public obligation to operate this farm and when I do till these lands I do so as a duty to my family.

As further proof that I hold rightful and legal possession of this farm, my Government has placed a value on it and levied a tax against it, based on that valuation, and demands that I pay that tax. That is right; I should pay taxes to support my Government so long as it protects me in the exercise of my inalienable rights such as life, liberty, and the pursuit of happiness, which last right means the right to work to supply my family's needs, the right to acquire and hold property, and, also, the right to use my property as my own best judgment dictates.

As the lawful owner and operator of this farm I have the right to hire other men to work in my fields and if one man is not satisfactory to me I have the right to fire him and hire another one to take his place. Whom I hire and whom I fire is nobody's business but mine, since I own the farm, pay the taxes on it, and bear all the operating costs. It is in perfect accord with the Constitution of my country that when I do not like an employee I have the right to discharge him, and if he doesn't like me or the job I have to offer him, he has the right to quit working for me. That is free enterprise in action and is wholly consistent with the American way of life.

Furthermore, when a workman leaves my employ or because he has been dismissed by me, that moment our relationship as employer and employee ceases and he has no legal nor moral right to remain on my premises nor to occupy any of the approaches to my property nor in any way interfere with the regular operation of this farm.

In a just and honest economy, there can be no Government regimentation of industry, nor Government-established maximum nor minimum wages. A workman is worth what his services are worth to his employer and there is no other honest way to compute wages. That, of course, would mean going back to the old merit system and granting an employer the right to decide just what a certain workman is worth to him.

That system would put labor in the same position industry is now in; that is, labor would also be in the competitive field. Free enterprise means competition and where there is no competition there is no democracy, because that is what democracy means, a competitive system in which thrift and merit win. A fixed wage scale, in which good, honest workmen are paid no more for their services than inefficient and indifferent employees are, is un-American and has no place in a democracy.

What I am building up to is this—that Henry Ford, Chrysler, General Motors or any other industrialist, big or little, individual or corporate, has or should have the same right to operate their respective properties as I have to operate this farm.

They live in the same country that I do. My constitutional guaranties cover them as well as they do me. They pay taxes to support the same government that I do. They pay their own employees, buy their own raw material, and find their markets for the finished products; then why, I ask you intelligent Americans, should they not enjoy the same freedom that I do?

Keep this solid fact in mind, my thoughtful fellow men, that government was not created to give anybody anything but to merely protect all of us while we prove our worth in this competitive world.

SHERMAN HICKLE.

Small War Contractors Under Renegotiations

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks to include a letter from the War Contracts Price Adjustment Board, I wish to submit the following letter from Col. Maurice Hirsch, Chairman of the War Contracts Price Adjustment Board, Washington, D. C.

The letter has been received in response to an inquiry of mine based upon an earlier statement in the RECORD commenting upon alleged difference in treatment between small war contractors and larger concerns.

A discrimination against concerns would be a distinct violation of the principles embodied in the Renegotiations Act and its amendments. As an example, I would call attention to the exemption in the original act for business totaling less than $100,000 in a year and the extension of that exemption to $500,000 in subsequent amendments.

Consequently, reference to alleged discrimination against small concerns aroused my interest because of my part in the initiating of the renegotiation statute and I submitted an inquiry to the War Department in this matter.

The report of the War Department follows:

WAR CONTRACTS PRICE ADJUSTMENT BOARD,
Washington, D. C., January 16, 1946.

Hon. FRANCIS CASE,
House of Representatives,
Washington, D. C.

DEAR MR. CASE: This is in response to your request for information as to the matters referred to in the remarks on the subject of contract renegotiation by the Honorable ANDREW J. MAY, which appeared on page A5043 of the CONGRESSIONAL RECORD for November 5, 1945. Mr. MAY there raises the question as to whether or not smaller war contractors may have received relatively less favorable treatment in statutory renegotiation than have larger concerns.

Inquiry has been made on this subject on other occasions. The matter received careful consideration by the House Small Business Committee under the chairmanship of the Honorable WRIGHT PATMAN. At its request, a report was submitted to that committee by the undersigned as Chairman of the War Contracts Price Adjustment Board. It is printed at pages 6145–6149 of the CONGRESSIONAL RECORD of June 14, 1945. Your attention is invited particularly to pages 6148 and 6149 at which is presented statistical material derived from more than 3,000 renegotiation cases. It is believed that in the light of those data it is not possible to support a contention that renegotiation authorities have given less favorable consideration to smaller war contractors than to larger concerns.

In any review of this matter it should be noted that the comparison of renegotiation cases solely by reference to percentages of profits on renegotiable sales will lead to improper and wholly unwarranted conclusion. It is a basic requirement of the Renegotiation Act that all the relevant facts and circumstances involved in each particular case should be considered and evaluated in arriving at the determination of excessive profits to be eliminated. Subsection (a) (4) (A) of that act expressly directs the consideration of the six factors therein defined.

Mr. MAY did not identify in his remarks the Company X and the Company Y to which he referred. If it may be assumed, as is believed to be the case, that General Motors Corp. was referred to as Company X and Willys-Overland Co. as Company Y, then the inadequacy of a comparison based solely on percentage of profit derived from renegotiable sales is apparent. Essential and controlling distinctions exist as to the facts presented in the 1943 renegotiation proceedings of these two companies. It is impractical within the limits of this letter to set out the details with respect to each of them, but those hereinafter referred to will be of especial interest.

Initially, the Willys-Overland Co. is hardly a little company when judged by ordinary standards. It had renegotiable fixed price sales of $98,200,000 after renegotiation in 1942 and $153,200,000 in 1943. On this business it retained a net profit before taxes of $9,400,000 in 1942 and $15,700,000 in 1943. Its 1943 total sales, including CPFF business, before renegotiation amounted to $193,851,000 and it realized a profit of $3,246,000 after taxes based upon audit by the Bureau of Internal Revenue and after the proposed renegotiation refund. During 1936–39 its average annual sales amounted to $16,301,000 on which an average annual net loss of $835,000 was realized.

Subsection (a) (4) (A) of the Renegotiation Act requires that consideration be given to volume of production and normal prewar earnings of war contractors. The large expansion of the sales and profits of Willys-Overland Co. during the war period is obvious. Its 1943 fixed price renegotiable business alone was more than 10 times its otal average annual business in the peacetime base-period years of 1936–39. Its profit of $15,700,000 in 1943 from renegotiable fixed-price business, after renegotiation but before taxes, and $3,246,000 after renegotiation and after taxes, is in contrast with an average annual loss of $835,000 suffered during the base period. In comparison, General Motors' 1943 renegotiable fixed-price business was 2.2 times the average volume during the base period and the dollars of profit on that business before renegotiation and before taxes were 2.3 times the average profit derived during the base period. The 1943 profits of General Motors, after renegotiation and after taxes, amounted to $185,247,000, as against its average profit after taxes of $182,600,000 for the years 1936–39, thus showing practically little increase in net dollars of profit even though the volume of business had more than doubled.

The Renegotiation Act requires that consideration be given to the reasonableness of costs and profits and to the risk incident to reasonable pricing policy. In this connection, Willys-Overland's renegotiable fixed price business during 1943 produced profits before renegotiation and Federal taxes amounting to 17 percent of sales. In the case of General Motors the comparable figure is 14.3 percent of sales. It is possible that the narrower margin realized by General Motors was the result of its policy, declared by it even before the enactment of the Renegotiation Act and effective as of January 1, 1942, for the restriction of profits during the war period.

Subsection (a) (4) (A) of the act requires that consideration be given to the complexity of manufacturing technique and character and extent of subcontracting. Willys-Overland in its war production has been relatively less integrated than other large automobile manufacturers. The cost of materials used in its renegotiable business in 1943 by Willys represents 72 percent of its cost of sales, whereas the comparable General Motors' materials cost in the same year was only 49 percent of its cost of sales. The 1943 profits from fixed price war business which Willys-Overland will retain after the renegotiation amount to 38.3 percent of the value which Willys itself added by manufacture to the materials and subcontracted items, whereas the profits retained by General Motors from its fixed-price war production, after renegotiation, amount to 27.6 percent of the value which it added by manufacture to its materials and subcontracted items. The profits retained after renegotiation, in relation to value added by manufacture, are higher in the case of Willys-Overland than in the case of any other of the large automobile manufacturers.

Mr. MAY compares the profits realized by Companies X and Y from their nonrenegotiable business with the profits derived from their renegotiable business. In making such a comparison it is appropriate to consider first that the Price Adjustment Boards have no authority under the law with respect to nonrenegotiable profits. It should be noted also that such a comparison has little effect unless it can be assumed that the character and extent of the nonrenegotiable business of the two companies were practically identical. In 1943 the nonrenegotiable sales of Willys-Overland Co. were less than 1 percent of its total sales. In the case of General Motors Corp. the nonrenegotiable business amounted to approximately 10 percent of its sales. The diversity of products and manufacturing operations of the General Motors Corp. is far wider than that of the Willys-Overland Co. Furthermore, it is of interest to note that the General Motors Corp. applied its self-imposed wartime profit restriction to its nonrenegotiable as well as to its renegotiable business.

It is to be regretted if Company Y will have difficulty in reconverting to peacetime production. If Company Y be the Willys-Overland Co., it should be apparent from the foregoing that such difficulty is not attributable to "inequitable treatment accorded it by the Renegotiation Board" in contrast to what was indicated as "comparatively liberal treatment" accorded to General Motors Corp. The Willys-Overland Co. entered the war period with relatively less working capital to finance a large volume of business than did larger concerns. No new private capital was invested in the business during the war period. Renegotiation authorities in determining excessive profits have sought to give due consideration to the risks, financial and otherwise, to which contractors were subject in the conduct of their war business. They have not, however, allowed a reserve out of excessive profits for the establishment or reestablishment of peacetime business. The allowance of such a reserve out of excessive profits would result in a contribution at the expenses of the Government to the contractor's capital, in addition to a fair payment to him for the work he has done and the articles he has furnished. A proposal to permit the creation of such reserves was considered by the House Ways and Means Committee during the course of the hearings leading to the adoption of the 1943 act. It was recognized that such a provision would operate to the advantage of those contractors who had accumulated excessive profits and to the relative disadvantage of those

concerns which by reason of close pricing had not permitted such excessive profits to arise.

If you desire any further information in connection with this matter, please call upon us.

Sincerely yours,

MAURICE HIRSCH,
Colonel, General Staff Corps, Chairman.

"Where Do I Stand?" Says the Veteran

EXTENSION OF REMARKS
OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. LATHAM. Mr. Speaker, following my release from naval service last year, and after I had taken my seat in Congress, many servicemen asked me the question: "Where do I stand? What are my rights regarding educational benefits, hospitalization, loans, and so forth?"

I have received numerous letters from servicemen which clearly indicate that in spite of all the information given them on veterans' benefits, they find it difficult to ascertain exactly what rights and benefits are theirs as a result of their military service. Furthermore, they do not seem to know exactly where to go to obtain these benefits.

I believe it would be of service to veterans who reside in my district to set forth their rights in simple question-and-answer form; also the particular place in their community where help can be obtained by them.

In order that they may have the whole picture before them, I have asked the representatives in the State legislature from my district, State Senator Halpern and Assemblymen Archinal, Rabin, and Preller, to collect for me and enumerate what New York State has to offer the veteran. This they have very willingly and ably done, and I wish to thank them for their splendid cooperation:

First. Am I entitled to any benefits? Yes, if discharged under conditions other than dishonorable and you have been in service for at least 90 days, or suffered injury in line of duty. This applies to both State and Federal benefits.

Second. Can I get my old job back? Yes. You lose no seniority because of your service. However, you take your chances on being replaced by other veterans coming back after you with more seniority. You must remember to apply for your old job within 90 days of discharge or end of hospitalization. If you have any difficulty, you may consult with the Veterans' Personnel Division, Selective Service Headquarters, 1 East Forty-fourth Street, New York City.

Third. Am I entitled to special help to get a new job? Yes. Go to the veterans' representative of the United States Employment Service, 11 West Forty-second Street (twenty-second floor), New York City. For a civil-service job see United States Civil Service Commission, 641 Washington Street, New York City, for Federal; 80 Center Street, New York City, for State; and 299 Broadway, New York City, for city jobs.

Fourth. How about loans?

For purchase of homes and farms? Yes. The Government guarantees 50 percent of a loan, guaranteed amount not to exceed $4,000.

For business purposes, including purchase of stock for farm or merchandise for store? Yes. The Government guarantees 50 percent, guaranteed amount not to exceed $2,000. Must be repaid within 10 years. See State Department of Commerce Office, room 905, 342 Madison Avenue, New York City, or local bank or building and loan association.

Fifth. Do I get a civil-service preference? Yes. On Federal civil-service examinations you get 5 extra points; if you are at all disabled, 10 points; widows of honorably discharged servicemen, and wives of totally disabled servicemen, 10 points. You have preference in promotion and retention in service. In New York State disabled veterans go to the top of the list, and other veterans come next, provided examinations are passed.

You may get information as to examinations and application forms for civil-service positions from any first-class post office, or:

For Federal positions, 641 Washington Street, New York City; for State positions, 80 Center Street, New York City; for city positions, 299 Broadway, New York City.

Sixth. Am I entitled to medical care and hospitalization?

For service-connected disability? Yes; even if merely for aggravation of previously existing condition.

For non-service-connected disability? Yes; if unable to pay the cost yourself. See nearest Veterans' Administration facility. There is one at 92–32 Union Hall Street, Jamaica, N. Y.

Seventh. Am I entitled to unemployment insurance? It is called service readjustment compensation. If earning less than $23 a week or, if self-employed, and earning less than $100 during the previous month, you are entitled to $20 a week for a maximum of 52 weeks. Eight weekly payments will be made for each month of active service up to 3 months, and 4 weekly payments for every month or major fraction thereafter. These payments will not be deducted from future bonus payments. Go to the United States Employment Service Office, 90–01 Sutphin Boulevard, Jamaica, N. Y.

Eighth. Can I go to school with Government help? Yes. You are entitled to 1 year plus time of service, up to a maximum of 4 years. Short intensive courses and correspondence courses may not cost more than $500, and you are allowed a tuition of $500 a year for regular schooling. Subsistence allowances of $65 for single men, and $90 for those with dependents will be made. Consult Veterans' Training Officer, Twenty-fourth Street and Seventh Avenue, New York City, or New York State Veterans' Counselor.

Ninth. If I am vocationally disabled will the Government retrain me? Yes. But course must be completed within 9 years from end of war. Subsistence allowances of $105 for single men, $115 with a dependent, $10 for the first child, $7 for each additional child, and $15 for a dependent parent will be made. See Veterans' Training Officer, Twenty-fourth Street and Seventh Avenue, New York City.

Tenth. Do I get a bonus? Not yet; but both the Federal Government and New York State are considering giving a bonus.

Eleventh. Do I have preference in purchase of surplus property? Technically, yes. But the difficulty of location, selling in small lots, and poor administration have practically nullified this right. The situation may improve, however. Loans may be obtained for purchase of such property. Go to the War Assets Corporation, Empire State Building, sixtieth floor, New York City, to be certified.

Twelfth. Must I pay income tax for my period of service? All war-service pay of enlisted men from 1941 is entirely exempt from Federal income tax. If that is sole income, no Federal return need be filed. Commissioned officers may exclude $1,500 from their income. Reserve officers may apply for extension of time to pay tax on service compensation for years beginning December 31, 1939, and before January 1, 1947. Tax may be paid in 12 equal quarterly installments over 3 years without interest on service pay. You must, however, file a State income-tax return if your net income exceeds $1,000 if unmarried or $2,500 if married. One hundred-and-eighty-day extension is granted on State returns if overseas. See Internal Revenue Bureau, 90–01 Sutphin Boulevard, Jamaica, N. Y.; New York State Tax Department, 320 Schermerhorn Street, Brooklyn, N. Y.

Thirteenth. Will my military service help me to acquire citizenship? Yes. For veterans there is no fee, no waiting period after filing petition, no restrictions as to age, race, enemy nationality, period of residence in the United States, or ability to speak, read, or write the English language; first papers are not required, and petition may be filed in any court with jurisdiction irrespective of residence. See Immigration Bureau, 271 Washington Street, Brooklyn, N. Y.

Fourteenth. How about purchase of a new house? During the present housing emergency, veterans are given priority in the purchase of new homes costing less than $10,000, or which are rented for less than $80 a month. See Civilian Production Administration, Sutphin Boulevard and Eighty-ninth Avenue, Jamaica, N. Y., or State Housing Authority, 80 Center Street, New York City.

Fifteenth. If disabled, do I get a pension? For service-connected disability? Yes; ranging from $11.50 a month to $300 a month, depending upon the degree of disability.

For non-service-connected disability? Yes; from $50 to $60 per month if disability is permanent and total, and annual income of veteran, if single, does not exceed $1,000; or if married or with minor children, $2,500. See Veterans' Administration, 92–32 Union Hall Street, Jamaica, N. Y.

Sixteenth. May I continue my Government service life insurance in civilian life? Yes; and it is an excellent thing to do. The rates are low and it can be continued without a new physical examination. However, within 8 years it must be converted from term insurance to ordinary life, 20-payment life, or a 30-payment life policy. Checks should be made out to Treasurer of the United States and sent to Collection Subdivision, Veterans' Administration, Washington 25, D. C., within 31 days of end of period for which premiums were last paid. There is a form for this purpose.

Seventeenth. Did my private insurance policies lapse during the war? Up to $10,000, if held at least 30 days before entry into service, policy will not lapse for nonpayment of premium until 2 years after discharge.

Eighteenth. May I try for a scholarship? Yes. New York State has 2,400 war-service scholarships. One thousand two hundred will be awarded in 1945 and 1946, on the basis of competitive examinations once a year. Annual value of scholarships is $350. Legislation now pending to increase value and number of scholarships. You may also receive training in many State agricultural, trade, radio, aviation, and other technical schools run by New York State. See Director of Veterans' Affairs, 111 Broadway, New York City.

Nineteenth How do I renew my professional license? If you are a licensed doctor, dentist, engineer, architect, embalmer, insurance agent, and so forth, you need only apply for renewal to the board which issued your license, within 3 months of discharge. See your local State veterans' counselor.

Twentieth. What about my driver's license? Licenses may be renewed upon presentation at the Motor Vehicle Bureau, Sutphin Boulevard and Eighty-ninth Avenue, Jamaica, N. Y., of discharge certificate before the September 30 following 60 days after discharge.

Twenty-first. What if I become blind? If service connected see question 15. Even though not service connected, provided lack of vision is sufficient to prevent holding a job, you are entitled to a $500 annuity pay by New York State. See Director of Veterans' Affairs, 111 Broadway, New York City.

Twenty-second. Can I go to a rest camp? Yes. The State of New York provides a beautiful rest camp at Mount McGregor, Saratoga County, N. Y. See your local veterans' counselor.

If you have any questions about your rights under the Federal law I shall be very happy to try to answer them. Write to me, HENRY J. LATHAM, Congressman, Third District, New York, at room 139, House Office Building, Washington, D. C.

If you have any questions regarding the State law write to State Senator Seymour Halpern, Assemblyman George Archinal, in the Seventh Assembly District; Assemblyman Samuel Rabin, in the Eighth Assembly District; or Assemblyman Fred W. Preller, in the Ninth Assembly District. They may be addressed at the Capitol, Albany, N. Y.

Your inquiries will be welcome.

Interest of Women in Public Affairs

EXTENSION OF REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, the distinguished gentleman from Michigan yesterday made a statement to the press in which he suggested that the organized women of our country were being misled and propagandized into action on subjects about which they knew little. My opinion is that the gentleman grossly underrates the women of America. Their organizations have a record of far-sighted civic statesmanship which is a credit to the whole Nation.

While women are less interested than men in partisan politics, they care supremely about matters which affect world peace and the general welfare. When these issues are touched, I am proud to say that they spring into action. Often the women's groups are the only spokesman for the general welfare as opposed to special interests.

The great national women's organizations have committees and experts which watch current affairs and are glad to hear the facts from all quarters. They do not act rashly, however, for most of them accept their programs only after long and careful study. When their long-range considered programs need action on some specific measure I am glad they are organized to be effective.

Stand Up and Be Counted

EXTENSION OF REMARKS
OF
HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. BOREN. Mr. Speaker, if I may speak parenthetically for a moment—so that there will be no misunderstanding of my words, let me make this very clear at the outset. It is unquestionably the right of any man to quit work, or of any group of men to quit work, except to the extent of his obligation to perform a task that might be in the terms of a contract to which he is a party and which was drawn without duress and of his own volition. This is right, and ought to be. But, the term "strike" as it is used, and as it has come to be known and as it is joined with the claim of a "right" to strike, embodies preventing production, embodies coercing the individual into quitting work against him own individual wishes or preventing him from going to work on his own choice. And, throughout my remarks the term "strike," when used, will be construed to be what is the usual use of the term today in industrial disputes, and what I conceive to be a proper interpretation of the term since, in its general application, it is constructed out of the materials of the closed shop, the picket line, the call to strike in the form of an order from a dictatorial leader, and work stoppage in the sense of preventing any other individual American from taking over a job that has been vacated. The right to quit work, of course, is an individual right, and it is a right, but the right to hold work in abeyance, refusing to let anyone else do it, does not exist as a right in my opinion.

All my life I have heard about the right to strike, and I let that claim go unchallenged until the time when America found its boys dying on Bataan and, shortly thereafter, in all the far-flung areas of war. There were strikes in the plants of war production even in those early days of our war effort when a few more planes or munitions would have returned home many more American boys who now lie buried beneath the ferns and palms of the far Pacific, in the sands and on the crags of north Africa, on Italy's Anzio beachhead and the slopes of Mount Cassino. I heard then the so-called leaders of some of the labor organizations speak of the right to strike. I could not see anything right about it.

Burdened with the tragedy of the loss of personal friends and relatives, fortified by a share in responsibility for the conditions that affected the success or safety or life or death of all America's men-at-arms, and urged by deep anxiety for the heroic men and boys starving and tortured in the prison camps, I arose to challenge that claim of right to strike. I could not see anything right about it, and with some of you here I joined hands in the endeavor to put an end to strikes in war industries and we passed the Smith bill.

It is true that in the ensuing election the CIO Political Action Committee opened its bank account to my opponent and brought the full force of its organized strength into the election contests in the hope of removing me from the Congress, as they did some of you others who also refused to be subservient to their dictation. They will do it again this election, of course. Today I hear in these Halls and cloakrooms and in our office buildings the threat of reprisal at election, and in some quarters, expressions of fear as to the political consequences of what we do here on this issue. Such considerations are too petty to be of any weight in any man's deliberations here today. It is a part of our history that in these Halls served a man whose words were, "I had rather be right than President," and he suited his deeds to his words. As for me, I had rather be right than Congressman, and, suiting my deeds to my words I want to help bring up this bill today including the Case amendment and vote for it and pass it and make it the law of the land.

Let us stand up today and be counted on this issue. Elections will come soon when all Americans will stand up and be counted on this issue. We know, each of us, that this issue envelops all of America. It is today paramount in national importance and it pervades the interest

of every home and affects the welfare of every citizen. Day before yesterday we had a roll-call vote on going into the committee with this bill. Let us fight it out today and then we can fight it out again in the coming elections and settle once and for all whether the people of America and their representatives, or the CIO Political Action Committee, the Petrillos, and the other dictators of organized labor, shall rule America.

Today, again, on every hand, and in half the speeches made in this rostrum there is asserted that there exists a right to strike. Justice Brandeis, who was known as the great liberal, delivered an opinion on the bench of the Supreme Court of the United States in which he pointed out that there is no such thing as a constitutional right to strike.

I have read the Bill of Rights in the Constitution of the United States of of America and no such right is listed. From the preamble of the Constitution to the last word there is not one word that gives status to the claim that there is any right to strike, if the right to strike means the right to keep other people from working.

When I look at the Nation's need today and recognize, as all of us must, that the only reliable prevention of inflation is full production; when I see throughout our country the need of the goods our industry is geared to produce, again I challenge the word "right" when used in conjunction with strike, if the right to strike means the right to stop production and to force every man to quit work whether he wants to or not. I do not see anything right about that.

The freedom, the independence, and the rights guaranteed by the Constitution of the United States are essentially individual in character. In recent years the rights of the individual have been seriously impaired. Even within organized labor the individual union member has had his rights usurped, his freedom impaled, and his independence chained into bondage. If there be any doubt in any man's mind as to the validity of that assertion, I invite him to examine the hearings before your own congressional Committee on Interstate and Foreign Commerce when the so-called Petrillo bill was under consideration.

There is another principle that is fundamentally American, and that is, freedom does not mean license. The freedom of the individual or the group to follow the dictates of its whim, its fancy, its depredation or its desire, is limited to the consistency of the welfare of the whole people. There is oft told the story of the Irishman coming to this country. When he set foot on our soil he threw his arms in the air and yelled, "Hurrah! I'm in a free country." And, when his wide-flung arms struck a passerby in the face, broke his glasses and bruised his face, the Irishman was promptly knocked down. Rubbing his chin he said, "Faith, and I thought I was in a free country." He was admonished as follows by the man he had hit: "You are in a free country, but your freedom ends where my nose begins." It is as simple as that. That, in effect, is the issue here today.

Let us today pass through the smoke screens, toss aside the propaganda, and stand on the ground of what is fundamentally right for all the people. The siren voice of false claim, nor threat, nor pressure should cudgel, persuade, or influence our decision here. These issues are fundamental. It is clear to my convictions, and I think evident to reason, that neither labor nor management has the fundamental right to decide what is good or bad for the American people. Only the people themselves have the right to decide that. Apply that view to the present problem, as representatives of the people it is up to us to prescribe a system which eliminates a conflict of interest between the employer and employee and which is directed to the advantage only of all the people.

The wisdom that founded the Government of this Nation and built it on the enduring principle of Americanism laid its granite foundation in the principle that all just powers of Government are derived from the consent of the governed. The founders so carefully applied that yardstick to the whole people as to specifically point out that no particular segment was to constitute the whole, hence the separation of church and state, the foundation of public schools, and the safeguards against levying taxes on the whole people or making laws on the whole people in the interest and to the benefit of private institutions, private groups, and so forth. It is quite clear a fundamental tenet of Americanism that no particular group of any kind or character shall rule America. Unionism and the state must be kept apart as surely as the church and the state must be kept apart; as surely as the Elks Lodge and the state must be kept apart; as surely as any other private interest, group, or institution must be kept apart. Any personal or selfish interest or aim, whether it be good or bad, or whether it be on the part of any individual or group must be kept apart from control of Government, and must be kept within the bounds of limitation that prevents its infringement on the rights of the whole people and prevents its action against the welfare of the whole people.

To give a complete transcript of my mind and thought, I feel it my responsibility to add: I do not believe in a closed shop. I believe the closed shop is both un-American and un-Christian. I do not think the individual's opportunity to earn a living should be conditioned on his being compelled to belong to an organization if he does not wish to belong to it. I do not believe that any American individual can rightfully be compelled to join any particular union or, as for that matter, any particular church or lodge.

And, finally, my colleagues, let me reaffirm my conviction that the inalienable rights which are so correctly announced in the charter of our Government are all individual in character and belong to the individual American. Further, let me reaffirm my assertion that neither management nor labor has a right on its whim or caprice to decide the good or bad for all the American people. In the light of the Nation's need and the current chaos in production of needed goods, I say again, with reference to the claim of a "right to strike" meaning the right to stop production, not only the power to compel great numbers to quit work, but the power to prevent others from working—I can see nothing right about it.

Full Employment Bill

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. POWELL. Mr. Speaker, I will vote on this bill if there is a roll call as follows: "Present and not voting."

If there is no roll call then I want to go on record now as not being in favor of this so-called full employment bill. This is not full employment, nor is it employment. It does not state anything that has not already been stated by the American way of life. It provides no machinery to see that citizens are assured employment. It is not only watered down but it is washed out.

I am further against this bill because there is absolutely no protection for the minorities of our country. Today, close to 30,000,000 American citizens are discriminated against—because of their color, Negroes; because of their race, Jews; because of their religion, Catholics; because of their national origin, Mexicans. This bill will not in any way help them. The same un-American practices of discrimination will continue. It would have been far better not to have had any bill than this, because this is a compromise. Compromises were proven disastrous at Munich. We should continue to fight until we get a full employment bill, not just any bill.

United States Service Legion of World War II

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. JENKINS. Mr. Speaker, there has been organized in my home city of Ironton, Ohio, the Hudson Brothers Post of the United States Service Legion of World War II. This post was organized in honor of Ronald Hudson and Kneeland Hudson, who were brothers and the sons of Mr. and Mrs. Ronald Hudson, of Ironton, Ohio. These two courageous and patriotic young men gave up their lives in the recent great World War. If it was necessary for these two gallant young men to give up their lives for our country then may their devoted parents

take solace in the thought that there is glory in one giving up his life for another. The Hudson Brothers Post has grown rapidly and now has a membership of 385 members. Recently Mr. Harry Burbrink, Sr., the national commander of the Auxiliary of the United States Service Legion of World War II, delivered an address to the veterans of World War II and their auxiliary and friends. Under leave to extend my remarks I wish to include the address which is as follows:

Ladies and gentleman, what I have to say this evening is primarily for the ears of the war veteran of World War II. Yes, veterans; my message deeply concerns you.

It is indeed a pleasure, also a privilege today to tell you about a fast growing organization for World War II veterans only. I refer to the organization known as the United States Service Legion of World War II. This organization had its beginning as an organization shortly after the beginning of the World War II; organized on Memorial Day, May 30, 1942, in the city of Cincinnati, Ohio, and chartered under the laws of the State of Ohio, September 8, 1943, with national headquarters located in the city of Cincinnati, Ohio. The purpose or purposes for which the organization was formed are: "To protect the right and interests and to promote the welfare and benefits of those who have enlisted or have been called to serve in the armed forces of the United States of America."

If you are a veteran of World War II and you feel that the principles for which you fought should not be permitted to languish, if you are concerned with the future welfare of the Nation, you will be more than interested in the program of the United States Service Legion of World War II. I am indeed happy to have this opportunity to introduce this organization to you and to explain something of its activities. Since its inception, this Legion has enjoyed the support and good will of all the veterans' organizations. Senators and Congressmen have expressed favor in the program of this Legion. During the past year other veterans' organizations have been springing up throughout the country and several of these organizations have approached our national officers with the purpose of uniting with their organizations. Their offers were refused due to the fact that this organization was not formed overnight like some of the disreputable ones in existence today who prey upon the veteran.

Membership in the United States Service Legion of World War II is open to any American citizen, male or female, without distinction as to race or creed, who served actively in the Army, Navy, Marine Corps, or Coast Guard during World War II, and who has been honorably discharged from same. Membership is also open to women who have served with the WAC's, the WAVES, SPARS, Marine Corps, or Nursing Corps, and who have been honorably discharged from same. With more than 15,000,000 potential veterans eligible for membership, the United States Service Legion of World War II promises to become one of the largest and most influential veterans' organizations.

Here in the city of Ironton the Hudson Brothers Post growth has been especially rapid. This post alone has a membership of over 385 members and is still growing. Our other posts throughout the State report likewise expansion.

The Hudson Brothers Post was named in honor of Ronald and Kneeland Hudson, sons of Mr. and Mrs. Ronald Hudson, of Ironton, Ohio, in honor of the glorious fighting spirit and supreme sacrifice which they so willingly made. Today, January 10, 1946, the national officers of this organization will institute and install those officers elected as State officers of the State of Ohio, at the Hudson Brothers Post headquarters. It is indeed a credit to the city of Ironton to have State headquarters located here for the State of Ohio. Also, a credit to the veterans of the organization, all of whom have shown at all times full cooperation in the affairs of their organization, the United States Service Legion of World War II, and I feel confident that the administrative officers of your city are justly proud to know that State headquarters for the United States Service Legion of World War II veterans will be located in your city of Ironton, Ohio. Yes, I might say the city of hospitality.

At this time I wish to extend an invitation to all veterans of World War II to attend the installation ceremony tonight; at the same time I urge all present officers and members to attend.

Many veterans realize the logic and the reason for becoming identified with an organization such as this Legion. Most of the millions of veterans of World War II are convinced of the futility of war as an instrument of national policy. They have seen at first hand the devastation, the indescribable suffering, the heartache, the anguish which attends armed conflict between nations. The veterans of this war are young men and women for the most part. They were not responsible for making this war. They paid and are still paying for the mistakes of an elder generation. They do not want to see those mistakes repeated.

The veteran of today realizes that there are tremendous problems facing our Nation in the days immediately ahead. A war does not end with the treaty of peace, the instrument of surrender. Wars never do. The struggle between armies stops, but the effects of war go on working destruction for generations afterward. The veterans of World War II comprise the major part, the vitally interested part, of a new generation. It is up to them to see that the objectives for which they fought and for which so many of their comrades died are carried over into national life and action.

Individually, the veteran can do little. In order for him to assume a proper and legitimate role in the rebuilding of America, it is essential that he and his former buddies be organized—and organized strongly.

If social and economic justice is ever brought about, if wars and depressions are ever made obsolete, if the letter and spirit of the preamble to the United States Constitution are ever given their rightful place in our individual and collective lives, if a better democratic society is ever achieved by these men and women who have carried into a later active life the aspirations and ideals for which they fought, the instrument through which they can make their influence effective is an organization strong in numbers and strong in principles. Such an organization is the United States Service Legion of World War II.

Permit me to outline briefly a few of the principles to which the members of this legion are pledged. True loyalty to the Government of the United States of America, based upon a respect for and devotion and fidelity to its Constitution and laws made evident by our disapprobation of anything that is disloyal, treasonable, or rebellious, or anything that will in any manner impair the efficiency and permanency of our National Union.

The United States Service Legion of World War II veterans is founded upon loyalty, charity, and patriotism; second to this we are banded together not for self-seeking but to work for the best interests of our veterans.

We believe that our returned veterans are entitled to the fullest opportunity for speedy reconversion to civilian status so that they may once more become constructive citizens.

We believe that Americans should exercise the full rights and obligations of citizenship, to protect our democratic principles, and to promote honesty and integrity in public office.

These are few of the major ideals to which the members of this organization are pledged. I believe these are principles with which all thoughtful Americans are in complete accord.

The United States Service Legion of World War II, has no intention to discredit or detract from the influence of existing veterans' organizations of previous wars. The American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the Army and Navy Union, these have all made their significant contributions to our American mode of living, and the United States Service Legion of World War II, their counterpart of World War II extends the hand of good fellowship and full cooperation on matters of mutual interest. However we do feel, as most veterans feel, that those who served in this greatest of all wars should have an organization of their own, an organization composed of young hearts and voices which will keep the spirit and temper of a new generation.

For this same reason I earnestly call upon all veterans of World War II to become familia with this organization, to examine its objectives, to join it, and support it. The various posts of this legion stand ready to answer inquiries with respect to the organization and to receive new members, or you may address all inquiries to the United States Service Legion, World War II, National Headquarters, Cincinnati, Ohio, in care of P. O. Box 365. A prompt reply will be sent on receipt of your letter.

Veterans of World War II, here is your opportunity as American citizens, as the generation of tomorrow, to unite in fellowship and patriotism as comrades in World War II under the banner of the United States Service Legion of World War II so as to stand united to protect the rights and interests and to promote the welfare and benefits of all of us who enlisted or who were called to serve in the armed forces of this great and grand country of ours, the United States of America.

I thank you.

International Information Service

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1946

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent article appearing in the Washington Star by Frank R. Kent:

BENTON CALLED UNCONVINCING IN EFFORT TO EXPLAIN INFORMATION AGENCY NEED

(By Frank R. Kent)

The effort of William Benton, the Assistant Secretary of State, who is endeavoring to establish for this country an official international information service, to explain that under him the distribution of news would be "objective" and in no sense, propaganda, is singularly unconvincing.

No doubt Mr. Benton is sincere in his belief and his intentions are pure. Even Elmer Davis believed that he, too, was "objective" in his conduct of the late and unlamented OWI, but the charges that quite often some very crude administrative propaganda got mixed with American propaganda were fully substantiated, and the agency never smelled very good. In time of war, propaganda, of course, is essential and proper; in time of peace, it is wholly out of tune with American precedents principles, and professions.

That is why the Associated Press board of directors, supported now by the United Press, have declined to furnish Mr. Benton's organization with their news for short-wave broadcasting, now the war is over, in the way they did the OWI when the war was on.

VIEW TAKEN BY ASSOCIATED PRESS

Their point is that no matter how well intentioned Mr. Benton may be no Government-sponsored news service, information service, or publicity service, whether supplemental, background or whatever you choose to call it, can ever be really objective; that, no matter how it starts; it inevitably becomes propaganda in the end; that for us to establish such a service as is proposed is to do exactly the thing we have deplored in other nations; that soon or late it means an international propaganda race, sure to create friction and breed ill will, distinctly not in interests of world amity and accord.

Believing this, it is easy to understand why our great press associations refused to put their facilities at the disposal of Mr. Benton. And this refusal was strongly indorsed a few days ago by Mr. Christopher Chancellor, general manager of Reuter, the British news agency comparable to the Associated Press.

In a speech to newspapermen here Mr. Chancellor criticized British propaganda and deplored governmental news sponsorship anywhere at any time.

"News," he said, "is sacred. That is why any handling of news by government is so greatly to be feared. When governments go into the news business, it is very hard to get them out again. The appetite grows with the eating. If once you begin to tamper with the news, even with the highest motives, you find yourself sliding down the slippery slope toward a pit which is bottomless."

Exactly who conceived the idea of converting our wartime propaganda machine into a peacetime publicity machine is uncertain, but it took both clearheadedness and courage for the Associated Press to see through it and take a firm stand against it.

Neither the charges of the exasperated Mr. Benton that it is interfering with the foreign policy of the country and refusing to cooperate with the Government nor the ill-natured slurs of Mr. Davis over the radio, where he seems to be about as objective as he was as head of the OWI, diminish the basic soundness of the AP's position.

CAN'T DISGUISE FACTS

Nor do the local cries that America must not be left at a disadvantage by having no means of making her voice heard in the world disguise the facts, first, that we have gotten along pretty well in the past without this kind of business; second, that, call it what you will, it is certain ultimately, as Mr. Chancellor says, to put us into competition with the propaganda of other nations who can—and always will—beat us at that game.

Of course, there are other objections to the establishment of this far-flung "information service" aside from the one that it takes us along the propaganda road which we have always regarded as reprehensible in peace periods.

One of these is that it is expensive at a time when the great need of the Nation is for economy. Mr. Benton has mentioned a "six to ten millions" deficit, but conservative estimates put the cost at much more than that. A second is that the personnel of the organization is hardly first class. It is largely composed of the dregs of the OWI, which at its peak was none too good.

Several thousands, unable to get civilian jobs when the OWI was liquidated, succeeded in transfering to the State Department pay roll—and there they cling. The plan, it is said, it to man the new service with these.

A third objection is that the scheme is very unpopular with our career diplomats in all parts of the world who look with distaste at the prospect of having these former OWI employees thrust into their embassies and legations. They take a very dim view of the whole scheme—and their feeling is beginning to be reflected in Congress where naturally, they have friends.

It may be that that body, regarding this as no time to enter upon any new and costly experiment, will end the whole affair by simply declining to make the appropriation. Worse things could happen.

The Truth About Yalta—A Year Late

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the United States News entitled "The Truth About Yalta—A Year Late":

THE TRUTH ABOUT YALTA—A YEAR LATE

(By David Lawrence)

How can the people of the world trust the heads of governments any more when they make evasive and equivocal statements in their official communiques and speeches, declaring that no secret deals or commitments have been made, and then a few months later the opposite is revealed as the truth?

Just a year ago Marshal Stalin, Prime Minister Churchill, and the late President Roosevelt were meeting at Yalta. They reached a number of agreements. Some were made public. There were, however, vague references to military considerations which prevented full disclosure of all agreements reached. It turns out now that in direct violation of the pledges made to one another under the Atlantic charter, Russia—although still at peace with Japan, our enemy—asked for and obtained from the heads of the British and American Governments an agreement that Japanese territory in the Kurile Islands and in the southern half of Sakhalin Island should be annexed by the Soviet.

But, it will be asked, was it not necessary for the American and British representatives at the Yalta Conference to make such a promise in order to induce Russia to enter the war eventually against Japan?

This is a question which will never be satisfactorily answered. For it implies that Russia was not interested in helping us out against Japan except at a price and had to be bribed with promises of territory in order to cooperate with us. It implies that the help we gave the Red armies with our billions of dollars of lend-lease and with our sacrifices of American lives in opening a second front in France were not sufficient to appease Marshal Stalin. It implies that, although we, by our help in Europe, saved Russia from ignominious defeat at the hands of the Nazis, Russia was not willing to come to our aid in the Far East against the enemy which had attacked us unless given a large piece of Japanese territory.

WHY TRUSTEESHIPS FOR UNITED STATES?

Let us put the most charitable interpretation possible on it—namely, that Russia has had reason in the past to fear Japan and wanted the Kuriles and the southern half of Sakhalin as a measure of security. For in the newly annexed territory she can have air and naval bases close enough to pounce upon Japan with naval aircraft carriers as well as land-based planes. Let's assume that Russia needed all this for her security.

What then becomes of the objections to our full-fledged ownership of the islands we won in the Pacific? Why should those islands be placed under an international trusteeship while Russia is left with complete sovereignty over the Kuriles?

All through the San Francisco Conference we heard much about trusteeships. Many American observers were quick to criticize our own military and naval advisers because they wanted us to retain bases in the Marianas, Iwo Jima, and the Bonins. Even in our own Department of State were to be found arched eyebrows whenever the claim for American retention of the Pacific bases we had won by the sacrifices of our youth was mentioned.

INCONSISTENCY IN STATE DEPARTMENT

What have these officials to say now? How much propaganda did they issue to the American people declaring that we had no right to sovereignty in the Pacific islands and should accept trusteeships and inter-Allied control and that we would be inconsistent if we did otherwise? For it was contended in the Department of State that we couldn't oppose Russia's claims for more territory in Poland and in Europe if we insisted on territory for ourselves—even tiny little bases for our ships and planes in the Pacific to protect our Aleutian Islands which are vulnerable to attack from islands near Japan.

Now the pretense and cloak of hypocrisy has been torn off. All the time the Department of State was insisting on international trusteeships for the Pacific island which was had conquered, the United States Government had in its possession a secret treaty with Russia which would permit the latter to annex outright the Kuriles and the southern half of Sakhalin.

President Truman acknowledges frankly that he did not know about this document until just before he went to Potsdam last July. He had been in the White House since April 12, but he did not know all through the time the San Francisco Conference and discussions on trusteeships were going on that hidden or lost somewhere in his predecessor's personal files was an agreement pledging, on behalf of a President of the United States, a certain action involving the good faith not only of the American people in general but the Senate of the United States in particular. For the Senate must consent to and ratify any agreement before it can be a valid pledge on behalf of the Government of the United States. Japan surrendered last August. Why has this agreement been kept secret from the Senate by Mr. Truman for the last 5 months while important questions of policy have been up for discussion with Russia concerning Japan?

The American people do not wish to see their President repudiated by action of the Senate. The better way would be to disclose, in executive sessions, to the Senate Foreign Relations Committee the nature of any secret understanding and to secure its informal acceptance or rejection then and there. One man should not be permitted to make treaties. The Constitution provides for two branches of the Government to participate in the making of treaties.

If that method has really become obsolete, then some means of holding a President of the United States immediately responsible for his acts—as, for instance, by the parliamentary system—must be established. The British Parliament can turn out a Prime Minister at once who makes a misstep in attempting to commit the Government of Great Britain to a particular course in foreign policy. The American people are entitled to

the same freedom of action and the same democratic process.

It can be argued that Mr. Roosevelt in his speech to Congress after coming back from Yalta significantly served notice on all governments that, under the American Constitution, treaties and agreements require the consent of the Senate. It is true that the annexation by Russia of the Kuriles and the southern half of Sakhalin must be confirmed now in a treaty of peace with some future Japanese Government and ratified formally by our Senate before the Russian demand can be fulfilled.

But a Russian "claim" and a pledge by the heads of the United States and British Governments to "support" a claim is tantamount to an agreement. The United States Senate could, of course, decide that all American "claims" must be duly "supported" by Russia before ratifying any "claims" growing out of the war with Japan or Germany.

ACTIONS CREATE DISTRUST

Mr. Roosevelt was a tired and sick man at Yalta. He may not have been altogether to blame for what he did there. But the many sycophantic supporters of the President who denounced anyone suggesting that personal diplomacy was wrong and who encouraged the private handling of public affairs must bear some responsibility for the fuzzy record which has been made—a record that leaves scars of distrust and deep misgiving about statesmen who tell the people one thing and agree secretly to something else.

On this page about a year ago the writer said:

"For American idealism was defeated at Yalta. American constitutionalism was scorned at Yalta, and the pledges given in the Atlantic Charter that no nation—neither Russia, nor Britain, nor any other country—will seek 'territorial aggrandizement' were flagrantly violated at Yalta."

This was a minority viewpoint then because the propaganda machine of Government had anesthetized large sections of the American press and also many observers who stood in awe of the wording of official communiques and naively accepted them at face value.

MAKE THE SENATE A PARTNER

Today we see the effects of personal diplomacy at its worst. No American President should go alone to represent the United States in any international conference with the head of another state. Government funds should not be allowed by Congress to be spent by the executive branch of the Government in conferences leading to the making of any agreement requiring the consent of the Senate unless representatives of the upper House of Congress are present, to be advised completely and promptly of the text of such agreements the moment they have been made.

This would afford the Senate an opportunity to repudiate or approve at once the signature of any President who attempts to make any pledges in the name of the Government of the United States in our relations with foreign governments.

In wartime the interests of military security can be protected by requiring that the Senate Foreign Relations Committee maintain secrecy on such phases as affect military operations. At least an agreement which necessitates secrecy can be known to more than one person in the Government and can at least be communicated promptly to the coordinate branch of the Government which has the power to ratify treaties.

We spoke a year ago of the tragedy of Yalta. Events have proved it was perhaps the most unmoral and humiliating episode in the history of those modern governments which classify themselves as champions of international morality.

The Next Step in International Relations

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, February 7 (legislative day of Friday, January 18), 1946

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the next step in international relations. The article is by Thomas L. Stokes, and it was printed in the Los Angeles Times of November 21, 1945. I shall read the first two and the last two sentences of the article, and then I shall submit the entire article for printing in the RECORD.

The first two sentences read, as follows:

It is becoming clear that public opinion is moving closer toward the next step in international relations.

This is usually described as "world government."

The last two sentences read, as follows:

The people again seem to be moving ahead of the politicians. The politicians might as well catch up.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEXT STEP

(By Thomas L. Stokes)

WASHINGTON, November 20.—It is becoming clear that public opinion is moving closer toward the next step in international relations.

This is usually described as world government.

The atomic bomb is responsible for this shift of opinion. The shift is discernible in recurring expressions by political leaders who were pioneers for a United Nations Organization, by scientists who helped create the bomb, by organizations which were set up to promote the UNO.

It is significant. It shows that public opinion is moving with the times, which are moving awfully fast.

ONE GOVERNMENT

World government means, in essence, a single government of all the nations of the world, just as the United States is one government of 48 States. Each nation would have to yield up sovereignty, just as our States did when the Constitution was drafted.

Anyone who suggested this when the 54 nations gathered at San Francisco last April was scornfully derided as a starry-eyed idealist by the practical diplomats and politicians there who were still "practical," though most of them came from nations laid waste by war.

But that was before the atomic bomb dropped to end lots of illusions about statecraft and international politics.

It is not so unpopular now to talk about world government.

No one, of course, expects world government to come tomorrow, or the day after tomorrow. But the atmosphere is being created.

It is the most important single factor in the world today and the politicians and diplomats are beginning to take notice.

THE WORLD'S FRIGHT

For that reason it is expected that this change of atmosphere will become apparent when the UNO Assembly meets for its opening session in January, and that the attitude and approach of that body will be entirely different from what might have been predicted just after it was created at San Francisco.

For there is no question that the people of the world have been frightened by the atomic bomb and this fright is being transferred, slowly as usual, to their political leaders.

The signs of the new approach are to be found in the numerous demands—and from responsible sources—for revision of the United Nations Organization, which at least would begin to make it more like a responsible, functioning government with real powers.

TRUSTEE OF BOMB

These demands proceed, in the first instance, from the fact that the UNO must be the trustee or custodian of the atomic bomb. That requires power. Consequently there are demands for change in the veto, so that one of the Big Five powers can't prevent action; for creating a real international police force; for powers of inspection for secret atomic bomb manufacture. Also, and this is in the interest of a real union of nations, there are demands that the trusteeship provisions, now rigid, be changed so that the UNO itself would assume all trusteeships and not leave various dependencies to the whims of those who have ruled them so long.

How good a job the international politicians thought they had done at San Francisco may be gathered from the difficulty with which they surrounded change or amendments to their Charter. It takes a two-thirds vote of the Assembly, including all five of the big powers, to amend.

THE PEOPLE AHEAD?

A constitutional convention to consider amendments can be called by a two-thirds vote of the General Assembly, including a simple majority of the Security Council of seven members.

But the delegates at San Francisco showed how little change they expected any time soon by providing that if such a convention has not been held in 10 years, then a proposal—only a proposal—for such a convention would be put on the agenda of the tenth session of the General Assembly.

The very first session of the General Assembly is likely to get proposals for amendments, now that we have the atomic bomb.

The people again seem to be moving ahead of the politicians.

The politicians might as well catch up.

The "Lone Eagle" Takes a Look at America's Future

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. WHITE. Mr. Speaker, under permission to extend my remarks in the RECORD, there is submitted a speech by Charles A. Lindbergh, an intrepid American whose bravery and independence I have always admired:

AVIATION IN THE ATOMIC ERA

(By Charles A. Lindbergh)

We meet in honor of Orville and Wilbur Wright. Most of us here tonight have followed aviation as a profession for many

years; and yet it is difficult even for us to realize the advance our art has made since that first power-driven flight.

It is only 42 years since they catapulted their plane into the air at Kitty Hawk. It has often seemed to me that it must have been centuries ago. Watching bombs falling on some South Pacific jungle or standing amid the ruined walls of a European city, I have had to tell myself over and over again that all this has happened within a lifetime. There is something incongruous in picturing that fragile and harmless craft in the same frame with the terrific detonation of bombs and millions of tons of rubble.

Certainly there was never a time when it was more interesting to speculate on the future of aircraft. How soon will we be crossing oceans at greater speed than the sun? Why can't we land on a planet now that the atom has been split? What speed might an atomic rocket attain in interstellar space? Such questions become dwarfed by the basic problem of how to keep aircraft from destroying the civilization which creates them.

There is little satisfaction in spending one's life developing machines which are likely to bring ruin to one's own people. Our minds are harassed by the damage that has already been done; by the realization that western man has not justified his trust; that he has misused his inheritance from the early pioneers.

The ghost of Lilienthal must glide uneasily over German cities. The devastation that the Nazis brought to Europe, carried on the wings he loved, is a warning to us all. The developments of science, improperly guided, can result in more evil than they bring good. What peaceful men take a thousand years to build, fools can now destroy in fewer seconds. Experience has shown that we cannot depend on political specialists to turn the inventions of science to the benefit of mankind. We can no longer blind ourselves to the future uses of aircraft while we concentrate on their mechanical perfection. It has become more important to control our products than to produce them.

ATOMIC ERA REVOLUTIONARY

Let us survey our present position. It is obvious that all of our ideas must be reconsidered in the revolutionary light of an atomic era. This applies especially to aviation since it provides the carrier for the latest and most deadly of all man's weapons. We know that one airplane, carrying one atomic bomb, can wipe out a city. We know that transoceanic rockets, using fuels already developed, can be built in the near future. The cost of a transoceanic rocket carrying an atomic bomb would be a small fraction of the value of a city. The oceans, therefore, which proved effective barriers to bombing aircraft of World War II, will not protect this country from atomic rockets of World War III, if such a war begins.

In the past, we have developed methods of defense against attacking aircraft. The fighter and the proximity fused antiaircraft projectile have made the sky a dangerous place for bombers. The guided missile may rid it entirely of military aircraft of our present types. But against rockets carrying atomic bombs, traveling faster than a cannon's shell, we see no adequate defense. Counterattack might win an atomic war; but it could not replace our cities or bring back our dead.

Life would be intolerable here in America if we knew that an irresponsible foreign government could, without warning, send an atomic rocket hurtling toward every city in our country. If we permit the world to continue uncontrolled, an enemy could have such rockets aimed at our vital areas waiting only for the pressure of a button to send them off. Then, our institutions, our homes, our families, would be at the mercy of some fanatic's finger thousands of miles away. It would be like living with a rifle pointed always at your head. And it would be only a matter of time before the trigger would be pulled, for where man has had power at his fingertips, sooner or later he has found causes for its trial. From primeval club to atomic bomb, he never invented a weapon so terrible that he failed to use it in war.

If we are able to prevent the misuse of power based on aircraft and atomic energy in the future, that will mark a greater epoch in human relationships than their invention marked in science. Yet, if we fail, the penalty is staggering. We can succeed only by organizing all nations toward this end. For we must face the fact that aircraft and the atomic bomb have brought us to a time when we will either live in an organized world or in constant insecurity.

WORLD ORGANIZATION NECESSARY

To me, it is no longer a question of whether or not we should have world organization, but of what form it should take. Now that such an organization is in its infancy—now is the time to consider seriously its implications. Too few people stop to realize that a world organization may vary between the arbitrary power of a Roman state and government based on the complete equality of man.

I do not believe it would be wise, even if it were possible, for this country to dominate the world by force. Certainly such a policy would be contrary to the ideals we have held. On the other hand, it is obvious that a world state based on the complete equality of man would be controlled by the nations of largest population. In such a state, our country would have less than half the influence of either India or China. We would have less influence than Russia. There is not much indication, either in our wars or our peace conferences, that the nations which have controlled on the basis of ability are willing to turn over their leadership to the nations which would control on the basis of counting heads. That would be contrary to the record of our forefathers and to the history of human progress.

Whatever compromise is made between these extremes of Roman state and mass control, it must contain an element of power to be effective—power to prevent the preparation for an atomic war, power which cannot be blocked by the veto of any single nation. Power—because experience has shown only too clearly that we cannot depend on promises alone. In this age of split seconds and splitting atoms, a world organization must have immediate and overwhelming strength at its disposal. To disarm too quickly, to fail to maintain the quality of our weapons, to underestimate the revolutionary changes the atomic age has brought, would be fatal. A successful military movement must prevent rather than win an atomic war, for one can hardly call a victory in war successful when it is won at the price of a destroyed civilization.

POWER TO BE FEARED

I have advocated tonight a world organization backed by military power, an organization led by the western peoples who developed modern science with its aviation and its atomic bomb. But I must confess to you that I am fearful of the use of power. I plead for strong military forces only because I believe the alternative is worse. We have seen what happens to a people too weak to maintain its rights. We need only think of France in 1940, of Poland, of the Baltic countries, of the Mayan civilization here in America, Hindu in India, the late Roman. Power is essential to survival; it is essential to freedom; it is essential even to justice.

But power alone has limited life. History is full of its misuse. There is no better example than Nazi Germany. Power without a moral force to guide it, invariably ends in the destruction of the people who wield it. Power, to be ultimately successful, must be backed by morality; just as morality must be backed by power. A world organization, to have permanent influence, must wield a power that is guided not by the desire for revenge, not by the intent to exploit or enslave, but by the qualities represented in Christian ideals. To those who say that such ideals are impractical, let us point out the failure of the Hitlerian regime. The philosophy of Christ may have been too intangible for the Nazi Government to understand, but the rubble of Berlin is a sufficiently tangible result of their failure.

CHRISTIAN IDEALS MUST SUPPLEMENT POWER

Can we learn from that failure? I believe we can maintain the necessary power. But can we do what no people has ever done before; can we pass the test of the Christian code? That requires integrity, humility, and compassion that are lacking all over this postwar world. One finds no trace of these qualities in the complacency with which we greeted the inverted hanging of Mussolini's body. There is little indication of them in the court trials of our conquered enemies. There is an appalling lack of them in our attitude toward the famine-stricken peoples we have defeated. But without these qualities, there can be no security, as the Germans learned. Without them, we simply sow the wind with our aircraft and our bombs.

Christian ideals may in one sense seem a far cry from the subject of aviation on which you invited me to speak. But in a deeper sense, they affect every industry and every action. They cannot be left alone to church and clergy. They must live in the philosophy of a nation, in the policies of a world organization, in the use of science and its great inventions.

We in America already have the most powerful Air Force in the world. We have the greatest Navy and the best equipped Army. We have demonstrated that we can outbuild any other nation. We have the atomic bomb. We are a Christian people. The ideals we profess are high. We have all the necessary elements to lead the world through this period of crisis. But can we combine these elements in our daily policies and lives? Whether our western civilization is facing new heights of human accomplishment or whether it is doomed to extinction depends not as much on technical progress as on the answer we make to this question.

The FEPC—A Fair Label on an Unfair Bill

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 7, 1946

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I delivered last evening over the facilities of the American Broadcasting Co., Station WMAL, in Washington, D. C., on the subject The FEPC—A Fair Label on an Unfair Bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The so-called fair-employment-practice bill bears an attractive label. The American people believe in fairness in all things. The

mere fact that the bill is called a fair bill has caused thousands of people to support it with no knowledge of its far-reaching consequences and its effect upon American business and the American people. The attractive name caught even some Members of Congress and caused them to commit themselves to the measure before understanding its details. The measure has been highly propagandized in emotional appeals. Its details have not been discussed in this propaganda campaign.

Let me say at the outset that despite the efforts to create prejudice by making a sectional issue of the bill, it is not a sectional measure. It will affect every American citizen in his daily life, wherever he may live.

Those of us who are fighting this bill believe that it is misnamed. We insist it is neither fair nor does it provide any employment except for a vast army of new Federal employees to police American business and American agriculture. We contend that instead of preventing discrimination it will bring about discrimination in hiring and firing. We insist that the bill invades and strikes down rights of the individual American citizen always considered sacred.

What does the bill do? It proposes to create a new Federal commission with agents and examiners to police the one and a half million businesses in this country, as well as all farms, where more than six people are employed. These agents will be supposed to see that the employer does not follow any practice, in either employing, promoting, or discharging his employees, which has been declared by the Board to be discriminatory, against any person on account of his race, creed, color, or national ancestry. Any person who contends that he has been denied employment or refused a promotion within a business because of such discrimination can file a complaint against the owner of the business or farm. Thereupon a representative of the Board brings the employer before him for a trial. The ordinary rules of law do not apply The man charged with discrimination is denied the right to be tried by a jury in his home community. He may be tried at any place the Board through its examiner determines. A businessman living in Phoenix, Ariz., can be tried in Detroit, Mich. He is not assured the right of cross-examining the witnesses or even seeing the witnesses against him. The agent of the Board is the prosecuting attorney, the judge, and the jury, and need not observe any rules of evidence. If he finds the accused person guilty of unfair practices, as he is almost certain to do if he files the case, the accused has no right of appeal which would enable him to have a jury trial. His only recourse is to the United States Circuit Court of Appeals, which may be hundreds of miles from his home and place of business. This court by the terms of the law is powerless to help him if there is any evidence whatever against the accused. To all practical purposes, the employer is denied a fair hearing anywhere along the line, and this upon a charge as nebulous as that he has discriminated against an individual on account of his race, color, creed, or national origin.

Free American business, industry, and agriculture, which have made this country the greatest and richest Nation of the earth, cannot long endure if some superbureaucracy of the Federal Government has the power to determine all employment policies. Think of a Federal agency having the power to tell a businessman whom he shall promote to a position of trust and responsibility. The bill, by its express powers, will nationalize all jobs in this country. American business, whether in the mine, the shop, the store, or on the farm, cannot maintain itself and go forward if the owner does not have free choice in the selection and promotion of his employees.

It is not strange that every Communist and every Socialist in this country who believes in Government ownership of all business and property are supporting this bill, for its passage is sure to eventuate in the destruction of all rights of private property. The bill has no safeguards for individual rights or property rights. One of its provisions allows the agents of this Commission to examine or copy all the books, records, and private documents of the million and a half businesses and the thousands of farmers brought under its jurisdiction. Any resistance on the part of the owner to this invasion of what has long been considered the constitutional right to be free from search or seizure without a warrant is punishable by a fine of not more than $5,000 or a year's jail sentence, or both.

I repeat, the bill does not create one single job, except the political jobs of the army of agents, employees, and examiners of the Commission, who will be supported by your tax money. Its passage is sure to lessen opportunities for employment. What incentive does a businessman have for creating new jobs and employment opportunities if he has no right to say who will fill them?

So much for the bill's invasion of the rights of owners of business. Let us now examine for a moment the discrimination against the rights of the ordinary, every day, average working American who cannot identify himself with one of the minority groups who may claim discrimination on account of race, creed, color, or national origin. I do not think I am particularly prejudiced against aliens, but I am old-fashioned enough to believe that American citizens should at least be accorded equal rights with aliens. Under the terms of the bill, any alien in this country, or any immigrant who may be brought to our shores would have the right to prosecute an employer before this kangaroo court if he claimed he had been discriminated against in hiring, firing, or promotions. It is very evident that the average American who does not belong to one of the minority groups could not claim that he had been discriminated against because of his race, creed, color, or national origin.

Suppose two men, one an alien recently admitted to this country and the other a garden-variety American citizen, were to apply for the same job. The alien could subject the employer to great expense, including back pay to the alien, much loss of time, and the cost of fighting the proceedings before the examiner, with the possibility of the employer winding up in jail if he denies employment to the alien. The average American does not have the same recourse. This naturally will result in a rank discrimination against the rights of the American to the job. It is bound to result in discrimination in favor of aliens and other minority groups who can cause the employer all of this trouble and expense.

Let us consider the case of a plant or business employing 40 men. Let us assume that 10 of the employees are aliens, or can identify themselves with the minority groups that the bill is designed to help. If this employer has to lay off 8 men, would he be likely to select any one of the group who could take him into this unfair court and cause him such great expense and severe punishment? The natural thing for him to do would be to lay off 8 of the average Americans, who could not sustain a claim of discrimination on account of race, creed, or color, even if they were better workmen than the minority-group members.

If this bill ever becomes a law, it will be a lasting handicap to the average American citizens in the competition for jobs and promotions. It will make more unfairness and discrimination than it can possibly cure. It will bring confusion and prejudice instead of order and harmony among our people.

Time will not permit me to discuss all the unfair provisions of the bill. It claims to promote fairness, but it does not address itself to the two greatest discriminations in employment that this country knows. I refer to discrimination on account of sex and age. It affords no protection to any woman or any person past 40 who might be applying for a job unless such woman or individual can identify themselves with a minority group.

Neither have I time to explain how this proposed law is communistic in theory and concept, and its full impact upon constitutional rights. The powers proposed to be granted could be used to absolutely destroy labor unions, all of whom are subject to its jurisdiction. As a permanent proposition, this proposed law cannot benefit anyone except those who wish to have us adopt a totalitarian system which will make the individual the slave of the state. Under the false guise of fairness, it will play into the hands of those who wish to stir up confusion and strife in our country. If passed, this bill will do violence to the rights of the individual American citizen and to the American way of life under which our land has prospered and grown great.

I know that some of the proponents of this bill are sincere. I say to them that they cannot help a minority group in this country by a law like this, which will impair if not destroy, the rights of the individual American citizens of both minority and majority. I say to them that they cannot abolish prejudice and discrimination by creating a vast Federal bureaucracy to enforce measures which generate prejudice and discrimination against other American citizens.

If this bill be passed in the name of fairness to minorities, it will perpetrate a great injustice on the majority of the American people. The nationalization of jobs and the creation of such a superbureaucracy would be a long step toward destroying the American system and extinguishing the American way of life.

Germany Is Our Problem

EXTENSION OF REMARKS
OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, February 7 (legislative day of Friday, January 18), 1946

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Human Events entitled "Germany Is Our Problem," by Karl Brandt. I am informed by the Public Printer that the cost of printing the article will be $156.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANY IS OUR PROBLEM

(By Dr. Karl Brandt)

American arms have won the greatest victory in history. Yet this is only the beginning. The real test, a far greater and more intricate task, is now upon us—the building of a durable peace.

As we search for principles to guide our actions, we must ask ourselves this question: What is the intelligently interpreted self-interest of the American people in the post-war world, and how can we shape our foreign policy wisely to serve that self-interest? That question we will have to answer dispassionately with a cool head, and with a brave, warm heart.

To begin with, nations need a certain area for their existence, and most wars have been fought, at least in part, with the aim of changing the boundaries on the political

map. What, then, has this war done so far to the map of Europe?

In the Atlantic Charter, the President of the United States and the Prime Minister of Great Britain solemnly proclaimed that their countries seek no aggrandizement, territorial or other, and that they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned. They also pledged themselves to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world, which are needed for their economic prosperity. These principles were later subscribed to by all members of the United Nations.

At Potsdam, last July, it was agreed by the Big Three that the German territory east of the Oder and the Neisse Rivers should tentatively be transferred to Polish administration. Irrespective of the temporary administrative arrangement, the Polish Provisional Government, with the consent of the Soviet Union, has proceeded to evict the indigenous German population. The Potsdam Declaration contained the statement that any transfers of population that take place should be effected in an orderly and humane manner, and requested the Czechoslovak and Polish provisional governments to suspend expulsions until further examination. Yet there are few Germans left on German soil annexed by Poland, and Germany has been shriveled by fait accompli, not only without plebiscite, but by unilateral action.

Some highly placed officials in Washington, who are frankly unhappy about Potsdam, excuse the state of affairs with the observation that there were a solid 15,000,000 Russian soldiers to endorse and execute every and any territorial change their government wanted. I accept this as a realistic statement of fact.

Quite apart from the moral issue, however, this transfer of people and territories has far-reaching economic and social consequences.

In the German area east of the Oder and Neisse lived 9,000,000 people of German culture tongue, and ancestry while in Czechoslovakia there were 3,000,000 Sudeten Germans. This total of 12,000,000 people have now been deprived of all their property in land buildings, and goods, prior to deportation into truncated Germany. The Potsdam agreement further provides that Germany should be stripped of her industrial war potential.

Potsdam will serve American interests only if it lays the foundation for a better balanced economy and for better international relations among the nations of Europe, and thereby eliminates the inner pressures and tensions which generate war. The security of the United States cannot be built on the simple recipe of "squeezing Germany until the pips squeak," as was said after the last war. Germany has been, and may become again, an important item in the ledger of our foreign relations. The security of the United States depends upon the security of the British Isles. The security of the British Isles in turn depends upon the economic and political conditions of Western and Central Europe. Because of this interrelationship we shall soon be forced to realize that the treatment of Germany concerns every one of us, wholly apart from humanitarian aspects of the problem.

Before the war Germany was never able to produce more than 80 percent of her food. The other 20 percent had to be imported either directly or in the form of feed and fertilizer. The German diet was then in its composition far below the average American fare. The situation after Potsdam, with the loss of the best food surplus areas, leaves Germany with a production of less than 50 percent of food requirements. That country must import a vast amount of food even if its people are confined to a diet of bread, turnips, and potatoes.

The basic arithmetic for this conclusion is simple. The area east of the Oder and Neisse fed its own 9,000,000 inhabitants and supplied all the food for an additional 8,000,000 Germans in the western part of the country. It produced 25 percent of the nation's food supply. Since 12,000,000 evicted Germans from east of the Oder and Neisse and people of German ancestry from Czechoslovakia and Hungary are now forced into what is left of the Reich, and since food surpluses from these areas are lost, an additional food deficit for 20,000,000 Germans is created. Henceforth every second Germany must be fed by imports.

This calculation, moreover, is based on the optimistic assumption that German agriculture can maintain the high yields per acre of prewar years. But the Potsdam Declaration provides for further dismantling and destruction of many basic industrial plants, among them agricultural machinery and fertilizer factories. With next to no fertilizer and no gasoline for tractors, with very few spare parts or new farm implements available, crop yields will be far below what they were. At present, the German population in cities and industrial areas like the Ruhr has already lost heavily in weight. This is the first stage of starvation.

On top of this catastrophic situation, the Russians have dealt a severe blow to the remaining food supply by distributing the land of large estates among farm laborers without any proper preparation. The result is approximately what would take place here if all our highly efficient farms in the Middle West were turned over to the man-and-a-mule sharecroppers of Alabama. The large German estates were the most efficient agricultural producers and the chief food suppliers of the cities. They are no more. Nearly all lie in the Russian zone. All have been stripped of the 140,000 tractors they once owned, and many of the hundreds of thousands of electric motors and horses too are gone.

Unless we are willing to see the Germans die like flies, we shall have to ship seven or eight million tons of wheat to them this winter plus as much in the way of fats as we can spare. We cannot close our eyes to the fact that these people and their country exist, that they believe they have a right to live, and some claim on the future. Nor can we afford to base our policy on the rash conclusion that because Hitler's regime started this war of annihilation, and because the German people are at our mercy today, we have plein pouvoir to do with them as we please.

It might be well to remind the apostles of hate, and the advocates of the planned extinction of the German people, of what President Roosevelt thought about this matter. In a letter to Secretary of War Stimson he wrote: "It is of utmost importance that every person in Germany should realize that this time Germany is a defeated nation. I do not want them to starve to death, but, as an example, if they need food to keep body and soul beyond what they have, they should be fed three times a day with soup from Army soup kitchens. That will keep them perfectly healthy, and they will remember that experience all their lives."[1]

In order to break the power of the German Army, we had to destroy the German railroads and other forms of transportation. But in destroying communications we have isolated the German coal mines, which fed the industries of half of Europe and kept the homes of 150,000,000 Europeans warm in winter. During this winter all Europe, not only Germany, will be without fuel for homes and industries simply because the German coal mines can produce only a small part of their capacity.

This is the case primarily because the railroad system has not been sufficiently restored, and to restore it one needs the restoration or maintenance of the very factories that are condemned as war potential. For instance, at the height of the aerial blitz, in February 1945, only 8 percent of Germany's locomotives were in repair shops. At the time of writing, 70 percent of the country's locomotives are incapacitated, because of the closing down of the industries which used to supply the repair shops with spare parts, tools, and materials. In the wake of the fuel shortage people in Holland, Denmark, Belgium, and France, Italy, and even Switzerland, wholly apart from people in Germany and Austria, will die of pneumonia, tuberculosis, and diseases attributable to exposure. The more you are exposed to cold, the more food you need to keep the body furnace going. The Colmer Committee report on postwar economic conditions in Europe, submitted to Congress in November, stated that the official ration of 1,550 calories per day runs in many German cities as low as 800 calories per person, which is only half the absolute subsistence minimum. With shortage of food and fuel, the weak are easy prey for bacteria which do not stop to make political distinctions. And as innocent women and children die, men resort to revolt. This winter is almost certain to bring civil disturbance and desperate guerrilla fighting in Germany.

For the sake of our own sons, who may be called on to police Europe indefinitely, we must realize that the German economy is a vital part and parcel of the fabric of Europe, which cannot be torn to pieces without continental disaster. Germany's coal mines belong to all Europeans, not just to the Germans. Since those mines cannot be moved, their produce must be allowed to move to all nations in the channels of trade. Since Germany lies in the heart of Europe, her railroads, highways, canals, and airways are also vital to the welfare of all European nations. A ruined Germany means a pauperized Europe and a poverty-stricken England, continuously calling for American financial support.

It has been argued recently that the world will not miss anything when Germany is stripped of her industries because German exports to the rest of Europe represented only 2½ percent of Europe's annual economic output. By the same logic one could assert that the world would not miss anything if all American industry were destroyed, since measured by the total world production its export is similarly small. Such statistical lunacy is like saying that nobody need fear heart failure, since the heart is only a small percentage of the weight of the human body.

The Allies have agreed to demilitarize Germany by dismantling all industries necessary to a war economy. Since there is no modern industry which cannot be converted for war, as we in America fully realize, this decision means the destruction of Germany's means of living. Without export industries, half the Germans have nothing to eat. Alternatively, the whole population is doomed to permanent semistarvation. Democracy finds no footing in that barren ground.

It is America's obligation to her own future to rehabilitate Germany before it is too late to salvage peace in Europe. A few months' delay in intelligent action may prove to be one of the greatest blunders in foreign policy that any nation has ever made. This deep conviction is not based on any sentimental reflections about my former country or on hopes for the survival of liberal Germans who are still alive. It is founded strictly upon my belief that this course of action is in the urgent interest of the United States of America.

The chief question then is, How much leeway does the Potsdam Declaration grant us to adjust our foreign policy to the needs of our own future security?

---

[1] Quoted by Mr. Leon Henderson in The Nation, October 27, 1945.

Germany, being densely settled and possessing a very small share of the world's natural resources, needs her pre-Munich territory. As an ethnic, cultural, and political unit, the German people ought to be kept as a nation, because their separation by force will direct their best energies into frantic efforts to reunite. And so far as the preservation of peace is concerned, it is of no help to create German minorities in adjacent countries by annexation of German-inhabited areas.

Present Allied policies will foment such atrocious economic conditions as to destroy all hope of denazifying Germany.

Why did people in Germany become Nazis in the first place? Because they had suffered years of mass unemployment and depression. They wanted work and bread, not war, although they got the war later without being asked. Now, we deny them employment. This will drive them into a despair far deeper than that which they knew during the world depression of 1931 and 1932. Denazification is first of all a question of hopeful alternatives. The only sensible alternative to militant nationalism and its dictatorial paraphernalia is a decent democratic society in which the people have some opportunity for the pursuit of happiness. This holds true abroad as it does at home.

But denazification is also a psychological affair. We must bring to the fore and encourage the Germans who are most susceptible and amenable to ideas of a free society. Unfortunately, we fumble this ball too often.

After 8 months of occupation, we still keep these democratic Germans behind the barbed wire fence of a noncommunication policy. As this is written millions of American citizens like myself cannot send messages even to close relatives in Germany who were victims of the Nazi regime. Close to 30 percent of our population have German ancestry, and many Americans have friends in Germany. These Americans have served their country loyally and unstintingly, and many of their sons and brothers have given their lives. Yet these free citizens cannot so much as give moral support to the anti-Nazis in Germany, or help create confidence in America as a country that stands for liberation. It is high time that humanitarian organizations be permitted to enter Germany to administer that minimum of aid to which, here at home, we believe even the families of convicted murderers are entitled.

Germany must be denazified. The only question is how. A routine proscription of all who were party members, or the circulation of questionnaires, are pitifully inadequate methods for checking on a form of political creed and behavior. The Nazi regime was efficient because it forced into its fold the large majority of men of competence, regardless of their political convictions. Only a positive approach in reconstruction will produce equally positive results. It demands economic rehabilitation and moral reconstruction, with the aid of the best people surviving in Germany. Months after the total collapse of the Nazi regime the Allied powers are none too united in their intentions concerning Germany's future. There is a silent, yet gigantic, tug-of-war to get that prostrate, bombed-out, half-starved people into one sphere of political influence or another.

Does it make sense deliberately to demolish in the heart of Europe the most vital part of the production capital that has been created by generations of toil and sweat and thrift—this on top of what strategic bombing has wiped out? Can one really believe this policy will work no injury on all the other European countries but on the contrary will somehow make them richer? If this were true, we could argue that Iowa, Wisconsin, Minnesota, Nebraska, and Oklahoma would be better off if we would completely destroy the Pittsburgh, Cleveland, and Chicago industrial areas.

Another issue with particular psychological importance is that of the reintroduction of slavery in the age of organized labor. At the Crimea Conference the big powers agreed that, as a sort of atonement and a form of reparation, human slavery should be applied in the case of Germans. At Potsdam, this issue was too hot to be touched, but the United States Government is reported to have filed a mild protest against the mass deportation of millions of people into slavery unless the deportees are individually convicted war criminals.

The fact is, however, that in the absence of an armistice or a peace treaty, German prisoners of war can and are being used as slave labor. German prisoners by the hundreds of thousands are being employed as slave labor in France, often under conditions which have aroused the indignation of American military authorities, and of repatriated French war prisoners. But even worse, one fears, is the unknown fate of millions of German men whom we helped to deliver up to Russia.

To justify this practice by saying that the Nazis employed slave labor is actually self-condemnation. We fought the war to stop this stark atrocity, not to foster or countenance it under our own banners. Every economist knows that slaves are the most inefficient of all workers. Every American agrees that the abolition of slavery was overdue in this country more than 80 years ago. That the Nation which reveres Abraham Lincoln should have fought this last war to abet the reintroduction of human slavery will seem, to historians, almost unbelievable.

German workers should do reparation work in foreign countries on a voluntary contractual basis, as employees of the German Government.

The Potsdam decisions rest on the moral verdict that all Germans are collectively guilty. President Truman outlined this concept of collective guilt in his report to the Nation on August 9, saying: "The German people are beginning to atone for the crimes of the gangsters whom they placed in power and whom they wholeheartedly approved and obediently followed." Those who know what happened in Germany since 1932 cannot approve this verdict.

In 1932 and 1933 the German economy was one-third idle. The German political machinery was deadlocked by the feud over how to cure the depression. Hitler rose to power by trickery on 45 percent of the votes and, once in the cabinet, he and his trigger men slugged down all opposition. I have never heard anyone in this country state specifically what the average German, the man in the street, the worker, the father of a family—people with no extraordinary avenues of escape—should have done to stop Hitler's murderous gang of henchmen once they had gained absolute control.

Too many German refugees in this country, including noted poets and scientists, too smugly and too easily forget, when they condemn their former compatriots, that they themselves did little else but crawl out from the barbed-wire fence when it was lifted and when generous aid from Americans helped them to settle in this country.

It may boost our national ego and make us feel good to say: "Thank God we are not such despicable cowards as the Germans." But I have yet to discover any essential difference between American men and women, with all their great human qualities and their human fallibility, and the German people. When I came to this country, 10,000,000 Americans were unemployed, farmers rioted in Iowa and threatened to hang the auctioneer, economic despair stalked the country, and the people voted dictatorial powers to a leader who promised them employment and bread. Were these people really so different from the man in Germany who had gone through 4 years of a disastrous war, 4 years of ruinous inflation, and 4 years of catastrophic depression?

Many hundreds of thousands of Germans endured years and years of torture in concentration and extermination camps. Even though a large section of the press concealed the fact it should be remembered that the major part of the victims of Buchenwald and the other atrocity camps were Germans. For the most part, those were piles of German bodies which you saw pictured in newspapers and magazines. Literally thousands of men have been butchered like animals for plotting to assassinate Hitler. The heroism of these executed men and women has saved uncounted American lives. It is a story that has not been told yet, but once written it will make many a man and woman in this country ponder and forgive.

Five years after the reign of terror began, the Prime Minister of Great Britain and the Premier of France, armed with the immense knowledge and secret information at their disposal, forced the people of Czechoslovakia into the tyranny of the Nazi brigands and established Hitler in a position of supremacy over all of Europe.

It now appears that this final act of appeasement choked off a solid conspiracy of generals—including Franz Halder, Erwin von Witzleben, Ludwig Beck, von Brockdorf, and von Fritsch—who were ready to arrest Hitler and overthrow his regime. Of these, only Franz Halder survived the war period. The others were shot or hanged by the Gestapo for continued plotting against the Nazis. And other facts now daily come to light which reveal similar acts of courage on the part of Germans in their effort to rid Germany and the world of Adolf Hitler, suppressed by brutal reprisals against thousands and thousands of decent citizens of whom any nation might be proud.

I fully share the horror, disgust, and anger of the American public over the crimes of the Nazi regime. I know only too well, however, that these emotions, natural as they are, cannot fail to blur our vision and reason. We must not now permit emotionalism to control our judgment. Otherwise, we are well on our way to being conquered by the evil spirit of the defeated regime. Unfortunately the brutality of a cruel enemy has brutualized our own thinking, as is obvious from the language in our press, of letters to editors, and in private conversations. If we do not stem this creeping deterioration we shall be unable to establish a sane, decent order in the world of tomorrow.

Mr. Justice Jackson, in his report to the President about the prosecution of war criminals, said: "Early in the Nazi regime, people of this country came to look upon the Nazi government as not constituting a legitimate state pursuing the legitimate objectives of a member of the international community. They came to view the Nazis as a band of brigands set on subverting within Germany every vestige of a rule of law which would entitle an aggregation of people to be looked upon collectively as a member of the family of nations. Our people were outraged by the oppressions, the cruelest forms of torture, the large-scale murder, and the wholesale confiscation of property which initiated the Nazi regime in Germany. They witnessed persecution of the greatest enormity on religious, political, and racial grounds, the break-down of trade unions, and the liquidation of all religious and moral influences."

This is the best and the most authoritative refutation of the concept of collective guilt of all Germans I have read anywhere. Justice Jackson correctly states here that gunman committed a successful hold-up on a whole nation. Since when have we in America held the victim of a hold-up responsible for the crime committed against him?

As the masters of Germany's destiny we, together with our Allies, must take this shattered people back into the family of na-

tions, into a position that promises less trouble for everyone in the future. We cannot achieve that end by converting what is left of Germany into a permanent penal colony, or a concentration camp under the auspices of the United Nations. If we do that, we shall only degrade ourselves to the level of the Nazis.

Even after defeat and surrender, Germany remains geographically, economically, and socially the heart of central and western Europe, upon whom other neighbor nations depend for their lives, just as the Germans depend on their neighbors. It is naive to assume that we can abolish private property and civil liberty in Germany, and yet preserve these fundamentals of political democracy in the adjacent countries.

It is equally naive to assume that 70,000,000 technologically and socially advanced and capable people can be confined in a sort of economic ditch and yet by their poverty and slave labor lift neighbor nations to an advanced standard of living. What happens to Germany affects all of Europe, and the United States as well. Germany's coal basins and other minerals and industries belong to Europe. Her railroads and highways, rivers, canals, and airports, and all the services they render, are an integral part of the European economy, essential to trade among the European nations. A glance at the map and a mere smattering of economic geography ought to convince even a schoolboy of the inevitable unity of Europe's fate, and the cruel stupidity of any plan to revive the continent by laying waste its central part. For France, Belgium, Holland, and Great Britain, the treatment of Germany will decide whether or not Asia and Asiatic standards will move westward to the Rhine, leaving of European civilization nothing but a precarious coastal fringe.

From a military viewpoint the method of protecting the world against German aggression by depriving her of industries is almost as obsolete as would be a prohibition of the use of the bow and arrow. What sense is there in dismantling a steel plant here or there when we and the British have atom bombs which can obliterate all life in the whole Ruhr area instantaneously? Since the demolition of industries does not make practical military sense, its justification can be sought in only two arguments—one involving maximum reparations, the other calling for riddance of unwanted competition.

Reparations can be obtained as a flow of goods and services over a number of years, resulting in a maximum of good to war-damaged areas as well as constructive employment for the people of conquered Germany. Instead, advisers whose wrath got the better of their powers of reason decided to take reparations at once by dismantling factories and shipping them off. They might have recalled the fable of the goose that laid the golden eggs. Now a factory worth $5,000,000 shrinks when dismantled to a scrap value of perhaps $200,000 or less. Much of this dismantled machinery is rusting now on some side track in Poland or farther east because it doesn't pay to move it another thousand miles. Even if reassembled, it is worth only a fraction of the value of the brand-new factory which the Germans could have delivered on reparations account.

The Germans could have built new factories ready for shipment into Russia within a year or two, and could have set them up in Russia. At the Crimea Conference, the figure of $20,000,000,000 worth of reparations in kind was mentioned. But at Potsdam we abandoned definite sums and as a result there is neither any reparations account nor any limit to the destruction of the wealth of central Europe. An economy worth in productive assets probably half as much as that of the United States is quickly being turned into a gigantic junk yard. Only the atomized mosaic of the family farm economy continues to function, but with all the arteries of traffic severed and wilted. Without the purchasing power of consumers to buy their products, even these 2,000,000 family farms will deteriorate in productivity.

Generalissimo Stalin told Senator PEPPER that Germany must be stripped of the Ruhr basin. But to whom can the Ruhr go? To France? Then any reconciliation between France and Germany becomes impossible, and France becomes Britain's competitor. If France eats the Ruhr, she will soon die of it, because the dead corpse of Germany will give her carrion poison. This may or may not be in Russia's interest; it certainly cannot be in the interest of America or Great Britain. The experiment of internationalizing the Ruhr may sound fascinating. In reality it would turn out as productive of trouble as the division of Berlin into four separate zones has proved to be.

The remaining argument is that it is desirable to kill off unwanted competition. It is, strangely enough, the elder statesman Bernard Baruch's open argument and that of some British industrialists. Mr. Baruch proposes to prevent Germany and Japan from ever again exporting industrial goods in order to protect American industry against what he calls "the products of sweated labor."

If this were the case, it would be in America's interest to stop exports from Great Britain and every other United Nation as well. This whole philosophy implies that this war was the best investment ever made, because America and Great Britain are ridding themselves of the nuisance of German industrial competition. No responsible businessman in Great Britain or the United States can possibly share Mr. Baruch's philosophy without tacitly subscribing to Hitler's and Mussolini's recipes of rubbing out competitors with the lead pipe. And the argument will certainly serve to stimulate Russian suspicions, since everything that country exports is produced under dictatorial state control and, in many instances, is a "product of sweated labor."

However, neither apology for, nor criticism of, the jerry-built architectural monstrosity of Potsdam is of much help in the developing emergency. Still less helpful is the conclusion that because our efforts up to now have set a time bomb for chaos in Europe, the safest thing for us to do is to forget why we went to war, throw off the responsibilities victory has brought, and clear out. We, the greatest and most powerful democracy in the world, simply cannot write off Europe as a bad debt. We have really only one choice. We must reconsider, adjust, and reorganize our foreign policy as a going concern, from the standpoint of the best interests of the American people. We cannot return to isolation and dodge the question of Germany just because it may seem insoluble.

We must prevent famine; we must restore Germany, and give her a chance to work herself out of her present misery and to build a better future—for the sake of Europe, Great Britain, and ourselves. The responsibility for such a change in policy does not rest with officials in Washington, or with Presidential advisers alone. It rests in part with every adult citizen of the United States. We must not sit idly by and condemn the Crimea and Potsdam programs as a catastrophe on another planet. We must do our part in getting those policies—which are our policies—revised by democratic processes of government. There is a helpful suggestion in the way the boys in the Army, by their good common sense, have forced the abandonment of the unworkable and inhuman nonfraternization policy.

Indeed, if the sovereign people of this great, free, and wealthy country have no better solution to offer than wantonly to lay waste the center of Europe, to the extent that tens of millions of people are permanently unemployed and hungry, then it would be more humane and more logical to reopen the gas chambers of Belsen and Buchenwald and to blow out the lives of thirty or forty million Germans and other Europeans with lethal gas. Compared with a generation of daily torture, this would be euthanasia. If the plans to force the Germans down to a rural slum are not changed, the terrific repercussions will fall eventually on every citizen of the United States—the veterans, the workers, the housewives, the children, and those yet unborn. After the last war we lost the sense of our national interest in developments abroad. Now, at the birth of the atomic age, we are running the risk of ignoring an ever greater jeopardy that is already looming in Europe. The making of the last war began in Germany. The making of the peace can only begin as Germany is reconstructed.

The vicious circle of atrocity and retaliation and renewed revenge must be broken. Otherwise our entire civilization will end, amid the detonation of atomic bombs.

The Polish People Are Grateful for American Assistance

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting letter received from a Polish recipient of some articles of clothing, contributed in the United States for overseas distribution.

The writer of this letter is one Feliks Sarosiek, of Lomza, Poland. Mr. Sarosiek found in the clothing presented to him a slip of paper bearing the name of John N. Mushevic, of Greenfield, Mass., who was presumably the donor in the United States.

This letter is a translation from the Polish language, and it was sent to the UNRRA offices here in Washington. The letter shows a deep and sincere appreciation to the American people for these much-needed gifts. It also describes the terrible devastation, hardship, and misery that these poor people have undergone during the 6 years of war and German occupation.

Let us urge and hope that the various relief campaigns that are under way in this country for the collection of food and clothing for the miserable and destitute people of Europe will receive the full support of every American. The kindness and assistance that we give now to these poor and unfortunate people will be repaid a thousandfold in friendship, love, and respect for Americans by the people of the world for many years to come. It is our best insurance for respect and honor among the suffering people of the world, and that our future position of leadership in the family of nations will be upheld and supported by them.

The letter follows:

LOMZA, *November 24, 1945.*

On the 20th November, just on the date of my namesday, I and my family received some clothes originating from UNRRA gifts. In the coat which was presented to me, I

found a slip of paper with the following address: John N. Mushevic, 356 Deerfield Street, Greenfield, Mass., USA.

As far as I can guess, the mentioned slip of paper has been put into the pocket by the kind donor to whom I wish to convey my heartiest thanks.

The gifts collected and donated to the Poles by the noble American people represent for us an invaluable help, especially with the advent of winter. The terrible devastations caused by the war deprived us of everything. Our town where we live is situated northeast of Warsaw on the river Narew. Before the war its population numbered about 35,000 inhabitants. It was a tidy and well-organized town. There were many schools, five churches, and a few industrial establishments. Today masonry and wreckage, here and there—like lonesome trees after a storm, stand shattered, gloomy houses. In fire-gutted interiors live people still terrified by the past horrors. Tremendous financial losses and still larger losses in people. There is no home, no family who should not suffer a loss of at least one member of the family. The war hasn't spared me either. The house in which I lived was bombed in 1939 on the second day of the war. Then I had gestapo on my heels and finally was arrested with my 18-year-old son. We were in prison and in concentration camp during 18 months. My second son, 15 years old has been killed by the Germans in guerrilla warfare. My wife and daughter were obliged to live in concealment for fear of the Germans and wandered from place to place. I am a fire-brigade specialist. I am working now at the reconstruction of the fire-brigade teams. My children had no chance to learn all during the war. Now they will start their school again.

Giving the above short description of my present situation, I wish to thank you on my own behalf and also on behalf of those other citizens of our town who received UNRRA gifts. I should also like to express our thanks to all of your acquaintances who contributed to the organization of UNRRA help. If you are interested in any other details, I should be ever so glad to supply them to you.

FELIKS SAROSIEK.

Our Taxpayer's Interest in the British Loan

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me over the radio program Congressional Record of the Air, Monday, February 4, 1946:

If the negotiators in the Anglo-American conference to arrange for a loan to Britain thought that the Members of Congress will swallow any pill handed to them in the form of an agreement they must, by now, be having a second thought.

The agreement is the first final termination of a lend-lease account. In all we gave the British Commonwealth $29,000,000,000 of lend-lease, receiving back from the United Kingdom slightly more than four billion. Thus the bulk of lend-lease is written off.

A line of credit of $3,750,000,000 will be available to Great Britain to be drawn upon until December 31, 1951. Great Britain then pays interest and principal on such part of the credit as it is used. Interest is at 2 percent over the 50-year repayment period, which starts 5 years after the ratification of the agreement, so that the effective rate on the entire sum over the 55-year period would be about 1.62 percent. Not so incidentally, when a GI borrows he must pay 4 percent.

The United States then lends to the British an additional sum of between $650,000,000 and $700,000,000 to be used by Britain in final settlement of lend-lease balances. This sum is to be repaid on the same basis as the line of credit, so that the total credit made available comes close to $4,400,000,000.

The agreement is so full of escape clauses, weasel words, and abracadabra as to permit Great Britain to do anything she pleases after she receives the money. The promises to pay are loaded with ambiguities. The qualifications practically nullify the apparent pledges. The double talk is bound to lead to misunderstandings, charges of bad faith, and as they were the last time, Anglo-American relations will be poisoned again.

Members of the House of Representatives and the Senate cannot be persuaded to forget Great Britain's well-known default the last time. Once bitten, they are twice shy. They cannot forget the irritations created and the name calling, such as Uncle Shylock. The British press has already begun sniping. Because the loan was not an outright grant in aid or a loan without interest, Mr. Churchill testily stated, "As it is, we seem to have the worst of it both ways." He even refrained from voting in the House of Commons.

Yet we in the United States, examining the terms, find it would take a Sabbath day's journey to go through the waiver of interest clauses to determine their exact meaning. We will have to pay more than 1.62 percent to raise the money for the loan—pay it to the American taxpayer. Even if Britain pays its obligations entirely, it will cost us an additional $2,000,000,000 to service the loan. I point this out to emphasize to Sir John Anderson, former Chancelor of the Exchequer, that it is not quite so "hard a bargain," as he termed it. I remind Sir John that the clauses providing for waiver of interest payments are wide enough to permit a B–29 to fly through without touching the sides.

Furthermore, it is not generally known that England borrowed in 1941 from the Reconstruction Finance Corporation the sum of $425,000,000. There has been disbursed three hundred and ninety millions, leaving a balance upon which she can draw of $253,265,000. We hear little about that. She gave security to the RFC, and at the present moment there are about eight hundred and ninety-five millions worth of securities held by RFC. Over and beyond that, Britain has huge free and clear assets in the United States which include $2,500,000,000 in negotiable securities and investments, a total of over three and a half billions. Why did she not propose that these assets be used to secure the contemplated loan?

Question. Do you see, Mr. CELLER, any relation between this loan and England's foreign policy?

Answer. I certainly do. This loan will be used to support not only the British at home but British imperialism abroad. There is no concrete limitation whatsoever on the use of any of our lend-lease war materials. Our Thunderbolts, our tanks, and our machine guns were used to maim and strafe innocent cititzens in Dutch Indonesia, in French Indochina, and supposedly independent Siam. That lend-lease material can still be placed by British in the hands of Indian and Japanese troops in subduing independence movements in colonial areas, despite the pledges of the Labor Party to encourage self-determination of subject peoples.

The moneys can be used to enable Britain to continue to tear-gas and V-bomb her way into Palestine villages and settlements, there, again, to kill innocent men, women, and children. The moneys can be used to support General Montgomery's cruel refusal to permit Jews fleeing new Polish pogroms to enter the British zone of occupation. I have great admiration for General Montgomery, but he is acting under Britain's callous orders. If the Jews attempt to cross the borders, they are met with guns and bullets. They want to go home to Palestine, but, again, a colonial policy supported by lend-lease guns seals the borders of Palestine against refugees.

Question. It has been stated that this loan will help do away with the trade barriers Great Britain has drawn around the sterling countries. Do you agree with that, Congressman?

Answer. I do not. There is no definite clear-cut agreement in this Anglo-American loan proposal that Great Britain will dissipate the very irritating sterling area bloc pool which so blatantly discriminates against American trade and American traders. We cannot freely trade with India, Australia, New Zealand, South Africa, Egypt, and other countries in the Levant. What dollars they possessed for the purchase of American goods has been converted into pounds by England and then frozen. The result is when these buyers want to buy American goods to be paid for with their own American dollars, they cannot do so. They can only buy where and in what quantities England permits them to buy.

Moreover, the imperial trade preferences are not even mentioned in the Anglo-American pact. This system, likewise, has a very deleterious effect on American trade and traders because within the British Dominions there is a tariff preference given one to the other, which preferences are denied to American exporters.

I'd like to ask the question now, if you'll let me. Shall we, with four and a half billions, bolster up British imperialism and British economic domination? That's a peculiar kind of way to endorse the Atlantic Charter.

Question. Has Britain asked any of her creditors to scale down her indebtedness to them?

Answer. We have no knowledge of Britain having asked her creditor countries to scale down the debt. I know if she asked India, whom she owes about $5,000,000,000, the people of India would do so gladly but in turn would demand political independence. England will not swallow such a condition. I know that many will be just as surprised as I am to learn that Greece, for example, has obtained a loan of forty-five million from Britain and that presently a Czechoslovakian mission is arranging for a loan from Britain in the announced sum of 25,000,000 gold pounds. If England is stone broke, how can she make these loans to Czechoslovakia and to Greece unless the money we turn over to her is so used? It appears, does it not, that Great Britain intends to get all the gravy and all the good will by making favorable trade treaties with Czechoslovakia and Greece at our expense and with our money.

Question. Now that the agreement is coming close to the time when it will be considered by Congress, do you know how some in Britain view it?

Answer. Well, for instance, Leopold S. Amery, former Secretary of State for India, said only the other day in addressing the Birmingham and Midland Institute of Export, "The way down which America is trying to drive us is the way to ruin." Such loan, he commented, is "national" suicide. If many in England talk that way and we in America talk about the disadvantages of the loan to the United States, I can't see how such an arrangement can lead to peaceful relations between the two countries.

Question. How about the other countries that will follow suit in asking for a loan?

Answer. That's it, exactly, Billy. France has sent a mission over here to make prepara-

tions for the asking of a loan. Russia will want money. So will China, to mention but a few. It seems to me that we ought to take stock of our ability to finance all these countries who are clamoring for loans. It certainly would not make for stable international relations to lend money to one country and not to another. Are our resources inexhaustible? Ought we not ask how much of a burden our taxpayers can carry once we start on the course of lending.

The debt will be like a millstone around our own necks. It will cause no end of friction and trouble. We shall be the wiser in the end, but also the loser. The wisdom will come too late.

The Citizen and Foreign Policy

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 7 (legislative day of Friday, January 18), 1946

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Citizen and Foreign Policy," delivered by my distinguished predecessor, Hon. Henry Cabot Lodge, Jr., before the Foreign Policy Association, at Minneapolis, Minn., on February 4, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to come before you today, and, for the first time in more than 2 years, to have the opportunity of expressing my inner convictions on some of the problems confronting our country and the world. A lifetime of study and travel, both as a journalist and as a public official, to which was recently added military service in Africa, Italy, France, and Germany, form the background of these remarks.

Our greatest, most overshadowing preoccupation as a people today centers in our relations with the rest of the world, that is to say, our foreign policy. We feel comparatively sure of ourselves when it comes to the waging of war, to the problems of peacetime production or to the decisions of domestic politics. But foreign policy is different. If it is undoubtedly often an enigma to those who are engaged in conducting it, it must to the ordinary man be still more confusing. He must learn to distinguish between facts, which are infrequent; political opinions, which are commonplace; and gossip, which is going on all the time.

It will clear the air to some extent if we automatically distrust all partisan political statements on foreign policy. Such statements have no place in the foreign field and it is reprehensible to seek to derive political advantage from foreign problems. Indeed, in the larger sense, there is often only one possible American policy; the question arises as to how skillfully it is handled by our officials and as to how clearly it is understood and hence supported by the American public.

Foreign policy also lends itself admirably to gossip. So much of the conduct of foreign relations must necessarily be secret. It may be only human for a diplomat to want to conceal his failures; but he is also unable to advertise all his triumphs, lest in so doing he start a reaction which may prevent triumphs in the future. Speaking of gossip and its harmful effect, it may be pertinent to recall that in 1943 a committee of five Senators which had flown around the world visiting the war theaters was asked to address the Senate in what was officially called a secret session. At that meeting I stated the obvious truth that Russian help in our war against Japan, at the proper time, would be of enormous value to us—endeavoring, of course, to make it clear that Russia then had her hands full fighting the Germans and that nothing should be done to hamper her in the war against the Nazis. A few hours later someone at the secret session had leaked to the press and had leaked inaccurately, saying that I had spoken critically of Russia for not fighting Japan at the same time that she was fighting with her back to the wall against Germany.

This is one example of the unreliability of gossip. It behooves us all, whether we be public officials or private citizens, not to believe every passing rumor and to speak with a far greater restraint and care about foreign policy than we are accustomed to speak about our own home politics. Moreover, while it is our traditional right, as freemen, to criticize our public officials, let us here today rather stress the duty incumbent on the citizen in a democracy to act in a serious and responsible manner, free from blind prejudice, in considering our foreign affairs.

Let us here today also stress the fact that we must cease to be greenhorns. We must not treat foreign policy as something apart from our daily lives. Our economic policies, for example, can determine the whole course of foreign relations. The biggest fact about American foreign policy today is that American soldiers all over the world are demonstrating against further service abroad. Actions speak louder than words.

The international war has stopped, but peace has not returned to the earth. The Old World is filled with people who are miserably clad, whose faces are drawn and pinched by hunger, and who live without proper shelter. Years of torture and cruelty have brought tragedy—and hate—into the souls of millions. There is widespread social unrest; the elaborate prewar system for the distribution of the necessities of life has broken down. While international war has stopped, there are civil disturbances in different parts of the earth, the consequences of which are just as deadly for those who get engulfed in them—and which are regarded by many as making a mockery of the principles of the Atlantic Charter and of the four freedoms. The white crosses in numerous cemeteries in foreign lands bear mute witness to the sacrifices which the United States has made. And our own land, so physically untouched by war, can be the object of universal hatred unless we are wise, farsighted and humane. The United Nations Organization, set up to prevent international war, has not yet had a chance to prove its worth. And the advent of atomic energy—the secret of which will soon be known to all nations—makes one feel that we have but a brief period of grace, that the sands are running out and that consequently the future must evoke from every one of us the best that is in us of intelligence, forbearance, farsightedness, and faith.

But alarming as the outlook is, this is no time for despondency or fatalism. We must take stock of our assets as well as of our liabilities. It is, for example, encouraging to realize that we have learned valuable lessons from the mistakes of the last peace. In contrast with the last postwar era, we are at least seeking to maintain the alliance which won the victory. We have separated the building of peace machinery from the detailed execution of specific peace terms, thus avoiding one of the principal reefs on which the last peace treaty foundered. Moreover, we have had among the American people a far greater unanimity on foreign policy than existed after the last war, although possible lines of cleavage are easy to see. Modern science, by largely destroying the advantage which geography conferred on us has convinced the average American that he cannot, no matter how much he might like to, let the rest of the world "stew in its own juice." The ideal of a provincial nation of simple humble people, far from the beaten track, whose forbears came to this country to escape the tyrannies of the Old World, has given way to the realization that we have become the world's greatest power and that, even if we elected to do nothing whatever, we would be inextricably involved in everything consequential that takes place in the world. Another asset is our enormous industrial and military might—if we can keep it—a decisive force in the war just ended and a potential force for good in the days ahead. Nor need we be too despondent because the principles of the Atlantic Charter and the "four freedoms" are not in effect all over the world today. In spite of this fact, the victory was well worth winning. After all, our soil is not occupied by the Germans or Japanese. Both nazism and Japanese imperialism, with the threat which they symbolized to lovers of freedom and to civilized society, have been destroyed. To this extent and in this way the war completely achieved its purpose. Finally, while it is true that the United Nations Organization is still in its infancy, there is cause for great encouragement in the fact that at least we have got an international organization and that the recent meeting at Moscow showed what Secretary Byrnes called such a friendly spirit as to justify some real hope for its growth.

With these broad considerations in mind what can we say more specifically about the immediate outlook? One does not have to look far. Overshadowing the entire international scene is one subject—the atomic bomb. Overshadowing all international relations are our relations with Russia.

Insofar as the atomic bomb is concerned, we can at the moment but hope that the unanimous vote of the United Nations Assembly creating a commission to consider problems arising from the discovery of atomic energy will lead to effective international inspection of atomic bomb production facilities and effective international control of this weapon. We must hope for such control under the auspices of the United Nations Organization. In devising such a control our minds must be bold and unhampered by precedent or old legalisms. We may well remember that a man whose home town has been hit by an atomic bomb has very little sovereignty left. The true object of government is the welfare of the citizens and not the preservation of any particular system, outdated or otherwise. Lincoln said: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves."

The bomb not only proves the need for effective international action; it also proves the need—if proof were necessary—for a strong America, strong in its productive power, strong in its faith in its institutions, and consequently strong in its military might. It is hard to follow those who see an inconsistency—not to say disloyalty—in one who fervently desires to promote international collaboration and at the same time wants a strong Army, Navy, and Air Force. After all, it is well to have two strings to your bow—although this is not the primary reason for keeping America strong. A prime reason is that our military might is an essential prerequisite to an effective foreign policy. Let us hope that we have learned one bitter lesson from the past, which is that your foreign policy is only as effective as the strength in readiness behind it. Words and resolutions, threats and bluffs, are of little avail when international relations get strained. While excessive armaments have been a cause of war in certain places, the

United States has never once been involved in war because we were too well prepared. The contrary has more often been the case. As General Eisenhower said, our fighting forces "have but a single mission—to discourage or to repel aggression."

And the future will be worse. It is estimated that we will have 30 minutes' warning of the approach of hostile bomb-laden aircraft or missiles. We will no longer have a year or two in which to get ready. The next time we will be the first country to be struck; not the last. Our entire salvation, therefore, may depend on being immediately ready. Marshal Foch is said to have remarked: "For a Nation to be respected, it must be worthy of respect. Victory doesn't last very long."

There are those who oppose military preparedness who ask, "Whom are you going to fight?" There are many answers to this question. One answer is to ask the question: "Who are the criminals against whom you maintain your police force?" No one knows who they are or who they may be 10 years hence; but we do know that we need a police force. Indeed the mere existence of such a force may prevent certain criminals from ever developing. It is also worth noting that in 1919 and 1920 exactly this same question was asked whenever national defense legislation was under consideration. And in 1919 we had just finished a war in which two of our allies were Italy and Japan.

We not only want a strong America—we want a kind and a generous America. Whoever has been in Europe recently knows the stark and tragic prospect ahead. He has probably seen old people and small children lining up in mud-soaked fields with tin cans in their hands in which to catch the leftovers of the American soldiers' meals. Common humanity demands that we help these miserable people. Those who are not moved by the humanitarian appeal should realize that America treads a dangerous and a lonely path as the only well-fed Nation in a starving world—and that the terrible epidemic diseases resulting from undernourishment are no respecters of frontiers.

Our spending abroad must not only be done humanely, but with efficiency and good judgment. Improper use of such supplies cannot be condoned. Foolish and wasteful expenditures abroad arouse justifiable resentment. The question of economic loans, as distinct from relief, should be decided on a broad and farsighted basis. We must always satisfy ourselves of the probability that the terms of these loans will be complied with. To set up requirements which will not be complied with leads inevitably to bad feeling and therefore defeats one of the major purposes of the loan. Let the terms therefore correspond with the facts and the probabilities. Such loans, even though they may appear to some to be unusually liberal, can in the end be helpful not only to the country which receives them, but to the United States as well.

Just as the atomic bomb is the prime issue confronting the nations, so do our relations with Russia at present overshadow all international relations. The emergence of the two so-called superstates—the United States and Russia—is one of the revolutionary consequences of this war. Both countries occupy vast land masses; the population of both countries stem from differing racial origins; both have in varying degrees, and alone among the nations of the world, the mass population, the natural resources and the strong central government essential to the prosecution of modern war. In neither country is thinking shackled by the dead hand of the past.

Both countries have vast natural resources within their own borders which are clamoring for development. Both have expanded into unsettled areas—we to our west; they to their east. Both have engaged in defensive wars to preserve the freedom of their respective countries. In 1863 Russia made a gesture of friendship to the Union by sending its naval vessels to New York. But the great bond, of course, is the grand alliance with Russia against Nazi Germany. No one of us—American, British, or Russian—could have defeated Germany alone. It required a grand alliance. Not only will the world not forget Stalingrad, but there are many American soldiers who will remember with gratitude moments last year when Russian troops drew German troops from the western front.

Last year, to be sure, we could not talk of the differences between us. Our authorities adopted the attitude that there could be no criticism of our allies. The unfortunate result of this suppression of all criticism is that today, when free speech has returned, the normal human faults of our allies are exaggerated, sometimes with explosive force and dangerous possibilities.

There is, to be sure, many a difference, many a broad ideological gulf between us and the Russians. Our ideas on religion, on democracy, on individual freedom, and on free enterprise are widely different. Their system of government is just about the opposite of ours in many respects. We believe in uncontrolled publicity, and they believe in what Senator VANDENBERG calls "the iron curtain." Even words like "democracy" mean different things to each of us. Public opinion here is relatively unorganized and divided, which necessarily reflects itself in the policy of our Government. We have strong historic ties with Poland and some of the smaller countries in eastern Europe. Russia has taken unilateral steps with regard to these countries which cause us sincere concern.

Maybe we cause the Russians disquiet. After all, they know us no better than we know them. It is estimated that there are not more than 250 Americans in Russia and not more than 2,000 persons in the United States holding Russian passports. How can we fail to be ignorant? Our philosophy about publicity may strike them as dangerous and excessive. They may be puzzled by our intense interest in countries so close to them. They may recall that in the past Americans have supported the White Russians in preference to the Bolsheviks and that in the Russo-Japanese War we certainly appeared to be sympathetic to Japan. They may look at our Navy and air force with at least as much awe as we contemplate their huge ground army. We can perhaps get an idea of how they feel about our possession of the atomic bomb by asking ourselves how we would feel if Russia alone had the bomb and, having used it, refused to share it. In fact, we have each done much to insult, antagonize, and thwart the other. In the past few months the loose talk has grown to proportions which to me seem dangerous.

Because, my fellow citizens, here we are in 1946. We want peace with them and I'm convinced that they want peace with us. We do not compete with each other—unless you see a competition in the realm of political ideas. There is no place today where our truly vital interests touch. We have the word of one American Ambassador who, while speaking of his conferences with Russian statesmen, said that while he seldom agreed with them, they never misled him. Moreover, we all know that with the United States and Russia together there will be international peace for all. Others may disturb the peace of the world; only we two can destroy it.

Why not face all these things frankly? Why not recognize that vituperation defeats its own purpose? If angry talk could improve the lot of one human being or could advance even an inch the cause of religious tolerance, there would be justification for it—but we know that such talk can only worsen the conditions which they are designed to improve.

Needless to say, there is no suggestion here that we change our beliefs or our ways. We cling passionately to our system, with its guaranty of religious liberty, of free enterprise, and freemen. There can be not even a suggestion of surrender of principle. Indeed, no question of like or dislike is involved. We have the word of Marshal Stalin himself that he wants his country judged dispassionately. "Just judge the Soviet Union objectively," he recently remarked. "Do not either praise us or scold us. Just know us and judge us as we are and base your estimate of us upon facts and not on rumors."

This means that we not take some alarming, though isolated, incident, and in our minds carry it to its logical extreme. Let us remember that, fortunately, things seldom go to their logical extremes.

It means being firm and definite and not talking too much.

It means keeping your word whenever you give it—and not necessarily giving it very often. The man who is firm and definite is respected and gets results; he who indulges in abuse and rumor-mongering achieves only trouble for himself and for those whom he seeks to help.

It means that we should always remember that the Russians are a practical people, who have come along in a hard school of international relations, and who realize that force, after all, is the ultimate unit of international politics.

To what conclusion about Russia does all this lead us? To this: That we must have an efficient working arrangement with Russia. There is indeed, as the Catholic bishops of the United States recently said, "a clash of ideologies," but, they continue, "the frank recognition of these differences is preliminary to any sincere effort in realistic cooperation for peace * * *." There must be "honest, promising discussion even on diverging plans." Accordingly, "our country acted wisely in deciding to participate in this world organization. It is better than world chaos."

"Better than world chaos." That is the point. And chaos is what we may have unless we develop a working arrangement with Russia. This involves not only our diplomats; it imposes an obligation on all of us to think clearly and fairly and to speak with firmness and restraint.

High on the list of problems between the United States and Russia is, after the atomic bomb, the treatment of Germany. If agreement on the policy to be followed toward Germany is achieved, it will make a host of other problems easier to solve.

In thinking about Germany, the following suggestions are submitted:

Germany's capacity to wage modern war must be eliminated. This involves, among other things, elimination of Nazi personnel from posts of authority, destruction of military installations and organizations, and of heavy industry having military potential.

Germany's pacification must be conducted so as to enable her to the maximum extent possible to subsist without external assistance.

Germany's currency and transport systems should be unified on a national scale. The present division of Germany into zones is responsible for much needless hardship and for much extra trouble and expense for the occupying forces.

Germany's interior administration, as General Eisenhower has said, should not remain under American military government now that the war is over. Our military-government officers, in common with other Army personnel, want to return to civilian life. The sooner civilian administrators can take over their functions, the better.

We should announce to the world and to ourselves that we intend in the long future to maintain an active interest in what happens to Germany and that we will support that interest with whatever is necessary. We should be breaking faith with those who died in this terrible war and we should be inviting future trouble for ourselves if we allowed the hard-won gains of this war to evaporate simply because we had lost interest in the future of Germany.

Germany's military occupation is essential, but it is to be hoped that the United States will not indefinitely have to furnish a large army of occupation for that purpose. Such duty goes against our grain, and the citizens of other countries do such work with more liking than we do. Prompt and detailed study should be given to the practicability of recruiting a force among the stateless young men in Germany who would make a life work of policing the country. There are surely many there who would willingly join a properly organized military force and who would not find the task of policing Germany uncongenial. There is the great possibility that such a program could materially reduce the demands on the United States to furnish occupation troops. It is indeed quite conceivable that such a constabulary could take over all functions except those to be performed by our American officers and by our technically trained troops. It might conceivably reduce American troop requirements in our zone in Germany to a few separate tank battalions. The idea should be thoroughly explored.

If agreement is obtained on basic policies, it will be time to consider whether Germany can, for administrative purposes, be placed under the jurisdiction of the United Nations Organization. It is perhaps not too much to hope that Austria could be so placed within a short space of time. Remember that, insofar as man-made devices are concerned, the United Nations Organization is our best hope. We must give it things to do so that its muscles may grow strong by exercise. We must be careful, insofar as we can control the problems which come before it, to give it in its early years only those problems which are virtually sure to have a successful outcome.

To sum up:

1. The citizen in his approach to foreign policy must beware of gossip and rumor; avoid partisan politics; and talk and think with restraint.

2. America must be generous and help the distressed in other lands.

3. America must be strong, especially in her Army, Navy, and Air Force.

4. Effective control under the United Nations Organization, with thorough inspection and other safeguards, of the production and possession of the atomic weapon is the prime objective of foreign policy.

5. An efficient working arrangement between the United States and Russia is of paramount importance to peace.

6. Germany to be demilitarized.

7. A constabulary recruited from stateless persons to police Germany could materially reduce the demand on the United States to furnish occupation troops and should be thoroughly, vigorously, and promptly expored.

8. Build up and strengthen the United Nations Organization.

Yes, build it up; it is our best hope. It is, as your own distinguished citizen, Governor Stassen, truly remarked, "a vital beachhead" in the battle for peace. It is an instrument which, as Mr. Bevin recently declared, "if all nations resolve to use it, can establish a rule of law and prevent war." He said further:

"I say 'resolve to use it' because to my mind here is the essence of the problem. Just as no system of inspection or control of weapons is to avail without good will, so no international organization, however carefully framed, will be of any avail unless the nations resolve to lay aside war and threat of war as an instrument of policy—unless they determine to establish between themselves such mutual confidence that war is unthinkable."

Indeed in the words of the Scripture, "the letter killeth, but the spirit giveth life." The abiding answer to the question of whether we shall have peace lies in the hearts of men. This spirit is stronger and more all-pervading than any organization, system or device. "The Kingdom of Heaven is within you." Indeed systems and devices to be successful, should follow closely the development of human nature and not try to act as a strait jacket for human passions. The strength of the United Nations Organization lies in the fact that it is an honest document, corresponding to the sentiments of the times. We all hope that it will grow because its growth connotes a growth in those spiritual values which are decisive in our quest for peace.

In conclusion, let us be inspired by the thought that such a growth is by no means out of the question. In the war just ended we saw some manifestations of the human spirit which were sublime enough to achieve anything. Men lived—and died—dangerously for ideals that were close to them. On the home front the American people were united by a common ideal. There was unity in Congress, reflecting the unanimous desire throughout the land to win the war, regardless of consequences. On the fighting fronts we saw this unity to an even more marked degree. General Eisenhower not only commanded Army, Navy and Air; he also commanded the troops of many different nations. I saw this international command at very close range in the extremely effective generalship of General Devers, who had all French combat units in Europe under his orders. These international commands had elements of great difficulty, since war is always difficult. Orders had to be issued, as they always are in war, spelling life and death. To take life and death orders from a foreigner is different from taking them from one of your own. Yet, in spite of these manifold opportunities for bitter feeling, we ended the war as friends with our allies.

May this partnership on the battlefield be the forerunner of successful cooperation in the larger field of international relations so that the ordinary men and women of the world may live their lives and rear their children in peace.

Indian-American Relations

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1946

Mr. CELLER. Mr. Speaker, a sad lack of information about India exists in the United States. The same lack of information about the United States exists in India. Whatever information we do manage to get about India is so colored by British propaganda that it hardly serves the purpose.

The average American sees the Indian either as a bizarre turbaned person or as an untouchable in a loin cloth. The picture of the American the Indian has is hardly more accurate or flattering. Americans are either vacuous illiterates or racketeers. Such misconceptions hardly serve to build up friendly, understanding relations between the two peoples.

During the war, India supplied us with millions of dollars of war materials. As a result thereof, she has with us a favorable trade balance in the sum of a billion and a half dollars with which she could and wants to buy our goods if and when the restrictions of the British sterling area bloc pool are lifted. This fact is not generally known in America.

The opportunities of mutual trade between the two countries are boundless. But the lack of knowledge of each other creates barriers which are disadvantageous to such mutual trade.

Public relations between the two countries can best be served by India setting up its own information service in the United States. She must no longer rely on the slanted items sent out by the British Information Service or the British Embassy. Until she does that India remains for the vast majority of Americans an enigma. Such information service will offset the statements of British lecturers and writers in this country who are constantly disparaging India and minimizing the India independence movement and who are constantly ballooning out of all proportion the differences between the Moslems and the Hindus.

Our own press has been anything but generous in printing articles and dispatches about the 390,000,000 people of India. For example, the sister of Nehru, Mrs. Vijaya Lakshmi Pandit was in the United States on a speaking tour. She is a charming and dynamic personality. Yet, the American people read scant notices of her talks and the enthusiastic receptions accorded her.

How much has appeared in our press, for instance, about the Bombay plan for the industrialization of India?

The Associated Press and United Press are now, fortunately, widening their coverage of India. They should be congratulated in getting a better message about America to India.

India should know that many of us in the United States are genuinely interested in India. We want more and more knowledge of her aims, aspiration, culture, and history.

Treasury Enforcement Agencies

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. COCHRAN. Mr. Speaker, annually the Treasury Department issues a release in reference to the activities of the enforcement agencies. This is always very interesting reading.

All enforcement agencies of the Treasury Department are under the Chief Coordinator, Hon. Elmer L. Irey.

Under the permission granted me, I include as part of my remarks the statement just released. It follows:

Officers of the United States customs service today saw statistical evidence of the shift of world trade and travel toward a peacetime basis with emphasis, from the enforcement point of view, on the traditional contraband of undeclared luxury merchandise—diamonds, furs, watches, and such.

Elmer L. Irey, Chief Coordinator of Treasury Enforcement Agencies, reported to Secretary Vinson that seizures of all types of smuggled commodities increased sharply in 1945, to 17,009, compared to 10,215 in 1944. Two elements swelled the total: First, the disposition of travelers to attempt to bring in or export scarce commodities, from beefsteak to nylons and automobile tires, in violation of wartime regulations; and in the closing months, conventional smuggling growing out of relaxed conditions of trade and travel. With the easing of the United States supply situation, liquor seizures declined.

E. J. Shamhart, Deputy Commissioner of Customs, said today that the Agency is applying improved inspection techniques and equipment developed as a wartime protective service to the peacetime checking of travelers and their luggage and shipments of merchandise through customs. He said those attempting to avoid payment of duties on merchandise will have a tougher gauntlet to run than ever before.

Mr. Irey reported that the United States Secret Service continued to depress money counterfeiting toward the vanishing point; but that theft and forgery of Government checks and bonds increased, although relatively slightly in comparison with the huge increase in such items being issued or outstanding. More than 23,000 checks were involved in Secret Service investigations during 1945, compared to 15,700 in 1944; and 1,841 persons were arrested on forgery charges. Discovery of coin counterfeiting within the walls of Missouri State Penitentiary was a spectacular incident of Secret Service investigative activities.

The Alcohol Tax Unit of the Bureau of Internal Revenue reported a decline in illicit distilling operations as reflected by still and mash seizures, but said the traditional moonshine States of the South witnessed fairly substantial substitution of cane sirup and home-made sorghum for scarce sugar, with operations continuing about as usual.

The 14 Southern States contributed 95 percent of all the stills seized, 92 percent of the mash seized, and 85 percent of the persons arrested for liquor law violations.

For the entire country, still seizures in 1945 were 7,521, compared with 7,762 in 1944, with arrests of 9,492 compared to 11,911 in 1944.

The Treasury's smallest investigative unit, the Foreign Funds Control Compliance Section, continued its policing of funds of enemy firms and nationals, with its outstanding case being the blocking as German of some $5,000,000 in cash and securities in five New York banks. These assets were held in the name of a Swiss company, which, investigation disclosed, was in turn owned by a German company.

During 1945, 11,012 persons were convicted in Federal courts of violations of laws administered by the above agencies and the Bureau of Narcotics and Intelligence Unit of the Bureau of Internal Revenue, which, collectively, make up the Treasury enforcement agencies. In 1944, convictions totaled 10,888.

Typical of the cases developed by Customs in increasing numbers during the closing months of 1945 was the seizure, from a professional entertainer returning from Latin America by plane, of 32 cut diamonds and other gems concealed in baggage. The passenger paid $4,000 in penalties and surrendered the gems for forfeiture to the Government.

Customs officers broke up a small scale rum-smuggling conspiracy operating between Cuba and Florida, and involving the masters of three vessels and officials of a steamship company. They sought to evade payment of duties by means of false manifests.

In the same area, officers foiled an extensive plot to export critically scarce truck tires. The conspirators sought to evade export control regulations by mounting the new tires on the wheels of decrepit automobiles and then exporting the automobiles. The "wrecks" were driven or towed through mud to conceal the newness of the tires.

Other cases involved illegal exportation of gold for sale abroad, and an attempt to export to the Orient, without license, quantities of medical supplies.

The Secret Service continued to combat counterfeiting and check forgeries with widespread use of educational films, newspaper and magazine publicity, and radio warnings designed to alert the public and storekeepers to the methods followed by these racketeers.

Two abortive attempts to make counterfeit currency were smashed during the year, one in Washington, D. C., and one in St. Petersburg, Fla. Plates and equipment and bogus money were seized in each case, and only one note got into circulation in the two ventures. One man was arrested in each case.

The coin-manufacturing plant in Missouri Penitentiary involved 20-year-old William L. Patterson, who was serving a 2-year sentence for burglary. While working in the prison foundry, he is alleged to have made sand moulds for manufacturing counterfeit nickels, dimes, quarters, and half dollars out of iron and aluminum, which he spent in the prison commissary. His activities were discovered only 2 weeks before he was due for discharge, and he is now under indictment and awaiting trial on the counterfeiting charge.

Chief Frank Wilson of the Secret Service reported that losses to the public from circulation of counterfeit currency and coins dropped to a new low of $25,666 in 1945, compared to $28,067 in 1944. In some years in the middle thirties such losses ran to more than a million dollars a year.

The most spectacular check forgery case of the year was solved with the arrest of Arthur Moses in New York on November 24. Moses confessed he had made a living by victimizing merchants with more than 1,000 stolen checks since 1938, realizing at least $50,000. He operated in Detroit, Louisville, Chicago, Cincinnati, Philadelphia, and other cities, in addition to New York.

The Secret Service received for investigation more than 6,500 bonds stolen and fraudulently negotiated during the year. In one case, in Philadelphia, Stanley S. Gnagey, 19 years old, was arrested in connection with theft and forgery of $1,240 worth of bonds, the proceeds of which he exhausted on a New York spending spree. He was sentenced in State court for the burglary and faces other charges.

Chief Wilson warned bond owners to keep their securities in a safe place and to keep a record of bond serial numbers separately to aid in recovery if losses should occur.

In addition to its perennial war against moonshiners, continued prosecution of liquor black marketeers of the recent shortage years and evaders of the floor tax stipulated in recent revenue acts, the Alcohol Tax Unit tackled a new problem in 1945. The Unit, charged with enforcement of the National Firearms Act, conducted a Nation-wide campaign to register automatic weapons such as machine guns, submachine guns, and machine pistols brought in as souvenirs by returning servicemen. The Unit sought to persuade the owners to render these and other weapons unserviceable for the protection of their families and to decrease the possibility of such weapons falling into criminal hands.

Stewart Berkshire, head of the Unit, said the campaign was considered imperative in view of a rapidly developing wave of crimes of violence in which such weapons brought in originally as souvenirs figured. He pointed out that the law provides a tax of $200 on each transfer of automatic weapons, a liability which can be avoided if the guns are made unserviceable.

Hon. John Elliott Rankin, the Gentleman from Mississippi

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Washington Post on February 3, 1946, by Miss Virginia Van der Veer, concerning the service rendered his district, his State, and his country by my good friend and colleague, Hon. JOHN RANKIN, of Mississippi:

JOHN RANKIN: A BARRYMORE IN SOUTHERN SOUND EFFECT

(By Virginia Van der Veer)

JOHN ELLIOTT RANKIN—tousled hair, Barrymore profile and southern sound effects—has an alert eye cocked at 1971.

It's an anniversary the fiery Democrat would like to keep—his 50-year mark in Congress.

The small man with the big voice from Mississippi's northeast corner is halfway there. On March 4 he'll round the corner into his second quarter-century on Capitol Fill.

Drop around the big dome about 7:30 any morning but Sunday. The wiry, slightly stooped man in a black suit, hot-footing it across the Capitol's front yard toward the House Office Building is JOHN E. RANKIN. He's been making this same trek, from home in the nearby Methodist Building, since 1928.

NICKNAMES APLENTY

Newsmen in the press gallery who hear his daily harangues call him "Silent John." In the early scrapping days of Government electric power he was "Kilowatt John." Recent opponents have applied the titles of "Republican Leader of the House" and "Gadfly." He has been accused of being antiunion and antilabor. RANKIN says he isn't. He says he believes in the right of labor to bargain collectively, but is opposed to "racketeering."

RANKIN is perhaps better known for his dislikes than his likes. Among his dislikes: Communists, un-American activities, the Fair Employment Practice Committee (FEPC), anti-poll-tax moves.

He is equally positive about his likes, but not quite so vociferous. These include: the late Gen. George S. Patton, Thomas Jefferson, rural electrification, servicemen, and veterans, mockingbirds and politics.

It was as a 38-year-old Tupelo, Miss., lawyer that RANKIN first came to the House on March 4, 1921. Colleagues probably saw little unusual about the new Mississippi Member—a sawmill operator's son, Methodist, war veteran, and married man.

Yet of the 205 newcomers to Congress that day, RANKIN is the only one still serving in the House. And from the point of view of service only 15 Members outrank him.

REAL "POWER LINES"

In the 13 elections since that year no opponent has carried more than one county against RANKIN. Few have carried one.

Why? RANKIN points to a map on his office wall. The long, first district on Mississippi's east border is crisscrossed with patterns of green lines.

"Know what those are?" asks Kilowatt John. "They're power lines. Electric lights for farmers, and electric milking machines, and electric refrigerators, and some day a new, all-electric veterans' hospital at Tupelo.

"That's my biggest job in these 25 years. If I hadn't been here I don't think those farmers would have had lights for 50 more years."

RANKIN likes to hark back to the days of famous congressional battles.

His first victory, he recalls, was "the battle of Shiloh Road," when the new Member first learned the value of Thomas Jefferson's manual on House rules. His parliamentary adroitness—now a House legend—won approval for a concrete road between Corinth, Miss., and Shiloh Battlefield.

SCRAPS GET BIGGER

RANKIN went from Shiloh to bigger scraps. He supported Nebraska's Senator George Norris in getting the Tennessee Valley Authority created by Congress. His amendment raised monthly base pay of World War II servicemen to $50. It was RANKIN who led the successful drive in January 1945 for a permanent committee on un-American activities.

A House session seldom opens without the fiery-voiced Mississippian. He likes to be on hand also at the close of each day's affairs. "That's when the skullduggery is done."

NOT AFRAID OF WAR

His days are busy. "I'm too conscientious," says RANKIN. Besides his chairmanship of the Veterans' Committee, the Mississippian holds high rank on four other House committees.

The Rankin office usually closes promptly at 5. The boss crosses the Capitol lawn again, eats with his family, goes to an occasional movie or early to bed.

Folding up his first quarter-century on the Hill, RANKIN already has plans for the next. He wants: A Tennessee-Tombigbee waterway, more lights for American farmers, better things for veterans, "a safe, free Nation."

War? The Mississippian doesn't think he'll see another.

"There's only us and Russia," he figures. "And neither wants anything from the other. If we sit tight and keep our powder dry, we won't fight again."

The Case of Robert Morss Lovett, Goodwin B. Watson, and William E. Dodd, Jr., Versus the United States

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. COFFEE. Mr. Speaker, there are those who feel that Congress, through its power over appropriations, can deny continuation of employment to public officials. Congress recently tested this out in the case of the above-named gentlemen. Those men took their case to the United States Court of Claims which handed down a decision on November 5, 1945. Because the matter was pending for considerable time and is of vital importance to the country, I believe the reprint of the opinion would be of interest to my colleagues and the Nation. The opinion speaks for itself. It is as follows:

IN THE COURT OF CLAIMS OF THE UNITED STATES—NOS. 46026, 46027, 46028—DECIDED NOVEMBER 5, 1945—ROBERT MORSS LOVETT V. THE UNITED STATES, GOODWIN B. WATSON V. THE UNITED STATES, WILLIAM E. DODD, JR., V. THE UNITED STATES

Mr. Charles A. Horsky for the plaintiffs; Mr. Edward B. Burling, Miss Amy Ruth Mahin, and Covington, Burling, Rublee, Acheson & Shorb, were on the briefs.

Mr. Rawlings Ragland, with whom was Mr. Assistant Attorney General Francis M. Shea, for the Attorney General. Messrs. Donald B. MacGuineas and Henry Weihofen were on the brief.

Mr. John C. Gall for the Congress of the United States. Messrs. Dean Hill Stanley, William F. Howe, Karl M. Dollak, Joseph G. Butts, Jr., John E. Ritzert, and Clark M. Robertson were on the briefs.

This case having been heard by the Court of Claims, the court, upon the stipulation entered into between the parties, makes the following special findings of fact:

NO. 46026. ROBERT MORSS LOVETT V. THE UNITED STATES

No. 46026. *Robert Morss Lovett* v. *The United States:*

1. Plaintiff, Robert Morss Lovett, is a citizen of the United States and at the time of the filing of this suit was a resident of the Virgin Islands.

2. Plaintiff was commissioned the United States Government Secretary of the Virgin Islands on April 28, 1939, having been appointed by the President pursuant to section 21 of the Organic Act of the Virgin Island (act of June 22, 1936). Plaintiff took the oath of office on July 17, 1939. On August 26, 1943, plaintiff was appointed executive assistant to the Governor of the Virgin Islands by the Secretary of Interior, pursuant to authority granted in section 23 of the Organic Act of the Virgin Islands (act of June 22, 1936) to succeed Mr. W. M. Freeman, who had resigned. Plaintiff entered on duty as such executive assistant on October 12, 1943.

3. The compensation for the position of Executive Assistant to the Governor of the Virgin Islands is fixed at a base rate of $4,600 per annum plus a 25-percent differential for services outside of the continental United States, plus overtime computed in accordance with the War Overtime Pay Act of 1943. Plaintiff has performed the duties incident to the position of Executive Assistant to the Governor of the Virgin Islands from October 12, 1943, through March 13, 1944. On March 6, 1944, Harold L. Ickes, Secretary of the Interior, wrote plaintiff as follows:

"MY DEAR MR. LOVETT: Last November I authorized you to continue your services to the Government after November 15, in spite of the provision of section 304 of the Urgent Deficiency Act (Public Law 132, 78th Cong.), which prohibited the use of appropriated funds for the payment of your salary. The principal purpose of that authorization was to make it possible for you to test by legal action the validity of section 304. You have continued to serve the Government without receiving your salary since November 15, 1943.

"As you no doubt know, this Department has been bitterly criticized by the Congress in recent months for continuing to accept them after you had worked for a period which would permit you to test the constitutionality of congressional action. In these circumstances I have concluded that I have no alternative but to request your resignation.

"The matter is now before the Court of Claims, and I believe that the position taken by this Department and by yourself will be vindicated, in which case you will receive all the salary which you have earned. I want again to acknowledge the respect and affection in which you are held by the people of the Virgin Islands and to assure you of my own highest regards and esteem.

"With best wishes to you and to Mrs. Lovett, I am

"Sincerely yours,

"HAROLD L. ICKES,

"*Secretary of the Interior.*"

On March 13, 1944, plaintiff wrote Harold L. Ickes, Secretary of the Interior, as follows:

"MY DEAR MR. ICKES: In accordance with your request, I am sending you my resignation as Executive Assistant to the Governor of the Virgin Islands, effective at the close of March 13, 1944. I do so with regret because of my pleasant relations during the past 5 years with the people of the Virgin Islands. I thank you for the opportunity of living among them and serving them in conjunction with my colleagues of all departments whose friendship and cooperation will always be a happy memory. For your own encouragement and support, and that of the Department, I shall always be profoundly grateful. It is obvious that the Department should not bear any longer the burden of the personal hostility toward me of Members of Congress, and that I can best serve the people of the Virgin Islands by leaving them.

"Sincerely yours,

"ROBERT M. LOVETT."

4. Harold L. Ickes is the duly appointed, qualified, and acting Secretary of the Interior of the United States. As such, he is head of the Department of the Interior and exercises general supervision and control over the executive branch of the government of the Virgin Islands. As Secretary of the Interior, he has the power of appointment of various of the executive and administrative officers and employees of the United States in the executive branch of the government of the Virgin Islands, including the appointment of plaintiff to his postion as Executive Assistant, pursuant to authority granted in the Organic Act of the Virgin Islands (act of June 22, 1936). As Secretary of the Interior, he, or someone acting on his behalf, has the duty of signing all requisitions for the advance or payment of money out of the Treasury for expenditures of business of the Department, including expenditures for the administration of the Virgin Islands.

5. On February 9, 1943, the House of Representatives of the United States adopted House Resolution 105. Pursuant to this resolution a special subcommittee of the Committee on Appropriations was appointed, and on March 23, 1943, the subcommittee adopted rules of procedure. These rules were first published in the CONGRESSIONAL RECORD of June 2, 1943 (CONGRESSIONAL RECORD, 78th Cong., 1st sess., Appendix, p. A2762). The subcommittee conducted hearings from April 9 to April 15, 1943, to investigate certain charges made, inter alia, against plaintiff. The hearings before the subcommittee were held in executive session. Plaintiff was invited by letter handed him on April 14 to appear in person before the subcommittee on April 15 and make such statements or explanations under oath as he might desire, and to answer such questions as might be propounded. The invitation advised plaintiff that if he was unacquainted with the charges and allegations concerning him, a copy would be furnished upon request. No such request was made by plaintiff. Plaintiff was shown at the hearing 54 charges made against him by the Committee on Un-American Activities of the House of Representatives, Seventy-eighth Congress, first session, acting pursuant to H. R. 282. The evidence and other materials gathered during the

course of prior investigations by the Federal Bureau of Investigation, by the Committee on Un-American Activities, and by others, which were considered by the subcommittee in connection with plaintiff's case, were and are confidential, except that the charges formulated by the Committee on Un-American Activities were shown to plaintiff at the hearing as above stated. The Solicitor of the Department of Interior, on the day before the hearing on April 15, 1943, requested permission to appear at the hearing before the subcommittee with plaintiff. He was advised by the committee that his request to appear as an observer for the Department of the Interior would be considered. On the following day the Solicitor was informed that the policy of the subcommittee, already formulated in prior hearings involving persons connected with the Federal Communications Commission, was to hold its hearings without any persons other than the subcommittee, its staff, and the witness being present. The plaintiff was not proffered, nor did he request, the opportunity to produce witnesses in his own behalf or to use the compulsory processes of the subcommittee to require other persons to appear before it to testify or to submit to cross-examination, nor were any witnesses called or heard by the subcommittee on behalf of plaintiff. No witnesses, other than plaintiff, testified before the subcommittee with respect to plaintiff. Plaintiff was questioned with respect to his membership and activity in various organizations and with respect to various writings, speeches, and activities on his part. Plaintiff was given at the hearing full opportunity to make any statements or explanations he desired with respect to the subject matter of the investigation. At the close of the hearing plaintiff was also accorded an opportunity to make any statements he wished, but registered with the subcommittee no complaint as to its procedure or its treatment of him.

6. On May 14, 1943, the special subcommittee of the Committee on Appropriations reported to the Committee on Appropriations. On May 14, 1943, the Committee on Appropriations submitted a report (H. Rept. No. 448, 78th Cong., 1st sess.) approving the findings of the said special subcommittee and proposing an amendment to the Urgent Deficiency Appropriation Act, 1943 (H. R. 2714). Section 304 of the Urgent Deficiency Appropriation Act of 1943 of July 12, 1943, as finally enacted (Public, 132), provides as follows:

"SEC. 304. No part of any appropriation, allocation, or fund (1) which is made available under or pursuant to this act, or (2) which is now, or which is hereafter made, available under or pursuant to any other act, to any department, agency, or instrumentality of the United States, shall be used, after November 15, 1943, to pay any part of the salary, or other compensation for the personal services, of Goodwin B. Watson, William E. Dodd, Jr., and Robert Morss Lovett, unless prior to such date such person has been appointed by the President, by and with the advice and consent of the Senate: *Provided*, That this section shall not operate to deprive any such person of payment for leaves of absence or salary, or of any refund or reimbursement, which have accrued prior to November 15, 1943: *Provided further*, That this section shall not operate to deprive any such person of payment for services performed as a member of a jury or as a member of the armed forces of the United States nor any benefit, pension, or emolument resulting therefrom."

The President did not appoint plaintiff under section 304.

7. By letter of November 23, 1943, Morris F. de Castro, Commissioner of Finance of the Virgin Islands and the officer authorized to certify the payment of salary to plaintiff, advised the Secretary of the Interior that in view of section 304 of the Urgent Deficiency Appropriation Act of 1943, he would not certify for payment the salary of plaintiff after November 15, 1943.

8. By letter of November 26, 1943, Harold L. Ickes, Secretary of the Interior, wrote plaintiff as follows:

"MY DEAR MR. LOVETT: When you were last in Washington I discussed with you the implications of section 304 of the Urgent Deficiencies Act. During these conferences I urged, despite the prohibition, your staying on the job after November 15, for the reason that the limitations contained in section 304 are, in my opinion and in the opinion of my solicitor, an unwarranted interference with my executive powers.

"I wish to repeat the request that you continue in the office of executive assistant to the Governor. Funds may not be available to pay your salary until the unconstitutional prohibition of the Urgent Deficiencies Act is declared invalid by the courts. I am confident, however, that the prohibition will be so adjudged, and a principle fundamental to democratic government will be upheld.

"In no case are you to consider yourself discharged. You will continue to perform the duties of your office and to exercise all the authority conferred upon you by law.

"Sincerely yours,

"HAROLD L. ICKES,
"Secretary of the Interior."

9. On November 29, 1943, the Secretary of the Interior wrote the following letter to plaintiff:

"MY DEAR MR. LOVETT: The commissioner of finance of the Virgin Islands has advised me that in view of section 304 of the urgent deficiency bill (Public Law 132, 78th Cong.) funds are not available to pay your salary after November 15, 1943.

"During the past 4 years you have won the respect and affection of all of the Virgin Islanders, and you have, under very trying circumstances, served the Governments of the Virgin Islands and the United States with credit and distinction.

"If there were some appropriate way to avoid the effect of the provision of the Deficiency Act, you would, of course, receive your salary. I should like very much for you to continue in the office of executive assistant to the Governor. It would be most difficult for me to find someone to replace you. The matter, however, now is beyond my control. I made every effort to prevent the adoption of the prohibitive provisions of the bill. The action taken by Congress has been very disappointing to me. I hope that you will be successful in challenging the constitutionality of the measure which otherwise prevents the disbursing officers of the Government from paying you the salary for which you are rendering such valuable services.

"With my best wishes, I remain,

"Sincerely yours,

"HAROLD L. ICKES,
"Secretary of the Interior."

Plaintiff demanded that he be paid for the services rendered to the United States as Executive Assistant to the Governor of the Virgin Islands from November 15, 1943, through March 13, 1944. This demand was refused.

10. Plaintiff, because of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has not received compensation from November 15, 1943, through March 13, 1944, nor has plaintiff ever received his pro rata annual base salary, plus differential and overtime, or any part thereof, for the services rendered during that period. The defendant, acting through Harold L. Ickes, Secretary of the Interior, his agents, assistant, or subordinates, and solely because of the operation of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has refused and failed to pay to plaintiff any compensation for the period from November 15, 1943, through March 13, 1944, nor has the defendant ever paid plaintiff his pro rata base salery, plus differential and overtime, or any part thereof, for the services rendered during that period. The amount which has not been paid to plaintiff, and which has been withheld solely because of the operation of said section 304 and the fact that the President did not appoint him thereunder, is $1,996.40.

NO. 46027. GOODWIN B. WATSON V. THE UNITED STATES

1. Plaintiff, Goodwin B. Watson, is a citizen of the United States and at the time of the filing of this suit was a resident of Washington, D. C.

2. Plaintiff was appointed Chief of the Analysis Division, Foreign Broadcast Intelligence Service, Federal Communications Commission, on November 16, 1941, by the Federal Communications Commission in the exercise of its authority granted by section 4 of the Federal Communications Act of 1934. Plaintiff took the oath of office on November 16, 1941.

3. Since October 20, 1942, the compensation for the position of Chief of the Analysis Division has been fixed at a base rate of $6,500 per year plus, since May 1, 1943, overtime computed in accordance with the War Overtime Pay Act of 1943. Plaintiff has performed the duties incident to the position of Chief of the Analysis Division, Foreign Broadcast Intelligence Service, Federal Communications Commission, from November 16, 1941, through November 21, 1943. On May 2, 1944, plaintiff wrote to Dr. Robert D. Leigh, Director of the Foreign Broadcast Intelligence Service, Federal Communications Commission, as follows:

"DEAR MR. LEIGH: As I understand it, the reduction in appropriation for the Foreign Broadcast Intelligence Service makes necessary the elimination of the Analysis Division and the absorption of some of its work by other groups and other agencies. That seems to me to mark the termination of the work which I came to Washington to do, and is hence an occasion on which I submit my resignation.

"In this last official document, I want to express to you, to the other administrative officers, and to the Commissioners and Chairman of the Federal Communications Commission my warm appreciation for the intelligent and courageous support which they gave to the war effort, to the FBIS, to our division, and to me personally. I am glad to have had a little part in what I believe was a helpful war service, but I shall treasure as the most valuable part of my Washington experience, the friends I have made here and the opportunity to work along with my fellow officials in the Federal Communications Commission.

"Cordially yours,

"GOODWIN WATSON."

On May 3, 1944, Mr. Leigh replied as follows:

"DEAR GOODWIN: I have your letter of May 2 presenting your resignation as Chief of the Analysis Division of the Foreign Broadcast Intelligence Service.

"It is true that the position which you held and which was kept vacant for you has been eliminated, so that there is no practical reason for continuance of you on the rolls of the FCC. Your resignation coming in this way makes it very clear-cut that the act is voluntary.

"From the point of view of good governmental operation in the prosecution of the war effort, I would like to frame your resignation with double black edges—the first line would represent the detriment to the analysis work by your enforced leave of absence due to the act of Congress. The second would

represent the hindrance to the war effort by the reduction in the FBIS appropriation.

"Sincerely yours,

"ROBERT D. LEIGH, *Director*."

On May 24, 1944, plaintiff received a notification from the Director of Personnel of the Federal Communications Commission that his resignation had become effective on May 21, 1944.

4. The Federal Communications Commission has general supervision and control over the agency which it heads. It has the power of appointment of various of the officers and employees necessary in the execution of its functions, as provided in the Communications Act of 1934, including the power of appointment of plaintiff. T. J. Slowie is the duly appointed, qualified and acting Secretary of the Commission and as such T. J. Slowie, or someone acting on his behalf, is authorized to approve before presentation for payment itemized vouchers for all expenditures of the Commission which may be necessary for the execution of its functions, including compensation to plaintiff, as provided by the Communications Act of 1934.

5. On February 9, 1943, the House of Representatives of the United States adopted House Resolution 105. Pursuant to this resolution, a special subcommittee of the Committee on Appropriations was appointed, and on March 23, 1943, the subcommittee adopted rules of procedures. These rules were first published in the CONGRESSIONAL RECORD of June 2, 1943 (CONGRESSIONAL RECORD, 78th Cong., 1st sess., Appendix, p. A2762). The subcommittee conducted hearings from April 9 to April 15, 1943, to investigate certain charges made inter alia, against plaintiff. The hearings before the subcommittee were held in executive session. Plaintiff was invited to appear by letter dated April 7, 1943, as follows:

"DEAR DR. WATSON: In accordance with House Resolution 105, Seventy-eighth Congress, first session, a copy of which is enclosed, the special subcommittee appointed thereunder has before it files from the Committee on Un-American Activities, the United States Civil Service Commission, the Federal Bureau of Investigation, and the Federal Communications Commission relative to your qualifications and suitability as a Federal employee.

"The committee will examine these files beginning Friday, April 9, 1943, at 10 a. m. and you are instructed to appear at room 449 Old House Office Building at such time when opportunity will be afforded you to answer these charges and interrogations by the committee.

"A statement and list of the charges preferred against you before this committee by the Committee on Un-American Activities, House of Representatives, is immediately available for your inspection at the office of this committee.

"Very truly yours,

"JOHN H. KERR,

"Chairman, Special Subcommittee."

Plaintiff's reply, addressed to the chairman of the subcommittee, and dated April 8, 1943, was as follows:

"GENTLEMEN: Thank you for your invitation to appear and make a statement before the Kerr committee. I have the highest respect for this committee and welcome an opportunity for a thorough and judicial review of my case.

"I have prepared the accompanying statement of what seem to me the most relevant facts. With your permission, I should like to present this statement to the committee, and I shall then be glad to answer any questions.

"Yours respectfully,

"GOODWIN WATSON,

"Chief, Analysis Division."

The letter of April 7, 1943, advised plaintiff that if he was unacquainted with the charges and allegations concerning him, a copy would be furnished upon request. No such request was made by plaintiff. Plaintiff was shown at the hearing 29 charges made against him by the Committee on Un-American Activities, of the House of Representatives, Seventy-eighth Congress, first session, acting pursuant to H. R. 282.

The evidence and other materials gathered during the course of prior investigations by the Federal Bureau of Investigation, by the Committee on Un-American Activities, and by others which were considered by the subcommittee in connection with plaintiff's case were and are confidential, except that the charges formulated by the Committee on Un-American Activities were shown to plaintiff at the hearing. The general counsel of the Federal Communications Commission appeared at the first session of the subcommittee with the first person summoned before it and requested permission to appear as an observer for the Federal Communications Commission, but was advised by the subcommittee that it had decided to hold its hearings without any persons other than the subcommittee, its staff, and the witness being present. The general counsel thereupon withdrew. Plaintiff was not proffered nor did he request the opportunity to produce witnesses in his own behalf or to use the compulsory processes of the subcommittee to require other persons to appear before it to testify or to submit to cross-examination, nor were any witnesses called or heard by the subcommittee on behalf of plaintiff. No witnesses, other than plaintiff, testified before the subcommitte with respect to plaintiff. Plaintiff was questioned with respect to his membership and activity in various organizations and with respect to various writings, speeches, and activities on his part. Plaintiff was given at the hearing full opportunity to make any statements or explanations he desired with respect to the subject matter of the investigation. Plaintiff registered with the subcommittee no complaint as to its procedure or its treatment of him.

6. On April 21, 1943, the special subcommittee of the Committee on Appropriations reported to the Committee on Appropriations. On April 26, 1943, the Federal Communications Commission, having considered the report of the special subcommittee, concluded that it would retain plaintiff in its employment and issued a report thereon. On May 14, 1943, the Committee on Appropriations submitted a report (H. R. 448, 78th Cong., 1st sess.) approving the findings of the said special subcommittee and proposing an amendment to the Urgent Deficiency Appropriation Act, 1943 (H. R. 2714). Section 304 of the Urgent Deficiency Appropriation Act of 1943 of July 12, 1943, as finally enacted (Public, 132), provides as follows:

"SEC. 304. No part of any appropriation, allocation, or fund (1) which is made available under or pursuant to this act, or (2) which is now, or which is hereafter made, available under or pursuant to any other act, to any department, agency, or instrumentality of the United States, shall be used, after November 15, 1943, to pay any part of the salary, or other compensation for the personal services, of Goodwin B. Watson, William E. Dodd, Jr., and Robert Morss Lovett, unless prior to such date such person has been appointed by the President, by and with the advice and consent of the Senate: *Provided*, That this section shall not operate to deprive any such person of paymen for leaves of absence or salary, or of any refund or reimbursement, which have accrued prior to November 15, 1943: *Provided further*, That this section shall not operate to deprive any such person of payment for services performed as a member of a jury or as a member of the armed forces of the United States nor any benefit, pension, or emolument resulting therefrom."

The President did not appoint plaintiff under Section 304.

7. On November 22, 1943, T. J. Slowie, Secretary of the Federal Communications Commission, in which capacity he acts as certifying officer for the Commission, wrote the following letter to the plaintiff:

"DEAR MR. WATSON: The Commission's records show that you have been on active duty with the Federal Communications Commission from November 7 through November 21. Since the position which you hold pays a base salary of $6,500 per annum, your compensation for this pay period, with overtime, would ordinarily be $297.01. However, in your case there is a provision of law which makes it impossible to pay you the full sum to which you would otherwise be entitled.

"Section 304 of Public Law 132, Seventy-eighth Congress, provides as follows:

* * * * * *

"Because of this provision, it is possible to compensate you only for your services from November 7 through November 15, 1943, and your compensation for this period with overtime is $178.21. Accordingly, after adjustment of tax deduction $23.60 and retirement deduction $8.13, there is enclosed a check for $146.68.

"If you desire to avail yourself of the benefits of the proviso which preserves your right to receive compensation for annual leave accrued prior to November 15, 1943, you should file an application for leave in the usual manner.

"Very truly yours,

"T. J. SLOWIE, *Secretary*."

Plaintiff demanded that he be paid for the services rendered to the United States as Chief of the Analysis Division, Foreign Broadcast Intelligence Service, from November 16 through November 21, 1943. This demand was refused. Plaintiff was given no instructions by the Commission to cease working on November 15, 1943. The Commission permitted plaintiff to remain at his desk as Chief of the Analysis Division, Foreign Broadcast Intelligence Service, from November 15 to November 21, 1943.

8. Plaintiff, because of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has not received compensation from November 16 through November 21, 1943, nor has plaintiff ever received his pro rata annual base salary plus overtime, or any part thereof, for the services rendered during that period. The defendant, acting through the Federal Communications Commission, its agents, assistants or subordinates, and solely because of the operation of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has refused and failed to pay plaintiff any compensation for the period from November 16 through November 21, 1943, nor has the defendant ever paid plaintiff his pro rata base salary plus overtime, or any part thereof, for services rendered during that period. The amount which has not been paid to plaintiff, and which has been withheld solely because of the operation of said section 304 and the fact that the President did not appoint him thereunder, is $101.78.

NO. 46028. WILLIAM E. DODD, JR., V. THE UNITED STATES

1. Plaintiff, William E. Dodd, Jr., is a citizen of the United States and at the time of the filing of this suit was a resident of Arlington, Va.

2. Plaintiff was appointed editorial assistant, Foreign Broadcast Intelligence Service, Federal Communications Commission, on December 1, 1941, by the Federal Communications Commission in the exercise of its authority to appoint such employees granted by section 4 of the Federal Communications Act of 1934. Plaintiff took the oath of office on

December 1, 1941. On December 22, 1942, plaintiff was appointed assistant news editor, Foreign Broadcast Intelligence Service, Federal Communications Commission, by the Commission pursuant to said authority.

3. Plaintiff has performed the duties incident to the respective positions of editorial assistant and assistant news editor, Foreign Broadcast Intelligence Service, Federal Communications Commission, from December 1 through November 21, 1943. The compensation for the position of assistant news editor is fixed at a base rate of $3,200 per year, plus overtime computed in accordance with the War Overtime Pay Act of 1943. Since November 21, 1943, plaintiff has been on a leave-without-pay status at the Federal Communications Commission, and is in that status at the present time.

4. The Federal Communications Commission has general supervision and control over the independent agency which it heads. It has the power of appointment of various of the officers and employees necessary in the execution of its functions, as provided in the Communications Act of 1934, including the power of appointment of plaintiff, T. J. Slowie is the duly appointed, qualified and acting secretary of the Commission and as such T. J. Slowie, or someone acting on his behalf, is authorized to approve before presentation for payment itemized vouchers for all expenditures of the Commission which may be necessary for the execution of its functions, including compensation to plaintiff, as provided by the Communications Act of 1934.

5. On February 9, 1943, the House of Representatives of the United States adopted House Resolution 105. Pursuant to this resolution, a special subcommittee of the Committee on Appropriations was appointed, and on March 23, 1943, the subcommittee adopted rules of procedure. These rules were first published in the CONGRESSIONAL RECORD of June 2, 1943 (CONGRESSIONAL RECORD, 78th Cong., 1st sess., Appendix, p. A2762). The subcommittee conducted hearings from April 9 to April 15, 1943, to investigate certain charges made, inter alia, against plaintiff. Plaintiff was invited by letter to appear in person before the subcommittee and make such statements or explanations under oath as he might desire, and to answer such questions as might be propounded. The plaintiff requested the clerk of the subcommittee to exhibit to him any charges against him, and was advised by the clerk that the subcommittee had formulated no charges. The evidence and other materials gathered during the course of prior investigations by the Federal Bureau of Investigation, by the Committee on Un-American Activities, and by others, which were considered by the subcommittee in connection with plaintiff's case, were and are confidential, except for the testimony of plaintiff before said committee. The general counsel of the Federal Communications Commission appeared at the first session of the subcommittee with the first person summoned before it and requested permission to appear as an observer for the Federal Communications Commission, but was advised by the subcommittee that it had decided to hold its hearings without any persons other than the subcommittee, its staff, and the witness being present. The general counsel thereupon withdrew. Plaintiff was not proffered nor did he request the opportunity to produce witnesses in his own behalf or to use the compulsory processes of the subcommittee to require other persons to appear before it to testify or to submit to cross-examination, nor were any witnesses called or heard by the subcommittee on behalf of plaintiff. No witnesses, other than plaintiff, testified before the subcommittee with respect to plaintiff. Plaintiff was questioned with respect to his membership and activity in various organizations and with respect to various writings, speeches, and activities on his part. Plaintiff was given at the hearing full opportunity to make any statements or explanations he desired with respect to the subject matter of the investigation. At the close of the hearing, plaintiff was also accorded an opportunity to make any statements he wished, but registered with the subcommittee no complaint as to its procedure or its treatment of him.

6. On April 21, 1943, the special Subcommittee of the Committee on Appropriations reported to the Committee on Appropriations. On April 26, 1943, the Federal Communications Commission, having considered the report of the special subcommittee, concluded that it would retain plaintiff in its employment and issued a report thereon. On May 14, 1943, the Committee on Appropriations submitted a report (H. Rept. 448, 78th Cong., 1st sess.) approving the findings of the said special subcommittee and proposing an amendment to the Urgent Deficiency Appropriation Act, 1943 (H. R. 2714).

Section 304 of the Urgent Deficiency Appropriation Act of 1943, of July 12, 1943, as finally enacted (Public, 132), provides as follows:

"SEC. 304. No part of any appropriation, allocation, or fund (1) which is made available under or pursuant to this act, or (2) which is now, or which is hereafter made, available under or pursuant to any other act, to any department, agency, or instrumentality of the United States, shall be used, after November 15, 1943, to pay any part of the salary, or other compensation for the personal services, of Goodwin B. Watson, William E. Dodd, Jr., and Robert Morss Lovett, unless prior to such date such person has been appointed by the President, by and with the advice and consent of the Senate: *Provided*, That this section shall not operate to deprive any such person of payment for leaves of absence or salary, or of any refund or reimbursement, which have accrued prior to November 15, 1943: *Provided further*, That this section shall not operate to deprive any such person of payment for services performed as a member of a jury or as a member of the armed forces of the United States nor any benefit, pension, or emolument resulting therefrom."

The President did not appoint plaintiff under section 304.

7. On November 22, 1943, T. J. Slowie, secretary of the Federal Communications Commission, in which capacity he acts as the certifying officer of the Commission, wrote the following letter to the plaintiff:

"DEAR MR. DODD: The Commission's records show that you have been on active duty with the Federal Communications Commission from November 7 through November 21. Since the position which you hold pays a base salary of $3,200 per annum, your compensation for this pay period, with overtime, would ordinarily be $159.51. However, in your case there is a provision of law which makes it impossible to pay you the full sum to which you would otherwise be entitled.

"Section 304 of Public Law 132, Seventy-eighth Congress, provides as follows:

* * * * *

"Because of this provision it is possible to compensate you only for your services from November 7 through November 15, 1943, and your compensation for this period with overtime is $96.51. Accordingly, after adjustment of tax deduction $5 and retirement deduction $4, there is enclosed a check for $87.51.

"If you desire to avail yourself of the benefits of the proviso which preserves your right to receive compensation for annual leave accrued prior to November 15, 1943, you should file an application for leave in the usual manner.

"Very truly yours,

"T. J. SLOWIE, *Secretary*."

Plaintiff demanded that he be paid for the services rendered to the United States as assistant news editor, Foreign Broadcast Intelligence Service, from November 16 through November 21, 1943. This demand was refused. Plaintiff was given no instructions by the Commission to cease working on November 15, 1943. The Commission permitted plaintiff to remain at his desk as assistant news editor, Foreign Broadcast Intelligence Service, from November 15 to November 21, 1943.

8. Plaintiff, because of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has not received compensation from November 16, through November 21, 1943, nor has plaintiff ever received his pro rata annual base salary plus overtime, or any part thereof, for the services rendered during that period. The defendant, acting through the Federal Communications Commission, its agents, assistants or subordinates, and solely because of the operation of section 304 of the Urgent Deficiency Appropriation Act of 1943 and the fact that the President did not appoint him thereunder, has refused and failed to pay plaintiff any compensation for the period from November 16, through November 21, 1943, nor has the defendant ever paid plaintiff his pro rata base salary plus overtime, or any part thereof, for services rendered during that period. The amount which has not been paid to plaintiff, and which has been withheld solely because of the operation of said section 304 and the fact that the President did not appoint him thereunder, is $59.83.

Conclusions of law

Upon the foregoing special findings of fact, which are made a part of the judgments herein, the court concludes, as a matter of law, that the plaintiffs are entitled to recover.

It is therefore ordered and adjudged that plaintiff Robert Morss Lovett (in case No. 46026) recover of and from the United States the sum of $1,996.40; that plaintiff Goodwin B. Watson (in case No. 46027) recover of and from the United States the sum of $101.78; and that plaintiff William E. Dodd, Jr. (in case No. 46028) recover of and from the United States the sum of $59.83.

Opinion

Whaley, Chief Justice, delivered the opinion of the court:

On August 26, 1943, plaintiff Robert Morss Lovett was appointed Executive Assistant to the Governor of the Virgin Islands by the Secretary of the Interior, pursuant to authority granted in section 23 of the Organic Act of the Virgin Islands of the United States, approved June 22, 1936, 49 Stat. 1807, 1813. He took the oath of office and entered upon the duties thereof October 12, 1943. He performed them thereafter through March 13, 1944, at which time his services ended. He has not been paid the salary of his office for the period November 15, 1943, through March 13, 1944, which amounts to $1,996.40, and this sum he sues to recover.

Plaintiff Goodwin B. Watson was appointed Chief of the Analysis Division, Foreign Broadcast Intelligence Service, Federal Communications Commission, November 16, 1941, by the Federal Communications Commission, and took the oath of office and entered upon the duties thereof on that date, and performed them thereafter through November 21, 1943, when his active services ended. His appointment was made under section 4 of the Communications Act of 1934, approved June 19, 1934, 48 Stat. 1064, 1066. He sues to recover the salary of his office from November 16, 1943, through November 21, 1943, amounting to $101.78, which he has not been paid.

Plaintiff William E. Dodd, Jr., was appointed assistant news editor, Foreign Broadcast Intelligence Service, Federal Communications Commission, December 22, 1942, by the Federal Communications Commission under section 4 of the Communications Act

of 1934, immediately entering upon the duties of that office. He performed those duties thereafter through November 21, 1943. He has not been paid the salary attached to that office for the period from November 16, 1943, through November 21, 1943, which amounts to $69.83, and he sues herein for that amount.

None of the appointments here involved were made by the President of the United States and confirmed by the Senate.

The three cases have been submitted on stipulations, and they have been briefed and argued together. The general question raised has been the constitutionality of section 304 of the Urgent Deficiency Appropriation Act, 1943 (57 Stat. 431, 450).

The plaintiffs assert that the section is unconstitutional setting forth their reasons for that assertion. The Attorney General having heretofore also taken the position that the section was unconstitutional, and still adhering to that position, the Assistant Attorney General, appearing for the defendant, supports the plaintiffs. Special counsel appear in the cases as amici curiae, having been employed to defend the constitutionality of the disputed section. The special counsel are designated variously in the record as representing the House, the Congress, the United States. Their brief is entitled "Brief for the Congress of the United States," and they sign as "Special Counsel for the Congress of the United States." They will hereinafter be referred to as "special counsel."

Insofar as the law involved in these three cases is concerned, they are not to be distinguished one from the other.

Special counsel raise the question of jurisdiction. Section 145 of the Judicial Code governs. The general jurisdiction of this court in pay cases is too well known and established to justify reexamination. Section 304, which will be quoted verbatum, in no way indicates that this court is without jurisdiction. There is not a line or word to that effect. Inferences will not be employed to go to the extent of holding that Congress went so far as to deny these plaintiffs their day in court. The jurisdictional statute is general, and section 304 contains no exception.

Section 304 is as follows:

"SEC. 304. No part of any appropriation, allocation, or fund (1) which is made available under or pursuant to this act, or (2) which is now, or which is hereafter made, available under or pursuant to any other act, to any department, agency, or instrumentality of the United States, shall be used, after November 15, 1943, to pay any part of the salary, or other compensation for the personal services, of Goodwin B. Watson, William E. Dodd, Jr., and Robert Morss Lovett, unless prior to such date such person has been appointed by the President, by and with the advice and consent of the Senate: *Provided*, That this section shall not operate to deprive any such person of payment for leaves of absence or salary, or of any refund or reimbursement, which have accrued prior to November 15, 1943: *Provided further*, That this section shall not operate to deprive any such person of payment for services performed as a member of a jury or as a member of the armed forces of the United States nor any benefit, pension, or emolument resulting therefrom."

If section 304 is unconstitutional and of no effect, recovery follows. Special counsel argue that it is not severable. Their argument is not convincing. We are in no doubt about our jurisdiction.

If, on the other hand, section 304 is a valid exercise of constitutional power, but notwithstanding that plaintiffs are entitled to recover, then it becomes a matter of indifference whether the section is valid or invalid as an exercise of constitutional power.

The Court will not reach out gratuitously to avail itself of questionable but inapplicable elements in an act and thereby hold it to be unconstitutional. There is always the presumption of validity. The Court will not undertake to say that, because provisions in section 304, not here operative, are invalid, the whole of the section falls for invalidity.

Much of the argument presented seems to be based on a supposed lack of appropriation. But there was an appropriation. Section 304 refers to an actual appropriation, an "available" appropriation. If available, the appropriation, as far as these cases are concerned, was available for the payment of these salaries. Availability of the appropriation for other purposes is beside the question. The disbursing agency could divert no part of an appropriation to purposes other than those for which that appropriation was made. Section 304 does not say "otherwise" available, and important words may not be put into the statute that Congress did not place there. There was an appropriation, it was available for the payment of these salaries. If it was not available for the payment of these salaries, then it was clearly not available to the administrative bureau. Congress did not limit the appropriation. What it did limit and what it was directed to, was the activities of the disbursing agency. There, and there only, did Congress apply the brake.

Section 304 is notable for what it did not do, as well as for what it did do.

It did not terminate plaintiffs' services. Special counsel insist that it did not work removal from office, and so stated on argument of the cases.

Removal from office is not made an item of damages here. The claim made is only for salary of the office during the time of service, and no longer. We are therefore not concerned with the cause of termination, or in what situation, except for lack of pay, the plaintiffs found themselves thereafter.

This limitation upon the claims made explains why it has not been necessary in reviewing the facts, to gather in many things that are of record, or of which judicial notice may be taken. Many of the circumstances are interesting only, and in no sense material to disposition of the cases.

There is nothing in section 304 which disturbed plaintiffs' incumbency in office. Special counsel in their brief say:

"All that the statute did was to say to the disbursing officers of the Government: After November 15, 1943, you shall not pay out any money to Watson, Dodd, and Lovett unless prior to that date they have been appointed by the President and confirmed by the Senate. This was merely a direction to disbursing officers, and in itself created no legal rights in anyone."

We repeat, the Court, in passing upon the constitutional validity of a statute will not gratuitously reach out to make use of that which is irrelevant to the case in hand. It was said in *Watson* v. *Buck* (313 U. S. 387, 402):

"A law which is constitutional as applied in one manner may still contravene the Constitution as applied in another. Since all contingencies of attempted enforcement cannot be envisioned in advance of those applications, courts have in the main found it wiser to delay passing upon the constitutionality of all the separate phases of a comprehensive statute until faced with cases involving particular provisions as specifically applied to persons who claim to be injured."

Section 304 does comprehend more than a direction not to pay for the isolated services here rendered. But that "more" is here irrelevant. In terms the section extends to all available appropriations, all disbursing officers, all departments, agencies, or instrumentalities of the United States, all personal services of the instant plaintiffs, and is without limitation in time. But in the cases before us we have for consideration only one specified period of employment, and the conditions of that specific employment. We cannot introduce situations which are not before us, and which may indeed never come into being. It may be repeated, that here we have no claim for damages for removal from office, no petition for compulsory process, solely a claim for the as yet unpaid salary of an office, the duties of which have been performed by the undisputed holder of that office. These are not suits for reinstatement to office. As was said in *California* v. *San Pablo etc. Railroad* (149 U. S. 308, 314):

"The duty of this court, as of every judicial tribunal, is limited to determining rights of persons or of property, which are actually controverted in the particular case before it. When, in determining such rights, it becomes necessary to give an opinion upon a question of law, that opinion may have weight as a precedent for future decisions. But the court is not empowered to decide moot questions or abstract propositions or to declare, for the Government of future cases, principles or rules of law which cannot affect the result as to the thing in issue before it. No stipulation of parties or counsel, whether in the case before the court or in any other case, can enlarge the power, or affect the duty, of the court in this regard."

The incumbent of the office held it de jure. There was no irregularity in the appointment. There was no removal of the officer from the office, no removal of the salary from the office. The appropriation was made and designated as "available." The only appropriation here, in praesenti, is the appropriation available to pay these salaries.

The closer the statute is examined, the more clearly does it appear that with reference to the particular situation we have here, Congress confined itself to one thing—prohibiting the disbursing agencies from paying the salaries of the plaintiffs. The act is very carefully framed to avoid denying pecuniary obligations. It is a bare caveat issued against the disbursing agency.

As special counsel contend, Congress did not remove from office. The original appointment was unaffected, the office was undisturbed, the compensation was unchanged, the incumbents were not separated from office. They held de jure.

Quoting again from the brief of special counsel:

Section 304 did not deprive plaintiffs of any right to salary. Section 304 denied to the Federal Communications Commission and to the Secretary of the Interior the funds with which to pay plaintiffs; and since under 47 U. S. C., section 154g and 48 U. S. C., section 1405v, the power of those agencies to grant plaintiffs a right to salary depended upon the existence of such funds, section 304 prevented these agencies from granting the right plaintiffs assert.

We are not free to conclude that section 304 accomplished deviously that which for certainty's sake should have been accomplished directly, if it could be accomplished at all. What it did do directly, not indirectly, constitutionally, or unconstitutionally, and nothing more, was to stay the hand of the disbursing agency.

There would have been no occasion for section 304 to stop payment if the plaintiffs were not holding their respective offices in fact and in law. No disbursing agent had authority to make payment of salaries to men out of office or not entitled to office, and a direction to such an agent not to pay the salary to a legally displaced officeholder would have been something less than an empty gesture. The obvious circumstance that the section was dealing with was one where the plaintiffs were legally and actually in office. Section 304 did not remove them.

It is to no very useful purpose to inquire into the reason for enactment of section 304. But it may be remarked in passing that it is impossible to conclude that Congress meant that in the final outcome service was to be free to the Government, because the plaintiffs were, in its opinion let us say, unfit for office. It is plain that the plaintiffs, if unfit, were just as unfit serving the Government

for nothing as serving it for something. There is no logic to the proposition that the plaintiffs were to serve the Government for nothing. The proposition is irrational. Unfitness could not be converted into fitness by withholding salary. Yet the statute allowed these plaintiffs to continue in office.

Section 304 is not to be construed beyond its express, explicit terms, nor beyond its incidence in time. It effectually halted the disbursing process in a special situation, at a particular time. We are not here concerned with other situations, other times. The situation, the occasion, has now passed into history. The accomplished event is not now before the Congress and never has been. But it is here and now before this Court.

It is urged that plaintiffs must fail, because the procedure was not followed of having an appointment "by the President, by and with the advice and consent of the Senate," as provided for in section 304. It has been observed that section 304 is notable for what it does not say. It does not say that the services of the plaintiffs are terminated, that they shall not continue on under their current appointments. In other words, as special counsel observe, the section did not remove them from office. The plaintiffs did not have to have a Presidential appointment in order to continue in office. They did continue in office. It is only the period of their continuance in office, after November 15, 1943, that is involved in this controversy.

In a long line of cases it has been held that lapse of appropriation, failure of appropriation, exhaustion of appropriation, do not of themselves preclude recovery for compensation otherwise due. (*King* v. *United States* (1 C. Cls. 38); *Graham* v. *United States* (1 C. Cls. 380); *Curtis* v. *United States* (2 C. Cls. 144); *Grant* v. *United States* (5 C. Cls. 71); *Collins* v. *United States* (15 C. Cls. 22); *Briggs* v. *United States* (15 C. Cls. 48); *Parsons* v. *United States* (15 C. Cls. 246); *Huffman* v. *United States* (17 C. Cls. 55); *Dougherty* v. *United States* (18 C. Cls. 496); *Ferris* v. *United States* (27 C. Cls. 542); *Sherlock* v. *United States* (43 C. Cls. 161); *Strong* v. *United States* (60 C. Cls. 627); *Danford* v. *United States* (62 C. Cls. 285); *McNeil* v. *United States* (64 C. Cls. 406); *Cogswell* v. *United States* (68 C. Cls. 694); *Palmer* v. *United States* (69 C. Cls. 260); *Crist* v. *United States* (74 C. Cls. 283); *Conrad* v. *United States* (74 C. Cls. 289); *Wilson* v. *United States* (77 C. Cls. 630); *Leonard* v. *United States* (80 C. Cls. 147); *Miller* v. *United States* (86 C. Cls. 609); *United States* v. *Langston* (118 U. S. 389); *United States* v. *Vulte* (233 U. S. 509).)

The provision in section 304 that no available appropriation shall be used to pay the salaries of these plaintiffs, here in question, does not reach this Court. Speaking with reference to the constitutional provision that no money shall be drawn from the Treasury but in consequence of appropriations made by law, this Court said (*Collins* v. *United States*, supra):

"That provision of the Constitution is exclusively a direction to the officers of the Treasury, who are intrusted with the safekeeping and payment out of the public money, and not to the courts of law; the courts and their officers can make no payment from the Treasury under any circumstances.

"This court, established for the sole purpose of investigating claims against the Government, does not deal with questions of appropriations, but with the legal liabilities incurred by the United States under contracts, express or implied, the laws of Congress, or the regulations of the executive departments."

Section 304 made no pretense to determine a legal liability. It assumed no judicial function. It simply prevented a particular disbursement from a particular fund, no more than that if it be taken for just what it says, without inferences. We are confining ourselves, of course, to the precise claims asserted.

In *United States* v. *Dickerson* (310 U. S. 554), it was held that an appropriation act could suspend the operation of a prior statute granting certain reenlistment allowances. Granted that an appropriation act may be something more than an accounting process, in the case we have here section 304 makes no attempt to change or do away with compensation attached to the offices held by the plaintiffs. It merely stopped payment in three specific instances (no other instances are here involved), regardless of obligation.

The obligation was undisturbed. The act did not say it was destroyed, or even subtly attempt to destroy it, unless we are to indulge in inferences, which we are not disposed to do. It did not say to the plaintiffs, "You are discharged." The status of the plaintiffs was untouched.

The cases cited indicate survival of the obligation in spite of lapse, exhaustion, failure of appropriation. Other reported cases not pay cases, are crowded with instances of unliquidated damages recovered, recovery against the United States being had in the absence of any appropriation at all to pay unliquidated damages, and in the absence of any authority in the disbursing agency to satisfy the litigant's claim.

In the three cases now here considered there was more than in the cases cited. There were in existence available appropriations. As heretofore indicated, full value must be given to the express word "available." It cannot be changed to "unavailable." If the appropriations could not be used for these offices, then they were unavailable. The statute says they are available, and they must be so considered.

We have pointed out that section 304 was without time limitation. Congress cannot bind itself to discontinue legislation, if it is to go on as a constitutional body. It may therefore repeal section 304. Section 304 is statutory, not a part of the Constitution. It may or may not turn out to be permanent legislation.

Congress, by enacting section 304, did not foreclose itself from thereafter appropriating for the payment of these salaries. Congress even now may appropriate, and authorize a selected disbursing agency to pay them. Claims therefor, presented to Congress, may be satisfied by an appropriation to pay them, as claims. Judgments, recovered here, may be satisfied by any appropriation out of which the judgments may be by act of Congress payable.

The statute did not separate the plaintiffs from office, it did not take away the salary of that office, it did not prohibit plaintiffs from receiving their salaries. The act did provide an appropriation for the payment of their salaries. The appropriation for the pay period was there, but it was not made use of. The plaintiffs were appointed lawfully, they continued in office lawfully. Section 304 in no way disqualified them, and we can find no rational basis for construing the act otherwise than as a mere stoppage of disbursing routine, nothing more. To construe it as something more is to volunteer inferences. Whether the Congress had the constitutional authority to stop payment, within the limitations of the act, is immaterial. That which is material is that the salaries have not been paid, that the obligation was never destroyed, and that the obligation continues to this day.

In the conclusion arrived at, it is immaterial whether section 304 of the Urgent Deficiency Appropriation Act, 1943, or any part thereof, is constitutional or not. We do not decide that question. The plaintiffs are entitled to recover in either event. As previously indicated, consideration of section 304 is necessarily confined to narrow limits, as narrow as the claims themselves.

Plaintiff Robert Morss Lovett in case No. 46026 is entitled to recover $1,996.40; plaintiff Goodwin B. Watson in case No. 46027 is entitled to recover $101.78; and plaintiff William E. Dodd, Jr., in case No. 46028 is entitled to recover $59.83. Judgments will be entered accordingly. It is so ordered.

Littleton, Judge, concurs.

Whitaker, Judge, concurring:

I desire to state very briefly the reason for my concurrence in the result reached by the court.

In the brief filed for the Congress it is argued that the power of that body to appropriate money is without limitation and, hence, that it can attach any condition it pleases on the use of the money appropriated. Even if we accept this statement without limitation, still, section 304 goes much beyond a mere restriction on the use of the money appropriated by that act. It not only prohibits the use of the money thereby appropriated to pay plaintiffs' salaries, but it also prohibits the use of any money theretofore or thereafter to be appropriated to pay their salaries, either in their present positions or in any other governmental positions, except as jurors or members of the armed forces. This amounts to depriving plaintiffs of their rights as citizens to enjoy the emoluments of office. It is, therefore, an act inflicting punishment upon them without a judicial trial.

The passage of such an act is prohibited by clause 3 of section 9 of article I of the Constitution, which reads: "No bill of attainder or ex post facto law shall be passed." A bill of attainder has been defined by the Supreme Court as "a legislative act which inflicts punishment without a judicial trial. If the punishment be less than death, the act is termed 'a bill of pains and penalties.' Within the meaning of the Constitution, bills of attainder include bills of pains and penalties." (*Cummings* v. *Missouri* (4 Wall. 277, 323).)

I have no doubt that section 304 of this appropriation act violates this provision of the Constitution; no judicial tribunal has found them guilty of any crime, but by this act they have been denied the salary attached to any office they may now or hereafter occupy. Patently, this violates this provision of the Constitution. If it does, it is void, although it was enacted in the exercise of the power of Congress to appropriate money. The grant of any power by the Constitution is subject to the limitation that it must not be exercised in a way that would nullify another provision of the Constitution. See, for instance, *Marbury* v. *Madison* (1 Cranch 137); *Rhode Island* v. *Massachusetts* (12 Pet. 657); *Knowlton* v. *Moore* (178 U. S. 41); *Dick* v. *United States* (208 U. S. 340).

Since I am convinced that this act does violate this provision of the Constitution, I find it unnecessary to consider the other constitutional objections to it, to wit, whether it amounted to a removal of these men from office or a denial of due process of law.

Courts never take pleasure in saying that a coordinate branch of the Government has exceeded its constitutional powers; certainly in this case I take no pleasure in saying that Congress has done that which it had no power to do, but since I am convinced that the restriction amounts to a bill of attainder, I am under compulsion to say that the restriction is invalid and, hence, cannot operate to deprive these men of the salaries to which their positions entitle them.

Jones, Judge, concurring:

I concur in the result.

The single issue in this case is whether section 304, as worded, is a valid exercise of the constitutional powers of the Congress.

The authority of the Congress to make appropriations, within the framework of the

Constitution, is plenary. The power to make appropriations carries with it the power to withhold or deny appropriations. That power has been exercised for generations.

This is as fundamental as the Ten Commandments.

As to the wisdom of granting or withholding appropriations the courts have no right to pass judgment, granted, of course, that the Congress is acting within the scope of its authority.

The Congress has the sheer power to grant or withhold current appropriations to individuals except for services already rendered, regardless of whether the action taken is wise or unwise. It does not have to assign a reason for such action, and we have no right to ask for a reason.

A Member's constituency alone, under our philosophy of government, has a right to call such Member to account.

Having the power to appropriate for specified purposes it has the power to limit the use of such funds so long as it is merely a limitation.

If section 304 merely forbade the use of funds in the bill, or other funds already available in other bills, I would have no hesitancy in holding it a limitation on appropriation.

The true issue is narrowed to whether the expression "or which is hereafter made available under or pursuant to any other act" transforms it from an appropriation to a legislative provision, and whether such legislation deprives plaintiffs of valuable rights as citizens which they would otherwise have under the Constitution.

The language quoted goes beyond a mere limitation on appropriation and beomes, unless affirmatively repealed, a permanent denial of plaintiffs' rights as citizens. A rose remains a rose even though someone calls it a lily.

No one has a right to be employed by the Government, but every citizen, whose rights have not been legally forfeited, is privileged to apply for any position within the Government and to have his application considered on its merits. This is a thing of value not only intrinsically, but because of the satisfaction it brings a man regardless of whether it is ever exercised. The knowledge of its possession is a powerful element in the pursuit of happiness. Section 304 forecloses this right and closes that door of opportunity.

The National Government is one of delegated powers in all its branches. All powers not delegated remain with the States or with the people.

The tenth amendment is as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The ninth amendment is as follows:

"The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

The power to provide or deny appropriations is vested in the Congress. There is no other way to take money out of the Treasury. The Constitution provides (art. I, sec. 9):

"No money shall be drawn from the Treasury, but in consequence of appropriations made by law."

If section 304 were a mere denial of appropriation, however unjust it might be, it could not be successfully questioned. But it does not stop with a mere denial of appropriation. It goes far beyond this. It forbids on a permanent basis employment in the future. It thus becomes a permanent legislative ban.

I cannot find within the four corners of the Constitution any power lodged in the Congress to deny these privileges to any citizen, except in the manner prescribed in the Constitution.

The principle of equality was written in the Declaration of Independence before we had a constitution. It was the result of a long struggle of English peoples upward toward the plains of liberty. It is one of our proudest traditions. It was carried forward into the Constitution. It shines through almost every provision in that instrument. The Constitution provides for liberty, equality, and fair play; and freedom from every form of new- and old-world caste and privilege, and from the tyranny of wealth and birth. It throws every safeguard around the rights and privileges of the individual citizen.

The right to seek employment is one of the most highly prized rights of the Anglo-Saxon race. When a citizen by his conduct forfeits any of his rights, privileges, and immunities, a method is provided for establishing that forfeiture. That method was not pursued here. One of the chief glories of the Constitution is the fact that you cannot take the shirt from the back of a ragged street urchin without either securing the lad's consent or paying for the rags in the manner prescribed by law. The same is true of his privileges in every form. *Truax* v. *Raich* (239 U. S. 33, 41); *Yick Wo* v. *Hopkins* (118 U. S. 356, 370); *International News Service* v. *Associated Press* (248 U. S. 215, 236).

Section 304 in making a permanent ban on the rights and privileges of the plaintiffs, exceeds the authority delegated to the Congress by the Constitution.

Madden, Judge, concurring in the result:

I agree with the decision of the court, but, because of the importance and variety of the problems presented, I make the following additional observations.

Nothing is claimed to have been done or said or written by any of the plaintiffs which was unlawful. No statute or legal doctrine is brought forward under which it is claimed that they could have been restrained before utterance or action, or punished thereafter by so much as a penny fine. And no indirect adverse legal consequences were attached to what they said or did by any legal doctrine, or by statutes such as the Hatch Act, or the various provisions in other acts disqualifying for Government employment members of organizations which advocate the overthrow of our constitutional form of government. It is not claimed that they violated those laws. In short, what they did was completely innocent and of no interest or consequence to the law of the land as it then was, or, as to all persons except the three plaintiffs, as the law still is. And this was true without any resort to constitutional protections of freedom of utterance or action. The law, wholly apart from the Constitution, did not touch what they had done. But as a consequence of their having done what they did, the three plaintiffs find themselves excommunicated, reduced to the status of three second-class citizens among all of the millions of their fellows. They find themselves subject to the same obligations as their fellow first-class citizens to obey the laws, pay taxes, and serve in the armed forces and on juries; but completely and perpetually disqualified from serving their Government in any of the thousands of positions in which any of the rest of us, if technically capable, may serve. It is not claimed that the three plaintiffs were not competent to perform, or did not faithfully perform, the duties of the positions they held.

Has Congress the power to remove, by statute, named individuals from Government service, and make them perpetually ineligible to hold positions in Government service because they have engaged in conduct which was entirely lawful? Section 304 purports to do this. If it in fact accomplishes it, it has accomplished, under the guise of law, a shocking and outrageous injustice, unique in our history, and discouraging because it follows 150 years of experience under the best Government men have devised. The court's problem is not, of course, whether section 304 is unjust, but whether it is unconstitutional. But when the injustice of the particular law is so shocking, and the threat of its repetition and extension is so menacing to our institutions, as in the case of section 304, one can hardly be blamed for saying to himself, even before he consults the text of the Constitution, "If the Constitution is the charter of liberty and free government which I have always supposed that it is, it does not permit this."

If section 304 is valid, Congress can disqualify for public office or service racial minorities, political minorities, and, probably, religious minorities. To do so would, indeed, be less unjust than what is done by section 304. If a racial minority were excommunicated, the statute would at least have one quality of what we have been accustomed to regard as law, the quality of generality of application to all persons of an ascertainable class. No individual would have the finger of the State pointed at him, as these three plaintiffs have, saying, "You are degraded, not because of the kind of person you are, for there may be thousands of persons just like you in all essential respects, who are still full citizens; not because of what you have done, for there may be thousands of persons who have done the same things, so far as those things are relevant to a rational state, as you have done. You are degraded because the State has selected you for degradation." And a racial or other minority could, under the constitutional protections which would apply even to second-class citizens, pool their resources and agitate for the repeal of the statute with some slight hope that in the turn of political events a powerful party might need the votes of this minority to insure its success, and hence would espouse its cause. But three individuals, such as these plaintiffs, are helpless. If they speak, who will listen? If they should happen to have the money to publish, who will read? Their appeal would appear to be completely selfish. The reaction would be: "Who are these persons, of the dominant race, of many generations of honorable American ancestry, to be complaining of discrimination? I don't know just what has happened to them, but if they can't take care of themselves, nobody can." And nobody can, if section 304 is valid.

Section 304 is asserted by the plaintiffs to be unconstitutional because (1) it purports to remove the plaintiffs from executive offices, and no power of removal resides in the legislative branch of the Government, except by impeachment; (2) it is a bill of attainder, or its equivalent, a bill of pains and penalties, which the Constitution forbids; and (3) it deprives the plaintiffs of liberty and property without due process of law, in violation of the fifth amendment.

I have no doubt that section 304 is a bill of pains and penalties and is therefore unconstitutional. It has the ancient flavor of the bills of attainder which were so odious to the makers of our Constitution that they forbade such laws in the main body of the Constitution and before the Bill of Rights later embodied in the first 10 amendments was thought necessary, in that it, like the bills of attainder that the fathers were familiar with, selects its victims as named individuals, and not as persons belonging to any describable class. It punishes them by removal from office and income and disqualification from ever again serving their Government for compensation except in military or jury service. It thus imposes the same penalty which the Senate is authorized to impose, on conviction by a two-thirds vote after impeachment by the House, upon officers guilty of "treason, bribery, or other high crimes and misdemeanors." The question of whether the forfeiture of the right to pursue a public calling was punishment, so that a statute imposing it for past innocent conduct is an ex post facto law and a bill of pains and penalties was settled right in the cases of Cummings, the priest, 4 Wall. 277, and Garland, the lawyer, 4 Wall. 333.

I think section 304 violates the fifth amendment in that it attempted to deprive the plaintiffs of liberty and property without due process of law. I recognize that the fifth amendment does not, like the fourteenth, which applies only to state governmental action, expressly assure equal protection of Federal laws. But a statute which selects persons for punitive action on a completely personal basis, with no attempt to treat similarly other persons similarly situated, is so foreign to our concepts of law that it is difficult to think of it as law at all, though it bears the stamp of legislative enactment. If a legislature refuses to define the conduct which it desires to punish, if done by A, in such terms that B and C and D will be equally punishable if they do it, but instead merely provides that A shall be punished if he does it, the legislature engages, not in law making, but in arbitrary action. And this would be true, even if the statute did not, as section 304 does, attempt to make punishable conduct which was wholly innocent when engaged in. There are indications in opinions of the courts, though the necessity for deciding the questions has not hitherto arisen, that the due process of law which is required by the fifth amendment would not be satisfied by the arbitrary selection by the legislature of certain named individuals to be the sole victims of penal laws. In *Hurtado* v. *California* (110 U. S. 516, 535), where the arbitrary action of a State was in question, the court said:

"But it is not to be supposed that these legislative powers are absolute and despotic, and that the amendment prescribing due process of law is too vague and indefinite to operate as a practical restraint. It is not every act, legislative in form, that is law. Law is something more than mere will exerted as an act of power. It must be not a special rule for a particular person or a particular case."

The cases of *Nichols* v. *Coolidge*, 274 U. S. 531; *Wallace* v. *Currin*, C. C. A. 4, 95 F. (2d) 856; *Minski* v. *United States*, C. C. A. 6, 131 F. (2d) 614; *United States* v. *Ballard*, W. D. Ky., 12 F. Supp. 321, also indicate the same attitude toward governmental action in the guise of law which penalizes persons unequally. I think, therefore, that section 304 is forbidden by the fifth amendment.

It is urged that section 304, even if it would otherwise be invalid as a trespass by Congress upon the executive function of removal of executive officers, is saved by the provision that these plaintiffs might keep their positions if, within the period of a few months set by the statute, they were appointed by the President and confirmed by the Senate. But no other person in the country had to pursue such a course in order to obtain or hold those positions, or identical or comparable ones. The requirement was intended to be, and was, discriminatory and oppressive as to three selected individuals out of all the people in the country. Under a system of equal justice under law, the three plaintiffs should not be subjected, in order to get or hold a Government position, to any other or different requirements than the rest of us are subject to. And the Constitution, I think, forbids their being so oppressed.

It is, in effect, urged that even though section 304 is unconstitutional for any or all of the reasons suggested, there can be no relief for its victims because the section is a part of an appropriation act, and the power of Congress to control expenditures is absolute. It may well be that under our Constitution, and under any constitution which might be devised for a free people, one branch of the Government could, temporarily at least, subvert the Government. The judges might refuse to enforce legal rights or convict criminals. The President might order the Army and Navy to surrender to the enemy. Congress might refuse to raise or appropriate money to pay the President or the Justices of the Supreme Court and the other courts. But any of these imagined actions would not be taken pursuant to the Constitution, but would be acts of subversion and revolution, the exercise of mere physical power, not lawful authority. And conduct by any branch of the Government less ruinously subversive, but, so far as it goes, equally unconstitutional, is likewise an exercise of physical power rather than lawful authority. I do not think, therefore, that the power of the purse may be constitutionally exercised to produce an unconstitutional result such as a taking of a citizen's liberty or property without due process of law, a conviction and punishment of a citizen for wholly innocent conduct, or a trespass upon the constitutional functions of another branch of the Government. And to whatever extent it is within the jurisdiction of a court to which the question is presented in litigation, to give judgment according to the Constitution, even though that requires the court to disregard a statute which conflicts with the Constitution, the judges are bound by their oaths to give such a judgment. In this case, therefore, we must disregard section 304. Without it, the plaintiffs are in the position of having performed services for the Government, under lawful appointments, for which the Government has refused to pay. Each of them is, therefore, entitled to a judgment.

A true copy.

Amvets Reach First Base in Fight for National Medical Center for Veterans

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. TRIMBLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following insertion by my young friend, Joe Leib, who is evidently putting up a fight for a cause which is near his heart:

AMVETS REACH FIRST BASE IN FIGHT FOR NATIONAL MEDICAL CENTER FOR VETERANS

(By J. H. Leib, national legislative director)

It is gratifying to report that the Veterans' Administration is now on public record to the effect that a national medical center for veterans to replace Mount Alto Hospital will be completed by October 1, 1947.

Thus, the American Veterans of World War II (Amvets) have succeeded in reaching first base in a long fight to replace the shamefully overcrowded, inadequate, and gloomy veterans' facility located in the National Capital.

But October 1, 1947, is a long way off—in fact 20 long, bitter months in the unforeseen future, and still the Veterans' Administration is complacently looking for a suitable site before the long-delayed construction can get under way.

In the name of logic what are the veterans in need of medical care and hospitalization going to do while the Veterans' Administration attempts to make up its mind?

On January 10, 1946, the Washington papers carried a statement by Dr. Griffith, manager at Mount Alto, in which he announced that the hospital "is classed as one of the most overcrowded veterans' hospitals in the country." Veterans who come to Washington for special treatment are being shipped to out-of-town Government institutions for necessary professional care. Action is needed immediately.

At this point I would like to present a letter I addressed to President Truman relative to this matter, and the reply received from General Bradley. They follow:

JANUARY 10, 1946.

HON. HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: More than a year ago I had inserted in the CONGRESSIONAL RECORD a number of articles relative to the urgent need of a new medical center for veterans here in the National Capital.

General Hines, then Administrator of Veterans' Affairs, assured me of the great need for such a hospital. On May 29, 1945, he publicly urged the construction of this center. Three months later General Bradley assured newspapermen that he would end overcrowding at Mount Alto.

In today's Washington Star there appeared a story that Mount Alto "is classed as one of the most overcrowded veterans' hospitals in the country. Dr. Griffith said the hospital was still operating over its authorized capacity of 327 beds."

Mr. President, the District of Columbia should have the finest and most modern hospital in the whole country as a model and example of medical care for veterans. Instead it is probably the worst of all such Government institutions.

Is it not about time that something is done about this unfortunate situation?

Sincerely yours,

JOSEPH LEIB,
National Legislative Director, Amvets.

The reply:

VETERANS' ADMINISTRATION,
Washington, D. C. January 23, 1946.

Mr. JOSEPH LEIB,
National Legislative Director, American Veterans of World War II, Washington, D. C.

MY DEAR MR. LEIB: The President has referred to me your letter of January 10, 1946, inquiring as to the status of our plans for veterans' hospital in the District of Columbia, and urging the desirability of establishing a veterans' hospital that would serve as an example of medical care for veterans.

I am most appreciative of your suggestion with regard to this hospital, and agree with you that the veterans' hospital for the District of Columbia should represent a model for the rest of the country.

Congress, in the 1946 deficiency appropriation, provided funds for the establishment of a 750-bed general medical and surgical hospital for the District of Columbia. We are, at the present time, making site surveys for the purpose of selecting a suitable location for this hospital. As soon as recommendations can be made to the Federal Board of Hospitalization and approval of the site can be obtained from the President, we hope to proceed with plans for establishing a hospital such as you outline.

Sincerely yours,

OMAR N. BRADLEY,
General, United States Army,
Administrator.

Finally, I would like to ask—why did the Veterans' Administration wait until now to start making site surveys? Why wasn't this problem foreseen and cleared away long before the present crisis presented itself?

In this connection attention is called to two letters that General Hines, former Administrator of Veterans' Affairs, wrote which shows who was basically responsible for delaying this long overdue Federal project. This correspondence speaks for itself. It is sincerely hoped that General Bradley will be able to unravel himself from the bureaucratic red tape and dodging and ducking tactics that so engulfed the Administration before him.

Here are the masterpieces of procrastination:

VETERANS' ADMINISTRATION,
Washington, D. C., February 22, 1945.

I have received your letter of February 12, 1945, that forwarded a clipping that appeared in the Washington Times-Herald, concerning the construction of a medical center for veterans residing in the District of Columbia.

While it has been determined that there is a need for expanded facilities for the hospitalization of beneficiaries of the Veterans' Administration in the District of Columbia area, provision for the establishment of additional facilities has not been made in our present program. It is expected that such a project will be included in our next submission to the Federal Board of Hospitalization.

Very truly yours,
FRANK T. HINES, *Administrator.*

Obviously, this letter was as clear as mud. Further specific data was respectfully demanded. Here is the second reply—equally as indefinite:

VETERANS' ADMINISTRATION,
Washington, D. C., February 23, 1945.

Reference is made to the inquiry from your office regarding the erection of a medical center for veterans in the District of Columbia area.

As stated in my letter of February 22, 1945, it is expected that the inclusion of such a project will be made in our next submission to the Federal Board of Hospitalization. Our next program of additional hospital construction will be submitted not later than July of this year.

Very truly yours,
FRANK T. HINES,
Administrator.

This as expected was just another stall. A call to the Veterans' Administration to ascertain who made up the Federal Board of Hospitalization brought forth the amusing revelation that the Chairman of this all-powerful group was none other than General Hines himself—believe it or not.

Here we are a year later—February 7, 1946—and all we have gotten is an obscure date when the much needed hospital might be completed. Veterans will not stand for this stupidity much longer.

Great Speech by Secretary Anderson on Importance and Constructive Work of Farm Cooperatives

EXTENSION OF REMARKS
OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. VOORHIS of California. Mr. Speaker, at the recent convention of the National Council of Farmer Cooperatives held in Chicago, Secretary of Agriculture Anderson made one of the truly great speeches of recent years.

Under unanimous consent I include the account of this speech which appeared in the Co-Op Review, the official monthly publication of the Pennsylvania Farm Bureau Federation, for February 1946:

From the pen of Secretary of Agriculture Clinton P. Anderson, the aims, the methods, and the validity of American farm cooperatives have just received the soundest endorsement probably ever given by a Cabinet member.

The message was spoken at the annual meeting of the National Council of Farmer Cooperatives at Chicago in January.

When the last word fell from the Secretary's lips, the mighty audience of cooperative executives that had gathered from coast to coast, and from the Lakes to the Gulf, arose as one man and cheered, and cheered to the echo. His breadth and warmth of understanding of their aspiration to lift American farming onto a self-dependent level, above the fear of encroaching monopoly, fairly lifted them from their seats. With penetrating statements he had inspired them with a new and deeper faith that farm cooperatives, fully in line with the power of the American farm tradition, are preserving the family-size farm and individual ownership against the insidious trend toward corporate ownership and operation—and maintaining their identity in a world of economic giants.

"Sheer economic giantism" was, in fact, the apt word-coinage of Secretary Anderson.

"We have moved," he said, "into an economy of 'bigness'—sheer economic giantism"—not only America's industrial plant, but agriculture, too. "It has become in the past generation a high-powered, mechanized business," and, while he had "nothing against big business just because they are big, at the same time size does carry with it some inherent dangers, as the dinosaurs of a bygone age found out.

"We would be dodging one of the most vital issues of the times," the Secretary contended, "if we did not acknowledge that the same forces which brought great size and concentration of economic power in our industries are also bearing heavily on agriculture.

"The major point I wish to make is that the farmer and the other small businessmen of today must operate in a world of economic giants, yet they must retain their identity and their flexibility as individual enterprisers. They can do that only by becoming just as efficient as the large operators.

"They must recognize that they face direct and indirect competition with multi-million-dollar organizations that are constantly extending, constantly on the alert for new processes or new short cuts that will yield competitive advantage."

The Secretary, indeed, went so far as to say with obvious emphasis that, he believed—

"There is little doubt that, except for the power of the American farm tradition, the growth of cooperation, and the definite, deep-seated Federal and State policy of encouraging the family-type farm as something of fundamental national strength, the big corporations might have taken over as much of agriculture as they have of other parts of our economy. It has happened all around us; it has been a part of our industrial and business growth; but I am positive that it is not what agriculture wants. We can, I believe, find other ways of producing the same results—we have done it, and we are going to continue to do it."

Cooperatives, as the Secretary developed his address, are simply a tangible expression, "with an extremely high value," of "the very nature of farming in America from the time of the first settlers." He spoke of the pioneer families that pushed westward across the country; faced great personal dangers and natural hazards against which the individual alone was powerless—and who through cooperation "found a source of strength that enabled them to bring the raw new land under the plow, to build homes, churches, and schools in the face of the peril of Indian wars, storms, drought, and lack of all but the most elementary facilities for civilization."

Here the Secretary found the spiritual note of his message—the precious spirit of neighborliness—of which he said the "highly developed formal cooperatives in agriculture today are a direct outgrowth."

He contended, moreover, that this "binding that holds them together, the essential force that makes them go on, is nothing more nor less than an extension of this spirit into present-day conditions. Without that human force, a cooperative is in real danger of becoming just another business, abstract in its aims, and divorced from the lives of its members and customers."

Cooperatives, he said, go back, indeed, to the day of Benjamin Franklin, "one of the sponsors of perhaps the first cooperative, well known as the 'Hand-in-Hand'—the Philadelphia Contributorship for Insurance of Houses from Loss by Fire, a mutual that was organized in 1752."

Today, cooperatives "have come to play an integral part in the life of the farmer—and of the businessman," so that "it is estimated that fully half the farmers in the United States are members of cooperative associations that are performing some vital service in purchase of farm supplies, processing or distributing farm products, or providing other essential farm-business services.

"Today, more than ever before, there are many services that the individual farmer cannot provide for himself—he must, if his efforts are to be effective, join with his neighbors in large-group endeavors.

"Today, to that farmer the term 'neighbors' has a much broader meaning; it takes in farmers like himself over the entire Nation. You don't have to look very far around modern agriculture to see how helpless the individual would be in dealing with many of his problems if he had no opportunity for joining his strength with that of his fellow-farmers."

Secretary Anderson pictured the size and strength of modern farm cooperatives in this manner:

"Some 7,500 farmer associations are engaged primarily in marketing farm products. They report 2,750,000 members.

"Two thousand mutual insurance companies serve almost half of our farmers with protection from losses from wind, hail, fire.

"Twenty-seven hundred associations, with 1,500,000 farmer members, are engaged in purchasing farm supplies. Their volume of business runs over $1,000,000,000 a year.

"Four thousand mutual irrigation companies serve about 150,000 farms.

"Eight hundred rural electric cooperatives provide service for more than a million farms.

"Fourteen hundred livestock improvement associations carry on programs to improve the productivity and quality of the products of our beef cattle, dairy cows, swine, poultry, and other farm animals.

"One thousand and seven hundred national farm loan associations are providing farm mortgage loans on a cooperative basis to 890,000 members. Five hundred and thirteen production credit associations are providing 370,000 members with short-term seasonal credit."

Secretary Anderson at no time mentioned the attacks upon the cooperatives by the National Tax Equality Association—yet, in effect, he answered the tirades supposedly emanating from "small businessmen" goaded on by NTEA by saying that "business, too, has developed many forms of cooperation and many specific cooperatives which operate almost exactly like farmers' cooperatives and which are taken for granted.

"There has been a strong trend running in small business to meet the competition of big business by combining into cooperative organizations; thus obtaining the advantages of massed buying power and mass-sales methods while retaining individual ownership. Thousands of independent retailers, wholesalers, manufacturers, and service firms have formed purchasing, marketing, advertising, or credit cooperatives.

"It is interesting to note, in passing, that these cooperatives, returning their savings

to the individual enterpriser and to his customers, have no income of their own, and hence are free of income taxes, although they are subject to other taxes common to most types of businesses.

"You can see these business cooperatives all around you. Independent grocers, competing with the large chains, have their cooperative retail grocery chains, which operate warehouses and represent their members in spending their pooled purchasing power, obtaining carlot rates, and merchandise of high quality, beyond the ability of the individual retailer.

"There are many so-called mutual drugstores, which are owned by cooperating independent druggists who have formed organizations to operate warehouses and to exercise definite standards in buying.

"We don't ordinarily think of it as such, but one of the most extensive of our news-gathering agencies, the Associated Press, is nothing more or less than a cooperative of newspapers, bringing to its members news that no individual publication could gather by its own efforts."

True cooperation, the Secretary reaffirmed, is "a part of the American way of life.

"When you strip cooperation to its fundamental elements, the story is a simple one, easily understood"—and then, as though to answer NTEA, he added "it reveals at once the reason for the legal right of cooperatives, and their legal obligations.

"It leaves no doubt as to the place of the cooperative in the system of free enterprise—in fact, it demonstrates that cooperatives are the very essence of free enterprise in that they actually represent groups of farmers acting together for the purpose of carrying on their individual free enterprise more efficiently. Nothing could be more American in its basic spirit and purpose than that.

"It is this basic objective of farm cooperatives that has caused Congress and the courts to recognize generally, and in specific legislation, and to affirm repeatedly, the right of farmers to organize cooperatives, and the public welfare obligations of cooperatives.

"Shorn of all technicalities, it is this basic purpose that frees cooperatives from income taxes, if they return to members and patrons the savings they may be able to make in the transaction of business for their members and patrons."

The Secretary made just as plain that the cooperator also has his obligations on the tax question. "Obviously, such (patronage) returns are a part of the income of the individual enterpriser—the farmer—and as such are subject to taxes as a part of his income. Outstanding and simple as that fact is, it has often been overlooked. It should be made clear that the farmer in this respect is in exactly the same position as the independent businessman or partner; he pays taxes on his income, including any savings he receives through cooperative action."

And again, by inference, Mr. Anderson refuted the groundless charges of the critics and enemies of cooperation that they don't pay taxes. "It should be made entirely clear," he declared, "that cooperatives are not entirely free from taxation—that, while they may not pay income taxes, they do pay their share of real estate, social security, and other taxes, just as do most businesses which are operated for profit."

The general welfare came repeatedly into Secretary Anderson's address as the focal point of both the power and the obligation, the privilege and responsibility of cooperatives.

BASICALLY AMERICAN

"Cooperatives are the very essence of free enterprise in that they actually represent groups of farmers acting together for the purpose of carrying on their individual free enterprises more efficiently. Nothing could be more American in its basic spirit and purpose than that. Farm cooperatives are not seeking profits as a group, but are seeking to use modern business methods to maintain their way of life. That is their aim, their purpose." (Secretary of Agriculture Clinton P. Anderson.)

"To be successful, and to live up to the responsibilities of free enterprise," he said, "the cooperative must genuinely serve both its members and the public.

"It is a part of the American way of life—it is as much a part of agriculture as is the family-type farm—and the two are dependent on each other—

"But the implications go even deeper than that.

"Cooperation is a two-way street.

"Farmers are justified in using the cooperative device, and the legal privileges that have been accorded it, only when it offers a sound means to solve an economic problem for the benefit of the cooperative and the public. Neither farmers nor anyone else have the undisputed privilege of combining their interests to seek monopoly or unfair advantage."

But there was no doubt in the Secretary's mind that "farm cooperation as a whole has served the public welfare. With very few exceptions, farm cooperatives have kept closely to the basic principle of service to their members and to the public."

He made the claim—as so often made in this journal—that "in a true sense, cooperatives have provided a valuable yardstick. As you well know, cooperatives have been pacesetters in improving the quality of farm products supplied the public—and they have done it by seeking higher and higher standards, better methods of marketing, and seeking to return to the producer who produces high quality the reward that such quality brings in the market."

The Secretary went on in a specific instancing of how cooperatives do operate in the general welfare:

"Farmers' cooperatives have been in the forefront in experimenting with and encouraging better grading, packing, and other means of assuring the housewife that she is getting her money's worth when she buys groceries.

"In the purchasing field, cooperatives have led the way toward known standard, efficient products for the farmer at the lowest possible cost, and in many cases the methods they have developed have spread, like ripples from a stone thrown in a pool, throughout our merchandising system. Such things as open-formula feeds—where the buyer knows exactly what he is buying—high-analysis fertilizer, and seeds of known origin and germination have been pioneered by cooperatives.

"Cooperatives have fought without let-up to eliminate marketing abuses, to break down monopoly, and to implement the public's right to know what it is buying.

"Cooperative organizations have sought to spread useful information. They have worked closely with the research staffs of the land-grant colleges and the United States Department of Agriculture to bring to their patrons and members the benefits of the latest scientific discoveries and the most up-to-date specifications.

"And finally, farm cooperatives can look back with honest pride on the service they gave to farmers and to the public during the war, when they played an important part in processing and marketing the capacity production of our farms, and in finding and distributing fertilizer, feed, fuel, machinery, and other supplies so essential for continued high production. That was service, not just to their members, but to the United States in time of war."

Farmer cooperatives need to clear their sights and determine their target in the future. "We must face the problems and the economic and technical developments that lie ahead," declared the head of USDA.

And here again Mr. Anderson reverted to his plea that ran like a thread through the discourse—a plea for the "maintenance and improvement of the family farm."

"We want it to be a fully productive, highly efficient farm—but we want it to be the traditional family type, capable of holding its own in our economy, capable of maintaining farm and home as a way of life.

"We want it to fit into a national pattern of a fully productive agriculture, turning out vast amounts of high-quality food and fiber, capable of supplying the Nation with a bountiful diet at a reasonable cost.

"We definitely don't want our farms to become soulless factories, owned by impersonal stockholders, and operated by hired managers and hired workers, with success or failure measured entirely by dollars and cents figures in company ledgers.

"To allow our machines and our impetus toward bigness to bring that about would be to take the American spirit out of farming; it would mean relinquishing the solid values of farm life that we have prized highly since the first settlers put the plow to the fresh soil of this continent."

No doubt was left that we are speeding into a high-powered economy. The thought on the Secretary's mind was that, since "the farm co-ops must play an increasingly important part in farm life and farm business (if we are to maintain and improve the family farm), it is absolutely essential that we give serious thought to the possibilities of the future in agriculture and determine the ways in which cooperatives can increase their aid to farmers in achieving the kind of agriculture we will need—and can aid the public even more in realizing to the full the benefits of our productive agriculture."

"It seems to me that one of our first jobs is to gain greater public understanding of what farm cooperatives are, and how they serve the Nation's welfare. I realize that a great deal has been done in education of farmers in cooperation, and that a great deal of information is available about the principles, methods, and aims of cooperation—for farmers.

"But, frankly, I think we have been talking to ourselves too much—and to the public too little!

"Furthermore, we have been talking in a special jargon that tends to make the idea of cooperation too complex.

"As a result, I think the public is somewhat confused about cooperatives. I believe that our language has caused means to be confused with ends—methods with purposes—implements with principles."

If anyone wanted to know what Secretary Anderson's personal understanding and appraisal of cooperatives were, he got it in concise terms as he went on in this wise:

"When I think of farm cooperatives, I think of them not as complex business concerns, but as groups of independent farmers banded together to do some job that is too big for them as individuals.

"They are not seeking profits as a group, but are seeking to use modern business methods to maintain their way of life. That is their aim, their purpose. The methods by which they seek to maintain their way of life may vary according to the economic problem they are attempting to solve by cooperation.

"If credit is their problem, their cooperation may take the form of a farm loan association.

"If marketing is their problem, their cooperation may take the form of a marketing association.

"If buying supplies of known quality at prices they can afford to pay is a problem, their cooperation may take the form of a purchasing cooperative, giving farmers the same advantages that big business enterprises have in skilled, large-scale buying."

Cooperatives have already written a dramatic story "of new and better products for the American dinner table." "New processes, quicker handling, fresher food, reduced costs

and margins." "It is a part of the story of better nutrition and health for our families," thought the Secretary, and "we in agriculture need to do a more aggressive job of informing the public of the many improvements and benefits that have come to consumers through farmers' cooperatives"—a story, indeed, of "better food brought to the American family at the lowest possible cost."

But the days of pioneering in cooperation are not past. Let him who thinks so "study some of the problems facing agriculture and the family farm.

"The frontier of ideas is always wide open, and we certainly are going to need ideas, plus the courage to give them a fair trial.

"We should not forget that agriculture has been in a seller's market for the past several years, with the Government taking great chunks of our output for the armed services. Certainly, finding new markets and enlarging the old ones is going to take all of our selling skill—and I, for one, have long believed that agriculture has not done the job of promoting its products, of creating new tastes and larger demands, as well as it could be done.

"Efficiency and lowest possible cost in producing, processing, and distributing farm products are going to loom more important than in the past, and may rapidly become the deciding factor between a thriving co-op and a defunct one when the going gets tough. Here alone is need for practically every cooperative to re-examine its operations with a most critical eye."

Cooperatives must be as modern as any other business, in their facilities. Many "have creaked by with obsolete equipment and old-fashioned methods during the war."

The farmer cooperative's service in keeping the farmer up with the times, and to aid him in maintaining his independent position, said the Secretary, was "among the greatest of challenges." He wouldn't attempt to guess what all this would add up to, but he did opine that "increased mechanization; increased use of refrigeration on farms and all along the way to market; development of many new methods of packaging; new forms of transportation, among other things, promise us a most exciting decade ahead."

In his conclusion, Secretary Anderson circled back to his cardinal theme—that the maintenance and improvement of the family farm is "the basic purpose" of the cooperative.

Directors and management must keep this eternally in mind as they guide the destinies of their cooperatives and accept the "great opportunities they have for service."

"We want cooperatives to remain human institutions, accurately reflecting the desires and interests of the individuals who make up their membership" for "cooperatives, too, can suffer the curse of bigness—they can become so huge and complex that, unless real effort is made, they lose contact with the lives of their farmer-members and their patrons. We don't want that to happen."

Of their future, Secretary Anderson was plainly unworried. As before observed, he was anxious of even the existence, much less the fulminations, of the organized opposition (NTEA) and the threats to force Congress to cripple the cooperatives by tax legislation. He had only one prescription for their conduct—and that was that they be responsive to the American tradition of the family farm, and keep on working for the public welfare. He put it in these words:

"If we keep our cooperatives interwoven into the lives of farmers and their customers from the grass roots to the city dinner tables, if we keep before us the realization that in the last analysis the only thing a cooperative has of its own is the service it provides its members and customers, then we need have little worry about the future of farmers' cooperatives."

Workers and Employers Team Up To Save British Industry

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. HERTER. Mr. Speaker, in view of the discussions that we have been holding in the last few days the following article by Stanley High which appeared in the February issue of the Reader's Digest is particularly timely:

WORKERS AND EMPLOYERS TEAM UP TO SAVE BRITISH INDUSTRY

(By Stanley High)

I went to Great Britain to see how labor would go about preparing the free economy of Britain for Marxist burial. I found, instead, that labor has teamed with management to rejuvenate British enterprise. Britain's workers are tackling the job of building the nation's future as full-fledged and responsible partners in a joint undertaking.

As a result, Britain's industrial atmosphere is not blanketed with gloom. It is remarkably invigorating. British industrialists are not shaking in their boots, holding up or moving to Canada. They are giving British industry the most promising overhaul it has had in 100 years.

These are more startling and important facts than the socialism which officially flies at the Labor Party masthead. For Britain, they are a bigger potential asset than loans, credits or Empire preferences.

To get British industry going again full blast, new wage and hour settlements have been voluntarily negotiated in coal, agriculture, cotton, the building trades and in many smaller industries. Cherished trade-union practices have been modified. War-born labor controls are being continued, with labor's agreement, to insure maximum peacetime production. Through joint production committees in more than 5,000 factories, labor's productive know-how is being pooled with management's.

There is, of course, a thin red fringe—led by the articulate and unheeded Professor Harold J. Laski—which would go all-out Socialist at once and damn the consequences. But to British trade unionism, which furnishes the Labor Party's bone and sinew, the consequences mean more than the socialism.

The consequence that means most—more than Marx on the left or capitalism on the right—is a higher British standard of living. There is one way to get that, says British trade unionism. Shake the backwardness and inefficiencies out of British industry; by the best and shortest route, put it into maximum peacetime production.

No one speaks for British workers with greater authority than Herbert Morrison, the Labor Party's floor leader in the House of Commons. "The nation wants a much higher national income; it wants full employment, big exports, efficient production—and we're going to get them," he says. "If the nation has to give marching orders to big business, the nation must give them. What matters is to get the results. A case can be made for private enterprise. There is no case whatever for private unenterprise.

"We do not stand for nationalization for its own sake or as a party slogan, but so that our national resources may be used with greater efficiency for the common good. If only nationalization will secure this result, then we must nationalize. If only private enterprise can do it, then let private enterprise remain."

A leader in the Trades Union Congress recently said: "A considerable amount of satisfaction can be derived from 'beating the bosses.' But it is very bad for industry and it is very bad for production. In meeting postwar demands we shall all require a united pull. I suggest that an honorable partnership is the best way of securing it."

There were strikes in Britain during the war. There have been strikes since, notably the dockers' unauthorized walkout. But Britain's industrial partnership has already gone far enough beyond the talking stage to foreshadow the end of industrial conflict over wages and hours.

British labor, during the war, worked under far more rigorous conditions than in World War I. Hours were longer. Working conditions were worse. Concessions demanded from trade-unionism were much more serious. Yet man-hours lost from strikes per year in World War I were almost five times as high as in World War II.

The end of the war did not blow off the lid. Instead, from January 1 to October 1, 1945, the total of man-hours lost by strikes was only one-third as high as between January 1 and October 1, 1944.

This does not mean that labor has ceased seeking better wages and working conditions. It means that labor is accepting its share of responsibility for the productive well-being of the industrial goose from which it expects to get many golden eggs.

The Amalgamated Engineering Union has 870,000 members in the metal trades. Before the end of the war, the AEU made three exhaustive studies, to assemble the workers' conclusions as to what was necessary "to reestablish Britain as a first-class industrial country."

That such an inquiry should be made at all is remarkable enough. More remarkable is its discovery that, "though complaints about earnings appeared in many answers, this was mostly associated with other negative factors such as bad cooperation with management or bad workshop procedure, lack of machine tools, misuse of labor, idle machines. Increased earnings were regarded as only one spur, but not the greatest, to the work people's enthusiasm for the production drive."

Says Sir Stafford Cripps, president of the board of trade in the Labor Cabinet: "The days are passing when a trade-unionist needed to be only a tough negotiator fighting a running battle with the employer for better wages and conditions. The trade unions more and more will have to take their share in the responsibility of production. Without this truly democratic partnership, there will be little hope of producing efficiently."

As a first measure for enlivening Lancashire's dispirited and lagging textile industry, the government appointed a commission to work out a new wage policy—four cotton-mill owners, four trade-union men, and, as chairman, a distinguished jurist. The commission's conclusions were unanimous. It called for basic pay raises of from 15 to 20 percent; the same wage for the same work for women; reduction in the employment of juveniles; increased facilities for training skilled workers; elimination of blind-alley jobs.

Such a report had in it the makings of a first-class uproar from labor leaders who aimed to get more or from owners who aimed to give less. Instead, labor, management, and the government hailed it as a magna carta for the industry.

Almost as significant as the agreements, peaceably arrived at by this employer-employee commission, was its conclusion that "it is essential to establish the belief that management on the one hand and operatives on the other are not serving opposing interests but are concerned to promote the health and efficiency of the industry."

Britain's developing industrial partnership did not spring, full-blown, from the war. It has been coming to maturity through a long history.

The earliest British trade-union leaders were largely recruited from the nonconformist churches—Methodist, Baptist, Congregational. Their ambitions were as far above reproach as their morals. They were driven solely by an evangelical determination to "improve the lot" of British working people.

For the growth of their unions, they did not rely on the compulsion of law or the intervention of government. The case they made was a moral case. They rested it on the increasing intelligence of the workers and the conscience of the British people.

In Great Britain, organized labor has now reached a more powerful position than in any other large industrial nation. But there is no British law to compel the closed shop. There is none to require a worker to join a union as a condition of employment. There is no check-off.

Save for a case involving one union officer a quarter of a century ago, there has never been a scandal among British labor leaders. Today the men who direct that movement are paid, as they have always been, only a little above the wages of the workers in the unions they lead. That means about $2,500 a year. The salary of Sir Walter Citrine, who, as general secretary of the Trades Union Congress, is the Nation's top labor executive, is about $5,000.

No law compels British trade unions to make annual reports to the government of receipts and expenditures. But virtually all of them do.

The two key words of British industrial relationships are "voluntary" and "good faith." The collective-bargaining structure covers virtually all British industry. Yet there is no law to compel any British employer to bargain collectively. There is no law to enforce, against either the employer or the union, the observance of any collective-bargaining agreement. Its observance, by both parties, rests wholly on good faith. That has proved sufficient.

Ernest Bevin, who came up from the ranks the tough way to his post as Foreign Minister, says that "in thousands of cases wage settlements are based on two men's word, often without anything being put into writing. It is simply a matter of the foreman or the manager and the trade-union official agreeing to it. Sometimes the matter is settled over a telephone. Yet everybody accepts it as an honorable bargain. No other country has yet been able to find a way of doing this with the same confidence."

The settlement of employer-employee disputes likewise proceeds without the strong arm of the law or the government. There is no machinery for compulsory arbitration, but the great majority of British industries have voluntarily set up their own boards of arbitrators. The history of these boards shows an almost unbroken record of loyal observance, by both sides, of the decisions of arbitrators.

Labor's healthy, productive status in British society is a result of that history. Industrial Britain, therefore, is not quailing before labor's rise. It has known the character of British trade unionism too well for too long.

I saw a chart, prominently thumb-tacked above a shop steward's desk in a Birmingham factory. It was headed: "Union provision for avoiding disputes." In diagram it gave the step-by-step procedure for keeping peace in the plant. There were eight such steps.

"Until these stages of procedure have been carried out, there shall be no stoppage of a partial or general character.

The first four measures were all within the plant. If they failed, step No. 5 called for a meeting of the works committee, with outside union officials present. "At this meeting the divisional organizer may be present, in which case a representative of the employers' association shall also be present."

Recently the British Broadcasting Corp. presented a discussion of jobs for all. A British industrialist and a trade-union leader participated.

The industrialist said: "If we get full employment, the employer will have to change his attitude considerably. The businessman has to look on himself less as a private man developing a private opportunity and much more as a public servant."

The trade-union leader said: "We agree that government must use its powers to control the location of industry and possible investment. What about the control of labor? I think the government must continue to control and direct labor. The trade unions will cooperate."

The industrialist: "The businessman has to take the public more into his confidence; to meet in very open fashion criticism of production costs and price policies; to develop more understanding between management and men. The whole thing has got to be a partnership—a team."

A trade-union leader recently said: "If we are going all out 'to enlarge the cake,' the union side would like to make efficiency more of its business. Under a full-employment policy, trade unions will not block improvements. On the contrary, they will be asking for new methods, new machines. If the workers are told what is going on and consulted about methods, they will put their minds and backs into production."

To keep the workers informed of what is going on and to consult them about methods is now widely accepted as a matter of good business. A recent newspaper poll showed a large majority of leading industrialists in favor of continuing wartime joint production committees in their factories.

Coventry, Britain's Detroit, went through the war and is now going through reconversion without serious industrial strife. In one of its automobile plants, management, through the joint production committee, put the problem of reconversion squarely up to the workers. Among the cards it laid on the table was the $165,000,000 of orders for new cars which were already on the company's books. I saw the first of these automobiles coming from the assembly line, and visited the new factory which was due to double this company's best prewar production.

"We'll never go back to running this plant from the top down," said a member of the board of directors. "We couldn't afford to."

I talked about joint production committees with the regional head of the British Board of Trade in Manchester. It is part of his job to attend many of their meetings. He said, "In dozens of them you can sit for an hour and not know who is there for management and who for labor."

In a plant I visited near Manchester, the chief shop steward, cochairman with the plant manager of the joint production committee, pointed to certain machines. "Formerly," he said, "it was a man to each machine in this department. In the old days, we, on the labor side, would have insisted on keeping it that way. But here the men worked out their own labor-saving method. Now, instead of operating only one machine each worker operates three."

The organized workers in this plant lodge complaints against three supervisors—union members—on the ground that they were inefficient and slowed up production. They got the men fired.

These are typical incidents. British labor is convinced that, to get more pay, better homes, and more of the good things of life, British industry first must get more business. It is prepared to agree that getting more business will require, for some time to come, more give than take.

Where necessary to serve the revival of the Nation's economy, labor accepts the transfer of workers from place to place; has agreed to the shifting of workers, as required by urgent production needs, from one trade into another. It was not management but the general council of the Trades Union Congress which proposed that any person who refused a job at a union rate in any vital industry should be denied unemployment benefits.

As a stopgap answer to the critical housing shortage, British industry is building prefabricated houses. The agitation, from the union side, is not the familiar outcry against prefabrication. It is a trade-union demand that prefabricated construction be speeded up. Through their respective unions, the bricklayers, joiners, plumbers, plasterers, and laborers abandoned their traditional opposition and agreed to join in assembling the new-type houses. The sole requirement was that standard craftsmen rates be paid.

When Britain was backed to the wall for lack of war equipment, labor and management jointly supervised scores of training centers for the production of skilled war-workers. The employers supplied vast quantities of shop equipment. From their own pay rolls, they provided many of the teachers. The unions, for their part, voluntarily made substantial modifications in their apprenticeship requirements. This plan is continuing for the requirements of peace production. Thirty-three such centers are already operating in the building trades. Many more will be started.

It is only reasonable to suppose, declares a writer in the journal of the Amalgamated Engineering Union, that "concessions have to be made from the workers' side in the sweeping away of certain hampering safeguards and the scrapping of certain trade-union practices which militate against efficiency."

Samuel Courtauld, one of Britain's greatest industrialists, recently sized up the current trend. What is being worked out between Britain's employers and employees, he said, is not socialism but the discovery of a productive "middle way" between Right and Left extremisms "which will bring the greatest attainable good." That, if it should come to pass, would be a pioneering achievement as important as any since the Machine Age began. The prospect is promising.

Subsidies

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Toledo Times which has been mailed to me by the Honorable Harry N. Hansen, outstanding civic leader of northern Ohio, who has written his Congressman and suggested that this should have the attention of every lawmaker. Mr. Hansen is a former legislator, soldier, and is one of our citizens who totally forgets himself and just goes about doing good. The author of the article is Harold H. Hartley, public-spirited citizen and outstanding journalist who dares to speak the truth.

IT'S CHEAPER TO GIVE THE BUTCHER A NICKEL

If one examined all of the individual records of man since his beginning, it still would be difficult to find who invented the subsidy. Generally, subsidy means putting money, or

other wealth, into something which does not pay its own way.

Businesses, trades, and professions have been subsidized by individuals, other businesses, and by the governments.

If an auto maker wishes to make his own tires, he subsidizes the company. This means he puts up the money and operates at a loss until his tire company begins to make a profit. Individuals have been subsidized, both honorably and dishonorably, since the beginning of time. A college professor may be subsidized by a large corporation to enable him to carry on valuable research. Or a whole university department may be subsidized. On the other hand, a purchasing agent may be subsidized if he is so unscrupulous as to accept a secret discount which he puts into his own pocket.

In modern times a subsidy often means persuasion with money. Sometimes the line between an outright bribe and an honorable subsidy is dim, indeed. There are all kinds of subsidies with all kinds of motives.

When one uses the word subsidy today, he usually means a Government subsidy, which is nothing more than a little help from the Federal Treasury, seldom without some political significance. Labor unions, for instance, are exempted from taxes. So are charitable organizations and nonprofit foundations. These are subsidies paid in tax exemptions which are cash subsidies just as much as if the Government laid the money on the barrel head.

The country also has fallen prey to outright Government cash subsidies. Most of us are unconscious of the fact that the Government is paying part of our meat bill, our egg bill, our bread bill, our butter and milk bill, and our cheese bill. And there are others.

The whole practice of cash Government subsidies is open to serious question.

The Government has no money of its own. Every cent in the Federal Treasury belongs to the people. So, when the Government subsidizes meat prices from 3 to 5 cents a pound, the Treasury pays this much with the people's money. The same applies to bread, eggs, milk, cheese, and butter.

In doing this, the Government gives the impression that it is helping both the farmer and the consumer. The farmer gets more for his products and the consumer pays less. This is the mistaken idea which goes hand-in-hand with subsidies.

Actually, what difference does it make whether we pay 50 cents a pound for meat at the butcher's and 5 cents to the Treasury for the Federal subsidy, or whether we pay the whole 55 cents over the butcher's counter?

Subsidies really make food cost more. When the 5-cent subsidy goes through the tax office into the Treasury and out to the farmer-producer, the consumer pays not only the nickel but the cost of handling it through the tax and distribution systems. The overhead on the nickel takes in administrative, clerk, and stenographer hire, the keeping of records, tax deputies, tax accountants to make sure everyone pays, stationery and other paper supplies, filing cabinets, office space, equipment and janitor service, telephone service, lights, ink, typewriters, mailing machines, mimeographs, and a host of workers on the Federal pay roll, not to mention the added burden on the mail service.

This is the big load the subsidy nickel is asked to carry.

If we pay the nickel across the counter to the butcher, we escape all of this political overhead, and meat actually becomes that much cheaper.

If we apply this same principle of subsidy overhead to all other subsidies, it is easy to see that we are paying the real cost of the food, plus the subsidy, plus the maintenance of a Federal patronage system which too often becomes a political machine in election years.

If we throw out the whole idea of Government subsidies, our food will be cheaper by millions of dollars a year. Common sense tells us it would be much better to pay the butcher the extra nickel right over the counter. Then we would know who gets it.

The Case of the Millers

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Tribune of February 2, 1946:

THE CASE OF THE MILLERS

One of the first rules of sound journalism is that news and editorial comment should be strictly segregated. Nevertheless, every so often a news story bobs up which, without any conscious effort on the part of the writer to make it one, turns out, through its sheer simplicity and factuality, to be as effective an editorial as any that could be purposefully contrived.

Such a story is the half-column account sent in to the Wall Street Journal this week from New Canaan by Staff Correspondent Sydney B. Self on what happened to the Miller brothers of that little community, which borders on Stamford, Conn. The Millers, Mr. Self explains, are three brothers, who were brought up on a farm, knew all about dairying (and put all their savings into it), but who had "reckoned without Local 338 of the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers, A. F. of L."

"Last week end," writes Mr. Self, "was probably the most trying in the lives of the Millers." The union had called out their drivers, demanding a new contract which was tantamount to a 50-percent increase in the pay roll, asked for an increase of 66⅔ percent in commissions, and barred the Millers from doing any manual work around the dairy. Although the Millers had only 7 or 8 drivers working for them, the union sent in from 200 to 250 pickets from out of town to police the dairy (which necessitated the use of 60 State troopers to maintain order). When women customers drove up to the dairy to get milk for their families the tires of their cars were slashed.

The employees decided they had had enough and quit. And the Millers followed shortly. The Millers didn't have an accounting staff, but they could add and subtract, and they got out paper and pencil and did just that. Their business (around 2,000 quarts a day) grossed about $1,000 a week, out of which a $455 pay roll had to be met, in addition to the cost of trucks, gasoline, pasteurizing, bottles, and other necessary expenses of doing business. It did not take much figuring to see that with the pay roll jumped to between $600 and $700, themselves barred from working, and with other expenses continuing as usual the Miller brothers, as they wrote to Frederick Conrad, union president, in signing the proposed contract would simply be "signing a petition of bankruptcy in advance."

The union had a solution for this problem. Why, they suggested, didn't the brothers sell out to a larger concern, which would be better able to meet the union's wage demands? To this the Millers, who had built up a quality business, with butterfat content of the product well above the legal minimum, answered with a flat refusal, "We don't propose to ask our customers," they declared, "to go blindly to another, merely because we have turned over our route books and have written glowing praises of our successor—obviously put into our mouths."

The battle between the powerful teamsters' union and this little Connecticut enterprise was short, and the defeat was a crushing one. But it was more than a defeat for the Millers; it was one more defeat for the thing that over the years has been this country's greatest source of strength—the right of an American citizen to go into business for himself with a fair chance of making a success of it if he works hard and produces something that the community wants and needs. That is the essence, not only of free enterprise, but of the only kind of equality that is consistent with the dignity of man—equality of opportunity. There are many threats to that system today, but none is greater than that presented by organized labor grown to manhood with respect to power, but with no corresponding increase in responsibility. As Congress prepares to write a new labor law, one could wish that every member had the case of the Millers before him. Because the case of the Millers is neither more nor less than today's labor problem in America presented in simple microcosm.

Foreign Trade and the British Loan

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. MUNDT. Mr. Speaker, the attached editorial written by Fred C. Christopherson, editor of the Daily Argus-Leader, published in Sioux Falls, S. Dak., merits the careful consideration of the Congress and the country.

Mr. Christopherson is not only a comprehensive student of economics and foreign affairs but on the matter of the British loan he speaks with a considerable degree of personal experience made possible through an intimate study of international trade as he has had an opportunity to observe it in visits to England and Europe.

The clear-cut facts set forth in this editorial have a direct bearing on the problems growing out of the British loan proposal now being urged by President Truman. Economics and national solvency are matters which cannot be settled on the basis of sentimentality.

If America and the world are to prosper, it must be on a basis of reality and one of the undeniable realities in the picture is the fact that a bankrupt United States not only cannot be helpful to the rest of the world but it would actually go far toward destroying the private enterprise system in every country and on every continent.

FOREIGN TRADE AND THE BRITISH LOAN

Paul McCracken, director of research of the Federal Reserve bank of Minneapolis, told the Sioux Falls Rotary Club yesterday that it was desirable for the United States to make the $4,500,000,000 loan to Great Britain.

But, though his remarks were interesting, they were unconvincing.

It was his opinion that the United States would have to provide this credit to Britain

if we were to maintain our proper position in world trade. If we did not finance Britain, he contended, the British would proceed to make individual trading agreements with other nations and the United States would be left on the outside of this charmed circle.

Thus, it seems—if we are to accept McCracken's opinion as the right one—the British lion is still the mightiest power in the world and that she is in a position to crack an economic whip that would make the United States stagger.

That is accrediting to an impoverished nation an almost incredible influence and might.

Actually Britain has no such power. She has lost her capital and is in desperate straits financially. In truth, she doesn't enjoy a full trading control over even the countries that comprise the British Commonwealth.

McCracken discussed foreign trade at some length. He pointed out, quite accurately, that England is potentially a great buyer of the world's goods. She would welcome the wheat from Argentina, for example, and would gladly buy from her providing that Argentina purchased some of her factory products. In fact, England is a market for foodstuffs in great quantity because she doesn't produce enough to serve her own people.

The United States, on the other hand, is a surplus producer of foodstuffs. We have food to export and have very little occasion to import it. Thus Argentina can't find a market here for her major export goods.

That, of course, is an economic fact and there's nothing in the British loan or any other loan that will alter the picture.

We could give Argentina $2,000,000,000, as an instance, and she would be willing to use that amount to buy American machinery, automobiles, refrigerators, radios, and sewing machines. But once that $2,000,000,000 was exhausted, she would cease buying our products unless we could provide a market here for her wheat. Fundamentally, she can't buy from us unless we buy from her.

So it is with England. England just now would welcome an opportunity to purchase great quantities of American products. And she could do so with the loan now under consideration. But once that sum was exhausted, she would be compelled to quit buying from us unless we bought from her.

Actually, it isn't credit that the world needs from us in order to do business with us.

The fact is that if we expect to sell goods to other nations we must be prepared to buy from them in equal quantity.

There is no purpose now in repeating the mistake that was made after the First World War. Then we financed the world—and found foreign outlets for our products. When the credit was exhausted, the markets were eliminated.

Surely we should have acquired enough learning through this experience to make an effort now to place our foreign trade on a sound basis. Such a basis would require a matching of our exports and imports. If we are unwilling to do that, we might as well prepare to forget about foreign trade.

The Argus-Leader doesn't question for a moment the fact that England needs financial aid and needs it badly.

She is a nation that is in acute distress primarily as a result of her tremendous sacrifices during the war. If we are to help her, let us do so on the basis of a direct contribution through the UNRRA or some other suitable organization. Then we'd be dealing factually with the problem and know exactly what we were doing.

When we extend aid in the guise of a loan, we are only kidding ourselves and perhaps many Britishers as well about its meaning and its possibilities.

The British Loan

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. THOMAS of New Jersey. Mr. Speaker, after the President's recommendation to the Congress of a $3,750,000,000 credit to the United Kingdom, I inquired of the President as to what further requests would be made for loans to other nations. The President, in a letter to me of February 2 stated that "Naturally, there will be requests for loans from a great many countries, some of which we shall expect to accommodate." But, the President failed to clarify the administration's position as to exactly what other loans and the amounts of such loans would be recommended by it. Certainly, it is difficult for this Congress to pass upon any one loan such as the proposed loan to Great Britain unless we know the whole story. I think it is imperative, therefore, that the President advise this Congress, either directly or through the Committee on Banking and Currency of the House of Representatives just what loan commitments to foreign nations he has made and what demands have been made upon us by other nations in the world, other than Great Britain.

In this connection, I believe it will be of interest to the Members of the House to read the correspondence between the President and myself on this subject, hereto appended:

JANUARY 30, 1946.

DEAR MR. PRESIDENT: After listening with deep interest to your message today, in which you recommend to the Congress the approval of a $3,750,000,000 credit to the United Kingdom, I concluded that it would be very helpful to my determination as to how to vote on such a measure if you would advise me as to whether the request for the United Kingdom will be followed by further requests of credits for other foreign nations.

Will there be a request for Russia, and for what amount? Will there be a request for France, and for what amount? Will there be a request for China, and for what amount? Will there be requests for other European nations, for South American nations, and for other Asiatic nations, and for what amounts?

Mr. President, I hope that in recommending the loan to the United Kingdom you are taking into consideration possible demands from other nations, and likewise the embarrassment which would accrue to us were we to grant a loan to the United Kingdom and not one to Russia, and to the other powers.

Will you please supply me with the requested information at an early date, and thinking you in anticipation of it, I am

Sincerely,

J. PARNELL THOMAS.

FEBRUARY 2, 1946.

MY DEAR MR. THOMAS: I appreciated very much your letter of January 30.

Naturally there will be requests for loans from a great many countries, some of which we shall expect to accommodate. The Bretton Woods arrangement and the Export-Import Bank were set up primarily to meet some of these demands.

Since we spent some $300,000,000,000 to carry on a war, for the thing for which we stand, it seems to me that we ought to be willing to contribute financial aid to devastated countries and to our allies to implement the peace for which we fought.

I am inclined to think that we are willing to do just that.

These loans are entirely different from the contributions we made in wartime. We, of course, shall expect their repayment.

Sincerely yours,

HARRY S. TRUMAN.

FEBRUARY 6, 1946.

DEAR MR. PRESIDENT: I wish to thank you for your prompt answer to my letter of January 30, in which I made specific inquiries regarding prospective loans by this country to foreign powers.

I am constrained to observe respectfully, however, that your letter contributes little to the clarification of the questions in which I am interested. I wrote you, if you remember, of my concern with regard to my vote on a proposed loan to the United Kingdom. My concern in the matter is based upon a feeling that other loans, to other nations, are in prospect, and my conviction is that I would be in a much better position to vote upon the British loan if I knew how much our administration proposed to lend to other countries.

The letter asked, for instance, how much it was proposed that America lend to Russia. Similar questions were asked regarding possible loans to other countries, named in my letter.

It is still my feeling, as it was when I wrote you last month, that the Congress should be fully informed in this vital matter, and that it is the duty of the administration to let the Congress know precisely what it intends to do regarding other loans.

Sincerely,

J. PARNELL THOMAS.

Settlement of Labor Disputes

EXTENSION OF REMARKS
OF
HON. J. ROLAND KINZER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. KINZER. Mr. Speaker, under leave to extend my remarks, I insert in the Appendix of the RECORD a statement before the Committee on Education and Labor of the United States Senate on February 5, 1946, by H. W. Prentis, Jr., president, Armstrong Cork Co., Lancaster, Pa.:

My name is H. W. Prentis, Jr. I reside in Lancaster, Pa. I have been in the employ of the Armstrong Cork Co. for 39 years and since 1934 have served as its president. The business was started in 1860. The company has 15 factories in the United States with approximately 12,000 employees in this country and some 2,500 abroad.

I have accepted the courteous invitation to appear before you, which your chairman, Senator MURRAY, extended me, not because I claim expert knowledge in the field of labor relations, but because I believe it is the bounden duty of every citizen, when called on, to make whatever modest contribution he can to the solution of public problems. And certainly no question confronting the Nation today is more critical and difficult than that which this Committee has before

it; namely, the devising of a sound national policy to promote industrial peace.

The gravity of the situation—taking into account its long-range implications—can scarcely be exaggerated. For history shows that no form of popular self-government can long exist in the face of acute class cleavage. The strength of the American Republic in the past has rested on the fact that we have divided on vertical rather than on horizontal lines. In politics, for example, no party has represented any particular class at all. Labor troubles create class consciousness and class consciousness, if accentuated sufficiently, will eventually spell the end of liberty as we have known it since 1776. If this tendency is to be avoided, the same basic rules must be applied to every group in the Nation. Special privileges, acquired either by legislation or by hunger for power, finally tend to create a state within a state which destroys freedom. As Woodrow Wilson said: "The business of government is to see that no body or group of men, no matter what their private business is, may come into competition with the authority of society."

I was in Pittsburgh yesterday, where a strike is in progress at our company's local plant. We had had no labor trouble there for 49 years prior to the passage of the Wagner Act. In this case, as in many others throughout the land, a small group of individuals, organized as a labor union, have arrogated to themselves the "authority of society" by refusing admission even to the office building of company employees who have nothing directly to do with the current production or shipping of products manufactured at that particular factory. Even the plant manager is denied entrance unless he exhibits this pass, which I thought the members of the committee might like to see.

I, for one, am no labor baiter. I was an advocate of collective bargaining—I prefer to call it collective negotiation—long before the Wagner Act was passed. As an American citizen, however, I submit that it is a sad travesty on American principles when government abdicates to a private organization the right to determine who shall or shall not come and go peacefully over public highways to his place of business. To such an undreamed pass has the exercise of power without commensurate responsibility brought us today.

Grave as the present picture is, the conditions that have led up to it are not of recent origin. They have been developing for years. And those conditions cannot be remedied overnight. I earnestly hope, therefore, that instead of recommending piecemeal legislation designed to put out the present fires in the field of industrial relations, Congress will center its attention on over-all measures calculated to prevent labor conflagrations in the future.

Government's function in the prevention or minimizing of industrial warfare should, it seems to me, be threefold in character: First, Government should set the rules; second, it should provide machinery (along with the help of the courts) to administer those rules efficiently and impartially; third, it should function as an umpire, not as a czar—except in the case of public utilities, whose rates are regulated by public authority. Government should stay out of the collective-bargaining process, which can only be really effective when conducted on a free basis at as nearly the plant level as possible.

There are many bills dealing with labor problems now pending before Congress. There are three measures, as I understand it, before this particular committee. The Ellender bill (S. 1661), the McMahon bill (S. 1419), and the Ball-Hatch substitute (S. 1661). Needless to say, I am in thorough sympathy with the objectives of all three of these bills; namely, to promote industrial peace. Measured by the three standards to which I have just referred, however, none provides the comprehensive fire-prevention methods and apparatus that the long-range problem requires.

For example, fact finding is only one piece of the mechanism that, in my judgment, should be set up to handle industrial disputes. The procedure is useful, but limited in application in the way in which it is currently being applied unless we are prepared ultimately to adopt a planned economy in which Government would take full responsibility for our economic life. Fact finding with one corporation may indeed create a whole series of problems in other companies and industries. What has happened in recent weeks, I think, bears out the truth of that assertion. Hence I cannot regard the Ellender bill (S. 1661) as the final solution of the over-all problem.

Conciliation and voluntary arbitration are most important steps in promoting industrial peace but, after all, they are only parts of the administrative machinery. They do not go to the roots of the difficulty. Therefore, in my opinion, the McMahon bill (S. 1419) is only a partial palliative—not the remedy.

The Ball-Hatch substitute (S. 1661), it seems to me, probes deeper into the basic problem, since it requires *both* labor and management to negotiate in good faith to make and maintain collective-bargaining agreements and provides that failure to do so is a violation of law, subject to the civil action in the courts. These stipulations are, moreover, accompanied by carefully thought out provisions for improved procedures in conciliation and voluntary arbitration and under certain conditions for special fact-finding commissions. But even this substitute does not go, in my opinion, to the core of the Nation's present problem; namely, to require in the public interest that labor organizations assume legal responsibility commensurate with the power they now possess under the laws of the land. Justice Brandeis hit the nail on the head when he said: "Industrial liberty, like civil liberty, must rest upon the solid foundation of law. Disregard the law in either, however good your motives, and you have anarchy. The plea of the trade-unions for immunity, be it from injunction or from liability for damages, is as fallacious as the plea for lynchers."

But even the establishment of the principle that legal responsibility and authority must go hand in hand will not cure all industrial trouble. My personal conviction is that a certain amount of economic friction is inevitable if we are to remain freemen politically, intellectually, and spiritually. There are no labor disturbances in Russia because, as the Federalist Papers said in 1789, "Power over a man's support is power over his will." Certainly all of us will agree with the statement of Mr. Matthew Woll, of the American Federation of Labor, sometime ago: "American labor wants no traffic with European despotism which has destroyed free trade-unionism and free private enterprise and has destroyed any voluntary form of collective effort in social, religious, and economic fields."

So as freemen, determined to remain free, we come back to the question: What can we do to minimize industrial friction without destroying our freedom on the one hand and without penalizing the consuming public on the other? Note that last phrase about the consuming public. I shall have something further to say on that point later.

Few men in history have demonstrated that human character can maintain its integrity under the corroding influence of unbridled power. A former Presidential candidate on the Democratic ticket once observed to me that men will do things out of the desire for prominence and power that they would never do for money. On the other hand, the assumption of moral and legal responsibility has a distinctly sobering effect on any man's attitude and actions. Public servants, like you gentlemen who are trying to solve this perplexing problem of industrial relations, need no reminder of that fact. Responsibility and power must be joined in all fields of human endeavor if social disintegration is to be avoided. Their divorce leads ultimately to anarchy.

If a man wants to be a general and exercise the authority that goes with the job, he must take responsibility for his brigade or his division. Otherwise there would be chaos in the Army. If a corporation executive aspires to such authority as now accompanies his position, he is required—and properly so—to assume legal and moral responsibility for all his actions 365 days in the year. While it is true that this responsibility may not have always been wisely exercised, nevertheless the legal responsibility of business managers does exist in statutory law. The responsibilities of labor leadership must now be clearly fixed also.

The arbitrary exercise of power brought down the Interstate Commerce Commission Act on the railroads in 1887. The selfishness of great industrial combinations brought the Sherman Antitrust Act in 1890; the Clayton Act in 1914. Abuses in the security markets brought the Securities and Exchange Acts of the thirties. Refusal to concede to labor the right to organize resulted in the National Labor Relations Act, and since organized labor has not found voluntary means of curbing its excesses, Congress should now do so in the public interest.

As long as a labor organization can negotiate an agreement with an employer backed by the full authority of the Federal Government without being held legally liable for faithful performance, is it not obvious that that organization is likely to be more extreme in its demands than it would be otherwise? What would happen to our intricate business and banking structure if executive authority and responsibility were not bound in legal wedlock? For example, there are things I wish our company might do but which as its legally responsible executive head, I dare not ask it to undertake because I fear it could not carry them out, and failure to do so would involve the corporation in financial or other difficulties. If I were freed of all responsibility as an executive, I hope I might prove to be a benevolent autocrat but I am afraid I should soon go the way of other big and little dictators and think of my own interest or our company's interest almost to the exclusion of the welfare of the other fellow. There are exceptions, of course, but that is where many a labor leader—hard pressed by his adherents—finds himself today. Devoid of legal responsibility, he is encouraged, and sometimes compelled, to press his claims on the employer to such a degree that he allows his union to take on contractural obligations which it cannot fulfill. When the inevitable lapse occurs, the employer finds himself with virtually no recourse. Ill-feeling, inflammatory statements, strikes, and lawlessness ensue in a vicious spiral. Local communities not infrequently find themselves in a state of civil insurrection. The right to negotiate collectively and the right to strike must and should be held inviolate in a free country. But the right to civil order, and the right to work so as to get the production that the Nation so sadly needs to combat inflation, are equally sacred.

Let me draw an illustration of the effect of legal responsibility from the moot question of freedom of speech in industrial disputes. If I, as a corporation executive, make assertions that are biased or untrue in respect to a labor union, our company can immediately be haled before the National Labor Relations Board for having indulged in an unfair labor practice. On the other hand, the labor leader is completely untrammeled in what he may say about me or our company. Only a few days ago in a pending labor dispute, an important labor leader made the public statement that if a certain

corporation broke even in 1946, it would receive refunds under the carry-back provisions of the Federal Income Tax law. Apparently he was mistaken because the company in question did not earn enough in 1944 and 1945 to pay any excess profits taxes whatever. Now suppose the labor leader who made that mistaken assertion could, under the law, be charged with an unfair labor practice. Is it not a reasonable assumption that he would have been more careful as to what he said and that he thus would not have thrown additional fuel on the flames of an already critical dispute?

Industrial peace can be promoted only by requiring that responsibility and authority go hand in hand. Unless that principle is established, all of the machinery that can be set up for conciliation, mediation, voluntary arbitration and fact-finding will never accomplish satisfactory results in protecting the public interest. One can hold this conviction firmly and yet have great sympathy—as I do—for the labor leader who finds it impossible to discipline his membership and at the same time hold his job. No man, of course, should permit himself to assume more authority than he can ethically and efficiently exrcise. But the laws of the land should certainly be cast in such form as to help the labor leader maintain—with his membership—a sound position of responsible leadership.

In surveying the question of promoting industrial peace, we should never lose sight of the fact that the opportunity for a labor union to exist does not arise until some individual has had the initiative to establish a successful business. I think it is not too much to say that a successful economic enterprise is a desirable end in itself from the broad viewpoint of the well-being of the whole body politic. On the other hand, a well-run labor union—although fraught with deep social significance—is simply a worthy means to help accomplish that desirable end. So any action of Government that results in reversing this concept and makes the union the desirable end and the enterprise merely the means by which the labor union can continue to exist, is bound to be disastrous in the long run to the national economy and our high standard of living. Hence in the interest of encouraging the development of new businesses and promoting the growth of those already established, it is essential, in my opinion, that some better balance in collective bargaining power between the unions and the employers of the Nation be established as quickly as possible.

Only last week there was an article on the front page of the Wall Street Journal for January 30th that illustrates that necessity in striking fashion. Three brothers by the name of Miller started a dairy 4 years ago at New Canaan, Conn. They put all their savings into it, worked themselves from morning till night and gradually built up a nice business producing Jersey milk of superior quality for local consumption. The Teamsters' Union came along and called a strike of the seven or eight drivers that the Millers employed. When wage demands could not be met, the union sent 200 men from out of town to picket the Miller dairy. Women customers who came to get milk for their babies had their automobile tires slashed. For the owners to go ahead meant bankruptcy, and since the Miller brothers were not willing to adopt the union's suggestion that they sell their business to a larger concern which could meet the union's demands, they simply went out of business. William Miller, in a concluding letter to the union said: "You have won a brilliant victory. I applaud you—the golden goose is dead, the eggs, no more."

Take the case of *Senn* v. *Tile Layers Union* (301 U. S. 468) (1937). The employer, who was a small contractor in Wisconsin, I believe, was willing to sign up for the union shop, even though none of his employees belonged to the union, but he found it impossible to accept the condition demanded by the union that he himself refrain from doing any of the work. So the union picketed his establishment, notified architects and contractors that Senn was on the black list, and ruined his business. Senn had four employees, and the year before this situation arose, he netted only $1,500 from his business. The Supreme Court, in a divided opinion, held that under the Wisconsin law this was peaceful picketing and a "labor dispute." The minority opinion pointed out that the union's purpose was not to establish better wages, hours, or other conditions of work but to compel Senn to quit working as a tile layer. Is it in accordance with the principles of American freedom that a man should not have the right to follow any of the common occupations of life that he may select? Was there anything approaching equality of bargaining power in this case? If Mr. Senn had been provided under the law with adequate recourse against the all-powerful union that took such an arbitrary stand, the outcome would probably have been quite different, and the old American ideal of opportunity and freedom for everyone would have been upheld.

This case, among many others, illustrates how important it is that in any remedial legislation that is enacted there should be clear-cut definitions of what wages, hours, and working conditions as used in the Wagner Act, actually comprehend. The reports of the committee on management's right to manage at the recent labor-management conference clearly demonstrates that organized labor is not willing to draw any line between those matters in the operation of a business that are properly subject to collective bargaining and those which are clearly the functions and responsibilities of management. The result is that entirely too much of management's time today is spent in defensive activity instead of being applied to the extension of the frontiers of existing business in order that there may be more job opportunities for all our citizens. The degree to which the minutae of collective bargaining procedures have been carried in many instances, is illustrated in an actual case quoted in an article by Daniel T. Pierce, assistant to the president of the Sinclair Oil Co., in the January 1943 issue of the magazine Factory Management and Maintenance.

"The chairman of a workmen's committee was called to the superintendent's office to be reprimanded for loafing while he was supposed to be on his job. He did not deny the charge, but put in a claim for 15 minutes' overtime occasioned by the interview. When this was refused, the international office demanded arbitration of the complaint. This necessitated the appointment of two arbitrators, and a conciliator of the Department of Labor as the third arbitrator. No decision has yet been rendered, but the arbitration is certain to cost the management, the union, and the Government at least $500 in time and traveling expenses."

Obviously the method of handling grievances provided in a collective bargaining agreement should be fair and exact but union leadership that was required to assume responsibility would be encouraged to have the backbone to refuse to take up trivial and invalid complaints from the membership even though such complaints were insisted upon by individuals or local groups. Time does not permit a discussion of the serious impact on the functions of management of the iron-clad seniority rules that are now being written into so many collective bargaining agreements. If the present tendency is not arrested, the quality of leadership that has been responsible for the dynamic American economy of the past will deteriorate and the public interest will suffer.

Perhaps the greatest problem that faces any business manager is the creation and maintenance of esprit de corps in his organization. No matter how good the plant and equipment may be; no matter how excellent the raw materials and product engineering; no matter how much capital may be available, it is "the spirit that quickeneth." And no organization can achieve high efficiency unless there is a dominant loyalty to the corporate organism of which the employee is part. The present inequality in bargaining power is driving a wedge between the employer and his employees which makes it increasingly difficult for even the best intentioned management to develop and maintain such loyalty. Yet the spirit and willingness to do, growing out of loyalty to the enterprise of which one is a member, has been one of the major factors contributing to the driving power of our American economy. Today—and I am not criticizing labor leadership for so doing—the union leader seeks to have the employee focus his devotion on the union rather than on the enterprise of which the employee is a part. Union leadership, with some outstanding exceptions, usually feels too little responsibility for the success of the business with which his union is connected. The employer is frequently belittled. The employees' suspicions are aroused. Distrust is substituted for confidence. The union gains while the enterprise on which it lives is hampered and the national economy suffers.

No one would be more willing than I am to acknowledge that management has failed at times to discharge its social stewardship in dealing with employees. However, it must be recognized also that organized labor of the United States has now come of age. It is no longer an infant industry. The arguments formerly used to justify legislation and judicial decisions granting special privileges to labor, because it was the underdog, no longer hold water. To preserve a free society there must be checks and balances on all groups: governmental, economic, educational, and so forth. Thus extremes are counterbalanced and reasonable social equilibrium is preserved, provided all men and groups stand equal before the law. The only alternative of an economic system in which there are checks and balances obtained by reasonable equality of bargaining power, is outright Government control. Neither business, nor labor, nor the public wants that. We shall, however, drift into some such situation if business on the one hand does not exercise intelligent social stewardship in its day-by-day decisions and if labor leadership proves it is unwilling to accept legal and moral responsibility in its administration of all of the notable gains it has achieved in recent years.

Greatly to the regret of all friends of the labor movement, there has developed a tendency on the part of the unions to make the public pay for labor peace. In the early days of the railway unions, for example, when management rode high, wide, and handsome in the saddle of uncontrolled power, there were good sound economic and humanitarian reasons for defining a day's work on a train, as 8 hours or a run of 100 miles. But the public asks today, is there any reason why it should pay a Pennsylvania Railroad engineer on a fast electric train running from Washington to New York—something over 200 miles—2 day's pay or more for about 4 hours' work? Or is there any valid reason why it should cost $112 more to distribute a carload of vegetables through the New York City market than in neighboring regions that are free of labor union exploitation. Mr. Thruman Arnold cites that case in an article in the Reader's Digest for June 1941, along with many others. The CONGRESSIONAL RECORD and the reports of the congressional committee for years past are replete with information showing the degree to which one-sided laws and the legal interpretations thereof permit Mr. Petrillo and others like him to conspire not only against employers but against the public in matters that bear little or no relationship to wages, hours, health,

safety, or working conditions. If management indulged in practices that are now legalized for unions, management would properly be cited for violation of the Sherman Act and of the Clayton Act. Is the maintenance of such an unequal situation in accordance with the public interest? Is it not a sine qua non of popular self-government that all men and all groups must stand equal before the law? The attitude of mind created by the lack of legal responsibility finds growing expression in slow-downs, lawless picketing, and utter disregard for the employers' and the public interest in jurisdictional disputes.

One of the most grievous disappointments that I had as a member of the recent Labor-Management Conference was that labor leadership proved unwilling to bring forward a voluntary plan to eliminate disputes between unions themselves—in the face of which the employer is absolutely helpless. Since labor leadership takes that position, it becomes the duty of Congress, as I see it, to provide legal procedure for the resolving of jurisdictional disputes with adequate penalties for violation of the decisions reached. As President Truman indicated to the Labor-Management Conference, strikes as the result of such controversies are indefensible.

The right to work freely at a lawful vocation of one's own choosing was regarded as so obvious and undebatable by our forefathers as not even to require specific mention in the Bill of Rights. In the Turgot edict of 1776 in France—which was well known to them—by which the industries of France were emancipated from the previous state monopolies, we find this affirmation: "God, in creating man with necessities, has compelled him to resort to labor, and has made the right to labor the first, most imprescriptible right of man." And a Justice of the Supreme Court of the United States in an early decision stated: "There is no more sacred right of citizenship than the right to pursue unmolested a lawful employment in a lawful manner."

The processes of democracy are hard to establish and maintain in any field of human effort. They can only be preserved in the political sphere if the citizen is free to express his satisfaction or displeasure through the exercise of freedom of speech, freedom of petition, freedom of assembly, and the secret ballot. How can the worker maintain his freedom if similar privileges are denied him through any form of union organization? Theoretically, such rights may still exist under the closed shop; practically they do not. The actions of management are not only under legal control but are regulated every day by the reactions of employees, customers, and stockholders. The employee may refuse to work; the customer may refuse to buy the product; the stockholder may sell his stock. In a free society it cannot be otherwise. Similarly, if the labor union is to be a truly great instrumentality for the preservation of human freedom, it must be equally willing to subject itself to appropriate checks and balances. None of the coercive or undemocratic racketeering aspects of trade-unionism can long exist, if members can resign when they see fit, and management is free to employ any qualified individual whether he is a union member or not.

In discussing the difficult question of the closed shop or any form of so-called union security, we should always keep in mind that closed shop agreements and the check-off are unknown in England and Sweden and the check-off specifically forbidden by law in the Railway Mediation Act in this country. The absence of union security in these instances has certainly not inhibited the growth of union influence and power. In this connection I want to endorse very heartily the approach to this subject in section 23, paragraph 8, of the so-called Ball-Burton-Hatch bill (S. 1171) introduced in the Senate in June 1945.

And now to sum up as briefly as I can my own suggestions:

1. Whatever legislation is enacted should provide definitely that both labor and management should stand equal before the law. This means that the Wagner Act and the Norris-LaGuardia Act should be amended and the immunities now enjoyed by the unions under the Sherman Act removed.

2. Provision should be made for the enforcement of collective bargaining agreements by providing that unions as entities can be sued for damages, and that defaulting unions or their members shall lose their rights under the Wagner Act.

3. Existing machinery for resolving representation questions can be made more useful and the public interest better protected by affording the employer greater access to this procedure.

4. Adequate machinery should be available for the full use of conciliation, mediation, and voluntary arbitration.

5. Procedure for fact finding—which as recently used amounts almost to compulsory arbitration—should be confined to public utilities which vitally affect the health and safety of the public, and whose selling prices are regulated by public authority.

6. The definition of "employee" in the Wagner Act should be amended to exclude all persons who devote their time to managerial functions.

Besides the three bills presently before this committee, namely, S. 1661, S. 1419, and substitute S. 1661, there are also pending before the Senate and House a number of other measures dealing with labor relations. Whatever measures are enacted should cover the whole problem. Principles and procedures are of equal importance. The setting up of machinery which some of these bills propose will not be sufficient to accomplish the desired objective. The rules must also be established and the fundamental principle underlying those rules is to require the assumption of equal legal responsibility by both labor and management. The chassis and the body of labor relations legislation must be joined together if we are to minimize industrial disputes.

Without attempting to go into too much detail, whatever legislation is enacted should be drawn with the following basic principles in mind: Recognition that monopolistic and unfair practices in the field of labor are as harmful to the public interest as similar practices are in either manufacture or distribution; recognition that employees are entitled to choose their representatives without coercion of any kind; recognition that employees have an equal right to join or not to join a labor organization; recognition that while employees have the right to quit work, either individually or collectively, they have no right to prevent others from working or any right to intimidate customers or their employers. In the interest of employees, no strike should be permitted which has not been approved by a secret ballot by those directly involved.

In revising the rules, the terms "rates of pay, wages, hours of employment, and other conditions of employment" (as used in the Wagner Act) should be clearly defined. Cognizance should also be taken of the fact that collective bargaining between employers and employees should never be used to compel either party to surrender basic principles, or to permit them to establish collusive agreements between themselves to the disadvantage of the public. To insure union responsibility, legislation should provide for the distribution of audited financial reports to members, the regular election of union officers at reasonable intervals by secret ballot, and the prohibition of unreasonable initiation fees and dues as well as political contributions. In the public interest, all of these legal restrictions have long been applied to business. In the public interest, they must now be applied to organized labor also.

Lord Moulton, the great English lawyer, asserted that there are three areas of human conduct: At one pole the area of complete freedom—to eat what we want or to fall in love with whomever we please; and at the opposite pole, the area of legal control—laws against thievery, murder, etc. The segment in between he termed "the area of good manners." Obviously, the more that labor and management can broaden this in-between area by voluntary adherence to high standards of conduct in which the public interest is placed above all group interests, the less will be the area of governmental intervention. Representative democracy is that kind of government in which self-restraint is substituted for external restraint. So if labor and management really want the spiritual, intellectual, and political blessings that our Republic brings, we will conduct ourselves accordingly. I tremble to think what will happen to our whole system of government if we in labor and management cannot find a satisfactory solution of our problems by peaceable negotiation with equal legal responsibility on both sides. If we constantly call in government to settle our difficulties we shall finally arrive at compulsory arbitration and rear a Frankenstein monster that will ultimately devour all the liberties that we hold so dear. We both know what happened to labor and management in Italy, Germany, and Russia long before the recent war broke out. With the destruction of the freedom of labor and the freedom of management in those countries also went the abolition of civil, religious, and political liberty.

If management will universally do its utmost to make collective bargaining work successfully; if it will universally refrain from any semblance of unfair practices such as labor-union baiting in any form, or discrimination against any man who wants to join a union; if labor will relinquish its efforts for any form of coerced union membership; if the labor union will regard itself as an integral part of the business enterprise in which it operates and give support to management in the intelligent handling of wage rates and the maintenance of production efficiency—only by such procedure can America remain the land of the free, in which our children will continue to enjoy the blessings of liberty long after we are gone.

The Wheat Situation

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the question of wheat is again claiming the attention of the people of the Nation. The question involved is whether we have a sufficient quantity on hand to take care of our domestic requirements before the production of another crop, and at the same time continue to supply the foreign countries with this product.

It is apparent that an order will soon be issued by the Secretary of Agriculture ordering mills to make dark flour for public consumption figured on percentage basis to the effect that 51 pounds of flour would be ground out of 60 pounds of wheat. This naturally necessitates grinding millfeed into the flour.

This is one way to reduce the use of bread and in the final analysis would be

a great blow to the grain farmer of the country.

Under unanimous consent, I include herewith a telegram received from R. M. Stangler, general manager of the North Dakota Mill and Elevator:

GRAND FORKS, N. DAK., *February 4, 1946.*
Hon. CHARLES ROBERTSON,
Member of Congress, Washington, D. C.:

Have information through Northwestern Miller that there is a possibility an order will be issued by Secretary of Agriculture, in effect ordering mills to make dark flour for public consumption, figured on percentage basis to the effect that 51 pounds flour would be ground out of 60 pounds wheat, which naturally necessitates grinding millfeed into the flour. This is one way to reduce the use of bread when normally speaking there generally is far more wheat in the country than can properly be used. It certainly would be a blow to the grain farmers of this country. From the information I can gather I am told that we have exported too much wheat and flour to the extent some countries have far more than they can properly use. I might refer to England, who, I understand, has over 6 month's supply of wheat and flour on hand at this time. Asking the mills to grind black or dark flour putting in millfeed naturally reduces the feed supply when there is a shortage of feed as it is. Surely, such an order should not be issued before the mills, through a committee, could be heard. It doesn't seem reasonable we should get to the point of rationing bread and then tell the people they must eat black bread. That in itself will have a tendency to reduce the consumption of bread that will take years to rebuild. It is a detriment to the wheat grower. Speaking for myself I think it is the most ridiculous thing I have heard for a long time. I think the details on the exporting of wheat should be investigated. This same wire going to each of our Congressmen and Senators.

R. M. STANGLER,
General Manager, North Dakota Mill and Elevator.

The Case Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. ROONEY. Mr. Speaker, under permission granted me by the House I include the following editorial from the Brooklyn Eagle of Tuesday, February 5, 1946, urging defeat of the Case bill which unfortunately has just been passed by the votes of a majority of our Members. I feel that I would have been derelict in my sworn duties in behalf of my constituents if I had voted in favor of this hastily-drawn unfair bill. I am glad that the congressional delegation from Brooklyn was unanimous in opposing it.

The editorial follows:

CASE BILL, JUMBLING MANY ISSUES, SHOULD BE DEFEATED

What this country needs, even more than a nickel cigar, is a lot less politics on the part of our Congressmen in Washington. The most important matter before the people today is the question of labor relations. The issue should be faced squarely and sincerely without fear or favor to anyone. Major problems should not be mingled with those of minor moment. Things relating to industry should not be commingled with other nonrelevant topics.

The Case bill points up the question. There is a Committee on Labor in the House which is so prolabor that any bill of a slightly restrictive nature will be buried in committee. During the war the simplest technique used by antilabor advocates or even those who sincerely desired a reform of some kind, was to bypass the Labor Committee and tack a rider onto a bill which would go through some other committee. Lest essential war legislation be defeated or delayed, the rider would sail along with the nonlabor proposal. That is not good lawmaking.

The promoters of the Case bill took no chances on any committee. They brought it directly to the Rules Committee, which decides which proposals will be put before the House for debate and vote. Representative CASE comes fom an agricultural district, so he can afford to introduce an antilabor measure. The bill jumbles a number of issues together which should be treated separately.

At least it is good to see that the bill was amended yesterday so that the Norris-LaGuardia Act preventing promiscuous use of the injunction against labor unions would not be practically emasculated. Labor has fought too hard and too long to have that protection inserted in the law of the land to have it now wiped out.

There is a section for penalties to both labor and management for violation of contracts. Certainly the sacredness of the contract is an essential for stable industrial relations. Are there no statutes now existing which could be properly amended to fit the specific situations that arise in labor disputes? If not, Congress has been asleep longer than we suspected.

Severe penalties for disorderly conduct on a picket line are prescribed by the bill. Disorderly conduct, whether it occurs on a picket line or anywhere else, is a misdemeanor that can be satisfactorily dealt with by alert local authorities. There is no need to invoke the machinery of the Federal Government for such matters.

These proposals of Representative CASE should be defeated decisively and the whole thing sent back for serious consideration. The odds are that it won't be. But that will merely show that we need some changes in the complexion of our present Congress.

Price Control

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Michigan Tradesman, Grand Rapids, Mich., for January 30, 1946:

END PRICE CONTROL

The price-control question is coming up in Washington, following introduction January 29 of a bill in the House of Representatives to extend the price control and wartime stabilization laws. The measure was introduced by Chairman SPENCE, of the House Banking Committee, and hearings are to begin February 5 before that committee.

Democratic Leader BARKLEY indicated that the administration may be willing to abandon some of its price-control authority—provided it gets a year's extension of such authority—and even intimated that some modifications may be expected in the too rigid controls.

Meanwhile, it is public knowledge that some difference of opinion among Government officials has arisen. Price Administrator John D. Small says: "Maintenance of a firm price line means little if goods are not available for purchase," but he wants to continue price control to withstand severe inflationary pressure. He thinks such controls should be used to bring about the most rapid increase in production. "To my mind," he says, "lack of production is the worst thing."

Mr. Small's ideas are about the same as those of Secretary Anderson of the Agriculture Department. At the same time OPA Administrator Bowles insists that price control must continue even while he says he is worried about the lack of production.

Into the picture comes the National Association of Retail Grocers, whose executive board has just passed resolutions that the Government price manipulators can't disregard. These resolutions, which you can read on page 3 of this issue of Michigan Tradesman, go right to the heart of the matter

The retail grocers insist that price and other wartime controls should end as soon as possible because the war is over and existing control agencies no longer are necessary. They demand that Congress should make an investigation with a view to ending quickly all those controls. They tell the blunt truth in this statement:

"Through its absorption and other mistaken price policies, OPA is retarding and distorting production and thereby creating additional inflation both by perpetuating and aggravating existing shortages and depreciating quality."

The retailers present a scathing arraignment of OPA, asserting that this Federal agency has used "indefensible practices" in order to break down violators of regulations and bring confessions. They charge OPA delays issuance of price-control lists, also delays corrections in community ceiling price lists when errors of calculation are made by OPA.

They demand removal of ceilings on butter in order to permit increased production. They demand forthwith removal of price ceilings on nonessential, non-cost-of-living luxury items.

From time to time, Michigan Tradesman has laid bare the defects of the price-control program as it applies to peacetime and has insisted that the war be declared officially ended by Government proclamation, thus automatically ending the powers of the Federal agencies that have been regulating our daily lives in wartime. We have declared that if price controls were abandoned, industry would bring about a fair stabilization of prices through competition. We have said that inflation is not to be feared if manufacturers could get materials.

The public has huge savings to spend for things it needs. The inflationary trend in evidence now is due to the fact that people are forced to buy inferior grade goods at prices that should give them the best possible products. It appears to be slowly filtering through some of the price fixers' minds that the country needs production more than price regulation.

Price regulation has brought the black markets in all kinds of merchandise. The sorry spectacle of prohibition days is repeated over and over in the things we need for sustenance, for wearing, for use otherwise. The collection of old clothes for European war sufferers is going stale because people can't get new clothes and therefore are clinging to what they have left to wear.

As a side light on what is going on is the tremendous demand for lower grade securities in the financial markets. Prices for these securities are going up, as are prices for real estate and commodities of all kinds.

Civilian Production Administrator Small gave utterance to a mouthful of truth when

he said: "The maintenance of a firm line means little if goods are not available for purchase." But we do not believe that any kind of price controls in the hands of the present Washington manipulators will be used to bring about "the most rapid increase in production." The "planners" won't abandon their so-called "plans." They must be forced to give us their real and assumed authority.

Adjustment of Labor Disputes

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1946

Mr. McGREGOR. Mr. Speaker, H. R. 5262 is now being considered on the floor of Congress and many amendments are being offered and some accepted, both by the opponents and proponents. I firmly believe that all of us are sincerely trying to get a fair, impartial, and workable piece of legislation enacted. I am certain we all want fair and just treatment and a decent living wage so that we can have sufficient income to live and raise our families in the true American way.

I firmly believe in the right of labor to organize and bargain collectively with employers. The processes of such bargaining must be protected and strengthened. Demands of either labor or management should be kept within the bounds of reason and fairness, and both sides must recognize the rights of the general public. Wrongful and unlawful conduct on either side is destructive to collective bargaining and a hindrance to the individual rights of us all. American labor and American management have repeatedly and conclusively demonstrated their fine patriotism and adherence to American ideals. Knowing these conditions, I am certain that an honest, workable, collective bargaining program can be established.

Mr. Speaker, I am not completely satisfied with H. R. 5262, but I am going to vote for it rather than take a do-nothing attitude. I think this legislation can be made a basis upon which labor and management can come to a closer understanding.

Wages and Prices

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock from the New York Times of Thursday, February 7, 1946:

IN THE NATION—"MAGIC FORMULA" THAT NEVER VARIES

(By Arthur Krock)

WASHINGTON, February 6.—For a long time before Pearl Harbor and afterward, the Roosevelt administration stubbornly maintained the position that effective anti-inflation controls need not include any ceiling on wages. Until the strike against the United States Steel Corporation became a fact recently, the Truman administration stubbornly maintained the position that substantial wage increases could be allowed in key industries without any advance in the general price level.

A PROCLAMATION COMING

The facts have always been against both positions, which were political measures to hold the support of organized labor at the polls and never based on economic realities. These realities forced the Roosevelt administration, with the "little steel" formula, to add wage controls to the others. And now the Truman administration is on the verge of relating prices to the cost of production, in which wages are the major element. Soon after this article appears, unless signs that point one way have misled all who have noted them, this second surrender to immutable facts is due for proclamation.

It will probably be couched in the same pious and hopeful terms that were employed on many occasions in the past when makeshift politics had worn out, and New Deal economists were confronted with the necessity of calling inflation desirable or belatedly accepting fundamental means to resist it. Since all formulae to "prevent" inflation after inflation has arrived are compounded largely of hope and politics, and the essential cooperation of labor, industry and the country at large is far from implicit in the formulae, the composition of these announcements seems to have fallen into the hands of a special group of rhetoricians; they all sound alike, and each lasts about as long as its predecessor.

THE HENDERSON-NELSON PAPER

The first document in the series that comes to mind was signed by Leon Henderson and Donald Nelson. It appeared in a Harvard Business School publication and was called The Result of Our Thinking So Far. The task before these gifted authors was to explain how wartime inflation, then threatening at close range amid loud, continuous, and unheeded warnings from B. M. Baruch, could be held in check by a series of Government and other controls from which wages were excluded. That was the electoral politics of Mr. Roosevelt at the time, and valiantly did the gifted economists do what they could for it. Some tooth of conscience, sharper than usual, gnawed at the authors before the article ended, for they conceded that wages are an important cost factor and must bear a relation to the other elements they listed. But they contented themselves with expressing the hope that labor and management would be wise and patriotic enough not to let this factor get out of hand.

The snorts of Mr. Baruch over this thinking reverberated in the capital. But they did no good. Not until wages had been pushed up to the wartime level—that in turn brought the rise in living costs on which recent organized labor demands for still higher levels are based—was the flexible ceiling of the Stabilization Act awkwardly and belatedly placed over the uneven structure. And any large strike could punch a hole in it.

Now the ceiling is shot full of holes again, as was inevitable in the circumstances. And once more a blueprint is being drawn up which is to be new only in the sense that the figures are larger. This sequence was made inevitable when, in devising a series of anti-inflation controls in which even rents and priorities were included, wages were left out. That led logically to Mr. Truman's effort to try to find the exact point to which wages could be advanced in 1946 without a general advance in the price level. Like the earlier attempt to flee from an economic fact by saying it wasn't there, this one ended with the administration's exploratory proposal of a higher price for steel.

BROKEN PLEDGES OF THE PAST

That proposal has now grown into another general formula which has been urged on the President by some of his economic advisers, a new magic prescription that may be on the mimeographs as this is written. Based on the sound and undisputed theory that full production will solve most of the income and earning troubles of organized industry, this formula would achieve it by raising the general wage-price level in return for certain pledges, thus drawing another line that must and will be held against inflation.

But the working of such a formula, and the attainment of the full production which would indeed be worth a certain general wage-price rise, depends, as all its predecessors have, on the answer to the same question: Will the pledges be kept? The mood of the industrial combatants must alter considerably and swiftly if the next labor contracts are not to be broken as current ones have been and as the no-strike pledge was shattered, despite the fact that the Nation was in desperate war. This latter promise was given by labor in exchange for a War Labor Board promise to adjust (which nearly always meant increase) wage scales. But it was violated thousands of times. If this is to be the fate of pledges on which any formula for full production must succeed or fail, then the new stabilization period will never operate for the duration. And then full production will be the goal of still another effort, within another and higher line that must be held.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter I have received, addressed to the Honorable James F. Byrnes, Secretary of State, regarding the present trend of our American foreign policy:

To Honorable Members of Congress:

I ask your kind consideration of the contents of letter below, addressed to Secretary of State James F. Byrnes.

This is an expressed opinion regarding the present trend of our American foreign policy, an opinion shared not only by 6,000,000 Americans of Polish origin, but also by millions of Americans of other backgrounds.

Sincerely yours,

CHARLES ROZMAREK,
President.

JANUARY 24, 1946.

Hon. JAMES F. BYRNES,
Secretary of State, Washington, D. C.

DEAR MR. BYRNES: The Polish American Congress, Inc., shares the grave concern felt and expressed by millions of Americans regarding the announced agreements recently entered into by you, Mr. Secretary, in Moscow with Messrs. Stalin, Molotov, and Bevin. We feel in duty bound to advise you that we have gained no encouragement from the explanations which you gave the American people in your last radio speech on December 30, 1945. On the contrary, your speech has only confirmed our apprehensions and increased our profound uneasiness concerning the present trend of our American foreign policy.

It is our considered opinion that, contrary to the interests of American security, which the Polish American Congress regards

as the basic aim of American policy—and contrary to our country's obligations toward the peoples of Europe and Asia who have been our loyal allies in this war—you have on behalf of the USA:

1. Agreed to recognize as free and valid the "Hitlerite" elections in Yugoslavia, although these elections can by no stretch of imagination be regarded as an expression of the free will of the Yugoslav peoples at present enslaved by Soviet Russia acting through her faithful comintern agent, Tito.

2. Agreed to the incorporation into Soviet Russia of the three small democracies: Lithuania, Latvia, and Estonia.

3. Agreed to become a party to the "legalization" and, thereby, the perpetuation of a Soviet-sponsored regime in Rumania and Bulgaria.

4. Agreed at present to accept the Soviet formula by virtue of which the task of preparing and drafting of the final peace treaties is to be carried out virtually by the big powers alone, a formula which you yourself have previously rejected as unacceptable at the preceding London Conference. Your acceptance of this formula makes the United States of America directly and actively participate in preventing the smaller nations from taking a substantial part in the establishment of the peace settlement, in utter disregard of their joint and respective contributions to our common victory won in the name of allegedly common principles of justice and democracy.

5. Agreed, contrary to your own previous stand, to accept Soviet Russia's participation not merely in an advisory capacity, but as a principal in the problems of the Far East and the Pacific Ocean.

6. Advanced considerably on the way towards the disclosure to Soviet Russia of the secrets of atomic energy.

7. Tacticly agreed to Soviet Russia's aggressive policy against Iran and Turkey.

Thus, by concessions to Soviet Russia, and particularly those referred to in points 1, 2, 3, and 7, direct encouragement has been given to Soviet Russia's expansionist imperialism in Europe and the Middle East and likewise the holding of a totalitarian type of elections now pending in other Soviet-dominated countries, such as Poland, has been encouraged.

By the action as described in point 4, the further spread of an overbearing and ruthlessly selfish power political concept, irreconcilable with a just and durable peace, has been encouraged and affirmed most unfortunately on behalf of our American democracy.

By the action referred to in point 5, the infiltration of hostile totalitarian Soviet policies into the Pacific area has been assented to, thereby enabling Soviet Russia henceforth to extend her imperialist activities, hitherto limited to the European Continent, to the Asiatic Continent and to the Pacific Ocean and its islands, which we regard as a serious direct menace to United States security.

In the matter of atomic energy, in our opinion the American delegation in Moscow has acted contrary to the repeatedly expressed will of our elected Senators and Representatives in the United States Congress.

We consider the stand adopted by the American delegation in Moscow as a complete retreat from the commendable attitude which you had taken at the recent London conference, and we solemnly urge you to inform the General Assembly of the United Nations Organization that the American people and its duly elected representatives are not prepared to regard as binding any agreements secretly arrived at and detrimental to our own security and to world peace and welfare. We can assure you that you will find, not only in the United States but also among most of the United Nations now assembled in London, wholehearted support for a courageous repudiation of the appeasement policy which is now inevitably setting the stage for another war. May the ruins of London evoke in your mind the memory of the late Neville Chamberlain, whose unfortunate and ill-fated policy of Munich should be a timely reminder of the lamentable consequences of appeasement. To those of your counselors who now guide our foreign policy down the road of appeasement proclaiming that only thus can be preserved "the unity of the Big Powers"—we beg you to remind them of the following prophetic passage of President Woodrow Wilson's message to Congress of April 2, 1917:

"A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic government could be trusted to keep faith within it or observe its covenants."

In this crucial hour of American destiny, we most earnestly request you to take the opportunity afforded you by the Assembly of the United Nations, meeting for the first time after this unprecedented total war, firmly to reject any and all attempts at power politics whatever their source, and steadfastly to abide by the truly democratic American ideals and principles so clearly expressed in President Truman's 12-point declaration on America's foreign policy which our American delegation is pledged to follow and not renounce or alter in any way.

So far the war has failed of its objective—liberty. We have not had 1 day, 1 hour, or 1 minute of real peace, all the shouting and all the hopes and all the prayers of millions notwithstanding.

The United States must not become a partner in any wrongdoing. On the contrary, it should use all peaceful means at its disposal to help allied Poland and all the other nations bordering upon Russia to regain the freedom they enjoyed prior to 1939.

Final victory in the Second World War will not be attained until and unless the ideals, for which our defenders fought and died, prevail.

Sincerely yours,

CHARLES ROZMAREK,
President.

(Mrs.) HONORATA B. WOLOWSKA,
Secretary.

Freedom and Self-Determination for Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a speech which I recently delivered over Station WSPR, Springfield, Mass., under the sponsorship of the Polish American Congress:

My friends, I am very much honored and privileged this afternoon to speak on this program dedicated by the Polish people of Massachusetts to the cause of human freedom.

Sometime ago in Congress I introduced a resolution in behalf of the Polish people, not only expressing sympathy with their aspirations for a completely free status, but pledging the assistance of the American Congress and people to their aims for a democratic government of their own choice.

At that time our Secretary of State was engaged in important international conferences in Moscow and I took occasion to urge upon him, as the representative of the American Government, that he might move successfully to fix an early date for the negotiation of permanent treaties of peace and thus end the dangerous policy of international drifting which appears to be generating feelings of distrust and suspicion that may well sow the dragon seeds of future war.

This is another most appropriate occasion to consider great questions which involve on almost a world-wide scale the freedom of millions of worthy democratic-minded peoples.

Above all, this is also the time to move for and arrange the early negotiation of final treaties of peace which will determine just, durable, and effective settlements and thus put an end to patchwork, piecemeal diplomacy and the policy of drifting and equivocation on vital international issues before this drifting leads us to the threshold of another great war. I have already urged our Department of State to press these questions, and earnestly hope that they may be considered and favorably acted upon.

In connection with the discussion of freedom and self-determination, it is most appropriate for me once again to bring to the attention of the Congress the unfortunate continuing plight of the gallant Polish people and other Baltic and Balkan States which are now suffering from, or threatened with, oppression and unwarranted denial of freedom.

It would seem very clear that there is in some places here and abroad the belief, desire, and hope that previous settlements of the Polish question and other related Baltic and Balkan questions heretofore arrived at by unilateral action or in informal conferences between some of the leaders of the United Nations would, after original protest, be ultimately accepted and approved by the people of the United States. The theory underlying this view is that, if long enough continued, our Nation will forget or overlook these gross and indefensible violations of the Atlantic Charter and our own cherished principles of freedom and justice. And I am not confining my remarks to the areas mentioned above because they are pertinent to informal arrangements heretofore made which affect many other nations and areas. They are equally pertinent to the brutal encroachments of imperialism wherever it reappears in ugly form throughout the world as to the brutalities and violations of totalitarianism

Be that as it may, so far as I am concerned as a Member of Congress, I am not prepared and will not be prepared at any time to forget or overlook these injustices. I endorse as a step in the right direction the principle stated not long ago in substance by our State Department that this Government would not accord diplomatic recognition to autonomy over any nation that was based on force, conquest, or aggression.

Some of the Allied Nations, including our own, have protested the political systems prevailing in central Europe. The Secretary of State has sharply criticized the situation in formerly hostile Bulgaria in particular, because he regards it as permitting a puppet dictatorial government in that country contrary to the interests and wishes of the people. In logic, the same protest is even more applicable to our faithful ally, Poland, where a puppet government, a ruthless dictatorship based on force, is established by our acquiescence and compliance which, if we can believe reports, is proceeding to throttle freedom and perpetrate outrage after outrage against the God-fearing, liberty-loving, peace-seeking Polish people. This is certainly a great inconsistency and glaring paradox of our current international policy.

If anyone is under the impression and is proceeding on the theory that this situation is going to blow over, that the delivery of gallant Poland, heroic Lithuania, and other brave Baltic and Balkan nations into the special sphere of Russian influence is going

to blow over and be forgotten by the American people or by the American Congress merely through inertia and the lapse of time, he is making a great mistake.

The irregular and ill-advised action on Poland by our Government and our allies has provoked the deepest resentment and bitterness among millions of decent, liberty-loving American citizens and this resentment and bitterness is not confined to those of Polish blood but is burning in the heart of every American citizen who loves liberty and believes in and stands for the principles of self-determination and the Atlantic Charter for which precious American blood has been so lavishly spilled all over the world.

What could be more destructive of our professed war aims than for this great, free, and powerful Nation to join with the other nations in turning over the Polish people to an undemocratic and ruthless regime against their will, and without their consent and without action by the United States Senate whose approval of foreign treaties is required by the Constitution? Could we believe for one moment that the United States Senate would ever sanction this outrage?

I am conscious that some Allied statesmen have talked about the political mistakes of the Poles, have advocated the so-called Curzon line as the solution to Poland's territorial problems and have made accusations against the good faith and fair dealing of the Polish people that are most unwarranted. No one should know better than some of these statesmen themselves that the Polish people not only do not accept the Curzon line, but have no voice whatever in present policy or acts of the present puppet-masters of Poland.

Those who participate in, recognize, and condone this outrageous violation of the God-given right of the Polish people to maintain and conduct a free government of their own choice must bear due guilt for the evil consequences of their acts and weak excuses and patent subterfuges will never delude the fair-minded, democratic-minded peoples of the earth here or elsewhere.

It is even more outrageous and indefensible to accuse the Polish people of the terrible inhuman crimes that have been and are being committed in eastern Europe, especially the slaughter and exile of the religious, when it is a known fact that all means of self-defense as well as self-expression have long since been taken away from the impoverished and defenseless Polish people by the oppressive puppet regime in Poland.

These poor people cannot speak and protest let alone procure or use the arms with which to defend their lives, families, and possessions. It has become fashionable in some supposedly enlightened and liberal circles to make scapegoats of the Polish people in order to distract attention from those responsible for their horrible plight.

But there is not a fair-minded Member of Congress, and there is not a freedom-loving American citizen in the Nation, who does not recognize that this situation now obtaining in Poland, to which I regret to say our Government apparently has consented, is an affront to all conceptions of honesty and justice. It is a repudiation of the basic principles of freedom and self-determination. It is a cruel betrayal of one of our most loyal allies in the war. It is a calloused, unpardonable abandonment of the so-called "four freedoms" which were alleged, as we were so often and so positively assured when our boys were being sent off to slaughter and death in all corners of the earth, to be the aims for which they were fighting, bleeding, and dying—our hope for a brave new world of peace and plenty.

It is pertinent now, and it will be pertinent until this question is finally settled under principles of international justice, amity, and decency, to ask whether or not it is the intention of our State Department and Government to consent to the perpetuation of this violation of the fundamental rights of the Polish people. To abandon them and leave them helpless before the powerful ruthless tyrants who are now holding them by the throat and stifling their last free breath is an unconscionable offense against the law of nations and the law of God which the decent opinion of this great free American Nation will never condone or sanction.

No, my friends, this episode of betrayal of gallant Poland will not blow over. It will not be forgotten. It lives in the minds and hearts of all our countrymen who love freedom and it will live in our minds and hearts until Poland is restored to its honored and rightful place among the free nations of the earth.

Some officials of this Government may glibly argue that compromise is a necessary part of world statesmanship but that is a principle that never has been and never will be accepted by the American people. The principle of compromise with terrorism, compromise with injustice is not an American principle; it is offensive to the very spirit of free America. Like every other nation in this world which has fought and struggled and sacrificed for self-government throughout the ages as gallantly and bravely as Poland has done, Poland is entitled to her freedom, Poland is entitled to reestablish and maintain her own government, Poland is entitled to her own territories and her own possessions, and Poland is entitled to her birthright as a free nation. Nothing less than that will ever satisfy the spirit of fearless devotion to liberty that animates the Polish people, and nothing less than full political, social, economic, and ideological protection for Poland as an independent and sovereign nation can or will be recognized by the American people.

Fellow citizens, as an American, I object to small peoples and small nations being kicked around by the strong and the powerful because I do not like injustice or brute force, and, moreover, because I understood that this war was to end that sort of thing for all time. I am out of patience with those who pursue the principle of compromise through appeasement and supine submission to the will of radicalism and imperialism. The time has come for our Nation to declare a strong, forceful foreign policy. We seek no selfish gains; we pursue no greedy aims; we ask not for territories or possessions of other people; we demand only that the principles on which our own Nation is based and for which we entered the war and for which so many of our loyal sons have offered up their lives shall be respected throughout the world; we demand this in the name of those who died that human liberty and American liberty might live.

It is time to let other nations understand—and I care not how strong or powerful they are—that we do not intend to sit idly by and watch cynical forces of totalitarianism or imperialism just as evil in their purposes and as ruthless in their methods as Hitler ever was employ brutal force and unwelcome infiltration to sweep across Europe—sweep across the Orient—threatening to destroy or throttle every spark of freedom and justice wherever the withering hand of tyranny is laid.

In our own self-interest as well as for justice it is time for us to act and urge that our State Department declare a strong affirmative position in this matter and serve notice on every nation to which it may be applicable that we will no longer tolerate oppression and betrayal of the Polish people or any other people desiring freedom, that we will regard continued domination of such peoples against their will and in violation of international morality to be acts of bad faith toward the principles and aims of the United States of America and the United Nations Organization.

Sincere and wholehearted international cooperation may well bring peace through justice but further appeasement of nations who through aggression and conquest insist upon making a mockery of our war aims and the accepted principles of human decency can only lead to another world war. Let us correct this threatening situation before we bring ruin upon the whole world, before we drift or are drawn into the vortex of another war that will decimate not only ourselves, but all of civilization. Now is the time for a show-down.

Let us go forward militantly and courageously. Let us carry on the fight for Poland until we have recorded decisive and lasting victory for freedom and justice.

Residential Race Restrictions

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Architectural Forum Magazine of Building for January 1946:

GOOD NEIGHBORS—CALIFORNIA JUDGE KNOCKS OUT RACE RESTRICTIVE COVENANT AS UNCONSTITUTIONAL

One big question which many a city will soon have to face got a decisive answer in a Los Angeles courtroom last month. Superior Judge Thurmond Clarke decided that 57 of the city's Negro families may keep the homes they have bought in a race-restricted neighborhood.

Moving slowly into old but still gracious colonial houses in once fashionable West Adams Heights, well-to-do Negroes (among them Movie Actresses Louise Beavers, Hattie McDaniel, Ethel Waters) had created what many a property owner fears—the "mixed" neighborhood. But most Sugar Hill property owners, glimpsing the spruce lawns, the careful maintenance of their new neighbors, soon lost their fear. Only a few protested the neighborhood change. Finally the protesting handful went to court, brandishing a race-restrictive covenant.

Judge Thurmond Clarke's decision was not the first to deny enforcement of a race-restrictive covenant. But it was the first in the United States to state clearly why such covenants cannot be recognized as legal: "It is time that members of the Negro race are accorded, without reservations or evasions, the full rights guaranteed them under the Fourteenth Amendment to the Federal Constitution. Judges have been avoiding the real issue too long."

Drawn like iron bands around bulging Negro neighborhoods in most northern cities, race restrictive covenants have been tightened by war housing shortage. They have been written to apply to almost all minority groups—one court ruled that two American Indians might be restrained from occupying property covered by a covenant proscribing "persons not of the Caucasian race." But their biggest social cost has been paid by the biggest United States minority group: Negro citizens.

Restrictive covenants have bottled Negroes in densely crowded areas, where two out of every three houses are substandard, where competition for living space means high rents, where three of four families must occupy space inadequate for one. Sample: a single Harlem block houses 3,871 persons; at a comparable concentration, the whole United States population could be housed in one-half of New York City.

NEW LAND COVERED

Initiated principally as barriers to Negro expansion into older city neighborhoods, restrictive covenants have by now spread to cover undeveloped suburban land. Said lawyer Oren Miller, who represented most of the defendants in the Sugar Hill case: "No Los Angeles subdivision is opened now without such covenants being written into the original subdivider's deed."

MARKET BLOCK

New building will ease the acute housing shortage for most Americans. But an important sector of building's market will be blocked by race restrictions on the land available for building. Nor can racially banned buyers take up housing released in older city neighborhoods as home buyers move to the suburbs. Smart real estate brokers have already realized how much restrictive covenants artificially limit the market for older houses. In some cities brokers have made a specialty of opening neighborhoods to Negro buyers.

Ever since the late, crusading President Franklin D. Roosevelt personally bawled out former Federal Housing Administrator Stewart McDonald for reported FHA discrimination against Negro home buyers, this agency has been a major target in the fight against restrictive covenants. Said the National Association for the Advancement of Colored People, "FHA is preventing the Federal Government from assisting Negro citizens in meeting their housing needs. It does this by demanding as one of the bases of its guaranty the protection of racial restrictive covenants; by insisting upon the extension of these racial covenants into new areas and, with the use of Federal funds and power, thereby requiring residential segregation."

Biggest bone of contention is FHA's Underwriting Manual, which says, "If a neighborhood is to retain stability, it is necessary that properties shall continue to be occupied by the same social and racial classes." Thus, while FHA will insure mortgages in all-white or all-Negro neighborhoods, it will not accept mortgages in changing or buffer neighborhoods. The manual also warns valuators that deeds should include "prohibition of the occupancy of properties except by the race for which they are intended."

The NAACP has fought for the last 6 years for deletion of these and other discriminatory instructions from the FHA Manual. Refusing to budge, FHA has argued that neighborhood stability and mortgage security would be jeopardized. FHA is now re-writing its manual. Whether it has changed its mind about race restrictions in view of Sugar Hill and a few other court-approved examples of mixed but stable neighborhoods, remains to be seen.

DOOR TO RACE STRIFE?

Those who advocate race restrictive covenants advance two major reasons: (1) appearance of a minority group in a neighborhood means property deterioration and general decline of values; or (2) mixed neighborhoods precipitate racial strife. There is much evidence against both these arguments.

FHA itself has said: "On the basis of credit analysis we consider Negro mortgagors as good or better risk than white mortgagors." Negro spokesmen have pointed out that restrictions on type of occupancy, requiring building owners not to sell or lease except to single families, would be a far more effective check on property deterioration. The National Association of Real Estate Boards has collected opinions of its members, all giving Negro owners and renters a good risk-rating.

Do mixed neighborhoods open a door to racial strife? Public housing experience as well as countless city neighborhoods have demonstrated that many kinds of neighbors can live happily together. The Detroit riots of 1943 supplied dramatic evidence: rioting occurred in sections where white and Negro citizens faced each other across a color line, but not in sections where the two groups lived side by side.

VIOLATION OF PUBLIC POLICY

Race restrictive covenants have no deep root in United States public policy. They began to occur only after the Supreme Court ruled in 1917 that city ordinances restricting residential areas according to racial groups are unconstitutional. With zoning segregation knocked out, property owners began to insert race restrictions in property deeds and to band together in covenant agreements. These have been upheld by a majority of State and municipal court rulings. So far the Supreme Court has ducked the question of race restrictive covenants, having refused permission to hear several such cases.

While the United States groped for its own solution to this painful but imperative question, a Canadian justice wrote a new chapter in the body of law regulating real estate transfers. Invalidating a deed restriction barring property transfer to Jewish citizens, Toronto Judge Mackay ruled it violated public policy. To define public policy, Judge Mackay drew, probably for the first time in civil jurisprudence, upon the San Francisco Charter for precedent. He quoted:

"We, the peoples of the United Nations—

"Determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

"To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small * * * and for these ends

"To practice tolerance and live together in peace with one another as good neighbors."

American Public Opinion Supports Philippine Rehabilitation

EXTENSION OF REMARKS

OF

HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a series of editorials taken at random from the American press during the last few weeks in which the problem of Philippine independence and Philippine rehabilitation are discussed. They are an expression of how the American feels toward the Filipino people. My people are grateful to the editors and publishers of these newspapers for their sympathetic interest displayed in all these articles. While on the question of independence some of them do not seem to have complete information—and in my speech on the floor today I hope to give them the background necessary for a proper comprehension of Filipino psychology to correct their wrong impression and allay their misgivings—they are unanimous in advocating that America should extend to the Philippines the assistance that we need for our rehabilitation and reconstruction.

These editorials follow:

[From the Wilmington (Del.) News of January 2, 1946]

WITH RELUCTANT FEET

It is not particularly surprising that many Filipinos look forward with increasing reluctance and apprehension to the prospect of independence 6 months from now. Four years of war, in which many of the chief cities of the islands have been ruined, have left the Philippines economically prostrate. They have also deprived the people of time which they badly needed to prepare for the day in which they would cut loose from the United States and strike off on their own.

This is a matter on which the Filipinos must take the initiative themselves, however, if there is to be any postponement of the date on which a free Philippine Republic is to be set up. There is nothing the United States can do to postpone the separation. We cannot change the independence day fixed 10 years ago, or even suggest a delay, without incurring charges of bad faith.

As matters stand, there is little likelihood that anything will be done to defer the date. Even though public opinion in the Philippines is reported to be overwhelmingly in favor of a 5-year postponement, Filipino politicians have committed themselves too strongly on this issue to reverse themselves. They have been screaming for independence for nearly half a century and they are afraid they would be risking political suicide to take a different position now.

However, the United States can and should do its best to help the islands to stand on their own feet. This will mean a far larger measure of financial support than was envisaged when the legislation granting them their freedom was originally passed. But it would be foolish and unfair to set the Filipinos adrift without giving them a reasonable chance to create a stable nation, and they have also earned special consideration by the gallant fight they put up at our side during the war with Japan.

[From the Pittsfield (Mass.) Berkshire Eagle of January 1, 1946]

THE FILIPINOS RECOGNIZE THE DRAW-BACKS OF INDEPENDENCE

An American observer in the Philippines reports that in his opinion 80 percent of the Filipinos are leary of immediate independence and wish the United States would wait another 5 years before releasing the islands from its aegis. The minority who disagree includes, of course, all the prominent politicians, who desire an immediate opportunity to establish themselves as heads of a new nation.

The majority are to be commended for their common sense. They evidently are aware that independence and self-rule are not the keys to an immediate paradise. Dependence has its drawbacks but it also has its advantages; if the Philippines will no longer have to subordinate their own wishes to those of the United States, they will also have to solve their own problems and skin their own skunks from this time forward. And they are going to find what every other new country has, that whatever may be said in favor of democracy, it is the most difficult form of government; it is in some ways the most inefficient; it is by all odds the most exacting and imposes the greatest demands on the intelligence, the time, and the patience of the individual. Rule by a tyranny may be oppressive but it requires no initiative and no intelligence and no effort on the part of the citizen who is willing to obey without question.

In passing from a colonial status direct to independent democratic government, the Filipinos are doing what the inhabitants of the United States did more than 150 years ago. They will do well, in looking toward

the future, to consider well the teachings of American history and to recall the long, slow struggle, the number of mistakes, the difficulties, dangers, and internal strife which the people of this country underwent before they succeeded in establishing their republic on a firm basis. If they become discouraged by failure to attain perfection in a decade or two, they will have failed to learn their lesson.

[From the Boston (Mass.) Globe of December 29, 1945]

PHILIPPINE STATUS

By including the Philippine Commonwealth among the members of the Far Eastern Commission, which will determine policy regarding Japan, the Moscow Conference has emphasized the growing international status of the islands, whose independence has been promised July 4 next.

While the Japanese occupied his country, the late President Quezon signed the Declaration by the United Nations, along with representatives of the British Dominions. The Philippines were therefore represented at San Francisco and signed the Charter. Now the Commonwealth is to sit on the board which will govern its invader.

During the war, the islands' growing international status, implying as it did recognition of the Commonwealth by other nations—with full approval of the United States—was concrete evidence that this country intended to keep its promises, at a time when Japan was beating the drums with the slogan, "Asia for the Asiatics." Today a colonial section of the world, both rulers and ruled, sees a genuinely self-governing American possession accorded an important position, heroically earned, in the council of nations. Such examples often act as solvents of widespread problems which seem very difficult.

[From the Durham (N. C.) Herald of December 24, 1945]

READY FOR INDEPENDENCE?

The Filipinos who dreamed of independence for 40 years even while the United States was building up the economy, health, and education of their country, little dreamed that the time would come when they would dread that independence.

But that situation, for some of them, now exists. Three years under the Japanese have nearly destroyed the economic life of the Philippines. A desperate effort is being made to restore that economy to a functional condition before granting them independence.

High Commissioner Paul V. McNutt declares that the initiative for a postponement of the granting of independence to which we are committed must come spontaneously and uninspired from the Filipinos themselves.

The Filipinos know that the vast amount of American investments needed to restore their country will not be made so readily as long as independence is so near.

But whether independence comes as scheduled next year or not, this country is making an effort to turn over to the Filipinos a nation that is functioning, not a war-ravaged, impoverished wreckage.

[From the Springfield (Mass.) Republican of January 14, 1946]

THE PHILIPPINE TRAGEDY

In delaying action on certain important economic questions directly related to the independence of the Philippines, Congress is fast approaching an embarrassing dilemma. Independence next July for the Commonwealth has been fixed by law, yet the Filipinos are in no condition to undertake the sole responsibility for the independent government of the archipelago. The Filipino economy has been almost ruined by the Japanese invasion and by the later military operations for the liberation of the islands. Independence sentiment among the native population has begun to waver. One prominent Filipino has recently stated that statehood in the American Union would be welcomed, although no conceivable solution seems more improbable from the American viewpoint.

Our statutory promise of independence for the Philippines has been an American boast during the war. Other powers facing difficult colonial problems in the Orient and elsewhere have been reminded how we have solved our Philippine problem on anti-imperialistic lines—the smug suggestion being that they should follow our unselfish example. This fact makes politically difficult, if not impossible, any postponement of the date fixed for the proclamation of independence, even at the request of the major political parties now functioning in the archipelago. They, too, would be embarrassed in asking for an extension of American sovereignty, in view of the fact that for many years they have capitalized the nationalist sentiment of the native population.

To set the Philippines adrift would involve no danger of foreign military intervention in the near future, in view of the quasi-protectorate which the United States would practically maintain from the naval and air bases to be ceded by the Philippine Government under the terms of the definitive independence treaty. The menace of Japan to an independent Filipino state has been removed for many years to come. American sea and air power can be dependent on to protect the islands from external enemies.

What is not so well assured is the Philippine Government's power to maintain itself against domestic uprising or disturbances, which might develop because of the poverty of the people and the slow revival of the insular economy. The present United States High Commissioner, Paul V. McNutt, reported last spring to Congress: "It will take 2 years, probably 3, to even revive the sugar industry. * * * Much machinery (in sugar mills) was shipped to Japan. * * * Most bridges are destroyed. * * * Fifteen percent of all buildings in the islands have been destroyed (notably in the cities)."

These facts indicate the menace of low-standard social conditions and of the revival of native banditry in the countryside. Banditry was not obliterated for several years after the United States Army took over the pacification of the island 45 years ago, after expelling the Spanish forces and then quelling the native nationalist movement of Aguinaldo, Mabini, and the other native leaders of that period.

Assuming that Philippine independence will be established next summer in accordance with the timetable, an economic program to safeguard the undertaking must be sanctioned by Congress. The several Tydings bills, hitherto sidetracked, include a grant of $100,000,000 for insular rehabilitation under American supervision, provision for war damages to be paid both by the Japanese and our own Government and one or two others transferring excise taxes still held in the United States Treasury and certain physical properties. Of more vital importance is the tariff barrier which may be set up against trade between the Philippines and the United States.

The truth is that the decision of Congress back in the 30's to grant independence to the Philippines was largely influenced by American agricultural and business interests which felt the competition of imports, notably sugar and cocoanut oil, from the islands. These imports came in under a special scale of duties permitting the trade to survive. Many votes in Congress for Philippine independence were cast with the purpose of applying to the Philippine trade the same high tariff which was applicable to all other foreign commerce. If that protective tariff sentiment is still as strong in Congress as it was 10 or more years ago, the question of how to surmount it arises in connection with the establishment of the Filipino republic on a going financial basis.

The Tydings tariff bill for the solution of this problem would start with low United States duties on Filipino imports and gradually raise them over a 20-year period. In the House the Bell bill would provide for free trade over the entire 20 years between the United States and the infant far eastern republic.

The Bell bill would have had no chance of American acceptance, probably, had there been no war. Yet today, the conditions in the Philippines being as tragic as they are admitted to be, complete free trade for a 20-year period seems the least the United States can do to make the independence of the Philippines a successful venture.

[From the Lewistown (Mont.) Democrat News of January 9, 1946]

EDITORIAL VIEWS AND REVIEWS

UP TO THE FILIPINOS

The American Government has definitely fixed July 4 this year as the date for granting the Filipinos complete independence. There has been some question as to whether or not the people of those islands will desire to accept full responsibility for their government at that time. Conditions throughout the archipelago are more or less chaotic. The long Japanese occupation has left their public finances in bad shape. Their capital, Manila, as well as other important centers of population, has suffered heavy physical damage from bombings and the willful destruction of the Nipponese. Most public utilities are in need of repairing or rebuilding. Much internal discord prevails. It is assumed in some quarters that the responsible people of the islands might desire the Americans to remain in charge until these conditions have been improved. That, however, is a matter which should be left strictly up to the Filipinos themselves. Our Government must be prepared to pull out at once except for such military forces as are required to remain there to take care of the enormous quantities of war material we have there.

[From the Easton (Pa.) Express of January 16, 1946]

PHILIPPINES AND DEFENSE

July 4, which this year will be independence day for the Philippines as well as for this Nation, is a long way off but already we hear the uneasy whisper that Philippine independence will be premature, that the Filipinos are not ready for it, and that our defense needs forbid it.

That point of view arises, we hope, merely from a misapprehension of United States intentions with regard to the Philippines once their independence becomes a fact. There is, so far as we know, no suggestion that this Nation drop the Philippines like a discarded garment, and allow this unhappy victim of aggression to face its future unaided.

In building its new framework, the Philippine nation doubtless will need economic aid. This Nation owes such aid to its political ward. It will need help in defense matters, and in giving it the United States will be building its own defense and providing air and sea bases which keeping peace in the Pacific promises to require, and which will be mutually profitable for commercial uses as well.

The Philippine nation is a nation of islands, but it comprises large area and population. It can become a notable nation and a valuable friend of the United States

in their joint progress toward the kind of world for which they both have fought. Its independence, and our help in establishing and maintaining that independence, will hasten Philippine adulthood and effective participation in the community of nations.

[From the Washington (D. C.) Post of January 11, 1946]

PHILIPPINE INDEPENDENCE

A recent dispatch predicts that Philippine independence, which will become effective on July 4, will be followed by disorders, if not revolution. Former guerrillas are still in possession of their arms, and the proclamations of President Osmeña and of the provincial governors asking surrender of those arms have been ignored. In some sections of the islands armed bands are said to be terrorizing the peaceful inhabitants.

Reconstruction problems are also acute, being aggravated, of course, by the delay of Congress in passing the bill for settlement of war-damage claims and in outlining a new trade policy between the islands and the United States. Inflation is giving officials grave concern. War has left the islands such a heritage of trouble that many Filipinos are said to be skeptical and regretful over the forthcoming dawn of independence. Some writers from Manila go so far as to say that a majority of the Filipino people no longer want unqualified independence.

We do not believe, however, that the situation justifies the suggestions repeatedly made in some quarters that the date of Philippine independence be postponed or that some other status for the islands be agreed upon. The predictions of disaster in the war-ravaged islands after July 4 seem to be predicated on the assumption that the United States-Philippine partnership will come to an abrupt end. That, of course, is an illusion. The nature of that partnership will change, but the partnership itself must continue in effect for the protection of the Philippines and for the greater security of the United States against external aggression. As we have previously pointed out, the American naval and air bases to be established in the islands will necessarily link the defense systems of the two countries inextricably together.

To this extent Philippine independence will be limited. We feel that the Filipino people understand this joint defense arrangement and overwhelmingly approve of it. Consequently, it will be only reasonable for them to ask and expect continued aid from the United States in reconstructing and stabilizing their country until the new governmental system is operating smoothly. And, of course, the United States could not decline such requests without undercutting the pledge that it has given to the Filipino people in addition to our own security in the Far East. The basic fact to remember is that independence for the Philippines will not take them out of the orbit of our close and immediate interests any more than the independence of Cuba broke the intimate ties between that country and our own. We think that any satisfactory approach to the islands' formidable economic and governmental problems must be made from this point of view.

[From the Scranton (Pa.) Times of January 3, 1946]

TROUBLE IN THE PHILIPPINES

The question of when full independence will be granted the Philippines is not the only one disturbing the Filipino people. A sharecroppers' revolution in Luzon's rice bowl has developed into a real, serious situation. The country is agitated over the demand for the division of big estates, which has become an issue in the present presidential campaign.

President Osmeña is stressing the Philippines' need for 20 years more of free trade with the United States and is reminding also that the late President Roosevelt in 1942 pledged assistance for the full repair of ravages caused by war. In this connection Congress has authorized the appropriation of $500,000,000 for war damages to Filipino private property. It is expected also there will be other grants for rebuilding destroyed and damaged public buildings and replacement of shipping or restoring of interisland trade.

While the Filipinos are making a big effort at rehabilitation the task is seemingly beyond them, and they must have financial help. In the Philippines about 5 percent of the people own the land, and before the war sharecroppers earned about 75 cents a day. They are now demanding a 70–30 or a 60–40 split of the products of their toil. Farmland reform is being agitated as a plank in the campaigns of both presidential candidates. It is believed certain that whichever side wins the large landowners will be forced to turn their land over to the Government for resale to tenant farmers on long terms at low interest.

As for the independence of the islands, there is divided thought in the Philippines. Many Filipinos who before the war were urging that Uncle Sam immediately give up any semblance of control are now hesitant and believe independence ought to be conditioned on a United States protectorate of some sort until the work of restoration is completed and the world peace program is worked out and put into full operation.

[From the Indianapolis (Ind.) Union of January 10, 1946]

PHILIPPINE ISLAND INDEPENDENCE IS ASSURED

WANT ECONOMIC FREEDOM

The people of the Philippines want something. When July 4, 1946, comes they want to quit being a colony. Not only political independence, but economic freedom, is what they want:

An end to the oppressive sharecropping, under which tenant farmers keep at the very most 50 percent of their crop (the top rate in the United States is 75 percent). A beginning of consumer industries, to give jobs to the city people and to furnish goods cheaply to the rest of the Philippines. Government ownership of the public utilities and of the big land holdings—held under a feudal set-up established when Spain ruled the Philippines.

Industry and agricultural improvements financed by Government loans from the United Nations under the Bretton Woods plan—not financed by private loans from Wall Street by private landowners and commercial interests devoted to making profits on the improvement of the standard of living.

One correspondent, at least, getting all his inside dope from a night-club waitress, has announced that the Philippines don't want independence now; they want to stay tied to United States apron strings. This is not true. In the Philippines I have not met one representative of the populace—radical or reactionary—who did not want independence as fast as possible.

WANT INDEPENDENCE

Even Roxas said: "There are some people who think we should postpone independence until we have recovered the losses suffered in the war But any man who came out publicly for that would automatically be out of politics." The people of the Philippines want independence and Roxas, an astute politician, knows it. His friends might want to continue the Philippines as a colony—but he wants to stay in Philippine politics.

[From the Syracuse (N. Y.) Herald-Journal of January 7, 1946]

ORIENT LOOKS TO UNITED STATES LEADERSHIP

(By David Wallace)

"America's voice must be dominant. The Far East wants that because America's word can be trusted."

Those were the electric words used last night by Brig. Gen. CARLOS P. ROMULO, last man out of Bataan. Officially he was aide to Gen. Douglas MacArthur, now Philippine Resident Commissioner to the United States. He was in Syracuse to speak at Lincoln Auditorium.

In personal talk he answered a direct question as to his views on the tangled international situation. That was whether he thought the United States should assume leadership in settlement of far-eastern problems. He said he felt the moral position of America, as he always calls it, was so important our Government must step out in front to bring about lasting peace.

He feels the United States has acquired such prestige and power through the Far East and such moral strength in upholding dignity of the human soul that now it must stand fast in its position for its own reputation as well as for the good of mankind.

In his own words: "After the American record in the Philippines, eyes of the Orient have been opened to the workability of a pattern unheard of in that part of the world before America came into the Philippines in 1898. America's occupation there, conducted as it was, paid dividends in loyalty of the Philippines through the last global war, loyalty not shown by any other dependent nation.

"Now other peoples there are asking themselves what America will do to prove how those principles can be applied to them. America dared to blaze a trail. Colonials of the Orient are hoping America will continue that policy which means respect for dignity of the human soul."

General ROMULO elaborated this theme in his lecture under theme of "America's Stake in the Pacific." The Right Reverend David F. Cunningham, chancelor of the diocese, presided. Municipal Judge William E. McClusky conducted the forum which followed, and Bishop Foery sat in the audience. The auditorium was crowded.

General ROMULO began with indorsement of the drive to raise a million dollars to start LeMoyne College here, relating what the Jesuit college, Ateneo de Manila, had meant in service to his own country before the Japs destroyed it. He said Syracuse would be fortunate to have such an institution. Then he commented on the difference between circumstances when he spoke here in 1943, haunted by his experiences at Bataan, worried desperately about the fate of his own wife and family, prisoners of the enemy.

His family have all been rescued, flown out in planes, through efforts of his son, Lt. Carlos, Jr., who went in as a guerrilla through the Jap lines after the American Army returned. "Tonight," he said, "we feel the throb of drums in victory." But he warned that while victory had been achieved, peace was not here yet.

He went on to outline what it meant to the Orient when American forces first entered the Philippines during the Spanish-American War. Two policies were possible for this Government then, he said, to continue the old course of imperialism or something untried in that part of the world, respect for the dignity of the human soul.

America passed by imperialism which meant exploitation, imposing will of the stronger nation upon the weaker, and pursued a benignant policy, incurring much criticism thereby. But when America installed in the Philippines this new policy it reached not only the islands, but all the Far East, and then all the world. That meant the beginning of a change in colonial policy.

The test came, said General ROMULO, in the last war, when the Japs struck and colonial empires long established fell like a house of cards. Sovereign powers had to fight natives as well as the Japs. In contrast, the United States, while hard hit at Pearl Harbor, found support in the Philippines. There were only 10,000 American soldiers there to fight a horde

of Japs, but Filipinos fought to the death beside them. "What a lesson that is for the world," he exclaimed. "What an eye-opener for mankind!"

After relating various personal observations of and experiences in the desperate combat there, he rose to his climax: "America's stake in the Pacific is moral. She must assert leadership. The founding fathers when they declared all men were free and equal did not limit that principle by the Equator or any line of longitude. If Lincoln were alive today his words would not be limited to a nation, but he would be likely to say: 'A world cannot survive, half slave, half free.' What is done in Chungking is felt in Tuscaloosa. Reverberations in Kalamazoo are felt over in Athens.

"One billion pairs of almond-shaped eyes are watching America. Your moral leadership was never more needed in the Pacific than now. I bring to you a message of good will, not a plea for tolerance but for friendship. One billion potential customers for American products are there in the Far East, available when there is understanding such as has been given to people in the Philippines. They expect deeds, behavior, action not of the ordinary sort. Don't let the lure of the gold dollar break the spell you have already cast over the billion people of the Far East.

"What happened at Hiroshima and Nagasaki has shown that material resources can be destroyed in a moment. But friendship, faith, freedom, those intangibles, can't be destroyed. Your country's greatness can't be destroyed."

General ROMULO was thoroughly occupied during the few hours he spent here yesterday.

[From the Boston (Mass.) Herald of January 8, 1946]

FILIPINO FEARS

After years of clamor and with independence scheduled for July 4, the Filipinos are reported to be apprehensive about their impending freedom but afraid to back down. The major fear arises from the firearms in the possession of the natives. During the war, some 40,000 stand of arms were distributed among the Filipinos—much of it by their own native military—for use against the Japanese. Today it is not easy to disarm these erstwhile guerrilla bands, which are likely to make trouble for a new government. There may not be enough unrest to invite a revolution, but there is more than the native police can cope with. Add the lawlessness in the wake of war and the situation causes considerable anxiety.

For a time problems of economics and reconstruction can be handled with the aid of the American Government. Bills already before Congress provide for rehabilitation, payment of war claims, and special tariff privileges. But there is still the question whether a new native regime can establish sufficient stability to attract investment capital.

It is too late for any major changes of policy In all probability Congress will enact laws to assist the Philippine economy. To do more might prove dangerous, any delay or postponement of independence being more damaging to the United States than to the Filipinos.

We have been proud of our record in the islands. During the war the natives remained loyal. To withhold independence would not only be an act of ingratitude, but would be legally impossible, according to some authorities.

[From the Tyrone (Pa.) Herald of January 8, 1946]

STILL NO SUGAR

In another 6 months the Philippine Islands will become independent and on their own. But the United States is not going to give them up—and the Philippines are not going to give us up. The population of the Philippines, at the time of taking the 1940 census was 16,350,000 and the land area of the Islands was 114,830 square miles.

Reciprocal free-trade relations have existed between the United States and the Philippines since 1909. Under the new relationship covering the forthcoming independence of the Philippines free trade will continue for 10 years. The most important shipments of the Islands to our own country has been sugar. The Philippines are insisting that its sugar should be shipped without any tariff to the United States, indefinitely.

But the United States is being accused of letting Cuba down by failure to provide the market for all of its sugar.

All restrictions on the shipments of sugar from Hawaii were removed by an order by President Roosevelt in 1942. So Hawaii figures in our three-cornered sugar puzzle.

A lot of people keep right on asking why sugar production is not developed in the United States so as to take care of our own demands. Ah, there is the rub! A half dozen of our own Southern States have grown as fine a quality of sugarcane and sugarbeets as has ever been produced in any part of the world.

[From the Mount Morris (N. Y.) Enterprise of January 9, 1946]

THE PHILIPPINES

On our next Fourth of July the Philippines will become independent, in accordance with acts of the Congress of the United States. Those acts were passed several years ago and ratified by further congressional authority on June 29, 1944.

The Philippines were one of our prizes of the Spanish-American War, and the first interest we had in the islands was Admiral Dewey's victory over the Spaniards, in Manila Bay. We took them but we had a hard time holding the Philippines.

But in the last 47 years what might be called a beautiful friendship has grown up between the Filipinos and the American people. We aren't going to push them aside, and tell them to paddle their canoe, and we are not going to withdraw our promise of independence scheduled for July 4, 1946. We had a pretty tough time in driving the Japanese out of the Philippines—but we did it.

Now, we are going to help the Filipinos establish their own government, and that program is progressing as rapidly as possible, supported by every branch of the United States Government. Such strong men as the late President Quezon, and the present-day leaders, President Osmena, and General Romulo, are doing an A1 job for their countrymen.

In another 6 months the Philippine Islands will become independent and on their own. But the United States is not going to give them up—and the Philippines are not going to give us up. The population of the Philippines at the time of taking the 1940 census was 16,350,000, and the land area of the islands was 114,830 square miles.

Reciprocal free-trade relations have existed between the United States and the Philippines since 1909. Under the new relationship covering the forthcoming independence of the Philippines, free trade will continue for 10 years. The most important shipments of the islands to our own country has been sugar. The Philippines are insisting that its sugar should be shipped without any tariff to the United States indefinitely.

But the United States is being accused of letting Cuba down by failing to provide the market for all of its sugar.

All restrictions on the shipments of sugar from Hawaii were removed by an order by President Roosevelt in 1942. So Hawaii figures in our three-cornered sugar pool.

A lot of people keep right on asking why sugar production is not developed in the United States so as to take care of our own demands. Ah, there is the rub. A half dozen of our own Southern States have grown as fine a quality of sugarcane and sugarbeets as has ever been produced in any part of the world.

[From the Oakland (Calif.) Tribune of January 5, 1946]

DELAYS IN PHILIPPINES

Charges that military bungling and profiteering by American businessmen in the Philippines have been responsible for the delays in rebuilding war-ravaged cities in the Philippines have been convincingly denied, but it remains true that only a very little has been done so far.

Economy in the Philippines is far from being restored. The Filipinos have been given little hope in Washington of any interest in the revision of their Independence Act to provide for more equitable trade, and the rehabilitation and reconstruction programs have all but stood still. The blame, if it must be fixed, is probably shared by the haste of demobilization, Congress, and certain Federal agencies.

In many ways the Philippines are our peculiar responsibility in the Pacific. Our bombs and shells did most of the damage there, for we had to fire on the islands to liberate them. Hungry Filipinos who fought with us against the Japanese cannot fail to wonder as they see their sugar mills still flattened, rubble remaining in their cities, and few signs of activities toward carrying out the promises we have made. Among top items on the calendar when Congress meets after its holiday should be quick action to make up, as best it can, for delay and confusion.

[From the New York Times of January 28, 1946]

FAIRNESS TO THE PHILIPPINES

There are two bills now before Congress which do not mean a great deal in an immediate material way to most of the people of the United States. But to 16,000,000 people in the Philippines the passage of these bills before July means almost literally life or death. They are a bill to grant $450,000,000 in rehabilitation aid against the estimated $1,000,000,000 of war damage suffered by the Philippines and a bill to revise the tariff provisions of the Tydings-McDuffie Act of 1934. If the two bills are not passed before July 4, the Filipinos will gain their independence as a war-desolated, impoverished Nation which has been denied even the means—in trade with the United States—to help itself.

Action on both bills has been lagging. The ostensible reason why pressure has not been exerted to pass them is that Filipinos who collaborated with the Japanese still go unpunished. The thought is that it is up to the Filipinos to clean house first before legislative aid is voted them. The defense made by those accused of collaboration is that they served the Philippines best by pretending to cooperate with the Japanese while doing little and thus mitigating the severity of the occupation.

To us it seems that the question of collaboration is one that might well be left to the Filipinos themselves to decide. They will have an opportunity in April, at the ballot box, to deliver their own judgment on these men. Passage of the rehabilitation aid bill and of the new Philippines Independence Act, however, is something the Filipinos cannot do themselves. For that they can only hope. The longer that hope is in question, the longer deferred will be the process of rehabilitation in the Philippines.

[From Export Trade and Shipper of February 4, 1946]

THE TWO-POINT PROGRAM FOR THE PHILIPPINES

With their political independence only 5 months away, the people of the Philippines face a dark future unless Uncle Sam comes to their rescue. No less do American traders with the islands.

We are happy to report that a rescue party has been formed in Washington; it needs only the authority of Congress to get under way.

It is interesting to note that a member of this rescue party is Senator MILLARD E. TYDINGS, Democrat, of Maryland, a cosponsor of the original Tydings-McDuffie Independence Act of 1934, a bit of legislation which today is a frightening spectre to Filipinos.

When enacted, the original act was generally thought to be a fair and workable program of raising tariffs on Philippine exports to the United States after independence became a fact. However, after 4 years of Jap domination and destruction, the terms of the act are not only onerous, they are ruinous; not only to Filipinos, but to American traders.

Knowing all this, Senator TYDINGS has introduced a new bill. It is titled "Rehabilitation and War Damages Act of 1945," bearing the serial number S. 1610, and is now before the Senate Committee on Territories and Insular Affairs and the Ways and Means Committee of the House of Representatives.

This bill provides for funds to cover public and private war damages inflicted by the Japs between December 7, 1941, and October 1, 1945, in the amount of $330,000,000. An additional $120,000,000 is requested for restoration and operation of public services. A little less than 10 percent of the $330,000,000 is to be used for the purchase of United States surplus military property, such as engineering and other equipment to aid in rehabilitation of the land and industry. Philippine currency is to be held at its present relation to United States currency, 2 to 1.

On January 21, Representative C. JASPER BELL, Democrat, of Missouri, sent a companion bill to the Ways and Means Committee of the House. This bill, H. R. 5185, and called the Future Trade Relations With the Philippines Act, provides that no duties will be imposed on Philippine goods until July 3, 1954.

But it does establish quotas on imports. Sugar, the islands' "bread and butter" export, is limited to 850,000 unrefined and 50,000 long tons refined; coconut oil to 200,000 long tons; cigars to 200,000,000, and cordage to 6,000,000 pounds. Pearl buttons and embroideries, two other important sources of income for the Filipinos, are also on quota, at about the same rates of shipments as made just before the outbreak of the Pacific war. Also interesting is the provision eliminating processing taxes on either American or Filipino products.

Eight years after independence becomes effective, the United States is to impose a tariff of 4 percent, increasing this impost at the rate of 4 percent annually until the full tariff becomes effective a quarter of a century later.

The Bell bill also provides for equal business rights in the islands for Americans and Filipinos, until 1979. It is also stipulated that there will be no discrimination against Americans in respect to citizenship, naturalization, and residence.

These are the high lights of the two-point rescue program Uncle Sam is planning for the Philippines. Lou Wagner, veteran American trader in the islands, has the two bills as meeting the economic requirements of the coming Philippine nation and American exporters and importers. He says the Tydings and Bell bills are like Siamese twins, inseparable without fatal injury to both the Filipino and American business body.

The Philippine-American Chamber of Commerce also seems pleased with Uncle Sam's rescue party and its equipment. Created in 1920 to foster trade between the United States and the Philippines, its activities necessarily were limited during Japanese occupation. Last month, at its annual meeting, it announced plans for accelerating its promotional work.

One of the chamber's first acts was to urge early passage of S. 1610 by the House, and equally expeditious action by the Senate and the House in respect to the Bell bill, H. R. 5185. The chamber expressed its opinion that there can be no hope of rehabilitation of the Philippines until both of these bills have been enacted into law.

It is obvious that American exporters cannot safely lay plans for doing business with and in the Philippines until they know with certainty the terms and conditions under which they will have to work. According to reliable report, it should be equally obvious that there might not be any Philippines to trade with in the prewar volume to which American exporters have been accustomed if these twin bills are not passed by Congress, and soon.

For that reason we suggest that all American foreign traders urge their Congressmen to pass the bills, and quickly.

[From the Washington Evening Star of February 6, 1946]

PHILIPPINE REHABILITATION

Philippine High Commissioner McNutt, arriving here from Manila to seek quick congressional action on pending legislation to extend rehabilitation aid to the war-ravaged Philippines, has placed proper emphasis on the obligation we owe to the courageous people of that Far Eastern outpost of democracy. After winning from Congress their right to be free and independent, as of July 4, 1946, the Filipinos were caught in the maelstrom of the Pacific war. They fought side by side with American forces to resist the Japanese invaders, from Luzon to Corregidor; shared the horrors of the death march and of prison camps, risked the dangers of guerrilla warfare and helped to pave the way for MacArthur's triumphant return to the islands. Through it all, those who survived saw their once beautiful cities and countryside devastated, their industries destroyed or damaged, their whole future under the independence program imperiled.

True to its pledged word, the United States will give the Philippines complete independence on July 4 next, but unless we keep a collateral promise made to the Filipinos the forthcoming Independence Day will be a hollow mockery of what we and the Filipinos had intended it to be. That collateral promise, Commissioner McNutt points out, is that we should take definite steps to help the Philippine people prepare for independence. They will not be prepared to assume the heavy responsibilities of an independent nation unless they are extended an immediate helping hand.

Such assistance is provided for in two bills now pending in Congress. One is the Bell free-trade bill, designed to eliminate tariff duties for 8 years after independence, to permit Philippine trade to get back on its feet; and the other is the Tydings rehabilitation bill, authorizing payment of more than $400,000,000 to help in rebuilding shattered homes, churches, and business houses. Both bills are awaiting action by House committees—the Bell bill by the the Ways and Means group and the Tydings bill by the Insular Affairs Committee. The Tydings measure already has passed the Senate, but the Bell bill has yet to reach either floor. Congress has before it, of course, a lot of other important legislation, but Mr. McNutt is correct in contending that economic aid to the Philippines is a matter of great immediate urgency, justifying prompt attention by Congress. Only effective action now can forestall chaotic conditions when Philippine independence becomes a fact a few months hence.

Wirthmore Feeds Weekly Chat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which was forwarded to me dated February 2, 1946:

WIRTHMORE FEEDS WEEKLY CHAT

SATURDAY, FEBRUARY 2, 1946.

A vicious circle has just been completed. It is now impossible for us here in New England to even buy oats. It looks to us that as far as the feed industry is concerned we have the greatest scarcity we have ever faced among plenty. Unless something is done to correct the distribution of available supplies of feed and grain throughout this country, it is our prediction that by early March New England feed manufacturers will be virtually closed and New England livestock and poultry will be out of feed.

Definite action on correcting the situation has been delayed so long that unless something concrete is done within the next 2 to 3 weeks at the very latest we do not see how any New England farmer can continue to feed his cows and chickens. This is a very serious statement, but we are very confident that it is factual.

We have been endeavoring to warn the feeding interests of New England for the past several months, that unless something was done we would eventually reach the end of the road. Many New England farmers apparently haven't given too much serious thought about these warnings. They have felt the feed industry has been talking pessimistically many times in the past, but up to the present time they have been able to get feed of one kind or another from some source, but this time we are sorry to say that it looks as though they would be unable to get supplies in sufficient quantities from any source that we know of.

Now, what is the cause of this very serious feed shortage, and what can be done? We sincerely believe, as we have been advocating for some time now, that the low ceilings that exist on many feed and grain items in comparison with the very attractive ceilings or support prices that have been placed on livestock and poultry productions, has not only created an apparent over-production based on peacetime needs, but has also caused considerable waste of valuable feeds out in the Midwest and has also been responsible for the greatest maldistribution and black market and bartering operations that this country has ever experienced. This price ceiling setup has completely eliminated competitive buying—has made money worthless, and has caused nothing more or less than unadulterated discrimination.

Let's take up one of these at a time. Certain proteins, when you consider the profitable feature of raising and feeding livestock and hogs, must be being wasted within the Grain Belt. A concrete example of why is that soybean meal on a Boston basis is worth $57.35 a ton, or only a 28-percent increase over the price of this commodity in December 1940. On the other hand, ground oats have been quoted as high as $66.50 per ton, Boston basis recently, as against a price of $35.75 in December 1940—an increase of somewhat over 80 percent. Is this price structure inducive to waste of soybean meal? We say yes.

Another illustration—wheat has increased in price since December 1940 approximately 77 percent. Corn on the other hand has increased over the same period only approxi-

mately 47 percent. The authorities are very much worried about the tremendous amount of wheat that has been used for feeding, but what could deficit areas do when corn is worth $1.70 per bushel to the western farmers inside of a hog, and New England is only allowed to pay approximately $1.40 per bushel under the present price ceiling. Of course, we could not get corn. We had to take the high-priced substitute wheat.

Take bran and midds. The present ceiling price here in New England is $46.17, an advancement of only 26 percent since December 1940. New England has been unable to buy in volume any wheat feeds for the past 3 years. Why? They are just about the cheapest feed ingredient available under present ceilings, and here again they are being consumed very close to the point of production, and here again the deficit feed area has had to turn to ground and flaked wheat as a substitute, at a price of $25–$30 per ton over the ceiling of bran and middlings.

For a time we have struggled along with substitutes, even though in many instances it not only meant an additional cost of $5–$8 per ton to the New England farmers, plus the fact that the quality of feed had not been as good as it would have been if New England had been able to secure the proper ingredients, but now the substitutes themselves have entirely disappeared.

We have a very attractive hog program set up which runs for sometime in the future. We have no penalty, insofar as we know, on the weight limit of hogs; consequently, the western hog farmer, with the very attractive price on feeds, is feeding his hogs to untold weights because it is profitable to do so. We wonder how much feed is being wasted through that sort of a program.

If you have not already heard of the bartering and trading that is going on out in the Midwest, let's give you a few illustrations. Nylons, fence posts, sugar, butter, new automobiles, and a million and one other scarce items are being offered to the farmer as an inducement to sell his corn, soybeans, etc. Folks who have a surplus of corn are trading corn for soybeans or meat scraps or bran and midds. Those who have a surplus of soybean meal are trading it for corn or bran and midds. This goes on endlessly.

That is why we say our money is worthless, and make the definite statement that competition in buying feed supplies for deficit feed areas, such as New England, has completely stopped by these unfair, unjust, and uneconomical price controls. If anyone can tell us what economical service a small western mill is performing for the United States of America by taking whole corn, which it normally sold to the deficit feed areas, as such, grinding it into meal, putting it into sacks, adding $4 per ton over ceiling price of corn plus the cost of sacks, and then shipping it over here to New England to a feed mixer, we certainly would like to know. We could grind this corn ourselves, as we have done for years, and deliver it to the New England farmer at considerably less than $4 per ton for this service. This fact can be easily proved by our records.

What economical service is a processor performing, when in lieu of selling us straight soybean meal under present ceilings, he mixes 80 percent or 90 percent of soybean meal and 10 percent of ground oats or wheat, and charges us $6 to $8 per ton over the soybean ceiling. Certainly this is not an economical function.

We sincerely believe that the only thing that can be done at this late date to prevent in many instances complete liquidation of farm animals and poultry here in New England, it the removal of price ceilings so all of us can compete at open market prices with the surplus producing areas of this country on an equal basis. If corn is worth $1.70 to the western hog farmer under our free American economy structure, the New England poultryman and dairyman should have the equal privilege of bidding $1.70 for his corn.

Farmers all over America will continue to produce only as long as it is profitable. If by the removal of price ceilings certain commodities went beyond this level in the price structure, you would get liquidation and, consequently, the demand for that item would commence to drop off and its value in dollars and cents would very quickly reflect the change in the situation. This is nothing more or less than the functioning of the good old fashioned sound and substantial law of supply and demand—a law under which this country of ours has prospered and become the leader of the world, the most desirable place in the world to live. We believe that some action should be taken immediately to bring us back to the good old American way of doing business, the way we were taught by our grandparents, and we sincerely believe that unless we get back to this American way of doing business we are apt to live to regret the alternative.

JIM THE FEED MAN.

Achievements of the Negro Race

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following quotations:

QUOTATIONS FROM RACE AND DEMOCRATIC SOCIETY

(By FRANZ BOAS)

No one has ever proved that a human being, through his descent from a certain group of people, must of necessity have certain mental characteristics. We may safely say that at a time when our own ancestors still utilized stone implements or, at best, when bronze weapons were first introduced, the Negro had developed the art of smelting iron, and it seems likely that their race has contributed more than any other to the early development of the iron industry. The beautiful iron weapons of central Africa, which excel in symmetry of form, and many of which bear elaborate designs inlaid in copper, are of admirable workmanship.

One of the features of Negro social life that deserves special mention is the legal trend of mind of the people. No other race on a similar level of culture has developed as strict methods of legal procedure as the Negro has. The power of organization that manifests itself in Negro communities is quite striking. In the Sudan the true Negro, the ancestor of our slave population, has achieved the very advances which the critics of the Negro would make us believe he cannot attain. He has a highly developed agriculture, and the industries connected with his daily life are complex and artistic. His power of organization has been such that for centuries large empires have existed which have proved their stability in wars with their neighbors. The achievement of the Negro in Africa demonstrates that the race is capable of social and political accomplishments; that it will produce its great men here, as it has done in Africa; and that it will contribute its part to the welfare of the community.

It does not even require a marked difference in type, such as we find when we compare Negro and white, to provoke the spirit that prevents us from recognizing individuals and compels us to see only representatives of a class endowed with imaginary qualities that we ascribe to the group as a whole. We find this spirit at work in anti-Semitism as well as in American nativism, and in the conflict between labor and capitalism. This is obviously the phychological basis of the present situation of the American Negro. To the popular mind the Negro appears as a class, and the impressions made by the life of the poor Negro are generalized by the white man and are combined with dogmatic beliefs regarding the physical and hereditary mental make-up of the race. Every moment of his life the self-respecting Negro feels the strain of his inability to overcome the prejudices that merge him in a type.

The existence of any pure race with special endowments is a myth, as is the belief that there are races all of whose members are foredoomed to eternal inferiority. The claim that mental qualities of races are biologically determined is not tenable. Much less have we a right to speak of biologically determined superiority of one race over another.

Hon. Fred M. Vinson

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Raleigh News and Observer of January 25, 1946:

WELCOME VISITOR

Secretary of the Treasury Fred M. Vinson, who addressed the Newspaper Institute at Chapel Hill last night, was a most welcome visitor.

There is no indispensable man, but in the war period and the reconversion period which has followed it, Fred Vinson has been a close approach to an indispensable man. The outbreak of the war found him on the United States Circuit Court of Appeals for the District of Columbia, to which he had been appointed after a distinguished record in Congress as a Representative from Kentucky. Almost at once he was made chief judge of the Emergency Court of Appeals which was created to deal with OPA cases. But Vinson did not stay on the bench. Early in the war President Roosevelt appointed him Director of Economic Stabilization, a position in which he performed outstanding service and held the line against inflation with a devotion to duty that disregarded pressure from every source. Later, he was named as Federal Loan Administrator and still later became Director of War Mobilization and Reconversion, a position so important that its holder was generally called the assistant President. One of President Truman's first Cabinet appointments was that of Secretary Vinson, a selection that was widely applauded.

Secretary Vinson, as one of the negotiators of the proposed loan to Great Britain, last night presented the case for the loan to North Carolina editors who, regardless of their views on the question, found the presentation informing and helpful.

Petition of Florida Townsend Clubs

EXTENSION OF REMARKS
OF
HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. HENDRICKS. Mr. Speaker, under unanimous consent, I insert in the RECORD a form of a petition circulated through my district and signed by the members of the Townsend Clubs of St. Cloud, New Smyrna Beach, Daytona Beach, Port Orange, Holly Hill, Cassadaga, and Kissimmee. These petitions were signed by 1,350 members. I want this to go in the RECORD as evidence of the fact that the people of this Nation want action on the Townsend bills, H. R. 2229 and H. R. 2230. The petition is as follows:

A PETITION TO MY CONGRESSMAN AND MY TWO SENATORS

GENTLEMEN: With millions of employees being dropped from industry's pay rolls during this transition period and with millions of soldiers being returned jobless to civilian life, we fear that American business may go into a downward spiral leading toward great depression unless Congress quickly adopts some program to keep purchasing power at high levels among the masses of the people. A bipartisan measure represented by twin bills, one introduced by a Democrat and one by a Republican, which, I believe, would accomplish this end, is now before the House. The House bills are H. R. 2229 and H. R. 2230, respectively. Senate bills are Nos. S. 690 and S. 809, respectively. It would provide high monthly annuities, as they retire from the labor market, for men and women past 60, for the blind and disabled, for mothers with dependent minor children. It would raise the money for such annuities by a 3-percent tax levied monthly upon the gross incomes of all business and upon that portion of gross individual incomes in excess of $100 a month. Please use your influence to see that this measure, embodying principles of the Townsend plan, gets a quick and complete hearing by the Ways and Means Committee and then by the Congress as a whole. Please demand a roll-call vote upon it. Please vote for its enactment when it comes upon the floor. I am authorizing the distributors of this petition to inform me, by mail, of your helpful action on this measure, so that I can reciprocate in the only way I, as a voter, know how.

Thank you.

Tribute to the American Civil Liberties Union

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. COFFEE. Mr. Speaker, the American Civil Liberties Union, a great national organization devoted to the militant preservation and protection of the Bill of Rights in these United States, an organization of which I have the honor to serve as a member of the national committee, recently celebrated its twenty-fifth anniversary. The ACLU has not been afraid to make enemies. Sometimes it treads on the toes of the left. Sometimes it offends the delicate sensibilities of the right. But its soul goes marching on. Freedom of speech means freedom must be accorded those with whom one violently disagrees, in disseminating their ideas in the press, on the platform, over the radio. In this field, it is often difficult for liberals to stomach the rantings of tories, and vice versa; but it is at that very point that the ACLU never hesitates to take a stand, proclaiming the right of all to speak and write freely their unvarnished opinions on controversial issues.

President Harry Truman and the Honorable Thomas Dewey, Governor of the great State of New York, both sent messages of greeting and congratulation to the ACLU on the occasion of this anniversary. Because these messages contained thoughts well expressed and observations thoroughly sound, and incorporated a well-deserved tribute to this great organization, I am asking my colleagues for their consent to have the same included as a part of my remarks and appended hereinafter:

DR. JOHN HAYNES HOLMES,
Chairman, Board of Directors,
American Civil Liberties Union,
New York:

I send you warm greetings upon the completion of 25 years of fighting for the civil rights of all Americans. The union is most publicized for its protection of minority groups, but I know that your over-all objective is that inherent constitutional privileges be granted to every person, citizen or alien, with no thought of race, color, or creed. I know, too, that you fight for the rights of majorities threatened by illegal monopoly and repression.

I believe with your members that whatever a man's political thinking, whatever his background, environment, or education, he must, if he be a real American, respect the aims of organizations such as yours. The integrity of the American Civil Liberties Union and of its workers in the field has never been, and I feel, never will be, questioned. Officers, directors, and members of the union have performed outstanding service to the cause of freedom.

HARRY S. TRUMAN.

TO DR. JOHN HAYNES HOLMES,
Chairman, Board of Directors,
American Civil Liberties Union,
New York, N. Y.

DEAR DR. HOLMES: I am happy to send warm greetings to all members of the American Civil Liberties Union and all men and women present at the national convention you are holding on November 24th on the theme, What's Ahead for American Liberties.

It is a matter of just pride to the citizens of New York State that the American Civil Liberties Union was incorporated under the laws of the Empire State on whose soil so many hotly contested struggles for the liberty and dignity of the individual were fought and won, struggles not only on the battlefield but in the courts and other arenas of the unending contest for freedom.

Of the quarter century of your existence you have established an enviable record. You have established, also, beyond all possible doubt, proof that the American Civil Liberties Union is an essential part of American life. It is essential not merely to the individuals whom you have helped against injustice, but to the self-respect of the community and of all citizens who appreciate our priceless heritage of personal, political, and religious liberty and regard for the dignity of the individual.

The war for freedom is an endless one. The worst attacks are those which do not affect the majority—the insidious attacks. Without the American Civil Liberties Union, there would be no organization to take up the cudgels for lone, oppressed individuals.

It has been inspiring to observe that the American Civil Liberties Union has stood unwavering on the principle of defending everybody's rights without distinction. It has championed the rights of unions and of employers, of union-workers and non-workers, of Catholics, Protestants, and Jews. On the racial front, it has stood firmly for the liberty of every racial minority.

It is a pleasure, therefore, to hail the gallant part that the American Civil Liberties Union has taken in upholding the principles for which this Republic was founded and to extend my warm good wishes for continuing success.

THOMAS E. DEWEY.

Understanding Russia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. JUDD. Mr. Speaker, under permission to extend my remarks, I include the final installment of a series of penetrating articles on the internal situation in Russia:

[From the Minneapolis Star-Journal of February 1, 1946]

MICROSCOPE ON MOSCOW—RUSSIA IS GOING ISOLATIONIST (MAYBE) WITH A FOOT IN UNO

(By C Sverre Norborg)

Since Moscow's painful discovery that a social-democratic Europe is emerging, it has heard again the bugle call of a Socialist isolationism as the only safe, sane Russian way of the future.

Led by President Kalinin, A. A. Andreyev, Security Police Chief Beria, and Bulganin (chairman of the Foreign Affairs Commission), the Moscow isolationists argue that the time is not ripe either for international cooperation or for international communistic experimentation.

They insist that the Soviet Union concentrate on the job at hand: rebuilding, reconstructing, and expanding the vast Socialist experiment inside Russia itself.

In this view Kalinin, the old Bolshevik President of the Soviet Union, is receiving the solid support of his old-time friend, Lazarus Kaganovich, the czar of Russian heavy industries.

The popular following of the isolationist school consists of industrial dreamers and planners, together with many of the premiers of the autonomous republics under the vocal leadership of S. N. Kruschev, of the Ukraine.

Above all, hundreds of thousands of Red Army men, who feel they have seen more than enough of the war and the world, are turning isolationist.

Beria joined the Moscow isolationist group not only for security reasons, but also because it gave him a welcome opportunity to emphasize personal differences of long standing between himself and the internationalist A. Y. Vishinsky, Soviet brain truster. A similar clash of personalities is said to be the reason behind the strangely neutral conduct of Marshal Voroshilov, who, as commander of the Red occupation army in Hungary, has shown no interest in helping any of the Communist imperialist dreams of Vishinsky.

Thus pressure from Russian isolationist quarters is steadily growing on the foreign office. And one of the rivals for Stalin's throne, Andreyev, who wields a tremendous influence as chief of the Communist Party control committee, is known to have expressed definitely isolationist convictions after the Potsdam meeting.

Diplomatic sources in Moscow report that no single event has driven the Russian isolationist stock so violently high as British Foreign Minister Bevin's frank declaration of his labor cabinet's unqualified imperialist policy.

Mr. Andreyev has as his lieutenant in the isolationist fight the intelligent and shrewd politician, N. Bulganin.

Thus the old-time Bolsheviks, the industrial expansionists, the party control leader and the security chief, together with certain top men of the autonomous republics, have created a strong isolationist bloc which is fighting the Communist imperialists and may well succeed in convincing Molotov, and even Stalin, that Russia's immediate interests lie within the borders of the Soviet Union itself.

European observers seem to agree that the old-line Comintern leaders are having a hard time in postwar Moscow. Vishinsky and Dimitrov met with signal misfortune in their dreams of a Red Europe. They obviously believed that the end of World War II would be the great hour, when the European nations would leap up with joy, as Lenin prophesied, to unite in a real people's revolution throughout the continent. Now even Poland begins to look doubtful, and only backward Yugoslavia still retains the Red Star on its national horizon.

In fact, the present Moscow leaders of the "communism-for-export" school of thought are running into a double head wind.

On the one hand are the isolationists, who are too intensely practical to feel any elation about Russia helping the proletariat of European nations.

On the other are the Russian internationalists, who are realistic enough to know which way the international winds are blowing. Neither party is disposed to listen to ideological weathermen of yesteryear.

Also, Moscow realists realize very keenly the great danger of having Marxist purists play havoc with the international good will which the Soviet Union has won for itself during World War II. The Moscow internationalists insist that respectability may pay great dividends for the Soviet Union—not least in the Far East.

Maxim Litvinov used to preach collective security in Geneva. He was Commissar of Foreign Affairs in those days, until the international wind shifted and Vyaschelav Molotov took the helm at the Foreign Office.

Years later Molotov turned up in San Francisco. He came late. Russians, like the emperors of old, seem to love to be late. Apparently, it strikes them as being an impressive technique. Or maybe it is just an old bad habit of revolutionary times, when the security and significance of a leader was measured by the time he kept his audience waiting for his appearance.

The overshadowing novelty in Russian foreign policy is the fact that Soviet leaders of today already have a long record of international "conferencing" at Teheran, Yalta, Potsdam, San Francisco, London. The recent Moscow Conference may prove to have been the decisive turning point in Russian acceptance of its duties in international cooperation for peace.

Upon his return to London from the San Francisco meeting, I asked one of the top-ranking European diplomats if he was satisfied that Russia was in the collective internationalist family to stay. He waited a while with the answer:

"We will know early in 1946. The Moscow leaders will not be able to settle that problem with themselves until 6 to 8 months after VE-day."

A few months later we met again on the continent. In the light of new international happenings, I repeated the question. This time his answer came with the precision of a machine gun:

"Russian internationalism, which wants collective security through the United Nations' Organization, is running into real trouble in the politburo.

"Molotov's strange tactics at recent international meetings indicate he is a spokesman for a supercabinet in which the isolationists are pressing for a wait-and-see policy.

"Having committed the USSR to Marshal Stalin's policy of trusting cooperation with the other nations, Molotov, who intends to outmaneuver both Andreyev and Zhdanov for the top job, is caught on the horns of a dilemma. He cannot go against Stalin. Neither does he dare to offend Andreyev and Beria. He will need them both when he becomes premier of what may very well be an isolationist Russia.

"You Americans tend to forget that the war in the Far East was not a war which ended as good orthodox wars are supposed to end. Your atom bomb exploded that war out of existence. Therefore, you will now have to wait for Moscow, since VJ caught her without any settled over-all foreign policy."

The most significant point made by this skilled observer was that during the first months of peace Molotov was keeping relatively aloof from the Moscow struggle between isolationists and internationalists.

The latter group was reported by the late summer of 1945 to be led by Nalonkov, Litvinov, Mickoyan, and Marshal Zhukov.

A. I. Mickoyan is the Commissar of Foreign Trade and has met with trade delegations of many liberated nations, seeking an expansion of their trade toward the East, now that Germany has been eliminated as a great commercial power.

The most significant event in this connection is the new French-Russian trade pact recently signed in Moscow by Mickoyan and Catroux.

No observer who have seen the utter desolation of Europe can doubt that international commerce will be the decisive answer to the reconstruction problems of Europe and of Russia.

In its own interest, the Soviet Union will have to seek long-range trade connections with the western nations.

And since the United States now is extending commercial loans to these same nations, it is safe to predict that along trade routes, real international good will will flow, building more international fellowship than political discussion ever could.

Marshal Stalin was not talking. For weeks rumors had him with one foot in the grave. Stupid speculation even had him on the way out of the political picture. But on Christmas eve 1945, he gave a banquet to the visiting foreign ministers.

STALIN WAS STILL THE BOSS

As a realist and statesman, Stalin towers immeasurably above Molotov or Vishinsky or any other Russian leader.

He realizes that only through international stability can he meet the paramount need of his nation.

That need is to give the Russians a living standard which can stand comparison with what the Russians have seen outside the Soviet Union.

Molotov thinks in paragraphs. Vishinsky is worried about prestige and ideology. Marshal Stalin has never grown away from his people.

Like the late President Roosevelt and the late Wendell Willkie, Josef Stalin has never lost sight of the fundamental fact that great statesmanship springs from a human soil and is directed toward the safeguarding and enhancement of human values.

From time to time, Soviet foreign policy will undoubtedly continue to puzzle the western mind. The Russians are rough and tough-minded. They do not bring much sentimentalism with them to the international conference table.

Their very presence will insure that the United Nations Organizations will not be permitted to become another futile League of Nations, built on a talkative and dishonest idealism.

On the other hand, the challenge before American statesmanship is to remind both the Russians and the British that power politics has definite, moral limits; that to be big is not necessarily synonymous with being great.

The atomic age is here. One day big power politics must end in the solemn halls of the world court.

Much water will go under the international bridge before that happens. In the meantime, it is the duty of the people of the United States to remind the foreign policy makers of all powers, great and small, that greater than foreign policy is the dignity of man.

True peace can only grow in a moral climate.

Food for Thought

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am happy to include a column by Constantine Brown which I think drips with real importance to anyone who is striving to understand what is wrong with this chaotic old world of ours.

Certainly no one denies but that a healthy world is important to all of us, not only in the promotion of our own prosperity and security, but also of importance in any over-all attempt to avoid World War III.

In this column, Mr. Brown reviews some of our mistakes. I think it is a rather comprehensive review and worthy of your reading:

UNSELFISH USE OF MIGHT VITAL TO KEEP PEACE ALIVE—VIOLATION OF PROMISES AND POLICY OF APPEASEMENT ROUSE FEARS THAT WORLD IS DRIFTING DANGEROUSLY

(By Constantine Brown)

Early in January one of the highest-ranking officers in Washington said bluntly at a small gathering, attended by some of the country's most responsible political men, that unless America's diplomacy changes radically from a policy of expediency and appeasement to one of realism "we may have another war within the next 5 years, whether we like it or not."

Here I might comment that it is so hard to be firm when we do not have a clear foreign policy, England has—commercial expansion and maintenance of the Empire. Russia has—political expansion and maintenance of the Bolshevist technique. Thus there is need to understand the American purpose at home and abroad.

Because this gathering was informal and strictly off the record, the name of the officer cannot be divulged. But he is known to have both feet on the ground and has never been a "Red baiter." Quite the contrary. He has been extremely understanding of Russia's actions, even when they appeared to be contrary to the pledges and agreements Premier Stalin had accepted at the various tripartite conferences.

It is too early to pass judgment on what the UNO will accomplish in the future. But one thing is obvious: Moscow does not believe in the rights of the little nations and wants this association of powers to be nominated by the Big Three. Of these, the United States and Great Britain are soon to be much weaker militarily than Russia. The demobilization in this country has already been so speeded up that today we can no longer be described as a strong military power. Britain has had such losses and is in such bad shape that she has only a negligible force.

RUSSIAN FORCES STRONG

Thus, when the American high-ranking officer adopted a gloomy attitude about a lasting peace, he took the point of view that if the United States, as she did after the World War, sets the pace of disarmament "by example," Britain will be compelled for economic reasons to reduce further its weak military potential, and Russia will become the world's dominating military power. Today Russia still has 15,000,000 men under arms; her aviation is intact and she is planning to build a powerful navy.

Compulsory military conscription in Russia and in satellite countries in Central Eastern, and Southeastern Europe will increase the standing armies of the Soviet bloc.

But this in itself might not be damaging to the peace of the world if powers which base their policies on military strength rather than moral issues would use their might unselfishly in the same way we have used it during the First and Second World Wars.

Here Mr. Brown approaches what is the nub of the matter. It has been said that the League of Nations enjoyed some influence and some power for 15 years after the end of World War I, but that UNO was still-born, having been killed before its organization by secret agreements and too great emphasis on the veto power.

It is perhaps worthy of note at this point that the League of Nations was an association of far more compatible national units than those attempting to erect a workable pattern out of a babble of tongues, economies, and religions, such as we find in UNO.

But, to go on with Mr. Brown's article:

We in the United States have had two periods which were described in their own particular fashion. There were, for instance, the gay nineties, when life was gay and pleasant. Then after the World War we had the hectic era described as the roaring twenties. Both had their counterpart across the Atlantic in modified form. Now we live in an era which eventually may be described as the lying forties.

PROMISES BEING BROKEN

Promises are being made by governments and are being broken within a few months; solemn pledges are being conveniently forgotten when selfish interests come into play and morality is at a low ebb. Words have lost their real meaning. The words "democracy" and "democratic" have one meaning in the United States and another meaning in Russia, eastern Europe, and China. The same applies to the words "liberal" and "liberalism." Unlike after other wars, tripartite or individual "agreements" are, in fact, replacing peace treaties, although a make-believe peace conference will take place eventually between the victors and the vanquished.

With this change of principles, it is difficult to forecast how a nation which keeps its military power intact will act in the future.

The French have a saying, "L'appétit vient en mangeant," which means "the more you drink the thirstier you get." Today it applies to politics more than to eating or drinking.

The Soviet Government indicated to the Germans and to the French and British Governments in 1939 that the price for its assistance in the war would be the incorporation into the Soviet of a part of eastern Poland and the Baltic States.

POLICY OF APPEASEMENT

The territorial thirst of the Kremlin leaders increased, however, as time went on and after Russia became a member of the United Nations. There was a time when the Russian thirst could have been quenched by a determined stand by Washington. But the fear that the Russians might change horses in the middle of the stream and abandon the Allies led our policy framers to adopt a yielding attitude. The increased Russian demands for complete and exclusive control of Europe from the Baltic to the Mediterranean were accepted by the American leaders, because, they said, it was more important to defeat the Axis quickly than to bother about the fate of those troublesome nations.

We thus embarked on a policy of appeasement of the type which we criticized so severely when Messrs. Chamberlain and Daladier were yielding to the Germans. The juiciest morsels of Europe were handed over to the Russians by secret agreements from 1944 on. Thus when VE-day came we could not stop. The situation could not be changed except by a policy of force which we were neither willing nor able to undertake.

Some American policy framers saw the writing on the wall, but felt that they were helpless. We put all our peace eggs in the UNO basket, although those familiar with the Yalta conversations knew that Russia was lending only lip service to the Organization.

The sending of a delegation to participate in the discussion at San Francisco was merely a polite gesture to President Roosevelt. Many people have forgotten by now that for 2 days after President Truman assumed office no one at the White House and the State Department knew whether or not the Russians would go to San Francisco since the set-up in Washington had been changed. It was only after a number of urgent messages had been exchanged with Moscow that Foreign Commissar Molotov was persuaded to come to this country. And he took such a long time in arriving that for several days high-ranking officials wondered if he had changed his mind en route.

THIRST FOR POWER GROWS

But even after VJ-day, when hostilities between the United Nations and the Axis ended, we continued a policy of appeasing our Russian friends. After a short-lived resistance at the Foreign Ministers' Conference at London, and after President Truman asserted he could see no reason for further tripartite meetings since all outstanding questions could be ironed out at meetings of the UNO—a conference of the Big Three foreign ministers was arranged in Moscow at the instigation of Secretary of State Byrnes.

In Moscow we followed the same appeasement policy which had characterized the previous sessions of the Big Three.

In the meantime, Russia's thirst for power increased. It extended to Iran and was rewarded by the creation of a "democratic autonomous government" in the oil-rich Azerbaijan.

It extended to China by way of a demand—contrary to the Sino-Russian treaty—for a 50-percent participation in the development and exploitation of the riches of Manchuria. And it is expected that before spring is over Turkey will have to accept the Muscovite demands for large territories in eastern Anatolia, in Thrace, and bases between the Dardanelles and the Bosphorus.

At the same time agents in the pay—ideologically or otherwise—of Moscow are increasingly active in South America and particularly in Brazil, where the United States is described as the last stronghold of ruthless and exploiting capitalism. High officials in the State, War, and Navy Departments are fully aware of what is going on, but prefer to say nothing lest the "harmony" among the Big Three should suffer.

ANSWER HARD TO FIND

The question raised by some "realists" like the high-ranking officer who fears another war within 5 years is where will the Russian drive stop? It now embraces the whole of Europe; it is making visible progress in Asia and it has begun to take a concrete shape in South America.

It is not easy to find an answer according to those few who are aware of the progress of Russia's thirst. But two constructive suggestions have been made. One is that we immediately stop humoring our Soviet friends. There is nothing much we can do in Europe henceforth except adopt a policy of nonrecognition of those governments which have been placed in power with the aid of the Red armies and are being maintained in the same manner against the wishes of the overwhelming majority of the population.

Governments which do not conform to the Yalta and Potsdam agreements should be outlawed, so far as this country is concerned. At a first glance, this would appear as an academic action. But the United States alone can provide the war-torn nations with tools and supplies for their reconstruction. Russia herself is now negotiating an imposing loan, although she has billions of dollars in gold hidden away somewhere. A policy of not recognizing present and future satellite states would make it impossible for Russia herself to reap the fruits of her expansion.

NO COMFORT IN SITUATION

The other solution is a total demobilization of the armed forces of all the nations in the world. Germany and Japan are down and out. They can be controlled by a small force which can see that they do not become a menace to the world peace.

America is demobilized, in fact, although not yet formally. There still are too many men in service, but we do not have an Army which may be described as a cohesive force.

Britain is attempting to hang onto her own meager national forces and to the Polish and Serbian "mercenaries" who are in Italy and Germany. The fear of something dramatic happening in the world has compelled the War Office to retain control over about 400,000 German prisoners who might conceivably be used as mercenaries in the same manner the British used the Hessians in the Eighteenth Century.

If Moscow would agree to order a thorough demobilization of the Red armies and maintain on active duty, say, only one-third of its present force, there is no question that the situation would appear less laden with dynamite. Talk of the possibility of another conflict would then become idle talk.

Mr. Speaker, there is, of course, still another solution. It will require the highest type of ability to effect and to maintain. Yet, it is, to my mind, an intelligent compromise between firmness, as Mr. Brown indicates above, and the hope of demobilization. Firmness supported by military might, of course, could be the preface to World War III.

With regard to the total demobilization which Mr. Brown indicates above, I

personally believe that total demobilization could be promoted into an overwhelming sentiment in our own country. I certainly doubt—and I have been to Russia—that the Soviet would agree. I feel also that there are many other countries who would either evade or refuse any program of total demobilization. However, I personally would like to see a sincere and earnest attempt made.

The third solution is the one that has already been suggested—was in fact suggested when we first started talking of ways and means to preserve the "coming" peace; that is, how to set up and make effective, and just, a world police force.

Certainly we know that militarily, at least, we are making many mistakes in the use of our occupational forces. We know now that we should have prepared two armies. First, of course, there should have been the combat army. This we did and its record of valor and achievement will go down through the years in the history of military science. Then, with victory apparent, we should have begun an intelligent training of armies of occupation. Unlike armies of combat which have to exist for the destruction of the enemy and his sources and depots of supplies, the occupational army should have been trained for the altogether different task of rebuilding, reconstructing, and liberating of self-government in the conquered areas. It could have been a work of real and glorious purpose.

I hold that the experience of our occupational armies should have given us a valuable background for making a contribution to and working for the success of the maintenance of a constructive peace.

If an unselfish use of might is vital to keep peace alive, then we must not lose any opportunity to learn how to use might unselfishly.

United States Commitments to Aid Philippines

EXTENSION OF REMARKS

OF

HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. ROMULO. Mr. Speaker, with the unanimous consent of the House, I am inserting some of the commitments made, during and after the war, by the leaders of the American people, both in the executive and legislative departments of your Government, commitments which were accepted by the Filipino people as emanating from the legitimate representatives of the American Nation. Because the United States High Commissioner, the Honorable Paul V. McNutt, has just arrived in the United States from Manila and has made a plea to this Congress that American promises made to the Filipinos during the war be fulfilled, I feel that some of these commitments must now be called to the attention of this Congress.

They are:

December 28, 1941: President Roosevelt, pledge broadcast to the Philippines; reiterated on August 13, 1943:

The people of the United States will never forget what the people of the Philippine Islands are doing this day and will do in the days to come. I give to the people of the Philippines my solemn pledge that their freedom will be redeemed and their independence established and protected. The entire resources, in men and in material, of the United States stand behind that pledge.

November 15, 1942: President Roosevelt, broadcast to the Philippines on the occasion of the seventh anniversary of the Commonwealth of the Philippines:

The United States and the Philippines are already engaged in examining the practical economic problems of the future—when President Quezon and his government are reestablished in the capital of Manila. He and I, in conference last week, agreed to set up a joint commission of our two countries, to study the economic situation which will face the nation which is soon to be, and to work out means of preserving its stability and security.

This typifies the highest form of good faith, which now exists between our two governments.

August 13, 1943: President Roosevelt, broadcast to the Philippines, reiterating his pledge of December 28, 1941:

I said then:

"I give to the people of the Philippines my solemn pledge that their freedom will be redeemed and their independence established and protected. The entire resources in men and materials of the United States stand behind that pledge."

We shall keep this promise just as we have kept every promise which America has made to the Filipino people.

* * * * * * *

* * * I give the Filipino people my word that the Republic of the Philippines will be established the moment the power of our Japanese enemies is destroyed. The Congress of the United States has acted to set up the independence of the Philippines. The time will come quickly when that goes into full effect. You will soon be redeemed from the Japanese yoke and you will be assisted in the full repair of the ravages caused by the war.

October 6, 1943: President Roosevelt, message to the Congress of the United States:

Since the Japanese launched their attack on the Philippine Islands, I have on several occasions addressed messages on behalf of the American people to the courageous people of the Philippines—expressing our admiration of their heroism and loyalty. I have assured them that the Government of the United States of America will see to it that their independence will be promptly established, and—still more important—that it will be protected. The resources of the United States, in men and materials, stand behind that pledge to the people of the Philippines. We shall keep that promise just as we have kept every promise which the United States has made to the Filipino people.

* * * * * * *

If the Congress takes this action, there are several steps which, in my opinion, are necessary to make good our pledge that the independence of the Philippines will be protected in the future, and to give them the opportunity of economic rehabilitation which is their due.

* * * * * * *

(3) That the Congress make provision for the physical and economic rehabilitation of the Philippines made necessary by the ravages of war which the invaders have inflicted upon them.

All of this is due to the Filipino people in recognition of their heroic role in this war, the political ties which have bound us together and the bonds of friendship which will join us together in the future.

November 15, 1943: President Roosevelt, telegram message on the occasion of the eighth anniversary of the Commonwealth of the Philippines:

Today, on this anniversary, and on every day that shall pass until the Japanese enemy is finally and totally defeated, the American people send messages of hope and faith to you, the gallant people of the Philippine Commonwealth. We work and we fight for the day of your liberation—for the day when your Government shall be restored to Manila—when you shall enjoy the true freedom and independence and national dignity which you have so fully earned.

November 15, 1943: Secretary of State Cordell Hull, statement on the occasion of the eighth anniversary of the Commonwealth of the Philippines:

The President's pledge to redeem the Philippines is certain of fulfillment. His message to the Congress on October 6, 1943, recommending that authority be granted to him to proclaim the legal independence of the islands as soon as feasible and to provide measures for their protection and rehabilitation, is but a step in that direction.

June 29, 1944. The Congress of the United States, Senate Joint Resolution 93:

Now, therefore, be it

Resolved, etc., That it is hereby declared to be the policy of the Congress that the United States shall drive the treacherous, invading Japanese from the Philippine Islands, restore as quickly as possible the orderly and free democratic processes of government to the Filipino people, and thereupon establish the complete independence of the Philippine Islands as a separate and self-governing nation.

* * * * * *

SEC. 4. Meanwhile the resources of the United States, both of men and materials, are pledged for continued use to redeem the Philippines from the invader and to speed the day of ultimate and complete independence for the people of the Philippine Islands.

June 29, 1944: President Roosevelt, statement upon signing Senate Joint Resolution 93 and Senate Joint Resolution 94:

We are ever mindful of the heroic role of the Philippines and their people in the present conflict. Theirs is the only substantial area and theirs the only substantial population under the American flag to suffer lengthy invasion by the enemy. History will attest the heroic resistance of the combined armies of the United States and the Philippines in Luzon, Cebu, Iloilo, and other islands of the archipelago. Our character as a nation will be judged for years to come by the human understanding and the physical efficiency with which we help in the immense task of rehabilitating the Philippines.

October 19, 1944: President Roosevelt, statement on the landing of the American troops on Leyte:

In the 6 years before the war broke out, the Philippine Government, acting in harmonious accord with the United States, made great strides toward complete establishment of her sovereignty. The United States

promised to help build a new nation in the Pacific, a nation whose ideals, like our own, were liberty and equality and the democratic way of life—a nation which in a very short time would join the friendly family of nations on equal terms.

We were keeping that promise. When the war came and our work was wrecked, we pledged to the people of the Philippines that their freedom would be redeemed and that their independence would be established and protected. We are fulfilling that pledge now. When we have finished the job of driving the Japs from the islands, the Philippines will be a free and independent republic.

There never was a doubt that the people of the Philippines were worthy of their independence. There will never be a doubt.

October 20, 1944: President Roosevelt, message to President Osmeña:

Our plans for the dignity and freedom of the people of the Philippines have been ruthlessly—but only temporarily—brushed aside by Japanese acts of exploitation and enslavement. When the Japanese invaders have been driven out, the Philippines will take their place as a free and independent member of the family of nations.

February 4, 1945: President Roosevelt, message to President Osmeña:
